$\Delta f_{\text{OoB}}$ (MHz)	1.4 MHz	3.0 MHz	5 MHz	10 MHz	15 MHz	20 MHz	Measurement bandwidth
0-1	-8.2	-11.2	-13.2	-16.2	-18.2	-19.2	30 kHz
1-2.5	-11.2	-11.2	-11.2	-11.2	-11.2	-11.2	1 MHz
2.5-2.8	-23.2						1 MHz
2.8-5							1 MHz
5-6	-23.2						1 MHz
6-10							1 MHz
10-15			-23.2				1 MHz
15-20					-23.2		1 MHz
20-25						-23.2	1 MHz
<p>Note 1: The first and last measurement position with a 30 kHz filter is at <math>\Delta f_{\text{OoB}}</math> equals to 0.015 MHz and 0.985 MHz.</p> <p>Note 2: At the boundary of spectrum emission limit, the first and last measurement position with a 1 MHz filter is the inside of +0.5MHz and -0.5MHz, respectively.</p> <p>Note 3: The measurements are to be performed above the upper edge of the channel and below the lower edge of the channel</p> <p>Note 4: Above SEM requirement applies to bands corresponding to network signalling value NS_03 as defined in TS 36.101 [2] clause 6.2.4B</p> <p>Note 5: For the 2.5-2.8 MHz offset range with 1.4 MHz channel bandwidth, the measurement position is at <math>\Delta f_{\text{OoB}}</math> equals to 3 MHz.</p>							

NOTE: (only for emission measurement) As a general rule, the resolution bandwidth of the measuring equipment should be equal to the measurement bandwidth. However, to improve measurement accuracy, sensitivity and efficiency, the resolution bandwidth may be smaller than the measurement bandwidth. When the resolution bandwidth is smaller than the measurement bandwidth, the result should be integrated over the measurement bandwidth in order to obtain the equivalent noise bandwidth of the measurement bandwidth.

#### 6.6.2.2B.5.2 Test requirements (network signalled value "NS\_04")

When "NS\_04" is indicated in the cell:

- the measured sum of mean power at each antenna connector of UE in the channel bandwidth, derived in step 3, shall fulfil requirements in clause 6.2.4B Table [TBD] as appropriate,

and

- the power of any UE emission at each antenna connector shall fulfil requirements in Table 6.6.2.2B.5.2-1 or Table.6.6.2.2B.5.2-2, as applicable.

**Table 6.6.2.2B.5.2-1: Additional requirements (network signalled value "NS\_04"), E UTRA bands  $\leq$  3GHz**

Spectrum emission limit (dBm)/ Channel bandwidth							
$\Delta f_{\text{OOB}}$ (MHz)	1.4 MHz	3.0 MHz	5 MHz	10 MHz	15 MHz	20 MHz	Measurement bandwidth
0-1	-8.5	-11.5	-13.5	-16.5	-18.5	-19.5	30 kHz

NOTE: (only for emission measurement) As a general rule, the resolution bandwidth of the measuring equipment should be equal to the measurement bandwidth. However, to improve measurement accuracy, sensitivity and efficiency, the resolution bandwidth may be smaller than the measurement bandwidth. When the resolution bandwidth is smaller than the measurement bandwidth, the result should be integrated over the measurement bandwidth in order to obtain the equivalent noise bandwidth of the measurement bandwidth.

### 6.6.2.2B.5.3 Test requirements (network signalled value "NS\_06" or "NS\_07")

When "NS\_06" or "NS\_07" is indicated in the cell:

- the measured sum of mean power at each antenna connector of UE in the channel bandwidth, derived in step 3, shall fulfil requirements in clause 6.2.4B Table [TBD] as appropriate 1,

and

- the power of any UE emission at each antenna connector shall fulfil requirements in Table 6.6.2.2B.5.3-1 or Table.6.6.2.2B.5.3-2, as applicable.

**Table 6.6.2.2B.5.3-1: Additional requirements (network signalled value "NS\_06" or "NS\_07") , E UTRA bands  $\leq$  3GHz**

$\Delta f_{\text{OOB}}$ (MHz)	Spectrum emission limit (dBm)/ Channel bandwidth				
	1.4 MHz	3.0 MHz	5 MHz	10 MHz	Measurement bandwidth
0-0.1	-11.5	-11.5	-13.5	-16.5	30 kHz
0.1-1	-11.5	-11.5	-11.5	-11.5	100 kHz
1-2.5	-11.5	-11.5	-11.5	-11.5	1 MHz
2.5-2.8	-23.5				1 MHz
2.8-5					1 MHz
5-6	-23.5				1 MHz
6-10			-23.5		1 MHz
10-15				-23.5	1 MHz
Note 1:	The first and last measurement position with a 30 kHz filter is at $\Delta f_{\text{OOB}}$ equals to 0.015 MHz and 0.085 MHz. The first and last measurement position with a 100 kHz filter is at $\Delta f_{\text{OOB}}$ equals to 0.15 MHz and 0.95 MHz.				
Note 2:	At the boundary of spectrum emission limit, the first and last measurement position with a 1 MHz filter is the inside of +0.5MHz and -0.5MHz, respectively.				
Note 3:	The measurements are to be performed above the upper edge of the channel and below the lower edge of the channel.				
Note 4:	Above SEM requirement applies to bands corresponding to network signalling value NS_06 and NS_07 as defined in TS 36.101 [2] clause 6.2.4B.				
Note 5:	For the 2.5-2.8 MHz offset range with 1.4 MHz channel bandwidth, the measurement position is at $\Delta f_{\text{OOB}}$ equals to 3 MHz.				

**Table 6.6.2.2B.5.3-2: Additional requirements (network signalled value "NS\_06" or "NS\_07") , 3GHz < E UTRA bands ≤ 4.2GHz**

$\Delta f_{\text{OoB}}$ (MHz)	Spectrum emission limit (dBm)/ Channel bandwidth				
	1.4 MHz	3.0 MHz	5 MHz	10 MHz	Measurement bandwidth
0-0.1	-11.2	-11.2	-13.2	-16.2	30 kHz
0.1-1	-11.2	-11.2	-11.2	-11.2	100 kHz
1-2.5	-11.2	-11.2	-11.2	-11.2	1 MHz
2.5-2.8	-23.2				1 MHz
2.8-5					1 MHz
5-6	-23.2				1 MHz
6-10			-23.2		1 MHz
10-15				-23.2	1 MHz
<p>Note 1: The first and last measurement position with a 30 kHz filter is at <math>\Delta f_{\text{OoB}}</math> equals to 0.015 MHz and 0.085 MHz. The first and last measurement position with a 100 kHz filter is at <math>\Delta f_{\text{OoB}}</math> equals to 0.15 MHz and 0.95 MHz.</p> <p>Note 2: At the boundary of spectrum emission limit, the first and last measurement position with a 1 MHz filter is the inside of +0.5MHz and -0.5MHz, respectively.</p> <p>Note 3: The measurements are to be performed above the upper edge of the channel and below the lower edge of the channel.</p> <p>Note 4: Above SEM requirement applies to bands corresponding to network signalling value NS_06 and NS_07 as defined in TS 36.101 [2] clause 6.2.4B.</p> <p>Note 5: For the 2.5-2.8 MHz offset range with 1.4 MHz channel bandwidth, the measurement position is at <math>\Delta f_{\text{OoB}}</math> equals to 3 MHz.</p>					

NOTE: (only for emission measurement) As a general rule, the resolution bandwidth of the measuring equipment should be equal to the measurement bandwidth. However, to improve measurement accuracy, sensitivity and efficiency, the resolution bandwidth may be smaller than the measurement bandwidth. When the resolution bandwidth is smaller than the measurement bandwidth, the result should be integrated over the measurement bandwidth in order to obtain the equivalent noise bandwidth of the measurement bandwidth.

## 6.6.2.2E Additional Spectrum Emission Mask for UE category 0

### 6.6.2.2E.1 Test purpose

Same test purpose as in clause 6.6.2.2.1.

### 6.6.2.2E.2 Test applicability

This test case applies to all types of E-UTRA UE release 12 and forward of UE category 0.

### 6.6.2.2E.3 Minimum conformance requirements

Same minimum conformance requirements as in clause 6.6.2.2.3

### 6.6.2.2E.4 Test description

#### 6.6.2.2E.4.1 Initial conditions

Same initial conditions as in clause 6.6.2.2.4.1 with following exceptions for HD-FDD:

- Instead of Tables 6.6.2.2.4.1-1 through 6.6.2.2.4.1-7 → use Table 6.6.2.2E.4.1-1 through 6.6.2.2E.4.1-4.
- Connect SS to the UE antenna connectors as shown in TS 36.508[7] Annex A Figure A.3 using only main UE Tx/Rx antenna.

**Table 6.6.2.E.4.1-1: Test Configuration Table (network signalled value "NS\_03")**

Initial Conditions						
Test Environment (as specified in TS 36.508 [7] subclause 4.1)				NC		
Test Frequencies (as specified in TS36.508 [7] subclause 4.3.1)				Low range, Mid range, High range		
Test Channel Bandwidths (as specified in TS 36.508 [7] subclause 4.3.1)				Lowest, 5MHz, 10MHz, Highest		
Test Parameters for Channel Bandwidths						
Ch BW	Downlink Configuration			Uplink Configuration		
	Mod'n	RB allocation		Mod'n	RB allocation	
		FDD	TDD		FDD and HD-FDD	TDD
1.4MHz	N/A for Additional Spectrum Emission Mask testing.			QPSK	6	6
1.4MHz				QPSK	5	5
1.4MHz				16QAM	5	5
3MHz				QPSK	15	15
3MHz				QPSK	4	4
3MHz				16QAM	5	5
3MHz				16QAM	4	4
5MHz				QPSK	25	25
5MHz				QPSK	8	8
5MHz				QPSK	6	6
5MHz				16QAM	5	5
10MHz				QPSK	36	36
10MHz				QPSK	12	12
10MHz				QPSK	6	6

21	20MHz			QPSK	36	0
22	20MHz			QPSK	36	25
23	20MHz			QPSK	25	75
24	20MHz			QPSK	1	99
Note 1: Test Channel Bandwidths are checked separately for E-UTRA band, the applicable channel bandwidths are specified in Table 5.4.2.1-1.						
Note 2: The RB <sub>start</sub> of partial RB allocation shall be RB# 0 and RB# (max +1 - RB allocation) of the channel bandwidth.						

**6.6.2.2E.4.2 Test procedure**

Same test procedure as in clause 6.2.3.4.2 with following exception for HD-FDD:

- In step 3, slots with transient periods are not under test. Half-duplex guard sub frame are not under test.

**6.6.2.2E.4.3 Message contents**

Same message contents as in clause 6.6.2.2.4.3.

**6.6.2.2E.5 Test requirements****6.6.2.2E.5.1 Test requirements (network signalled value "NS\_03")**

When "NS\_03" is indicated in the cell:

- the measured UE mean power in the channel bandwidth, derived in step 3, shall fulfil requirements in Table 6.2.4.5-1 and 6.2.4.5-2 as appropriate,

and

- the power of any UE emission shall fulfil requirements in Table 6.6.2.2E.5.1-1 or 6.6.2.2E.5.1-2, as applicable.

**Table 6.6.2.2E.5.1-1: Additional requirements (network signalled value "NS\_03"), E-UTRA bands ≤ 3GHz**

$\Delta f_{\text{OOB}}$ (MHz)	Spectrum emission limit (dBm)/ Channel bandwidth						Measurement bandwidth
	1.4 MHz	3.0 MHz	5 MHz	10 MHz	15 MHz	20 MHz	
0-1	-8.5	-11.5	-13.5	-16.5	-18.5	-19.5	30 kHz
1-2.5	-11.5	-11.5	-11.5	-11.5	-11.5	-11.5	1 MHz
2.5-2.8	-23.5						1 MHz
2.8-5							1 MHz
5-6							-23.5
6-10			-23.5				1 MHz
10-15				-23.5			1 MHz
15-20					-23.5		1 MHz
20-25						-23.5	1 MHz
Note 1:	The first and last measurement position with a 30 kHz filter is at $\Delta f_{\text{OOB}}$ equals to 0.015 MHz and 0.985 MHz.						
Note 2:	At the boundary of spectrum emission limit, the first and last measurement position with a 1 MHz filter is the inside of +0.5MHz and -0.5MHz, respectively.						
Note 3:	The measurements are to be performed above the upper edge of the channel and below the lower edge of the channel						
Note 4:	Above SEM requirement applies to bands corresponding to network signalling value NS_03 as defined in TS 36.101 [2] subclause 6.2.4 Table 6.2.4-1.						
Note 5:	For the 2.5-2.8 MHz offset range with 1.4 MHz channel bandwidth, the measurement position is at $\Delta f_{\text{OOB}}$ equals to 3 MHz.						

**Table 6.6.2.2E.5.1-2: Additional requirements (network signalled value "NS\_03"), 3GHz < E-UTRA bands ≤ 4.2GHz**

$\Delta f_{\text{OOB}}$ (MHz)	Spectrum emission limit (dBm)/ Channel bandwidth						Measurement bandwidth
	1.4 MHz	3.0 MHz	5 MHz	10 MHz	15 MHz	20 MHz	
0-1	-8.2	-11.2	-13.2	-16.2	-18.2	-19.2	30 kHz
1-2.5	-11.2	-11.2	-11.2	-11.2	-11.2	-11.2	1 MHz
2.5-2.8	-23.2						1 MHz
2.8-5							1 MHz
5-6							-23.2
6-10			-23.2				1 MHz
10-15				-23.2			1 MHz
15-20					-23.2		1 MHz
20-25						-23.2	1 MHz
Note 1:	The first and last measurement position with a 30 kHz filter is at $\Delta f_{\text{OOB}}$ equals to 0.015 MHz and 0.985 MHz.						
Note 2:	At the boundary of spectrum emission limit, the first and last measurement position with a 1 MHz filter is the inside of +0.5MHz and -0.5MHz, respectively.						
Note 3:	The measurements are to be performed above the upper edge of the channel and below the lower edge of the channel						
Note 4:	Above SEM requirement applies to bands corresponding to network signalling value NS_03 as defined in TS 36.101 [2] subclause 6.2.4 Table 6.2.4-1.						
Note 5:	For the 2.5-2.8 MHz offset range with 1.4 MHz channel bandwidth, the measurement position is at $\Delta f_{\text{OOB}}$ equals to 3 MHz.						

NOTE: (only for emission measurement) As a general rule, the resolution bandwidth of the measuring equipment should be equal to the measurement bandwidth. However, to improve measurement accuracy, sensitivity and efficiency, the resolution bandwidth may be smaller than the measurement bandwidth. When the resolution bandwidth is smaller than the measurement bandwidth, the result should be integrated over the measurement bandwidth in order to obtain the equivalent noise bandwidth of the measurement bandwidth.

## 6.6.2.2E.5.2 Test requirements (network signalled value "NS\_04")

When "NS\_04" is indicated in the cell:

- the measured UE mean power in the channel bandwidth, derived in step 3, shall fulfil requirements in Table 6.2.4.5-3 as appropriate,

and

- the power of any UE emission shall fulfil requirements in Table 6.6.2.2E.5.2-1 or Table.6.6.2.2E.5.2-2, as applicable.

**Table 6.6.2.2E.5.2-1: Additional requirements (network signalled value "NS\_04"), E-UTRA bands ≤ 3GHz**

$\Delta f_{\text{OOB}}$ (MHz)	Spectrum emission limit (dBm)/ Channel bandwidth						Measurement bandwidth
	1.4 MHz	3.0 MHz	5 MHz	10 MHz	15 MHz	20 MHz	
0-1	-8.5	-11.5	-13.5	-16.5	-18.5	-19.5	30 kHz
1-2.5	-11.5	-11.5	-11.5	-11.5	-11.5	-11.5	1 MHz
2.5-2.8	-23.5						1 MHz
2.8-5		-23.5	-23.5	-23.5	-23.5	-23.5	1 MHz
5-6							1 MHz
6-10							1 MHz
10-15							1 MHz
15-20							1 MHz
20-25							1 MHz
Note 1:	The first and last measurement position with a 30 kHz filter is at $\Delta f_{\text{OOB}}$ equals to 0.015 MHz and 0.985 MHz.						
Note 2:	At the boundary of spectrum emission limit, the first and last measurement position with a 1 MHz filter is the inside of +0.5MHz and -0.5MHz, respectively.						
Note 3:	The measurements are to be performed above the upper edge of the channel and below the lower edge of the channel						
Note 4:	Above SEM requirement applies to bands corresponding to network signalling value NS_04 as defined in TS 36.101 [2] subclause 6.2.4 Table 6.2.4-1.						
Note 5:	For the 2.5-2.8 MHz offset range with 1.4 MHz channel bandwidth, the measurement position is at $\Delta f_{\text{OOB}}$ equals to 3 MHz.						

**Table 6.6.2.2E.5.2-2: Additional requirements (network signalled value "NS\_04"), 3GHz < E-UTRA bands ≤ 4.2GHz**

$\Delta f_{\text{OOB}}$ (MHz)	Spectrum emission limit (dBm)/ Channel bandwidth						Measurement bandwidth
	1.4 MHz	3.0 MHz	5 MHz	10 MHz	15 MHz	20 MHz	
0-1	-8.2	-11.2	-13.2	-16.2	-18.2	-19.2	30 kHz
1-2.5	-11.2	-11.2	-11.2	-11.2	-11.2	-11.2	1 MHz
2.5-2.8	-23.2						1 MHz
2.8-5		-23.2	-23.2	-23.2	-23.2	-23.2	1 MHz
5-6							1 MHz
6-10							1 MHz
10-15							1 MHz
15-20							1 MHz
20-25							1 MHz
Note 1:	The first and last measurement position with a 30 kHz filter is at $\Delta f_{\text{OOB}}$ equals to 0.015 MHz and 0.985 MHz.						
Note 2:	At the boundary of spectrum emission limit, the first and last measurement position with a 1 MHz filter is the inside of +0.5MHz and -0.5MHz, respectively.						
Note 3:	The measurements are to be performed above the upper edge of the channel and below the lower edge of the channel						
Note 4:	Above SEM requirement applies to bands corresponding to network signalling value NS_04 as defined in TS 36.101 [2] subclause 6.2.4 Table 6.2.4-1.						
Note 5:	For the 2.5-2.8 MHz offset range with 1.4 MHz channel bandwidth, the measurement position is at $\Delta f_{\text{OOB}}$ equals to 3 MHz.						

NOTE: (only for emission measurement) As a general rule, the resolution bandwidth of the measuring equipment should be equal to the measurement bandwidth. However, to improve measurement accuracy, sensitivity and efficiency, the resolution bandwidth may be smaller than the measurement bandwidth. When the resolution bandwidth is smaller than the measurement bandwidth, the result should be integrated over the measurement bandwidth in order to obtain the equivalent noise bandwidth of the measurement bandwidth.

Test requirements (network signalled value "NS\_06" or "NS\_07")

When "NS\_06" or "NS\_07" is indicated in the cell:

- the measured UE mean power in the channel bandwidth, derived in step 3, shall fulfil requirements in Table 6.2.4.5-5, 6.2.4.5-6 and 6.2.4.5-7 as appropriate 1,

and

- the power of any UE emission shall fulfil requirements in Table 6.6.2.2E.5.3-1 or Table.6.6.2.2E.5.3-2, as applicable.

**Table 6.6.2.2E.5.3-1: Additional requirements (network signalled value "NS\_06" or "NS\_07"), E-UTRA bands  $\leq$  3GHz**

$\Delta f_{\text{OOB}}$ (MHz)	Spectrum emission limit (dBm)/ Channel bandwidth				
	1.4 MHz	3.0 MHz	5 MHz	10 MHz	Measurement bandwidth

NOTE: (only for emission measurement) As a general rule, the resolution bandwidth of the measuring equipment should be equal to the measurement bandwidth. However, to improve measurement accuracy, sensitivity and efficiency, the resolution bandwidth may be smaller than the measurement bandwidth. When the resolution bandwidth is smaller than the measurement bandwidth, the result should be integrated over the measurement bandwidth in order to obtain the equivalent noise bandwidth of the measurement bandwidth.

**6.6.2.2EA Additional Spectrum Emission Mask for UE category M1**

*Editor’s note: This clause is incomplete. The following aspects are either missing or not yet determined:*

*- NS\_04 (B41), NS\_07 (B13): Test configuration table missing due to minimum requirements for A-MPR in 36.101 are incomplete.*

**6.6.2.2EA.1 Test purpose**

Same test purpose as in clause 6.6.2.2.1.

**6.6.2.2EA.2 Test applicability**

This test case applies to all types of E-UTRA UE release 13 and forward of UE category M1.

**6.6.2.2EA.3 Minimum conformance requirements**

Same minimum conformance requirements as in clause 6.6.2.2.3

## 6.6.2.2EA.4 Test description

## 6.6.2.2EA.4.1 Initial conditions

Initial conditions are a set of test configurations the UE needs to be tested in and the steps for the SS to take with the UE to reach the correct measurement state.

The initial test configurations consist of environmental conditions, test frequencies, and channel bandwidths based on E-UTRA bands specified in sub-clause 5.2E. All of these configurations shall be tested with applicable test parameters for each channel bandwidth, and are shown in Tables 6.6.2.2EA.4.1-1 through 6.6.2.2EA.4.1-4. The details of the uplink reference measurement channels (RMCs) are specified in Annex A.2 respectively. Configurations of PDSCH and MPDCCH before measurement are specified in Annex C.2.

**Table 6.6.2.2EA.4.1-1: Test Configuration Table (network signalled value "NS\_03")**

Initial Conditions					
Test Environment as specified in TS 36.508[7] subclause 4.1			Normal		
Test Frequencies as specified in TS 36.508 [7] subclause [4.3.1]			Low range, Mid range, High range		
Test Channel Bandwidths as specified in TS 36.508 [7] subclause [4.3.1]			Lowest, 5MHz, 10MHz, Highest		
Test Parameters for Channel Bandwidths and Narrowband positions					
		Downlink Configuration	Uplink Configuration		
Configuration ID	Ch BW	N/A for Maximum Power Reduction (MPR) test case	Mod'n	RB allocation	
			FDD and HD-FDD	Narrowband index (Note 1)	

Low range, Mid range					
1	1.4MHz		QPSK	2	0
2	1.4MHz		QPSK	5	0
3	1.4MHz		QPSK	6	0
4	1.4MHz		16QAM	2	0

**Table 6.6.2EA.4.1-4: Test Configuration Table (network signalled value "NS\_07")**

TBD

1. Connect SS to the UE antenna connectors as shown in TS 36.508[7] Annex A Figure A.3 using only main UE Tx/Rx antenna.
2. The parameter settings for the cell are set up according to TS 36.508 [7] subclause 4.4.3.
3. Downlink signals are initially set up according to Annex C0, C.1 and C.3.0, and uplink signals according to Annex H.1 and H.3.0.

4. The DL Reference Measurement channels are set according to Tables 6.6.2.2EA.4.1-1 to 6.6.2.2EA.4.1-4.
5. Propagation conditions are set according to Annex B.0.
6. Ensure the UE is in State 3A-RF-CE according to TS 36.508 [7] clause 5.2A.2AA. Message contents are defined in clause 6.6.2.2EA.4.3.

#### 6.6.2.2EA.4.2 Test procedure

1. SS sends uplink scheduling information for each UL HARQ process via MPDCCH DCI format 6-0A for C\_RNTI to schedule the UL RMC according to applicable table from Table 6.6.2.2EA.4.1-1 to 6.6.2.2EA.4.1-4. Since the UE has no payload data to send, the UE transmits uplink MAC padding bits on the UL RMC.
3. Send continuously uplink power control "up" commands in the uplink scheduling information to the UE until the UE transmits at  $P_{UMAX}$  level. For HD-FDD slots with transient periods are not under test. Half-duplex guard sub frame are not under test.
4. Measure the mean power of the UE in the channel bandwidth of the radio access mode according to the test configuration, which shall meet the requirements described in Table 6.2.4EA.5-1 to 6.2.4EA.5-9 as appropriate. The period of the measurement shall be at least one sub-frame (1ms).
5. Measure the power of the transmitted signal with a measurement filter of bandwidths according to Table 6.6.2.2EA.5.1-1, 6.6.2.2EA.5.2-1, 6.6.2.2EA.5.3-1 or Table 6.6.2.2EA.5.1-2, 6.6.2.2EA.5.2-2, 6.6.2.2EA.5.3-2, as applicable. The centre frequency of the filter shall be stepped in continuous steps according to the same table. The measured power shall be recorded for each step. The measurement period shall capture the active TSs.

#### 6.6.2.2EA.4.3 Message contents

Message contents are same as in clause 6.2.4EA.4.3.6.6.2.2EA.5 Test requirements

#### 6.6.2.2EA.5.1 Test requirements (network signalled value "NS\_03")

When "NS\_03" is indicated in the cell:

- the measured UE mean power in the channel bandwidth, derived in step 3, shall fulfil requirements in Table 6.2.4EA.5-1 and 6.2.4EA.5-2 as appropriate,
- and
- the power of any UE emission shall fulfil requirements in Table 6.6.2.2EA.5.1-1, as applicable.

**Table 6.6.2.2EA.5.1-1: Additional requirements (network signalled value "NS\_03")**

$\Delta f_{\text{OOB}}$ (MHz)	Spectrum emission limit (dBm)/ Channel bandwidth						Measurement bandwidth
	1.4 MHz	3.0 MHz	5 MHz	10 MHz	15 MHz	20 MHz	
0-1	-8.5	-11.5	-13.5	-16.5	-18.5	-19.5	30 kHz
1-2.5	-11.5	-11.5	-11.5	-11.5	-11.5	-11.5	1 MHz
2.5-2.8	-23.5						1 MHz
2.8-5							1 MHz
5-6	-23.5						1 MHz
6-10			-23.5				1 MHz
10-15				-23.5			1 MHz
15-20					-23.5		1 MHz
20-25						-23.5	1 MHz
Note 1:	The first and last measurement position with a 30 kHz filter is at $\Delta f_{\text{OOB}}$ equals to 0.015 MHz and 0.985 MHz.						
Note 2:	At the boundary of spectrum emission limit, the first and last measurement position with a 1 MHz filter is the inside of +0.5MHz and -0.5MHz, respectively.						
Note 3:	The measurements are to be performed above the upper edge of the channel and below the lower edge of the channel						
Note 4:	Above SEM requirement applies to bands corresponding to network signalling value NS_03 as defined in TS 36.101 [2] subclause 6.2.4 Table 6.2.4-1.						
Note 5:	For the 2.5-2.8 MHz offset range with 1.4 MHz channel bandwidth, the measurement position is at $\Delta f_{\text{OOB}}$ equals to 3 MHz.						

NOTE: (only for emission measurement) As a general rule, the resolution bandwidth of the measuring equipment should be equal to the measurement bandwidth. However, to improve measurement accuracy, sensitivity and efficiency, the resolution bandwidth may be smaller than the measurement bandwidth. When the resolution bandwidth is smaller than the measurement bandwidth, the result should be integrated over the measurement bandwidth in order to obtain the equivalent noise bandwidth of the measurement bandwidth.

#### 6.6.2.2EA.5.2 Test requirements (network signalled value "NS\_04")

When "NS\_04" is indicated in the cell:

- the measured UE mean power in the channel bandwidth, derived in step 3, shall fulfil requirements in Table 6.2.4EA.5-3 as appropriate,

and

- the power of any UE emission shall fulfil requirements in Table 6.6.2.2EA.5.2-1, as applicable.

**Table 6.6.2EA.5.2-1: Additional requirements (network signalled value "NS\_04")**

$\Delta f_{\text{OoB}}$ (MHz)	Spectrum emission limit (dBm)/ Channel bandwidth						Measurement bandwidth
	1.4 MHz	3.0 MHz	5 MHz	10 MHz	15 MHz	20 MHz	
0-1	-8.5	-11.5	-13.5	-16.5	-18.5	-19.5	30 kHz
1-2.5	-11.5	-11.5	-11.5	-11.5	-11.5	-11.5	1 MHz
2.5-2.8	-23.5						1 MHz
2.8-5							1 MHz
5-6		-23.5	-23.5	-23.5	-23.5	-23.5	1 MHz
6-10							1 MHz
10-15							1 MHz
15-20							1 MHz
20-25							1 MHz
Note 1:	The first and last measurement position with a 30 kHz filter is at $\Delta f_{\text{OoB}}$ equals to 0.015 MHz and 0.985 MHz.						
Note 2:	At the boundary of spectrum emission limit, the first and last measurement position with a 1 MHz filter is the inside of +0.5MHz and -0.5MHz, respectively.						
Note 3:	The measurements are to be performed above the upper edge of the channel and below the lower edge of the channel						
Note 4:	Above SEM requirement applies to bands corresponding to network signalling value NS_04 as defined in TS 36.101 [2] subclause 6.2.4 Table 6.2.4-1.						
Note 5:	For the 2.5-2.8 MHz offset range with 1.4 MHz channel bandwidth, the measurement position is at $\Delta f_{\text{OoB}}$ equals to 3 MHz.						

NOTE: (only for emission measurement) As a general rule, the resolution bandwidth of the measuring equipment should be equal to the measurement bandwidth. However, to improve measurement accuracy, sensitivity and efficiency, the resolution bandwidth may be smaller than the measurement bandwidth. When the resolution bandwidth is smaller than the measurement bandwidth, the result should be integrated over the measurement bandwidth in order to obtain the equivalent noise bandwidth of the measurement bandwidth.

**Test requirements (network signalled value "NS\_06" or "NS\_07")**

When "NS\_06" or "NS\_07" is indicated in the cell:

- the measured UE mean power in the channel bandwidth, derived in step 3, shall fulfil requirements in Table 6.2.4EA.5-5, 6.2.4EA.5-6 and 6.2.4EA.5-7 as appropriate 1,
- and
- the power of any UE emission shall fulfil requirements in Table 6.6.2EA.5.3-1, as applicable.

Table 6.6.2.EA.5.3-1: Additional requirements (network signalled value "NS\_06" or "NS\_07")

$\Delta f_{\text{OOB}}$ (MHz)	Spectrum emission limit (dBm)/ Channel bandwidth				
	1.4 MHz	3.0 MHz	5 MHz	10 MHz	Measurement bandwidth
0-0.1	-11.5	-11.5	-13.5	-16.5	30 kHz
0.1-1	-11.5	-11.5	-11.5	-11.5	100 kHz
1-2.5	-11.5	-11.5	-11.5	-11.5	1 MHz
2.5-2.8	-23.5				1 MHz
2.8-5		-23.5	-23.5	-23.5	1 MHz
5-6					1 MHz
6-10			-23.5		1 MHz
10-15				-23.5	1 MHz
Note 1:	The first and last measurement position with a 30 kHz filter is at $\Delta f_{\text{OOB}}$ equals to 0.015 MHz and 0.085 MHz. The first and last measurement position with a 100 kHz filter is at $\Delta f_{\text{OOB}}$ equals to 0.15 MHz and 0.95 MHz.				
Note 2:	At the boundary of spectrum emission limit, the first and last measurement position with a 1 MHz filter is the inside of +0.5MHz and -0.5MHz, respectively.				
Note 3:	The measurements are to be performed above the upper edge of the channel and below the lower edge of the channel				
Note 4:	Above SEM requirement applies to bands corresponding to network signalling value NS_06 and NS_07 as defined in TS 36.101 [2] subclause 6.2.4 Table 6.2.4-1.				
Note 5:	For the 2.5-2.8 MHz offset range with 1.4 MHz channel bandwidth, the measurement position is at $\Delta f_{\text{OOB}}$ equals to 3 MHz.				

NOTE: (only for emission measurement) As a general rule, the resolution bandwidth of the measuring equipment should be equal to the measurement bandwidth. However, to improve measurement accuracy, sensitivity and efficiency, the resolution bandwidth may be smaller than the measurement bandwidth. When the resolution bandwidth is smaller than the measurement bandwidth, the result should be integrated over the measurement bandwidth in order to obtain the equivalent noise bandwidth of the measurement bandwidth.

### 6.6.2.3 Adjacent Channel Leakage power Ratio

#### 6.6.2.3.1 Test purpose

To verify that UE transmitter does not cause unacceptable interference to adjacent channels in terms of Adjacent Channel Leakage power Ratio (ACLR).

#### 6.6.2.3.2 Test applicability

This test case applies to all types of E-UTRA Power Class 3 UE release 8 and forward.

#### 6.6.2.3.3 Minimum conformance requirements

ACLR requirements are specified for two scenarios for an adjacent E -UTRA<sub>ACLR</sub> and UTRA<sub>ACLR1/2</sub> as shown in Figure 6.6.2.3.3-1.

Figure 6.6.2.3.3-1: Adjacent Channel Leakage Power Ratio requirements

6.6.2.3.3.1 Minimum conformance requirements for E-UTRA

E-UTRA ACLR ( $E-UTRA_{ACLR}$ ) is the ratio of the filtered mean power centred on the assigned channel frequency to the filtered mean power centred on an adjacent channel frequency at nominal channel spacing. The assigned E-UTRA channel power and adjacent E-UTRA channel power are measured with rectangular filters with measurement bandwidth specified in Table 6.6.2.3.3.1-1.

If the measured adjacent channel power is greater than  $-50\text{dBm}$  then the  $E-UTRA_{ACLR}$  shall be higher than the valued specified in Table 6.6.2.3.3.1-1.

Table 6.6.2.3.3.1-1: General requirements for  $E-UTRA_{ACLR}$

	Channel bandwidth / $E-UTRA_{ACLR1}$ / measurement bandwidth					
	1.4 MHz	3.0 MHz	5 MHz	10 MHz	15 MHz	20 MHz
$E-UTRA_{ACLR1}$	30 dB	30 dB	30 dB	30 dB	30 dB	30 dB
<b>E-UTRA channel Measurement bandwidth</b>	1.08 MHz	2.7 MHz	4.5 MHz	9.0 MHz	13.5 MHz	18 MHz

The normative reference for this requirement is TS 36.101 [2] subclause 6.6.2.3.1.

6.6.2.3.3.2 Minimum conformance requirements for UTRA

UTRA ACLR ( $UTRA_{ACLR}$ ) is the ratio of the filtered mean power centred on the assigned E-UTRA channel frequency to the filtered mean power centred on an adjacent UTRA channel frequency.

UTRA ACLR is specified for both the first UTRA adjacent channel ( $UTRA_{ACLR1}$ ) and the 2<sup>nd</sup> UTRA adjacent channel ( $UTRA_{ACLR2}$ ). The UTRA channel power is measured with a RRC bandwidth filter with roll-off factor  $\alpha = 0.22$ . The assigned E-UTRA channel power is measured with a rectangular filter with measurement bandwidth specified in Table 6.6.2.3.3.2-1.

If the measured UTRA channel power is greater than  $-50\text{dBm}$  then the  $UTRA_{ACLR1}$ , and  $UTRA_{ACLR2}$  shall be higher than the valued specified in Table 6.6.2.3.3.2-1.

Table 6.6.2.3.3.2-1: General requirements for  $UTRA_{ACLR1/2}$

	Channel bandwidth / $UTRA_{ACLR1/2}$ / measurement bandwidth					
	1.4 MHz	3.0 MHz	5 MHz	10 MHz	15 MHz	20 MHz

<b>UTRA<sub>ACL</sub>R1</b>	33 dB	33 dB	33 dB	33 dB	33 dB	33 dB
<b>Adjacent channel centre frequency offset (in MHz)</b>	$0.7+B_{W_U}$ $\frac{TR_A}{2}$ -0.7- $B_{W_{UTRA}}/2$	$1.5+B_{W_U}$ $\frac{TR_A}{2}$ -1.5- $B_{W_{UTRA}}/2$	$2.5+B_{W_U}$ $\frac{TR_A}{2}$ -2.5- $B_{W_{UTRA}}/2$	$5+B_{W_{UTR}}$ $\frac{A}{2}$ -5- $B_{W_{UTRA}}/2$	$7.5+B_{W_U}$ $\frac{TR_A}{2}$ -7.5- $B_{W_{UTRA}}/2$	$10+B_{W_{UT}}$ $\frac{RA}{2}$ -10- $B_{W_{UTRA}}/2$
<b>UTRA<sub>ACL</sub>R2</b>	-	-	36 dB	36 dB	36 dB	36 dB
<b>Adjacent channel centre frequency offset (in MHz)</b>	-	-	$2.5+3*B_{W_{UTRA}}/2$ / -2.5- $3*B_{W_{UTR}}/2$	$5+3*B_{W_U}$ $\frac{TR_A}{2}$ / -5- $3*B_{W_{UTR}}/2$	$7.5+3*B_{W_{UTRA}}/2$ / -7.5- $3*B_{W_{UTR}}/2$	$10+3*B_{W_{UTRA}}/2$ / -10- $3*B_{W_{UTR}}/2$
<b>E-UTRA channel Measurement bandwidth</b>	1.08 MHz	2.7 MHz	4.5 MHz	9.0 MHz	13.5 MHz	18 MHz
<b>UTRA 5MHz channel Measurement bandwidth<sup>1</sup></b>	3.84 MHz	3.84 MHz	3.84 MHz	3.84 MHz	3.84 MHz	3.84 MHz
<b>UTRA 1.6MHz channel measurement bandwidth<sup>2</sup></b>	1.28 MHz	1.28 MHz	1.28 MHz	1.28 MHz	1.28 MHz	1.28 MHz
Note 1: Applicable for E-UTRA FDD co-existence with UTRA FDD in paired spectrum. Note 2: Applicable for E-UTRA TDD co-existence with UTRA TDD in unpaired spectrum.						

The normative reference for this requirement is TS 36.101 subclause 6.6.2.3.2.

#### 6.6.2.3.4 Test description

##### 6.6.2.3.4.1 Initial conditions

Initial conditions are a set of test configurations the UE needs to be tested in and the steps for the SS to take with the UE to reach the correct measurement state.

The initial test configurations consist of environmental conditions, test frequencies, and channel bandwidths based on E-UTRA bands specified in table 5.4.2.1-1. All of these configurations shall be tested with applicable test parameters for each channel bandwidth, and are shown in table 6.6.2.3.4.1-1. The details of the uplink reference measurement channels (RMCs) are specified in Annex A.2. Configurations of PDSCH and PDCCH before measurement are specified in Annex C.2.

Table 6.6.2.3.4.1-1: Test Configuration Table

Initial Conditions						
Test Environment (as specified in TS 36.508 [7] subclause 4.1)				NC, TL/VL, TL/VH, TH/VL, TH/VH		
Test Frequencies (as specified in TS36.508 [7] subclause 4.3.1)				Low range, Mid range, High range		
Test Channel Bandwidths (as specified in TS 36.508 [7] subclause 4.3.1)				Lowest, 5MHz, 10MHz, Highest		
Test Parameters for Channel Bandwidths						
Ch BW	Downlink Configuration			Uplink Configuration		
	Mod'n	RB allocation		Mod'n	RB allocation	
		FDD	TDD		FDD	TDD
1.4MHz	N/A for ACLR testing			QPSK	6	6
1.4MHz				QPSK	5	5
1.4MHz				16QAM	6	6
1.4MHz				16QAM	5	5
3MHz				QPSK	15	15
3MHz				QPSK	4	4
3MHz				16QAM	15	15
3MHz				16QAM	4	4
5MHz				QPSK	25	25
5MHz				QPSK	8	8
5MHz				16QAM	25	25
5MHz				16QAM	8	8
10MHz				QPSK	50	50
10MHz				QPSK	12	12
10MHz				16QAM	50 (Note 3)	50 (Note 3)
10MHz				16QAM	12	12
15MHz				QPSK	75	75
15MHz				QPSK	16	16
15MHz				16QAM	75 (Note 3)	75 (Note 3)
15MHz				16QAM	16	16
20MHz				QPSK	100	100
20MHz				QPSK	18	18
20MHz				16QAM	100 (Note 3)	100 (Note 3)
20MHz				16QAM	18	18
Note 1: Test Channel Bandwidths are checked separately for each E-UTRA band, which applicable channel bandwidths are specified in Table 5.4.2.1-1. Note 2: The RB <sub>start</sub> of partial RB allocation shall be RB#0 and RB# (max + 1 – RB allocation) of the channel bandwidth. Note 3: Applies only for UE-Categories 2-5						

1. Connect the SS to the UE antenna connectors as shown in Figure TS 36.508 [7] Annex A, Figure A.3.
2. The parameter settings for the cell are set up according to TS 36.508 [7] subclause 4.4.3.
3. Downlink signals are initially set up according to Annex C0, C.1 and C.3.0, and uplink signals according to Annex H.1 and H.3.0.
4. The UL Reference Measurement channels are set according to Table 6.6.2.3.4.1-1.
5. Propagation conditions are set according to Annex B.0.
6. Ensure the UE is in State 3A-RF according to TS 36.508 [7] clause 5.2A.2. Message contents are defined in clause 6.6.2.3.4.3.

#### 6.6.2.3.4.2 Test procedure

1. SS sends uplink scheduling information for each UL HARQ process via PDCCH DCI format 0 for C\_RNTI to schedule the UL RMC according to Table 6.6.2.3.4.1-1. Since the UE has no payload data to send, the UE transmits uplink MAC padding bits on the UL RMC.

2. Send continuously uplink power control "up" commands in the uplink scheduling information to the UE until the UE transmits at  $P_{UMAX}$  level.
3. Measure the mean power of the UE in the channel bandwidth of the radio access mode according to the test configuration, which shall meet the requirements described in Table 6.2.3.5-1. The period of the measurement shall be at least the continuous duration of one sub-frame (1ms). For TDD slots with transient periods are not under test.
4. Measure the rectangular filtered mean power for E-UTRA.
5. Measure the rectangular filtered mean power of the first E-UTRA adjacent channel on both lower and upper side of the E-UTRA channel, respectively.
6. Measure the RRC filtered mean power of the first and the second UTRA adjacent channel on both lower and upper side of the E-UTRA channel, respectively.
7. Calculate the ratios of the power between the values measured in step 4 over step 5 for lower and upper E-UTRA<sub>ACLR</sub>, respectively.
8. Calculated the ratios of the power between the values measured in step 4 over step 6 for lower and upper UTRA<sub>ACLR1</sub>, UTRA<sub>ACLR2</sub>, respectively.

#### 6.6.2.3.4.3 Message contents

Message contents are according to TS 36.508 [7] subclause 4.6.

#### 6.6.2.3.5 Test requirement

##### 6.6.2.3.5.1 Test requirements E-UTRA

- The measured UE mean power in the channel bandwidth, derived in step 3, shall fulfil requirements in Table 6.2.3.5-1 as appropriate,

and

- if the measured adjacent channel power is greater than  $-50$  dBm then the measured E-UTRA<sub>ACLR</sub>, derived in step 7, shall be higher than the limits in table 6.6.2.3.5.1-1.

**Table 6.6.2.3.5.1-1: E-UTRA UE ACLR**

	Channel bandwidth / E-UTRA <sub>ACLR1</sub> / measurement bandwidth					
	1.4 MHz	3.0 MHz	5 MHz	10 MHz	15 MHz	20 MHz
<b>E-UTRA<sub>ACLR1</sub></b>	29.2 dB	29.2 dB	29.2 dB	29.2 dB	29.2 dB	29.2 dB
<b>E-UTRA channel Measurement bandwidth</b>	1.08 MHz	2.7 MHz	4.5 MHz	9.0 MHz	13.5 MHz	18 MHz
<b>UE channel</b>	+1.4 MHz or -1.4 MHz	+3 MHz or -3 MHz	+5MHz or -5MHz	+10MHz or -10MHz	+15MHz or -15MHz	+20MHz or -20MHz

#### Test requirements UTRA

If the measured UTRA channel power is greater than  $-50$ dBm then the measured UTRA<sub>ACLR1</sub>, UTRA<sub>ACLR2</sub>, derived in step 8, shall be higher than the limits in table 6.6.2.3.5.2-1.

**Table 6.6.2.3.5.2-1: UTRA UE ACLR**

	Channel bandwidth / UTRA <sub>ACLR1/2</sub> / measurement bandwidth					
	1.4 MHz	3.0 MHz	5 MHz	10 MHz	15 MHz	20 MHz

<b>UTRA<sub>ACLR1</sub></b>	32.2 dB	32.2 dB	32.2 dB	32.2 dB	32.2 dB	32.2 dB
<b>Adjacent channel centre frequency offset (in MHz)</b>	$0.7+BW_{UTR}/2$ / -0.7- $BW_{UTR}/2$	$1.5+BW_{UTR}/2$ / -1.5- $BW_{UTR}/2$	$2.5+BW_{UTR}/2$ / -2.5- $BW_{UTR}/2$	$5+BW_{UTR}/2$ / -5- $BW_{UTR}/2$	$7.5+BW_{UTR}/2$ / -7.5- $BW_{UTR}/2$	$10+BW_{UTR}/2$ / -10- $BW_{UTR}/2$
<b>UTRA<sub>ACLR2</sub></b>	-	-	35.2 dB	35.2 dB	35.2 dB	35.2 dB
<b>Adjacent channel centre frequency offset (in MHz)</b>	-	-	$2.5+3*BW_{UTR}/2$ / -2.5- $3*BW_{UTR}/2$	$5+3*BW_{UTR}/2$ / -5- $3*BW_{UTR}/2$	$7.5+3*BW_{UTR}/2$ / -7.5- $3*BW_{UTR}/2$	$10+3*BW_{UTR}/2$ / -10- $3*BW_{UTR}/2$
<b>E-UTRA channel Measurement bandwidth</b>	1.08 MHz	2.7 MHz	4.5 MHz	9.0 MHz	13.5 MHz	18 MHz
<b>UTRA 5MHz channel Measurement bandwidth<sup>1</sup></b>	3.84 MHz	3.84 MHz	3.84 MHz	3.84 MHz	3.84 MHz	3.84 MHz
<b>UTRA 1.6MHz channel measurement bandwidth<sup>2</sup></b>	1.28 MHz	1.28 MHz	1.28 MHz	1.28 MHz	1.28 MHz	1.28 MHz
Note 1: Applicable for E-UTRA FDD co-existence with UTRA FDD in paired spectrum. Note 2: Applicable for E-UTRA TDD co-existence with UTRA TDD in unpaired spectrum. Note 3: $BW_{UTR}$ for UTRA FDD is 5MHz and for UTRA TDD is 1.6MHz.						

### 6.6.2.3\_1 Adjacent Channel Leakage power Ratio for HPUE

#### 6.6.2.3\_1.1 Test purpose

To verify that HPUE transmitter does not cause unacceptable interference to adjacent channels in terms of Adjacent Channel Leakage power Ratio (ACLR).

#### 6.6.2.3\_1.2 Test applicability

This test case applies to all types of E-UTRA Power Class 1 UE release 10 and forward.

#### 6.6.2.3\_1.3 Minimum conformance requirements

ACLR requirements are specified for an adjacent E -UTRA<sub>ACLR</sub> as shown in Figure 6.6.2.3\_1.3-1.

Figure 6.6.2.3\_1.3-1: Adjacent Channel Leakage Power Ratio requirements

### 6.6.2.3\_1.3.1 Minimum conformance requirements for E-UTRA for HPUE

Same minimum conformance requirements as in clause 6.6.2.3.3.1 with for following exceptions:

- Instead of Table 6.6.2.3.3.1-1 → use Table 6.6.2.3\_1.3.1-1

**Table 6.6.2.3\_1.3.1-1: Additional E-UTRA<sub>ACLR</sub> requirements for Power Class 1**

	Channel bandwidth / E-UTRA <sub>ACLR1</sub> / Measurement bandwidth					
	1.4 MHz	3.0 MHz	5 MHz	10 MHz	15 MHz	20 MHz
E-UTRA <sub>ACLR1</sub>	N/A	N/A	37 dB	37 dB	N/A	N/A
E-UTRA channel Measurement bandwidth	N/A	N/A	4.5 MHz	9.0 MHz	N/A	N/A
Adjacent channel centre frequency offset [MHz]	N/A	N/A	+5 / -5	+10 / -10	N/A	N/A
Note 1: E-UTRA <sub>ACLR1</sub> shall be applicable for >23dBm						

The normative reference for this requirement is TS 36.101 [2] clause 6.6.2.1.

### 6.6.2.3\_1.4 Test description

#### 6.6.2.3\_1.4.1 Initial conditions

Same initial conditions as in clause 6.6.2.3.4.1.

#### 6.6.2.3\_1.4.2 Test procedure

1. SS sends uplink scheduling information for each UL HARQ process via PDCCH DCI format 0 for C\_RNTI to schedule the UL RMC according to Table 6.6.2.3.4.1-1. Since the UE has no payload data to send, the UE transmits uplink MAC padding bits on the UL RMC.
2. Send continuously uplink power control "up" commands in the uplink scheduling information to the UE until the UE transmits at P<sub>UMAX</sub> level.
3. Measure the mean power of the UE in the channel bandwidth of the radio access mode according to the test configuration, which shall meet the requirements described in Table 6.2.3\_1.5-1. The period of the measurement shall be at least the continuous duration of one sub-frame (1ms). For TDD slots with transient periods are not under test.
4. Measure the rectangular filtered mean power for E-UTRA.
5. Measure the rectangular filtered mean power of the first E-UTRA adjacent channel on both lower and upper side of the E-UTRA channel, respectively.
6. Calculate the ratios of the power between the values measured in step 4 over step 5 for lower and upper E-UTRA<sub>ACLR</sub>, respectively.

#### 6.6.2.3\_1.4.3 Message contents

Same message contents as in clause 6.6.2.3.4.3

### 6.6.2.3\_1.5 Test requirement

#### 6.6.2.3\_1.5.1 Test requirements E-UTRA

- The measured UE mean power in the channel bandwidth, derived in step 3, shall fulfil requirements in Table 6.2.3\_1.5-1 as appropriate,

and

- if the measured adjacent channel power is greater than  $-50$  dBm then the measured  $E-UTRA_{ACLR}$ , derived in step 7, shall be higher than the limits in table 6.6.2.3\_1.4.1-1.

**Table 6.6.2.3\_1.4.1-1: E-UTRA UE ACLR**

	Channel bandwidth / E-UTRA <sub>ACLR1</sub> / measurement bandwidth					
	1.4 MHz	3.0 MHz	5 MHz	10 MHz	15 MHz	20 MHz
E-UTRA <sub>ACLR1</sub>	N/A	N/A	36.2 dB	36.2 dB	N/A	N/A
E-UTRA channel Measurement bandwidth	N/A	N/A	4.5 MHz	9.0 MHz	N/A	N/A
UE channel	N/A	N/A	+5MHz or -5MHz	+10MHz or -10MHz	N/A	N/A

### 6.6.2.3\_2 Adjacent Channel Leakage power Ratio for Multi-Cluster PUSCH

*Editor's note: For a transition period until RAN5#72, this test case in version 13.0.1 of 36.521-1 shall be used. This is to ensure no test coverage is lost before the UL 64QAM test case becomes available.*

#### 6.6.2.3\_2.1 Test purpose

To verify that UE transmitter does not cause unacceptable interference to adjacent channels in terms of Adjacent Channel Leakage power Ratio (ACLR) for Multi-Cluster PUSCH transmission.

#### 6.6.2.3\_2.2 Test applicability

This test case applies to all types of E-UTRA UE release 10 and forward that support multi cluster PUSCH within a component carrier for the tested band but do not support UL 64QAM.

#### 6.6.2.3\_2.3 Minimum conformance requirements

ACLR requirements are specified for two scenarios for an adjacent E-UTRA<sub>ACLR</sub> and UTRA<sub>ACLR1/2</sub> as shown in Figure 6.6.2.3\_2.3-1.

**Figure 6.6.2.3\_2.3-1: Adjacent Channel Leakage Power Ratio requirements**

#### 6.6.2.3\_2.3.1 Minimum conformance requirements for E-UTRA

E-UTRA ACLR ( $E-UTRA_{ACLR}$ ) is the ratio of the filtered mean power centred on the assigned channel frequency to the filtered mean power centred on an adjacent channel frequency at nominal channel spacing. The assigned E-UTRA

channel power and adjacent E-UTRA channel power are measured with rectangular filters with measurement bandwidth specified in Table 6.6.2.3\_2.3.1-1.

If the measured adjacent channel power is greater than  $-50\text{dBm}$  then the  $E\text{-UTRA}_{\text{ACLR}}$  shall be higher than the valued specified in Table 6.6.2.3\_2.3.1-1.

**Table 6.6.2.3\_2.3.1-1: General requirements for  $E\text{-UTRA}_{\text{ACLR}}$**

	Channel bandwidth / $E\text{-UTRA}_{\text{ACLR1}}$ / measurement bandwidth					
	1.4 MHz	3.0 MHz	5 MHz	10 MHz	15 MHz	20 MHz
$E\text{-UTRA}_{\text{ACLR1}}$	30 dB	30 dB	30 dB	30 dB	30 dB	30 dB
<b>E-UTRA channel Measurement bandwidth</b>	1.08 MHz	2.7 MHz	4.5 MHz	9.0 MHz	13.5 MHz	18 MHz

The normative reference for this requirement is TS 36.101 [2] subclause 6.6.2.3.1.

### 6.6.2.3\_2.3.2 Minimum conformance requirements for UTRA

UTRA ACLR ( $UTRA_{\text{ACLR}}$ ) is the ratio of the filtered mean power centred on the assigned E-UTRA channel frequency to the filtered mean power centred on an adjacent UTRA channel frequency.

UTRA ACLR is specified for both the first UTRA adjacent channel ( $UTRA_{\text{ACLR1}}$ ) and the 2<sup>nd</sup> UTRA adjacent channel ( $UTRA_{\text{ACLR2}}$ ). The UTRA channel power is measured with a RRC bandwidth filter with roll-off factor  $\alpha = 0.22$ . The assigned E-UTRA channel power is measured with a rectangular filter with measurement bandwidth specified in Table 6.6.2.3\_2.3.2-1.

If the measured UTRA channel power is greater than  $-50\text{dBm}$  then the  $UTRA_{\text{ACLR1}}$ , and  $UTRA_{\text{ACLR2}}$  shall be higher than the valued specified in Table 6.6.2.3\_2.3.2-1.

**Table 6.6.2.3\_2.3.2-1: General requirements for  $UTRA_{\text{ACLR1/2}}$**

	Channel bandwidth / $UTRA_{\text{ACLR1/2}}$ / measurement bandwidth					
	1.4 MHz	3.0 MHz	5 MHz	10 MHz	15 MHz	20 MHz
$UTRA_{\text{ACLR1}}$	33 dB	33 dB	33 dB	33 dB	33 dB	33 dB
<b>Adjacent channel centre frequency offset (in MHz)</b>	$0.7+BW_U$ $TR_A/2$ / $-0.7-$ $BW_{UTRA}/2$	$1.5+BW_U$ $TR_A/2$ / $-1.5-$ $BW_{UTRA}/2$	$2.5+BW_U$ $TR_A/2$ / $-2.5-$ $BW_{UTRA}/2$	$5+BW_{UTR}$ $A/2$ / $-5-$ $BW_{UTRA}/2$	$7.5+BW_U$ $TR_A/2$ / $-7.5-$ $BW_{UTRA}/2$	$10+BW_{UT}$ $RA/2$ / $-10-$ $BW_{UTRA}/2$
$UTRA_{\text{ACLR2}}$	-	-	36 dB	36 dB	36 dB	36 dB
<b>Adjacent channel centre frequency offset (in MHz)</b>	-	-	$2.5+3*B$ $W_{UTRA}/2$ / $-2.5-$ $3*BW_{UTR}$ $A/2$	$5+3*BW_U$ $TR_A/2$ / $-5-$ $3*BW_{UTR}$ $A/2$	$7.5+3*B$ $W_{UTRA}/2$ / $-7.5-$ $3*BW_{UTR}$ $A/2$	$10+3*BW$ $UTRA/2$ / $-10-$ $3*BW_{UTR}$ $A/2$
<b>E-UTRA channel Measurement bandwidth</b>	1.08 MHz	2.7 MHz	4.5 MHz	9.0 MHz	13.5 MHz	18 MHz
<b>UTRA 5MHz channel Measurement bandwidth<sup>1</sup></b>	3.84 MHz	3.84 MHz	3.84 MHz	3.84 MHz	3.84 MHz	3.84 MHz
<b>UTRA 1.6MHz channel measurement bandwidth<sup>2</sup></b>	1.28 MHz	1.28 MHz	1.28 MHz	1.28 MHz	1.28 MHz	1.28 MHz
Note 1:	Applicable for E-UTRA FDD co-existence with UTRA FDD in paired spectrum.					
Note 2:	Applicable for E-UTRA TDD co-existence with UTRA TDD in unpaired spectrum.					

The normative reference for this requirement is TS 36.101 subclause 6.6.2.3.2.

### 6.6.2.3\_2.4 Test description

#### 6.6.2.3\_2.4.1 Initial conditions

Initial conditions are a set of test configurations the UE needs to be tested in and the steps for the SS to take with the UE to reach the correct measurement state.

The initial test configurations consist of environmental conditions, test frequencies, and channel bandwidths based on E-UTRA bands specified in table 5.4.2.1-1. All of these configurations shall be tested with applicable test parameters for each channel bandwidth, and are shown in table 6.6.2.3\_2.4.1-1. The details of the uplink reference measurement channels (RMCs) are specified in Annex A.2. Configurations of PDSCH and PDCCH before measurement are specified in Annex C.2.

**Table 6.6.2.3\_2.4.1-1: Test Configuration Table**

Initial Conditions					
Test Environment as specified in TS 36.508[7] subclause 4.1			Normal, TL/VL, TL/VH, TH/VL, TH/VH		
Test Frequencies as specified in TS36.508 [7] subclause 4.3.1			Low range, Mid range, High range		
Test Channel Bandwidths as specified in TS 36.508 [7] subclause 4.3.1			Highest		
Test Parameters for Channel Bandwidths					
Configuration ID	Downlink Configuration		Uplink Configuration		
	Ch BW	N/A for SEM testing	Mod'n	Cluster1 RB allocations (LCRB @ RB <sub>start</sub> )	Cluster2 RB allocations (LCRB @ RB <sub>start</sub> )
1	5MHz		16QAM	2@0	1@24
2	5MHz		16QAM	18@0	2@22
3	5MHz		16QAM	2@0	18@6
4	10MHz		16QAM	3@0	2@48
5	10MHz		16QAM	42@0	3@45
6	10MHz		16QAM	3@0	42@6
7	15MHz		16QAM	8@0	7@68
8	15MHz		16QAM	60@0	4@68
9	15MHz		16QAM	4@0	60@12
10	20MHz		16QAM	4@0	4@96
11	20MHz		16QAM	92@0	4@96
12	20MHz		16QAM	4@0	92@8
Note 1: Test Channel Bandwidths are checked separately for each E-UTRA band, the applicable channel bandwidths are specified in Table 5.4.2.1-1.					

1. Connect the SS to the UE antenna connectors as shown in Figure TS 36.508 [7] Annex A, Figure A.3.
2. The parameter settings for the cell are set up according to TS 36.508 [7] subclause 4.4.3.
3. Downlink signals are initially set up according to Annex C0, C.1 and C.3.0, and uplink signals according to Annex H.1 and H.3.0.
4. The UL Reference Measurement channels are set according to Table 6.6.2.3\_2.4.1-1.
5. Propagation conditions are set according to Annex B.0.
6. Ensure the UE is in State 3A-RF according to TS 36.508 [7] clause 5.2A.2. Message contents are defined in clause 6.6.2.3\_2.4.3.

#### 6.6.2.3\_2.4.2 Test procedure

1. SS sends uplink scheduling information for each UL HARQ process via PDCCH DCI format 0 for C\_RNTI to schedule the UL RMC according to Table 6.6.2.3\_2.4.1-1. Since the UE has no payload data to send, the UE transmits uplink MAC padding bits on the UL RMC.

2. Send continuously uplink power control "up" commands in the uplink scheduling information to the UE until the UE transmits at  $P_{UMAX}$  level.
3. Measure the mean power of the UE in the channel bandwidth of the radio access mode according to the test configuration, which shall meet the requirements described in Table 6.2.3\_2.5-1. The period of the measurement shall be at least the continuous duration of one sub-frame (1ms). For TDD slots with transient periods are not under test.
4. Measure the rectangular filtered mean power for E-UTRA.
5. Measure the rectangular filtered mean power of the first E-UTRA adjacent channel on both lower and upper side of the E-UTRA channel, respectively.
6. Measure the RRC filtered mean power of the first and the second UTRA adjacent channel on both lower and upper side of the E-UTRA channel, respectively.
7. Calculate the ratios of the power between the values measured in step 4 over step 5 for lower and upper E-UTRA<sub>ACLR</sub>, respectively.
8. Calculated the ratios of the power between the values measured in step 4 over step 6 for lower and upper UTRA<sub>ACLR1</sub>, UTRA<sub>ACLR2</sub>, respectively.

#### 6.6.2.3\_2.4.3 Message contents

Message contents are according to TS 36.508 [7] subclause 4.6.

#### 6.6.2.3\_2.5 Test requirement

##### 6.6.2.3\_2.5.1 Test requirements E-UTRA

- The measured UE mean power in the channel bandwidth, derived in step 3, shall fulfil requirements in Table 6.2.3\_2.5-1 as appropriate,

and

- if the measured adjacent channel power is greater than  $-50$  dBm then the measured E-UTRA<sub>ACLR</sub>, derived in step 7, shall be higher than the limits in table 6.6.2.3\_2.5.1-1.

**Table 6.6.2.3\_2.5.1-1: E-UTRA UE ACLR**

	Channel bandwidth / E-UTRA <sub>ACLR1</sub> / measurement bandwidth					
	1.4 MHz	3.0 MHz	5 MHz	10 MHz	15 MHz	20 MHz

Note 2:	Applicable for E-UTRA TDD co-existence with UTRA TDD in unpaired spectrum.					
Note 3:	BW <sub>UTRA</sub> for UTRA FDD is 5MHz and for UTRA TDD is 1.6MHz.					

### 6.6.2.3\_3 Adjacent Channel Leakage power Ratio for UL 64QAM

#### 6.6.2.3\_3.1 Test purpose

Same test purpose as in clause 6.6.2.3.1.

#### 6.6.2.3\_3.2 Test applicability

This test case applies to all types of E-UTRA UE from release 13 and forward that support UL 64QAM.

#### 6.6.2.3\_3.3 Minimum conformance requirements

Same minimum conformance requirements as in clause 6.6.2.3.3.

#### 6.6.2.3\_3.4 Test description

##### 6.6.2.3\_3.4.1 Initial conditions

Initial conditions are a set of test configurations the UE needs to be tested in and the steps for the SS to take with the UE to reach the correct measurement state.

The initial test configurations consist of environmental conditions, test frequencies, and channel bandwidths based on E-UTRA bands specified in table 5.4.2.1-1. All of these configurations shall be tested with applicable test parameters for each channel bandwidth, and are shown in table 6.6.2.3\_3.4.1-1. The details of the uplink reference measurement channels (RMCs) are specified in Annex A.2. Configurations of PDSCH and PDCCH before measurement are specified in Annex C.2.

**Table 6.6.2.3\_3.4.1-1: Test Configuration Table**

Initial Conditions						
Test Environment (as specified in TS 36.508 [7] subclause 4.1)				NC, TL/VL, TL/VH, TH/VL, TH/VH		
Test Frequencies (as specified in TS36.508 [7] subclause 4.3.1)				Low range, Mid range, High range		
Test Channel Bandwidths (as specified in TS 36.508 [7] subclause 4.3.1)				Lowest, 5MHz, 10MHz, Highest		
Test Parameters for Channel Bandwidths						
Ch BW	Downlink Configuration			Uplink Configuration		
	Mod'n	RB allocation		Mod'n	RB allocation	
		FDD	TDD		FDD	TDD
1.4MHz				64QAM	6	6
1.4MHz				64QAM	5	5
3MHz				64QAM	15	15
3MHz				64QAM	4	4
5MHz				64QAM	25	25
5MHz				64QAM	8	8
10MHz				64QAM	50	50
10MHz				64QAM	12	12
15MHz				64QAM	75	75
15MHz				64QAM	16	16
20MHz				64QAM	100	100
20MHz				64QAM	18	18
Note 1: Test Channel Bandwidths are checked separately for each E-UTRA band, which applicable channel bandwidths are specified in Table 5.4.2.1-1.						
Note 2: The RB <sub>start</sub> of partial RB allocation shall be RB#0 and RB# (max + 1 – RB allocation) of the channel bandwidth.						

1. Connect the SS to the UE antenna connectors as shown in Figure TS 36.508 [7] Annex A, Figure A.3.
2. The parameter settings for the cell are set up according to TS 36.508 [7] subclause 4.4.3.
3. Downlink signals are initially set up according to Annex C0, C.1 and C.3.0, and uplink signals according to Annex H.1 and H.3.0.
4. The UL Reference Measurement channels are set according to Table 6.6.2.3\_3.4.1-1.
5. Propagation conditions are set according to Annex B.0.
6. Ensure the UE is in State 3A-RF according to TS 36.508 [7] clause 5.2A.2. Message contents are defined in clause 6.6.2.3\_3.4.3.

#### 6.6.2.3\_3.4.2 Test procedure

Same test procedure as in clause 6.6.2.3.4.2.

#### 6.6.2.3\_3.4.3 Message contents

Message contents are according to TS 36.508 [7] subclause 4.6.

#### 6.6.2.3\_3.5 Test requirement

##### 6.6.2.3\_3.5.1 Test requirements E-UTRA

- The measured UE mean power in the channel bandwidth, derived in step 3, shall fulfil requirements in Table 6.2.3\_1.5-1 as appropriate, and
- if the measured adjacent channel power is greater than  $-50$  dBm then the measured E-UTRA<sub>ACLR</sub>, derived in step 7, shall be higher than the limits in table 6.6.2.3\_3.5.1-1.

Table 6.6.2.3\_3.5.1-1: E-UTRA UE ACLR

	Channel bandwidth / E-UTRA <sub>ACLR1</sub> / measurement bandwidth					
	1.4 MHz	3.0 MHz	5 MHz	10 MHz	15 MHz	20 MHz
E-UTRA <sub>ACLR1</sub>	29.2 dB	29.2 dB	29.2 dB	29.2 dB	29.2 dB	29.2 dB
E-UTRA channel Measurement bandwidth	1.08 MHz	2.7 MHz	4.5 MHz	9.0 MHz	13.5 MHz	18 MHz
UE channel	+1.4 MHz or -1.4 MHz	+3 MHz or -3 MHz	+5MHz or -5MHz	+10MHz or -10MHz	+15MHz or -15MHz	+20MHz or -20MHz

## 6.6.2.3\_3.5.1 Test requirements UTRA

If the measured UTRA channel power is greater than  $-50\text{dBm}$  then the measured UTRA<sub>ACLR1</sub>, UTRA<sub>ACLR2</sub>, derived in step 8, shall be higher than the limits in table 6.6.2.3\_3.5.2-1.

Table 6.6.2.3\_3.5.2-1: UTRA UE ACLR

	Channel bandwidth / UTRA <sub>ACLR1/2</sub> / measurement bandwidth					
	1.4 MHz	3.0 MHz	5 MHz	10 MHz	15 MHz	20 MHz
UTRA <sub>ACLR1</sub>	32.2 dB	32.2 dB	32.2 dB	32.2 dB	32.2 dB	32.2 dB
Adjacent channel centre frequency offset (in MHz)	$0.7+BW_{UTR}/2$ / -0.7- $BW_{UTR}/2$	$1.5+BW_{UTR}/2$ / -1.5- $BW_{UTR}/2$	$2.5+BW_{UTR}/2$ / -2.5- $BW_{UTR}/2$	$5+BW_{UTR}/2$ / -5- $BW_{UTR}/2$	$7.5+BW_{UTR}/2$ / -7.5- $BW_{UTR}/2$	$10+BW_{UTR}/2$ / -10- $BW_{UTR}/2$
UTRA <sub>ACLR2</sub>	-	-	35.2 dB	35.2 dB	35.2 dB	35.2 dB
Adjacent channel centre frequency offset (in MHz)	-	-	$2.5+3*BW_{UTR}/2$ / -2.5- $3*BW_{UTR}/2$	$5+3*BW_{UTR}/2$ / -5- $3*BW_{UTR}/2$	$7.5+3*BW_{UTR}/2$ / -7.5- $3*BW_{UTR}/2$	$10+3*BW_{UTR}/2$ / -10- $3*BW_{UTR}/2$
E-UTRA channel Measurement bandwidth	1.08 MHz	2.7 MHz	4.5 MHz	9.0 MHz	13.5 MHz	18 MHz
UTRA 5MHz channel Measurement bandwidth <sup>1</sup>	3.84 MHz	3.84 MHz	3.84 MHz	3.84 MHz	3.84 MHz	3.84 MHz
UTRA 1.6MHz channel measurement bandwidth <sup>2</sup>	1.28 MHz	1.28 MHz	1.28 MHz	1.28 MHz	1.28 MHz	1.28 MHz
Note 1:	Applicable for E-UTRA FDD co-existence with UTRA FDD in paired spectrum.					
Note 2:	Applicable for E-UTRA TDD co-existence with UTRA TDD in unpaired spectrum.					
Note 3:	$BW_{UTR}$ for UTRA FDD is 5MHz and for UTRA TDD is 1.6MHz.					

## 6.6.2.3\_4 Adjacent Channel Leakage power Ratio for Multi-Cluster PUSCH with UL 64QAM

## 6.6.2.3\_4.1 Test purpose

Same test purpose as in clause 6.6.2.3\_2.

## 6.6.2.3\_4.2 Test applicability

This test case applies to all types of E-UTRA UE from release 13 and forward that support UL 64QAM and multi cluster PUSCH within a component carrier for the tested band.

### 6.6.2.3\_4.3 Minimum conformance requirements

Same minimum conformance requirements as in clause 6.6.2.3\_2.3.

### 6.6.2.3\_4.4 Test description

#### 6.6.2.3\_4.4.1 Initial conditions

Initial conditions are a set of test configurations the UE needs to be tested in and the steps for the SS to take with the UE to reach the correct measurement state.

The initial test configurations consist of environmental conditions, test frequencies, and channel bandwidths based on E-UTRA bands specified in table 5.4.2.1-1. All of these configurations shall be tested with applicable test parameters for each channel bandwidth, and are shown in table 6.6.2.3\_4.4.1-1. The details of the uplink reference measurement channels (RMCs) are specified in Annex A.2. Configurations of PDSCH and PDCCH before measurement are specified in Annex C.2.

**Table 6.6.2.3\_4.4.1-1: Test Configuration Table**

Initial Conditions					
Test Environment as specified in TS 36.508[7] subclause 4.1			Normal, TL/VL, TL/VH, TH/VL, TH/VH		
Test Frequencies as specified in TS36.508 [7] subclause 4.3.1			Low range, Mid range, High range		
Test Channel Bandwidths as specified in TS 36.508 [7] subclause 4.3.1			Highest		
Test Parameters for Channel Bandwidths					
Configuration ID	Downlink Configuration		Uplink Configuration		
	Ch BW	N/A for SEM testing	Mod'n	Cluster1 RB allocations (LCRB @ RB <sub>start</sub> )	Cluster2 RB allocations (LCRB @ RB <sub>start</sub> )
1	5MHz		64QAM	2@0	1@24
2	5MHz		64QAM	18@0	2@22
3	5MHz		64QAM	2@0	18@6
4	10MHz		64QAM	3@0	2@48
5	10MHz		64QAM	42@0	3@45
6	10MHz		64QAM	3@0	42@6
7	15MHz		64QAM	8@0	7@68
8	15MHz		64QAM	60@0	4@68
9	15MHz		64QAM	4@0	60@12
10	20MHz		64QAM	4@0	4@96
11	20MHz		64QAM	92@0	4@96
12	20MHz		64QAM	4@0	92@8
Note 1: Test Channel Bandwidths are checked separately for each E-UTRA band, the applicable channel bandwidths are specified in Table 5.4.2.1-1.					

1. Connect the SS to the UE antenna connectors as shown in Figure TS 36.508 [7] Annex A, Figure A.3.
2. The parameter settings for the cell are set up according to TS 36.508 [7] subclause 4.4.3.
3. Downlink signals are initially set up according to Annex C0, C.1 and C.3.0, and uplink signals according to Annex H.1 and H.3.0.
4. The UL Reference Measurement channels are set according to Table 6.6.2.3\_4.4.1-1.
5. Propagation conditions are set according to Annex B.0.
6. Ensure the UE is in State 3A-RF according to TS 36.508 [7] clause 5.2A.2. Message contents are defined in clause 6.6.2.3\_4.4.3.

#### 6.6.2.3\_4.4.2 Test procedure

Same test procedure as in clause 6.6.2.3\_2.4.2 with following exception:

- In step 3, instead of Table 6.2.3\_2.5-1 → use Table 6.2.3\_4.5-1

#### 6.6.2.3\_4.4.3 Message contents

Message contents are according to TS 36.508 [7] subclause 4.6.

#### 6.6.2.3\_4.5 Test requirement

Same test requirements as in clause 6.6.2.3\_2.5 with following exception:

- Instead of Table 6.2.3\_2.5-1 → use Table 6.2.3\_4.5-1

### 6.6.2.3A Adjacent Channel Leakage power Ratio for CA

#### 6.6.2.3A.0 Minimum conformance requirements

ACLR for CA requirements are specified for two scenarios for an adjacent E-UTRA<sub>ACLR</sub> and UTRA<sub>ACLR1/2</sub> as shown in Figure 6.6.2.3A.0-1.

Figure 6.6.2.3A.0-1: Adjacent Channel Leakage Power Ratio for CA requirements

#### 6.6.2.3A.0.1 Minimum requirement UTRA for CA

For inter-band carrier aggregation with uplink assigned to two E-UTRA bands, the UTRA Adjacent Channel Leakage power Ratio (UTRA<sub>ACLR</sub>) is the ratio of the filtered mean power centred on the assigned channel bandwidth on the component carrier to the filtered mean power centred on an adjacent channel frequency. The UTRA Adjacent Channel Leakage power Ratio is defined per carrier and the requirement is specified in subclause 6.6.2.3.3.

For intra-band contiguous carrier aggregation the UTRA Adjacent Channel Leakage power Ratio (UTRA<sub>ACLR</sub>) is the ratio of the filtered mean power centred on the aggregated channel bandwidth to the filtered mean power centred on an adjacent(s) UTRA channel frequency.

For intra-band non-contiguous carrier aggregation when all sub-blocks consist of one component carrier the UTRA Adjacent Channel Leakage power Ratio (UTRA<sub>ACLR</sub>) is the ratio of the sum of the filtered mean powers centred on the assigned sub-block frequencies to the filtered mean power centred on an adjacent(s) UTRA channel frequency. UTRA<sub>ACLR1/2</sub> requirements are applicable for all sub-blocks and are specified in Table 6.6.2.3A.0.1-2. UTRA<sub>ACLR1</sub> is required to be met in the sub-block gap when the gap bandwidth  $W_{gap}$  is  $5\text{MHz} \leq W_{gap} < 15\text{MHz}$ . Both UTRA<sub>ACLR1</sub> and UTRA<sub>ACLR2</sub> are required to be met in the sub-block gap when the gap bandwidth  $W_{gap}$  is  $15\text{MHz} \leq W_{gap}$ .

UTRA Adjacent Channel Leakage power Ratio is specified for both the first UTRA adjacent channel (UTRA<sub>ACLR1</sub>) and the 2<sup>nd</sup> UTRA adjacent channel (UTRA<sub>ACLR2</sub>). The UTRA channel power is measured with a RRC bandwidth filter with roll-off factor  $\alpha = 0.22$ . The assigned aggregated channel bandwidth power is measured with a rectangular filter with measurement bandwidth specified in Table 6.6.2.3A.0.1-1 for intraband contiguous carrier aggregation or 6.6.2.3A.0.1-2 for intraband non-contiguous carrier aggregation. If the measured UTRA channel power is greater than  $-50\text{dBm}$  then

the  $UTRA_{ACLR}$  shall be higher than the value specified in Table 6.6.2.3A.0.1-1 for intraband contiguous carrier aggregation or 6.6.2.3A.0.1-2 for intraband non-contiguous carrier aggregation.

**Table 6.6.2.3A.0.1-1: Requirements for  $UTRA_{ACLR1/2}$**

	<b>CA bandwidth class / <math>UTRA_{ACLR1/2}</math> / measurement bandwidth</b>
	<b>CA bandwidth class B and C</b>
$UTRA_{ACLR1}$	33 dB
Adjacent channel centre frequency offset (in MHz)	$\frac{+ BW_{Channel\_CA} / 2 + BW_{UTRA} / 2}{- BW_{Channel\_CA} / 2 - BW_{UTRA} / 2}$
$UTRA_{ACLR2}$	36 dB
Adjacent channel centre frequency offset (in MHz)	$\frac{+ BW_{Channel\_CA} / 2 + 3 * BW_{UTRA} / 2}{- BW_{Channel\_CA} / 2 - 3 * BW_{UTRA} / 2}$
CA E-UTRA channel Measurement bandwidth	$BW_{Channel\_CA} - 2 * BW_{GB}$
UTRA 5MHz channel Measurement bandwidth (Note 1)	3.84 MHz
UTRA 1.6MHz channel measurement bandwidth (Note 2)	1.28 MHz
NOTE 1: Applicable for E-UTRA FDD co-existence with UTRA FDD in paired spectrum.	
NOTE 2: Applicable for E-UTRA TDD co-existence with UTRA TDD in unpaired spectrum.	

**Table 6.6.2.3A.0.1-2: Requirements for intraband non-contiguous CA  $UTRA_{ACLR1/2}$**

	<b><math>UTRA_{ACLR1/2}</math> / measurement bandwidth</b>
$UTRA_{ACLR1}$	33 dB
Adjacent channel centre frequency offset (in MHz)	$\frac{+ F_{edge,block,high} + BW_{UTRA} / 2}{- F_{edge,block,low} - BW_{UTRA} / 2}$
$UTRA_{ACLR2}$	36 dB
Adjacent channel centre frequency offset (in MHz)	$\frac{+ F_{edge,block,high} + 3 * BW_{UTRA} / 2}{- F_{edge,block,low} - 3 * BW_{UTRA} / 2}$
Sub-block measurement bandwidth	$BW_{Channel,block} - 2 * BW_{GB}$
UTRA 5 MHz channel Measurement bandwidth (Note 1)	3.84 MHz
UTRA 1.6 MHz channel measurement bandwidth (Note 2)	1.28 MHz
NOTE 1: Applicable for E-UTRA FDD co-existence with UTRA FDD in paired spectrum.	
NOTE 2: Applicable for E-UTRA TDD co-existence with UTRA TDD in unpaired spectrum.	

The normative reference for this requirement is TS 36.101 [2] subclause 6.6.2.3.2A.

#### 6.6.2.3A.0.2 Minimum requirements for CA E-UTRA

For intra-band contiguous carrier aggregation the carrier aggregation E-UTRA Adjacent Channel Leakage power Ratio (CA E- $UTRA_{ACLR}$ ) is the ratio of the filtered mean power centred on the aggregated channel bandwidth to the filtered mean power centred on an adjacent aggregated channel bandwidth at nominal channel spacing. The assigned aggregated channel bandwidth power and adjacent aggregated channel bandwidth power are measured with rectangular filters with measurement bandwidths specified in Table 6.6.2.3A.0.2-1. If the measured adjacent channel power is greater than – 50dBm then the E- $UTRA_{ACLR}$  shall be higher than the value specified in Table 6.6.2.3A.0.2-1.

**Table 6.6.2.3A.0.2-1: General requirements for CA E-UTRA<sub>ACLR</sub>**

	CA bandwidth class / CA E-UTRA <sub>ACLR</sub> / Measurement bandwidth
	CA bandwidth class B and C
CA E-UTRA <sub>ACLR</sub>	30 dB
CA E-UTRA channel Measurement bandwidth	$BW_{\text{Channel\_CA}} - 2 * BW_{\text{GB}}$
Adjacent channel centre frequency offset (in MHz)	$+ BW_{\text{Channel\_CA}}$ / $- BW_{\text{Channel\_CA}}$

For inter-band carrier aggregation with uplink assigned to two E-UTRA bands, E-UTRA Adjacent Channel Leakage power Ratio (E-UTRA<sub>ACLR</sub>) is the ratio of the filtered mean power centred on the assigned channel bandwidth on a component carrier to the filtered mean power centred on an adjacent channel frequency. The E-UTRA Adjacent Channel Leakage power Ratio is defined per carrier and the requirement is specified in subclause 6.6.2.3.1.

For intra-band non-contiguous carrier aggregation when all sub-blocks consist of one component carrier the E-UTRA Adjacent Channel Leakage power Ratio (E-UTRA<sub>ACLR</sub>) is the ratio of the sum of the filtered mean powers centred on the assigned sub-block frequencies to the filtered mean power centred on an adjacent channel frequency at nominal channel spacing. In case the sub-block gap bandwidth  $W_{\text{gap}}$  is smaller than of the sub-block bandwidth then for that sub-block no E-UTRA<sub>ACLR</sub> requirement is set for the gap. In case the sub-block gap bandwidth  $W_{\text{gap}}$  is smaller than either of the sub-block bandwidths then no E-UTRA<sub>ACLR</sub> requirement is set for the gap. The assigned E-UTRA sub-block power and adjacent E-UTRA channel power are measured with rectangular filters with measurement bandwidths specified in Table 6.6.2.3A.0.2-2. If the measured adjacent channel power is greater than  $-50\text{dBm}$  then the E-UTRA<sub>ACLR</sub> shall be higher than the value specified in Table 6.6.2.3A.0.2-2.

**Table 6.6.2.3A.0.2-2: General requirements for non-contiguous intraband CA E-UTRA<sub>ACLR</sub>**

	CC and adjacent channel bandwidth / E-UTRA <sub>ACLR</sub> / Measurement bandwidth					
	1.4 MHz	3 MHz	5 MHz	10 MHz	15 MHz	20 MHz
E-UTRA <sub>ACLR1</sub>	30 dB	30 dB	30 dB	30 dB	30 dB	30 dB
CC and adjacent channel measurement bandwidth [MHz]	1.08	2.7	4.5	9	13.5	18
Adjacent channel centre frequency offset [MHz]	+ 1.4 / - 1.4	+ 3 / - 3	+ 5 / - 5	+ 10 / - 10	+ 15 / - 15	+ 20 / - 20

The normative reference for this requirement is TS 36.101 [2] subclause 6.6.2.3.3A.

#### 6.6.2.3A.1 Adjacent Channel Leakage power Ratio for CA (intra-band contiguous DL CA and UL CA)

##### 6.6.2.3A.1.1 Test purpose

To verify that UE transmitter does not cause unacceptable interference to adjacent channels in terms of Adjacent Channel Leakage power Ratio (ACLR) for CA.

##### 6.6.2.3A.1.2 Test applicability

This test case applies to all types of E-UTRA UE release 10 and forward that support intra band contiguous DL CA and UL CA.

##### 6.6.2.3A.1.3 Minimum conformance requirements

The minimum conformance requirements are defined in clause 6.6.2.3A.0.

6.6.2.3A.1.4 Test description

6.6.2.3A.1.4.1 Initial condition

Initial conditions are a set of test configurations the UE needs to be tested in and the steps for the SS to take with the UE to reach the correct measurement state.

The initial test configurations consist of environmental conditions, test frequencies, and channel bandwidths based on E-UTRA CA configurations specified in table 5.4.2A.1-1. All of these configurations shall be tested with applicable test parameters for each channel bandwidth, and are shown in table 6.6.2.3A.1.4.1-1. The details of the uplink reference measurement channels (RMCs) are specified in Annex A.2. Configurations of PDSCH and PDCCH before measurement are specified in Annex C.2.

Table 6.6.2.3A.1.4.1-1: Test Configuration Table

Note 1: CA Configuration Test CC Combination settings are checked separately for each CA Configuration, which applicable aggregated channel bandwidths are specified in Table 5.4.2A.1-1.

Note 2: If in the CA Configuration UE supports multiple CC Combinations with the same  $N_{RB\_agg}$ , only the first of those is tested, according to the order on the Test Configuration Table list.

1. Connect the SS to the UE antenna connectors as shown in Figure TS 36.508 [7] Annex A, Figure group A.32 as appropriate.
2. The parameter settings for the cell are set up according to TS 36.508 [7] subclause 4.4.3.
3. Downlink signals for PCC are initially set up according to Annex C.0, C.1 and C.3.0, and uplink signals according to Annex H.1 and H.3.0.
4. The UL Reference Measurement channels are set according to Table 6.6.2.3A.1.4.1-1.
5. Propagation conditions are set according to Annex B.0.
6. Ensure the UE is in State 3A-RF according to TS 36.508 [7] clause 5.2A.2. Message contents are defined in clause 6.6.2.3A.1.4.3.

#### 6.6.2.3A.1.4.2 Test procedure

1. Configure SCC according to Annex C.0, C.1 and Annex C.3.0 for all downlink physical channels.
2. The SS shall configure SCC as per TS 36.508 [7] clause 5.2A.4. Message contents are defined in clause 6.6.2.3A.1.4.3
3. SS activates SCC by sending the activation MAC-CE (Refer TS 36.321 [13], clauses 5.13, 6.1.3.8). Wait for at least 2 seconds (Refer TS 36.133, clauses 8.3.3.2).
4. SS sends uplink scheduling information for each UL HARQ process via PDCCH DCI format 0 for C\_RNTI to schedule the UL RMC according to Table 6.6.2.3A.1.4.1-1 on both PCC and SCC. Since the UE has no payload and no loopback data to send the UE sends uplink MAC padding bits on the UL RMC.
5. Send continuously uplink power control “up” commands in every uplink scheduling information to the UE until the UE transmits at  $P_{UMAX}$  level.

6. Measure the mean power over all component carriers of the UE in the CA configuration of the radio access mode according to the test configuration, which shall meet the requirements described in Table 6.2.3A.1.5-1. The period of the measurement shall be at least the continuous duration of one sub-frame (1ms). For TDD slots with transient periods are not under test.
7. Measure the rectangular filtered mean power for CA E-UTRA.
8. Measure the rectangular filtered mean power of the first CA E-UTRA adjacent channel on both lower and upper side of the CA E-UTRA channel, respectively.
9. Measure the RRC filtered mean power of the first and the second UTRA adjacent channel on both lower and upper side of the CA E-UTRA channel, respectively.
10. Calculate the ratio of the power between the values measured in step 7 over step 8 for CA E-UTRA<sub>ACLR</sub>.
11. Calculate the ratio of the power between the values measured in step 7 over step 9 for UTRA<sub>ACLR1</sub>, UTRA<sub>ACLR2</sub>.

#### 6.6.2.3A.1.4.3 Message contents

Message contents are according to TS 36.508 [7] subclause 4.6. In test procedure step 2, for SCC configuration there are no additional message contents.

#### 6.6.2.3A.1.5 Test Requirements

##### 6.6.2.3A.1.5.1 Test requirements of UTRA for CA

If the measured UTRA channel power is greater than  $-50$  dBm then the measured UTRA<sub>ACLR1</sub> and UTRA<sub>ACLR2</sub>, derived in step 11, shall be higher than the limits in table 6.6.2.3A.1.5.1-1.

**Table 6.6.2.3A.1.5.1-1: UTRA UE ACLR for CA**

	CA bandwidth class / UTRA <sub>ACLR1/2</sub> / measurement bandwidth
CA bandwidth class B and C	
UTRA <sub>ACLR1</sub>	32.2 dB
Adjacent channel centre frequency offset (in MHz)	$\frac{+ BW_{\text{Channel\_CA}}/2 + BW_{\text{UTRA}}/2}{- BW_{\text{Channel\_CA}}/2 - BW_{\text{UTRA}}/2}$
UTRA <sub>ACLR2</sub>	35.2 dB
Adjacent channel centre frequency offset (in MHz)	$\frac{+ BW_{\text{Channel\_CA}}/2 + 3*BW_{\text{UTRA}}/2}{- BW_{\text{Channel\_CA}}/2 - 3*BW_{\text{UTRA}}/2}$
CA E-UTRA channel Measurement bandwidth	$BW_{\text{Channel\_CA}} - 2* BW_{\text{GB}}$
UTRA 5MHz channel Measurement bandwidth (Note 1)	3.84 MHz
UTRA 1.6MHz channel measurement bandwidth (Note 2)	1.28 MHz
Note 1:	Applicable for E-UTRA FDD co-existence with UTRA FDD in paired spectrum.
Note 2:	Applicable for E-UTRA TDD co-existence with UTRA TDD in unpaired spectrum.

##### 6.6.2.3A.1.5.2 Test requirements of CA E-UTRA

- The measured UE mean power in the channel bandwidth as specified in clause 5.4.2A, derived in step 6, shall fulfil requirements in Table 6.2.3A.1.5-1 as appropriate,

and

- if the measured adjacent channel power is greater than  $-50$  dBm then the measured CA E-UTRA<sub>ACLR</sub>, derived in step 10, shall be higher than the limits in table 6.6.2.3A.1.5.2-1.

Table 6.6.2.3A.1.5.2-1: CA E-UTRA ACLR

	CA bandwidth class / CA E-UTRA <sub>ACLR</sub> / Measurement bandwidth
	CA bandwidth class B and C
CA E-UTRA <sub>ACLR</sub>	29.2 dB
CA E-UTRA channel Measurement bandwidth	$BW_{\text{Channel\_CA}} - 2 * BW_{\text{GB}}$
Adjacent channel centre frequency offset (in MHz)	$+ BW_{\text{Channel\_CA}}$ / $- BW_{\text{Channel\_CA}}$

### 6.6.2.3A.1\_1 Adjacent Channel Leakage power Ratio for CA (intra-band contiguous DL CA and UL CA) for UL 64QAM

#### 6.6.2.3A.1\_1.1 Test purpose

Same test purpose as defined in clause 6.6.2.3A.1.1.

#### 6.6.2.3A.1\_1.2 Test applicability

This test case applies to all types of E-UTRA UE from release 13 and forward that support intra-band contiguous DL CA, UL CA and UL 64QAM.

#### 6.6.2.3A.1\_1.3 Minimum conformance requirements

The minimum conformance requirements are defined in clause 6.6.2.3A.0.

#### 6.6.2.3A.1\_1.4 Test description

##### 6.6.2.3A.1\_1.4.1 Initial conditions

Initial conditions are a set of test configurations the UE needs to be tested in and the steps for the SS to take with the UE to reach the correct measurement state.

The initial test configurations consist of environmental conditions, test frequencies, and channel bandwidths based on E-UTRA CA configurations specified in Table 5.4.2A.1-1. All of these configurations shall be tested with applicable test parameters for each channel bandwidth, and are shown in Table 6.6.2.3A.1\_1.4.1-1. The details of the uplink reference measurement channels (RMCs) are specified in Annex A.2. Configurations of PDSCH and PDCCH before measurement are specified in Annex C.2.

Table 6.6.2.3A.1\_1.4.1-1: Test Configuration Table

Initial Conditions											
Test Environment as specified in TS 36.508[7] subclause 4.1					NC, TL/VL, TL/VH, TH/VL, TH/VH						
Test Frequencies as specified in TS36.508 [7] subclause 4.3.1 for different CA bandwidth classes, and PCC and SCCs are mapped onto physical frequencies according to Table 6.1-2.					Low range, High range						
Test CC Combination setting ( $N_{RB\_agg}$ ) as specified in subclause 5.4.2A.1 for the CA Configuration					Lowest $N_{RB\_agg}$ , Highest $N_{RB\_agg}$ (Note 2)						
Test Parameters for CA Configurations											
CA Configuration / $N_{RB\_agg}$			DL Allocation		CC MOD	UL Allocation					
ID	PCC $N_{RB}$	SCCs $N_{RB}$	PCC & SCC RB allocation			$N_{RB\_allo}$	PCC & SCC RB allocations( $L_{CRB}$ @ $RB_{start}$ )

33	50	50			64QAM	2	P_1@0	S_1@0			
34	50	50			64QAM	50	P_50@0	S_0@0			
35	50	50			64QAM	100	P_50@0	S_50@0	-	-	
Note 1: CA Configuration Test CC Combination settings are checked separately for each CA Configuration, which applicable aggregated channel bandwidths are specified in Table 5.4.2A.1-1.											
Note 2: If in the CA Configuration UE supports multiple CC Combinations with the same $N_{RB\_agg}$ , only the first of those is tested, according to the order on the Test Configuration Table list.											

## 6.6.2.3A.1\_1.4.2 Test procedure

Same test procedure as defined in clause 6.6.2.3A.1.4.2.

#### 6.6.2.3A.1\_1.4.3 Message contents

Same message contents as defined in clause 6.6.2.3A.1.4.3.

#### 6.6.2.3A.1\_1.5 Test requirement

Same test requirement as defined in clause 6.6.2.3A.1.5.

### 6.6.2.3A.2 Adjacent Channel Leakage power Ratio for CA (inter-band DL CA and UL CA)

#### 6.6.2.3A.2.1 Test purpose

To verify that UE transmitter does not cause unacceptable interference to adjacent channels in terms of Adjacent Channel Leakage power Ratio (ACLR) for CA.

#### 6.6.2.3A.2.2 Test applicability

This test case applies to all types of E-UTRA UE release 11 and forward that support inter-band DL CA and UL CA.

#### 6.6.2.3A.2.3 Minimum conformance requirements

The minimum conformance requirements are defined in clause 6.6.2.3A.0.

#### 6.6.2.3A.2.4 Test description

##### 6.6.2.3A.2.4.1 Initial condition

Initial conditions are a set of test configurations the UE needs to be tested in and the steps for the SS to take with the UE to reach the correct measurement state.

The initial test configurations consist of environmental conditions, test frequencies, and channel bandwidths based on E-UTRA CA configurations specified in Table 5.4.2A.1-2 for CA configurations with two bands or Table 5.4.2A.1-2a for CA configurations with three bands. All of these configurations shall be tested with applicable test parameters for each channel bandwidth, and are shown in table 6.6.2.3A.2.4.1-1. The details of the uplink reference measurement channels (RMCs) are specified in Annex A.2. Configurations of PDSCH and PDCCH before measurement are specified in Annex C.2.

Table 6.6.2.3A.2.4.1-1: Test Configuration Table

Initial Conditions								
Test Environment as specified in TS 36.508[7] subclause 4.1						NC, TL/VL, TL/VH, TH/VL, TH/VH		
Test Frequencies as specified in TS 36.508 [7] subclause 4.3.1 for different CA bandwidth classes						Low and High range for both PCC and SCC (Note 3)		
Test CC Combination setting (NRB_agg) as specified in subclause 5.4.2A.1 for the CA Configuration across bandwidth combination sets supported by the UE.						Lowest NRB_agg Highest NRB_agg (Note 2)		
Test Parameters for CA Configurations								
Config ID	CA Configuration / NRB_agg		DL Allocation	CC MOD		UL Allocation

60	100	100		QPSK	16QAM	118	18	100

Note 1: CA Configuration Test CC Combination settings are checked separately for each CA Configuration, which applicable aggregated channel bandwidths are specified in Table 5.4.2A.1-2.

Note 2: If in the CA Configuration UE supports multiple CC Combinations with the same NRB\_agg, only the first of those is tested, according to the order on the Test Configuration Table list.

Note 3: For Low range place test point with RB\_start=0. For High range place test point with RB\_start=RB\_max-L\_CRB+1.

1. Connect the SS to the UE antenna connectors as shown in Figure TS 36.508 [7] Annex A, Figure group A.32 as appropriate.
2. The parameter settings for the cell are set up according to TS 36.508 [7] subclause 4.4.3.
3. Downlink signals for PCC are initially set up according to Annex C.0, C.1 and C.3.0, and uplink signals according to Annex H.1 and H.3.0.
4. The UL Reference Measurement channels are set according to Table 6.6.2.3A.2.4.1-1.
5. Propagation conditions are set according to Annex B.0.

6. Ensure the UE is in State 3A-RF according to TS 36.508 [7] clause 5.2A.2. Message contents are defined in clause 6.6.2.3A.2.4.3.

#### 6.6.2.3A.2.4.2 Test procedure

1. Configure SCC according to Annex C.0, C.1 and Annex C.3.0 for all downlink physical channels.
2. The SS shall configure SCC as per TS 36.508 [7] clause 5.2A.4. Message contents are defined in clause 6.6.2.3A.2.4.3
3. SS activates SCC by sending the activation MAC-CE (Refer TS 36.321 [13], clauses 5.13, 6.1.3.8). Wait for at least 2 seconds (Refer TS 36.133, clauses 8.3.3.2).
4. SS sends uplink scheduling information for each UL HARQ process via PDCCH DCI format 0 for C\_RNTI to schedule the UL RMC according to Table 6.6.2.3A.2.4.1-1 on both PCC and SCC. Since the UE has no payload and no loopback data to send the UE sends uplink MAC padding bits on the UL RMC.
5. Send continuously uplink power control “up” commands in every uplink scheduling information to the UE until the UE transmits at  $P_{UMAX}$  level.
6. Measure the mean power of the component carrier of the UE in the first band of the CA configuration of the radio access mode according to the test configuration, which shall meet the requirements described in Table 6.2.3A.2.5-1. The period of the measurement shall be at least the continuous duration of one sub-frame (1ms). For TDD slots with transient periods are not under test.
7. Measure the rectangular filtered mean power for CA E-UTRA in the first band of the CA configuration.
8. Measure the rectangular filtered mean power of the first CA E-UTRA adjacent channel on both lower and upper side of the CA E-UTRA channel in the first band of the CA configuration, respectively.
9. Measure the RRC filtered mean power of the first and the second UTRA adjacent channel on both lower and upper side of the CA E-UTRA channel in the first band of the CA configuration, respectively.
10. Calculate the ratio of the power between the values measured in step 7 over step 8 for CA E-UTRA<sub>ACLR</sub>.
11. Calculate the ratio of the power between the values measured in step 7 over step 9 for UTRA<sub>ACLR1</sub>, UTRA<sub>ACLR2</sub>.
12. Repeat steps 6 to 11 for the second band of the CA configuration.

#### 6.6.2.3A.2.4.3 Message contents

Message contents are according to TS 36.508 [7] subclause 4.6. In test procedure step 2, for SCC configuration there are no additional message contents.

#### 6.6.2.3A.2.5 Test Requirements

##### 6.6.2.3A.2.5.1 Test requirements of UTRA for CA

If the measured UTRA channel power is greater than  $-50\text{dBm}$  then the measured UTRA<sub>ACLR1</sub> and UTRA<sub>ACLR2</sub>, derived in step 11, shall be higher than the limits in table 6.6.2.3A.2.5.1-1.

**Table 6.6.2.3A.2.5.1-1: UTRA UE ACLR for CA**

	Channel bandwidth / UTRA <sub>ACLR1/2</sub> / measurement bandwidth					
	1.4 MHz	3.0 MHz	5 MHz	10 MHz	15 MHz	20 MHz

<b>UTRA<sub>ACLR1</sub></b>	32.2 dB	32.2 dB	32.2 dB	32.2 dB	32.2 dB	32.2 dB
<b>Adjacent channel centre frequency offset (in MHz)</b>	$0.7+BW_{UTR}/2$ / -0.7- $BW_{UTR}/2$	$1.5+BW_{UTR}/2$ / -1.5- $BW_{UTR}/2$	$2.5+BW_{UTR}/2$ / -2.5- $BW_{UTR}/2$	$5+BW_{UTR}/2$ / -5- $BW_{UTR}/2$	$7.5+BW_{UTR}/2$ / -7.5- $BW_{UTR}/2$	$10+BW_{UTR}/2$ / -10- $BW_{UTR}/2$
<b>UTRA<sub>ACLR2</sub></b>	-	-	35.2 dB	35.2 dB	35.2 dB	35.2 dB
<b>Adjacent channel centre frequency offset (in MHz)</b>	-	-	$2.5+3*BW_{UTR}/2$ / -2.5- $3*BW_{UTR}/2$	$5+3*BW_{UTR}/2$ / -5- $3*BW_{UTR}/2$	$7.5+3*BW_{UTR}/2$ / -7.5- $3*BW_{UTR}/2$	$10+3*BW_{UTR}/2$ / -10- $3*BW_{UTR}/2$
<b>E-UTRA channel Measurement bandwidth</b>	1.08 MHz	2.7 MHz	4.5 MHz	9.0 MHz	13.5 MHz	18 MHz
<b>UTRA 5MHz channel Measurement bandwidth<sup>1</sup></b>	3.84 MHz	3.84 MHz	3.84 MHz	3.84 MHz	3.84 MHz	3.84 MHz
<b>UTRA 1.6MHz channel measurement bandwidth<sup>2</sup></b>	1.28 MHz	1.28 MHz	1.28 MHz	1.28 MHz	1.28 MHz	1.28 MHz
Note 1: Applicable for E-UTRA FDD co-existence with UTRA FDD in paired spectrum. Note 2: Applicable for E-UTRA TDD co-existence with UTRA TDD in unpaired spectrum. Note 3: $BW_{UTR}$ for UTRA FDD is 5MHz and for UTRA TDD is 1.6MHz.						

#### 6.6.2.3A.2.5.2 Test requirements of CA E-UTRA

- The measured UE mean power in the channel bandwidth as specified in clause 5.4.2A, derived in step 6, shall fulfil requirements in Table 6.2.3A.2.5-1 as appropriate,

and

- if the measured adjacent channel power is greater than -50 dBm then the measured CA E-UTRA<sub>ACLR</sub>, derived in step 10, shall be higher than the limits in table 6.6.2.3A.2.5.2-1.

**Table 6.6.2.3A.2.5.2-1: CA E-UTRA ACLR**

	Channel bandwidth / E-UTRA <sub>ACLR1</sub> / measurement bandwidth					
	1.4 MHz	3.0 MHz	5 MHz	10 MHz	15 MHz	20 MHz
<b>E-UTRA<sub>ACLR1</sub></b>	29.2 dB	29.2 dB	29.2 dB	29.2 dB	29.2 dB	29.2 dB
<b>E-UTRA channel Measurement bandwidth</b>	1.08 MHz	2.7 MHz	4.5 MHz	9.0 MHz	13.5 MHz	18 MHz
<b>UE channel</b>	+1.4 MHz or -1.4 MHz	+3 MHz or -3 MHz	+5MHz or -5MHz	+10MHz or -10MHz	+15MHz or -15MHz	+20MHz or -20MHz

#### 6.6.2.3A.2\_1 Adjacent Channel Leakage power Ratio for CA (inter-band DL CA and UL CA) for UL 64QAM

##### 6.6.2.3A.2\_1.1 Test purpose

To verify that UE transmitter does not cause unacceptable interference to adjacent channels in terms of Adjacent Channel Leakage power Ratio (ACLR) for CA.

##### 6.6.2.3A.2\_1.2 Test applicability

This test case applies to all types of E-UTRA UE release 13 and forward that support inter band DL CA and UL CA and UL 64QAM.

### 6.6.2.3A.2\_1.3 Minimum conformance requirements

The minimum requirements are the same as in section 6.6.2.3A.2.3.

### 6.6.2.3A.2\_1.4 Test description

#### 6.6.2.3A.2\_1.4.1 Initial condition

Initial conditions are a set of test configurations the UE needs to be tested in and the steps for the SS to take with the UE to reach the correct measurement state.

The initial test configurations consist of environmental conditions, test frequencies, and channel bandwidths based on E-UTRA CA configurations specified in table 5.4.2A.1-1. All of these configurations shall be tested with applicable test parameters for each channel bandwidth, and are shown in table 6.6.2.3A.2\_1.4.1-1. The details of the uplink reference measurement channels (RMCs) are specified in Annex A.2. Configurations of PDSCH and PDCCH before measurement are specified in Annex C.2.

Table 6.6.2.3A.2\_1.4.1-1: Test Configuration Table

Initial Conditions								
Test Environment as specified in TS 36.508[7] subclause 4.1						NC, TL/VL, TL/VH, TH/VL, TH/VH		
Test Frequencies as specified in TS 36.508 [7] subclause 4.3.1 for different CA bandwidth classes						Low and High range for both PCC and SCC (Note 3)		
Test CC Combination setting (NRB_agg) as specified in subclause 5.4.2A.1 for the CA Configuration across bandwidth combination sets supported by the UE.						Lowest N <sub>RB_agg</sub> Highest N <sub>RB_agg</sub> (Note 2)		
Test Parameters for CA Configurations								
Config ID	CA Configuration / NRB_agg		DL Allocation	CC MOD		UL Allocation		
	PCC	SCC	PCC & SCC RB allocation	PCC	SCC	NRB_alloc	PCC & SCC RB allocations	
	NRB	NRB

24	100	100		64QAM	64QAM	200	100	100
Note 1:	CA Configuration Test CC Combination settings are checked separately for each CA Configuration, which applicable aggregated channel bandwidths are specified in Table 5.4.2A.1-1.							
Note 2:	If in the CA Configuration UE supports multiple CC Combinations with the same NRB_agg, only the first of those is tested, according to the order on the Test Configuration Table list.							
Note 3:	For Low range place test point with RB <sub>start</sub> =0. For High range place test point with RB <sub>start</sub> =RB <sub>max</sub> -L <sub>CRB</sub> +1.							

1. Connect the SS to the UE antenna connectors as shown in Figure TS 36.508 [7] Annex A, Figure group A.32 as appropriate.
2. The parameter settings for the cell are set up according to TS 36.508 [7] subclause 4.4.3.
3. Downlink signals for PCC are initially set up according to Annex C.0, C.1 and C.3.0, and uplink signals according to Annex H.1 and H.3.0.
4. The UL Reference Measurement channels are set according to Table 6.6.2.3A.2\_1.4.1-1.
5. Propagation conditions are set according to Annex B.0.
6. Ensure the UE is in State 3A-RF according to TS 36.508 [7] clause 5.2A.2. Message contents are defined in clause 6.6.2.3A.1.4.3.

#### 6.6.2.3A.2\_1.4.2 Test procedure

Same test procedure as in clause 6.6.2.3A.2.4.2.

#### 6.6.2.3A.2\_1.4.3 Message contents

Message contents are according to TS 36.508 [7] subclause 4.6. In test procedure step 2, for SCC configuration there are no additional message contents.

#### 6.6.2.3A.2\_1.5 Test Requirements

Same test requirements as in clause 6.6.2.3A.2.5.

### 6.6.2.3A.3 Adjacent Channel Leakage power Ratio for CA (intra-band non-contiguous DL CA and UL CA)

**Editor's note: For a transition period until RAN5#73, this test case in version 13.1.0 of 36.521-1 shall be used. This is to ensure no test coverage is lost before the UL 64QAM test case becomes available.**

#### 6.6.2.3A.3.1 Test purpose

Same test purpose as defined in clause 6.6.2.3A.1.1.

#### 6.6.2.3A.3\_1 Adjacent Channel Leakage power Ratio for CA (intra-band non-contiguous DL CA and UL CA) for UL 64QAM

##### 6.6.2.3A.3\_1.1 Test purpose

Same test purpose as defined in clause 6.6.2.3A.1.1.

##### 6.6.2.3A.3\_1.2 Test applicability

This test case applies to all types of E-UTRA UE release 13 and forward that support intra-band non-contiguous DL CA and UL CA and UL 64QAM.

##### 6.6.2.3A.3\_1.3 Minimum conformance requirements

The minimum conformance requirements are defined in clause 6.6.2.3A.0.

## 6.6.2.3A.3\_1.4 Test description

## 6.6.2.3A.3\_1.4.1 Initial condition

Initial conditions are a set of test configurations the UE needs to be tested in and the steps for the SS to take with the UE to reach the correct measurement state.

The initial test configurations consist of environmental conditions, test frequencies, and channel bandwidths based on E-UTRA CA configurations specified in table 5.4.2A.1-1. All of these configurations shall be tested with applicable test parameters for each channel bandwidth, and are shown in table 6.6.2.3A.3\_1.4.1-1. The details of the uplink reference measurement channels (RMCs) are specified in Annex A.2. Configurations of PDSCH and PDCCH before measurement are specified in Annex C.2.

**Table 6.6.2.3A.3\_1.4.1-1: Test Configuration Table**

Initial Conditions									
Test Environment as specified in TS 36.508[7] subclause 4.1				NC, TL/VL, TL/VH, TH/VL, TH/VH					
Test Frequencies as specified in TS36.508 [7] subclause 4.3.1 for different CA bandwidth classes, and PCC and SCCs are mapped onto physical frequencies according to Table 6.1-2.				Refer to test points A: Mid frequency, Maximum Wgap(low + high frequency)					
Test CC Combination setting ( $N_{RB}$ ) as specified in subclause 5.4.2A.1 for the CA Configuration across bandwidth combination sets supported by the UE.				Refer to test point Test only test points with Lowest $N_{RB}$ for PCC and SCC Highest $N_{RB}$ for PCC and SCC					
Test Parameters for CA Configurations									
ID	CA Configuration / $N_{RB\_agg}$		$W_{gap}$ [MHz]	DL Allocation		UL Allocation			
	PCC $N_{RB}$	SCCs $N_{RB}$		CC MOD	PCC & SCC RB allocation	CC MOD	PCC $N_{RB\_alloc}$ ( $L_{CRB}$ @ $RB_{start}$ )	CC MOD	SCC $N_{RB\_alloc}$ ( $L_{CRB}$ @ $RB_{start}$ )
Test Parameters for CA_4A-4A Configurations									
1	25	25	35	N/A	N/A	64QAM	P_1@0	64QAM	S_1@24
2	25	25	35	N/A	N/A	64QAM	P_25@0	64QAM	S_25@0
3	25	25	5	N/A	N/A	64QAM	P_1@0	64QAM	S_1@24
4	25	25	5	N/A	N/A	64QAM	P_25@0	64QAM	S_25@0
5	100	100	5	N/A	N/A	64QAM	P_1@0	64QAM	S_1@99
6	100	100	5	N/A	N/A	64QAM	P_25@0	64QAM	S_25@75
7	100	100	5	N/A	N/A	64QAM	P_100@0	64QAM	S_100@0

1. Connect the SS to the UE antenna connectors as shown in Figure TS 36.508 [7] Annex A, Figure group A.32 as appropriate.
2. The parameter settings for the cell are set up according to TS 36.508 [7] subclause 4.4.3.
3. Downlink signals for PCC are initially set up according to Annex C.0, C.1 and C.3.0, and uplink signals according to Annex H.1 and H.3.0.
4. The UL Reference Measurement channels are set according to Table 6.6.2.3A.1.4.1-1.
5. Propagation conditions are set according to Annex B.0.
6. Ensure the UE is in State 3A-RF according to TS 36.508 [7] clause 5.2A.2. Message contents are defined in clause 6.6.2.3A.1.4.3.

#### 6.6.2.3A.3\_1.4.2 Test procedure

Same test procedure as in clause 6.6.2.3A.3.4.2.

#### 6.6.2.3A.3\_1.4.3 Message contents

Message contents are according to TS 36.508 [7] subclause 4.6. In test procedure step 2, for SCC configuration there are no additional message contents.

#### 6.6.2.3A.3\_1.5 Test Requirements

Same test requirements as in clause 6.6.2.3A.3.5.

#### 6.6.2.3A.3.2 Test applicability

This test case applies to all types of E-UTRA UE release 11 and forward that support intra-band non-contiguous DL CA and UL CA but do not support UL 64QAM.

#### 6.6.2.3A.3.3 Minimum conformance requirements

The minimum conformance requirements are defined in clause 6.6.2.3A.0.

#### 6.6.2.3A.3.4 Test description

##### 6.6.2.3A.3.4.1 Initial condition

Initial conditions are a set of test configurations the UE needs to be tested in and the steps for the SS to take with the UE to reach the correct measurement state.

The initial test configurations consist of environmental conditions, test frequencies, and channel bandwidths based on E-UTRA CA configurations specified in table 5.4.2A.1-1. All of these configurations shall be tested with applicable test parameters for each channel bandwidth, and are shown in table 6.6.2.3A.3.4.1-1. The details of the uplink reference measurement channels (RMCs) are specified in Annex A.2. Configurations of PDSCH and PDCCH before measurement are specified in Annex C.2.

Table 6.6.2.3A.3.4.1-1: Test Configuration Table

Initial Conditions									
Test Environment as specified in TS 36.508[7] subclause 4.1				NC, TL/VL, TL/VH, TH/VL, TH/VH					
Test Frequencies as specified in TS36.508 [7] subclause 4.3.1 for different CA bandwidth classes, and PCC and SCCs are mapped onto physical frequencies according to Table 6.1-2.				Refer to test points A: Low Wgap, Maximum Wgap					
Test CC Combination setting ( $N_{RB}$ ) as specified in subclause 5.4.2A.1 for the CA Configuration across bandwidth combination sets supported by the UE.				Refer to test point Test only test points with Lowest $N_{RB}$ for PCC and SCC Highest $N_{RB}$ for PCC and SCC					
Test Parameters for CA Configurations									
ID	CA Configuration / $N_{RB\_agg}$		$W_{gap}$ [MHz]	DL Allocation		UL Allocation			
	PCC $N_{RB}$	SCCs $N_{RB}$		CC MOD	PCC & SCC RB allocation	CC MOD	PCC $N_{RB\_alloc}$ ( $L_{CRB}$ @ $RB_{start}$ )	CC MOD	SCC $N_{RB\_alloc}$ ( $L_{CRB}$ @ $RB_{start}$ )
Test Parameters for CA_4A-4A Configurations									
1	25	25	35	N/A	N/A	16QAM	P_1@0	16QAM	S_1@24
2	25	25	35	N/A	N/A	16QAM	P_25@0	16QAM	S_25@0
3	25	25	5	N/A	N/A	16QAM	P_1@0	16QAM	S_1@24
4	25	25	5	N/A	N/A	16QAM	P_25@0	16QAM	S_25@0
5	100	100	5	N/A	N/A	16QAM	P_1@0	16QAM	S_1@99
6	100	100	5	N/A	N/A	16QAM	P_25@0	16QAM	S_25@75
7	100	100	5	N/A	N/A	16QAM	P_100@0	16QAM	S_100@0

1. Connect the SS to the UE antenna connectors as shown in Figure TS 36.508 [7] Annex A, Figure group A.32 as appropriate.
2. The parameter settings for the cell are set up according to TS 36.508 [7] subclause 4.4.3.
3. Downlink signals for PCC are initially set up according to Annex C.0, C.1 and C.3.0, and uplink signals according to Annex H.1 and H.3.0.
4. The UL Reference Measurement channels are set according to Table 6.6.2.3A.1.4.1-1.
5. Propagation conditions are set according to Annex B.0.
6. Ensure the UE is in State 3A-RF according to TS 36.508 [7] clause 5.2A.2. Message contents are defined in clause 6.6.2.3A.1.4.3.

#### 6.6.2.3A.3.4.2 Test procedure

1. Configure SCC according to Annex C.0, C.1 and Annex C.3.0 for all downlink physical channels.
2. The SS shall configure SCC as per TS 36.508 [7] clause 5.2A.4. Message contents are defined in clause 6.6.2.3A.1.4.3
3. SS activates SCC by sending the activation MAC-CE (Refer TS 36.321 [13], clauses 5.13, 6.1.3.8). Wait for at least 2 seconds (Refer TS 36.133, clauses 8.3.3.2).
4. SS sends uplink scheduling information for each UL HARQ process via PDCCH DCI format 0 for C\_RNTI to schedule the UL RMC according to Table 6.6.2.3A.3.4.1-1 on both PCC and SCC. Since the UE has no payload and no loopback data to send the UE sends uplink MAC padding bits on the UL RMC.

5. Send continuously uplink power control “up” commands in every uplink scheduling information to the UE until the UE transmits at  $P_{UMAX}$  level.
6. Measure the mean power over all component carriers of the UE in the CA configuration of the radio access mode according to the test configuration, which shall meet the requirements described in Table 6.2.3A.3.5-1. The period of the measurement shall be at least the continuous duration of one sub-frame (1ms). For TDD slots with transient periods are not under test.
7. Measure the rectangular filtered mean power for E-UTRA.
8. Measure the rectangular filtered mean power of the CA E-UTRA adjacent channel on lower side of the lowest sub-clock, and the higher side of the highest sub-block (out of gap measurement).
9. If  $W_{gap}$  is larger or equal to either of the sub-block bandwidths, perform this step, otherwise continue to next step. Measure the rectangular filtered mean power of the CA E-UTRA adjacent channel on higher side of the lowest sub-clock, and the lower side of the highest sub-block (in gap measurement).
10. Measure the RRC filtered mean power of the first and the second UTRA adjacent channel on lower side of the lowest sub-clock, and the higher side of the highest sub-block (out of gap measurement).
11. If  $W_{gap}$  is larger or equal to 5 MHz, perform this step, otherwise continue to next step. Measure the rectangular filtered mean power of the first UTRA adjacent channel on higher side of the lowest sub-clock, and the lower side of the highest sub-block (in gap measurement).
12. If  $W_{gap}$  is larger or equal to 15 MHz, perform this step, otherwise continue to next step. Measure the rectangular filtered mean power of the second UTRA adjacent channel on higher side of the lowest sub-clock, and the lower side of the highest sub-block (in gap measurement).
13. Calculate the ratio of the power between the values measured in step 7 over step 8 for CA E-UTRA<sub>ACLR</sub> (out of gap measurement) .
14. Calculate the ratio of the power between the values measured in step 7 over step 9 for CA E-UTRA<sub>ACLR</sub> (in gap measurement) .
15. Calculate the ratio of the power between the values measured in step 7 over step 10 for UTRA<sub>ACLR1</sub>, UTRA<sub>ACLR2</sub> (out of gap measurement).
16. Calculate the ratio of the power between the values measured in step 7 over step 11 and 12 for UTRA<sub>ACLR1</sub>, UTRA<sub>ACLR2</sub> (in gap measurement).

#### 6.6.2.3A.3.4.3 Message contents

Message contents are according to TS 36.508 [7] subclause 4.6. In test procedure step 2, for SCC configuration there are no additional message contents.

#### 6.6.2.3A.3.5 Test Requirements

##### 6.6.2.3A.3.5.1 Test requirements E-UTRA

- The measured UE mean power, derived in step 6, shall fulfil requirements in Table 6.2.3A.3.5-1 as appropriate, and
- if the measured adjacent channel power is greater than  $-50$  dBm then the measured E-UTRA<sub>ACLR</sub>, derived in step 13 and 14, shall be higher than the limits in table 6.6.2.3A.3.5.1-1.

**Table 6.6.2.3A.3.5.1-1: E-UTRA UE ACLR**

	Channel bandwidth / E-UTRA <sub>ACLR1</sub> / measurement bandwidth					
	1.4 MHz	3.0 MHz	5 MHz	10 MHz	15 MHz	20 MHz

<b>E-UTRA<sub>ACLR1</sub></b>	29.2 dB	29.2 dB	29.2 dB	29.2 dB	29.2 dB	29.2 dB
<b>E-UTRA channel Measurement bandwidth</b>	1.08 MHz	2.7 MHz	4.5 MHz	9.0 MHz	13.5 MHz	18 MHz
<b>UE channel</b>	+1.4 MHz or -1.4 MHz	+3 MHz or -3 MHz	+5MHz or -5MHz	+10MHz or -10MHz	+15MHz or -15MHz	+20MHz or -20MHz

### 6.6.2.3A.3.5.2 Test requirements UTRA

If the measured UTRA channel power is greater than  $-50\text{dBm}$  then the measured  $\text{UTRA}_{\text{ACLR1}}$ ,  $\text{UTRA}_{\text{ACLR2}}$ , derived in steps 15 and 16, shall be higher than the limits in table 6.6.2.3A.3.5.2-1.

**Table 6.6.2.3A.3.5.2-1: UTRA UE ACLR**

	Channel bandwidth / $\text{UTRA}_{\text{ACLR1/2}}$ / measurement bandwidth					
	1.4 MHz	3.0 MHz	5 MHz	10 MHz	15 MHz	20 MHz
<b><math>\text{UTRA}_{\text{ACLR1}}</math></b>	32.2 dB	32.2 dB	32.2 dB	32.2 dB	32.2 dB	32.2 dB
<b>Adjacent channel centre frequency offset (in MHz)</b>	$0.7 + \text{BW}_{\text{UTR}}/2$ / -0.7- $\text{BW}_{\text{UTR}}/2$	$1.5 + \text{BW}_{\text{UTR}}/2$ / -1.5- $\text{BW}_{\text{UTR}}/2$	$2.5 + \text{BW}_{\text{UTR}}/2$ / -2.5- $\text{BW}_{\text{UTR}}/2$	$5 + \text{BW}_{\text{UTR}}/2$ / -5- $\text{BW}_{\text{UTR}}/2$	$7.5 + \text{BW}_{\text{UTR}}/2$ / -7.5- $\text{BW}_{\text{UTR}}/2$	$10 + \text{BW}_{\text{UTR}}/2$ / -10- $\text{BW}_{\text{UTR}}/2$

Note 1:	Applicable for E-UTRA FDD co-existence with UTRA FDD in paired spectrum.					
Note 2:	Applicable for E-UTRA TDD co-existence with UTRA TDD in unpaired spectrum.					
Note 3:	$\text{BW}_{\text{UTR}}$ for UTRA FDD is 5MHz and for UTRA TDD is 1.6MHz.					

### 6.6.2.3B Adjacent Channel Leakage power Ratio for UL-MIMO

#### 6.6.2.3B.1 Test purpose

To verify that UE transmitter does not cause unacceptable interference to adjacent channels in terms of Adjacent Channel Leakage power Ratio (ACLR) for UL-MIMO.

#### 6.6.2.3B.2 Test applicability

This test case applies to all types of E-UTRA UE release 10 and forward that support UL-MIMO.

#### 6.6.2.3B.3 Minimum conformance requirements

For UE with multiple transmit antenna connectors, the requirements for ACLR are specified at each transmit antenna connector. ACLR requirements are specified for two scenarios for an adjacent E-UTRA ACLR and  $\text{UTRA}_{\text{ACLR1/2}}$  as shown in Figure 6.6.2.3B.3-1.

Figure 6.6.2.3B.3-1: Adjacent Channel Leakage Power Ratio requirements

6.6.2.3B.3.1 Minimum conformance requirements for E-UTRA

E-UTRA ACLR (E-UTRAACLR) is the ratio of the filtered mean power centred on the assigned channel frequency to the filtered mean power centred on an adjacent channel frequency at nominal channel spacing. The assigned E-UTRA channel power and adjacent E-UTRA channel power are measured with rectangular filters with measurement bandwidth specified in Table 6.6.2.3B.3.1-1.

For UEs with two transmit antenna connectors in closed-loop spatial multiplexing scheme, the requirements in Table 6.6.2.3B.3.1-1 apply to each transmit antenna connector with the UL-MIMO configurations specified in Table 6.2.2B.3-2.

If the measured adjacent channel power is greater than -50dBm then the E-UTRAACLR shall be higher than the valued specified in Table 6.6.2.3B.3.1-1.

Table 6.6.2.3B.3.1-1: General requirements for E-UTRA<sub>ACLR</sub>

	Channel bandwidth / E-UTRA <sub>ACLR1</sub> / measurement bandwidth					
	1.4 MHz	3.0 MHz	5 MHz	10 MHz	15 MHz	20 MHz
E-UTRA <sub>ACLR1</sub>	30 dB	30 dB	30 dB	30 dB	30 dB	30 dB
E-UTRA channel Measurement bandwidth	1.08 MHz	2.7 MHz	4.5 MHz	9.0 MHz	13.5 MHz	18 MHz

The normative reference for this requirement is TS 36.101 clause 6.6.2B.

6.6.2.3B.3.2 Minimum conformance requirements for UTRA

UTRA ACLR (UTRA<sub>ACLR</sub>) is the ratio of the filtered mean power centred on the assigned E-UTRA channel frequency to the filtered mean power centred on an adjacent UTRA channel frequency.

UTRA ACLR is specified for both the first UTRA adjacent channel (UTRA<sub>ACLR1</sub>) and the 2nd UTRA adjacent channel (UTRA<sub>ACLR2</sub>). The UTRA channel power is measured with a RRC bandwidth filter with roll-off factor  $\alpha \leq 0.22$ . The assigned E-UTRA channel power is measured with a rectangular filter with measurement bandwidth specified in Table 6.6.2.3B.3.2-1.

For UEs with two transmit antenna connectors in closed-loop spatial multiplexing scheme, the requirements in Table 6.6.2.3B.3.2-1 apply to each transmit antenna connector with the UL-MIMO configurations specified in Table 6.2.2B.3-2.

If the measured UTRA channel power is greater than -50dBm then the UTRA<sub>ACLR1</sub>, and UTRA<sub>ACLR2</sub> shall be higher than the valued specified in Table 6.6.2.3B.3.2-1.

Table 6.6.2.3B.3.2-1: General requirements for UTRA<sub>ACLR1/2</sub>

	Channel bandwidth / E-UTRA <sub>ACLR1/2</sub> / measurement bandwidth					
	1.4 MHz	3.0 MHz	5 MHz	10 MHz	15 MHz	20 MHz
<b>E-UTRA<sub>ACLR1</sub></b>	33 dB	33 dB	33 dB	33 dB	33 dB	33 dB
<b>Adjacent channel centre frequency offset (in MHz)</b>	$0.7+BW_{UTRA}/2$ / $-0.7-BW_{UTRA}/2$	$1.5+BW_{UTRA}/2$ / $-1.5-BW_{UTRA}/2$	$2.5+BW_{UTRA}/2$ / $-2.5-BW_{UTRA}/2$	$5+BW_{UTRA}/2$ / $-5-BW_{UTRA}/2$	$7.5+BW_{UTRA}/2$ / $-7.5-BW_{UTRA}/2$	$10+BW_{UTRA}/2$ / $-10-BW_{UTRA}/2$
<b>UTRA<sub>ACLR2</sub></b>	-	-	36 dB	36 dB	36 dB	36 dB
<b>Adjacent channel centre frequency offset (in MHz)</b>	-	-	$2.5+3*BW_{UTRA}/2$ / $-2.5-3*BW_{UTRA}/2$	$5+3*BW_{UTRA}/2$ / $-5-3*BW_{UTRA}/2$	$7.5+3*BW_{UTRA}/2$ / $-7.5-3*BW_{UTRA}/2$	$10+3*BW_{UTRA}/2$ / $-10-3*BW_{UTRA}/2$
<b>E-UTRA channel Measurement bandwidth</b>	1.08 MHz	2.7 MHz	4.5 MHz	9.0 MHz	13.5 MHz	18 MHz
<b>UTRA 5MHz channel Measurement bandwidth<sup>1</sup></b>	3.84 MHz	3.84 MHz	3.84 MHz	3.84 MHz	3.84 MHz	3.84 MHz
<b>UTRA 1.6MHz channel measurement bandwidth<sup>2</sup></b>	1.28 MHz	1.28 MHz	1.28 MHz	1.28 MHz	1.28 MHz	1.28 MHz
Note 1: Applicable for E-UTRA FDD co-existence with UTRA FDD in paired spectrum.						
Note 2: Applicable for E-UTRA TDD co-existence with UTRA TDD in unpaired spectrum.						

The normative reference for this requirement is TS 36.101 clause 6.6.2B.

#### 6.6.2.3B.4 Test description

##### 6.6.2.3B.4.1 Initial conditions

Initial conditions are a set of test configurations the UE needs to be tested in and the steps for the SS to take with the UE to reach the correct measurement state.

The initial test configurations consist of environmental conditions, test frequencies, and channel bandwidths based on E-UTRA bands specified in table 5.4.2.1-1. All of these configurations shall be tested with applicable test parameters for each channel bandwidth, and are shown in table 6.6.2.3B.4.1-1. The details of the uplink reference measurement channels (RMCs) are specified in Annex A.2. Configurations of PDSCH and PDCCH before measurement are specified in Annex C.2.

Table 6.6.2.3B.4.1-1: Test Configuration Table

Initial Conditions						
Test Environment (as specified in TS 36.508 [7] clause 4.1)				NC, TL/VL, TL/VH, TH/VL, TH/VH		
Test Frequencies (as specified in TS 36.508 [7] clause 4.3.1)				Low range, Mid range, High range		
Test Channel Bandwidths (as specified in TS 36.508 [7] clause 4.3.1)				Lowest, 5MHz, 10MHz, Highest		
Test Parameters for Channel Bandwidths						
Ch BW	Downlink Configuration			Uplink Configuration		
	Mod'n	RB allocation		Mod'n	RB allocation	
		FDD	TDD		FDD	TDD
1.4MHz	N/A for ACLR testing			QPSK	6	6
1.4MHz				QPSK	5	5
1.4MHz				16QAM	6	6
1.4MHz				16QAM	5	5
3MHz				QPSK	15	15
3MHz				QPSK	4	4
3MHz				16QAM	15	15
3MHz				16QAM	4	4
5MHz				QPSK	25	25
5MHz				QPSK	8	8
5MHz				16QAM	25	25
5MHz				16QAM	8	8
10MHz				QPSK	50	50
10MHz				QPSK	12	12
10MHz				16QAM	50 (Note 3)	50 (Note 3)
10MHz				16QAM	12	12
15MHz				QPSK	75	75
15MHz				QPSK	16	16
15MHz				16QAM	75 (Note 3)	75 (Note 3)
15MHz				16QAM	16	16
20MHz				QPSK	100	100
20MHz				QPSK	18	18
20MHz				16QAM	100 (Note 3)	100 (Note 3)
20MHz				16QAM	18	18
Note 1: Test Channel Bandwidths are checked separately for each E-UTRA band, which applicable channel bandwidths are specified in Table 5.4.2.1-1. Note 2: The RBstart of partial RB allocation shall be RB#0 and RB# (max + 1 - RB allocation) of the channel bandwidth. Note 3: Applies only for UE-Categories [FFS].						

1. Connect the SS to the UE antenna connectors as shown in Figure TS 36.508 [7] Annex A, Figure A.28.
2. The parameter settings for the cell are set up according to TS 36.508 [7] clause 4.4.3.
3. Downlink signals are initially set up according to Annex C0, C.1 and C.3.0, and uplink signals according to Annex H.1 and H.3.0.
4. The UL Reference Measurement channels are set according to Table 6.6.2.3B.4.1-1.
5. Propagation conditions are set according to Annex B.0.
6. Ensure the UE is in State 3A-RF according to TS 36.508 [7] clause 5.2A.2. Message contents are defined in clause 6.6.2.3B.4.3.

#### 6.6.2.3B.4.2 Test procedure

1. SS sends uplink scheduling information for each UL HARQ process via PDCCH DCI format 4 for C\_RNTI to schedule the UL RMC according to Table 6.6.2.3B.4.1-1. Since the UE has no payload data to send, the UE transmits uplink MAC padding bits on the UL RMC.

2. Send continuously uplink power control "up" commands in the uplink scheduling information to the UE until the UE transmits at  $P_{UMAX}$  level.
3. Measure the sum of the mean power at each antenna connector of UE in the channel bandwidth of the radio access mode according to the test configuration, which shall meet the requirements described in clause 6.2.3B.5. The period of the measurement shall be at least the continuous duration of one sub-frame (1ms). For TDD slots with transient periods are not under test.
4. Measure the rectangular filtered mean power for E-UTRA at each antenna connector of UE.
5. Measure the rectangular filtered mean power of the first E-UTRA adjacent channel at each antenna connector of UE.
6. Measure the RRC filtered mean power of the first and the second UTRA adjacent channel at each antenna connector of UE.
7. Calculate the ratio of the power between the values measured in step 4 over step 5 for  $E-UTRA_{ACLR}$ .
8. Calculated the ratio of the power between the values measured in step 4 over step 6 for  $UTRA_{ACLR1}$ ,  $UTRA_{ACLR2}$ .

#### 6.6.2.3B.4.3 Message contents

Message contents are according to TS 36.508 [7] subclause 4.6.

#### 6.6.2.3B.5 Test requirement

##### 6.6.2.3B.5.1 Test requirements E-UTRA

- The measured sum of mean power at each transmit antenna connector for UE in the channel bandwidth, derived in step 3, shall fulfil requirements in clause 6.2.3B.5 as appropriate,
- and
- The requirements apply to each transmit antenna connector.
  - if the measured adjacent channel power is greater than -50 dBm then the measured  $E-UTRA_{ACLR}$ , derived in step 7, shall be higher than the limits in table 6.6.2.3B.5.1-1.

**Table 6.6.2.3B.5.1-1: E-UTRA UE ACLR**

	Channel bandwidth / E-UTRA <sub>ACLR1</sub> / measurement bandwidth					
	1.4 MHz	3.0 MHz	5 MHz	10 MHz	15 MHz	20 MHz
<b>E-UTRA<sub>ACLR1</sub></b>	29.2 dB	29.2 dB	29.2 dB	29.2 dB	29.2 dB	29.2 dB
<b>E-UTRA channel Measurement bandwidth</b>	1.08 MHz	2.7 MHz	4.5 MHz	9.0 MHz	13.5 MHz	18 MHz
<b>UE channel</b>	+1.4 MHz or -1.4 MHz	+3 MHz or -3 MHz	+5MHz or -5MHz	+10MHz or -10MHz	+15MHz or -15MHz	+20MHz or -20MHz

##### 6.6.2.3B.5.2 Test requirements UTRA

The requirements apply to each transmit antenna connector.

If the measured UTRA channel power is greater than -50dBm then the measured  $UTRA_{ACLR1}$ ,  $UTRA_{ACLR2}$ , derived in step 8, shall be higher than the limits in table 6.6.2.3B.5.2-1.

Table 6.6.2.3B.5.2-1: UTRA UE ACLR

	Channel bandwidth / E-UTRA <sub>ACLR1/2</sub> / measurement bandwidth					
	1.4 MHz	3.0 MHz	5 MHz	10 MHz	15 MHz	20 MHz
UTRA <sub>ACLR1</sub>	32.2 dB	32.2 dB	32.2 dB	32.2 dB	32.2 dB	32.2 dB
Adjacent channel centre frequency offset (in MHz)	$0.7+BW_{UTRA}/2$ / $-0.7-BW_{UTRA}/2$	$1.5+BW_{UTR}/2$ / $-1.5-BW_{UTR}/2$	$2.5+BW_{UTR}/2$ / $-2.5-BW_{UTR}/2$	$5+BW_{UTRA}/2$ / $-5-BW_{UTRA}/2$	$7.5+BW_{UTRA}/2$ / $-7.5-BW_{UTRA}/2$	$10+BW_{UTRA}/2$ / $-10-BW_{UTRA}/2$
UTRA <sub>ACLR2</sub>	-	-	35.2 dB	35.2 dB	35.2 dB	35.2 dB
Adjacent channel centre frequency offset (in MHz)	-	-	$2.5+3*BW_{UTR}/2$ / $-2.5-3*BW_{UTR}/2$	$5+3*BW_{UTR}/2$ / $-5-3*BW_{UTR}/2$	$7.5+3*BW_{UTR}/2$ / $-7.5-3*BW_{UTR}/2$	$10+3*BW_{UTR}/2$ / $-10-3*BW_{UTR}/2$
E-UTRA channel Measurement bandwidth	1.08 MHz	2.7 MHz	4.5 MHz	9.0 MHz	13.5 MHz	18 MHz
UTRA 5MHz channel Measurement bandwidth <sup>1</sup>	3.84 MHz	3.84 MHz	3.84 MHz	3.84 MHz	3.84 MHz	3.84 MHz
UTRA 1.6MHz channel measurement bandwidth <sup>2</sup>	1.28 MHz	1.28 MHz	1.28 MHz	1.28 MHz	1.28 MHz	1.28 MHz
Note 1:	Applicable for E-UTRA FDD co-existence with UTRA FDD in paired spectrum.					
Note 2:	Applicable for E-UTRA TDD co-existence with UTRA TDD in unpaired spectrum.					
Note 3:	BW <sub>UTRA</sub> for UTRA FDD is 5MHz and for UTRA TDD is 1.6MHz.					

### 6.6.2.3E Adjacent Channel Leakage power Ratio for UE category 0

#### 6.6.2.3E.1 Test purpose

Same test purpose as in clause 6.6.2.3.1.

#### 6.6.2.3E.2 Test applicability

This test case applies to all types of E-UTRA UE release 12 and forward of UE category 0.

#### 6.6.2.3E.3 Minimum conformance requirements

Same minimum conformance requirements as in clause 6.6.2.3.3.

#### 6.6.2.3E.4 Test description

##### 6.6.2.3E.4.1 Initial conditions

Same initial conditions as in clause 6.6.2.3.4.1 with following exceptions:

- Instead of Table 6.6.2.3.4.1-1 → use Table 6.6.2.3E.4.1-1.
- Connect SS to the UE antenna connectors as shown in TS 36.508[7] Annex A Figure A.3 using only main UE Tx/Rx antenna.

Table 6.6.2.3E.4.1-1: Test Configuration Table

Initial Conditions						
Test Environment (as specified in TS 36.508 [7] subclause 4.1)				NC, TL/VL, TL/VH, TH/VL, TH/VH		
Test Frequencies (as specified in TS36.508 [7] subclause 4.3.1)				Low range, Mid range, High range		
Test Channel Bandwidths (as specified in TS 36.508 [7] subclause 4.3.1)				Lowest, 5MHz, 10MHz, Highest		
Test Parameters for Channel Bandwidths						
Ch BW	Downlink Configuration			Uplink Configuration		
	Mod'n	RB allocation		Mod'n	RB allocation	
		FDD	TDD		FDD and HD-FDD	TDD
1.4MHz	N/A for ACLR testing			QPSK	6	6
1.4MHz				QPSK	5	5
1.4MHz				16QAM	5	5
3MHz				QPSK	15	15
3MHz				QPSK	4	4
3MHz				16QAM	5	5
3MHz				16QAM	4	4
5MHz				QPSK	25	25
5MHz				QPSK	8	8
5MHz				16QAM	5	5
10MHz				QPSK	25	25
10MHz				QPSK	12	12
10MHz				16QAM	5	5
15MHz				QPSK	36	36
15MHz				QPSK	16	16
15MHz				16QAM	5	5
20MHz				QPSK	36	36
20MHz				QPSK	18	18
20MHz				16QAM	5	5
Note 1: Test Channel Bandwidths are checked separately for each E-UTRA band, which applicable channel bandwidths are specified in Table 5.4.2.1-1. Note 2: The RB <sub>start</sub> of partial RB allocation shall be RB#0 and RB# (max + 1 – RB allocation) of the channel bandwidth.						

#### 6.6.2.3E.4.2 Test procedure

Same test procedure as in clause 6.6.2.3.4.2 with following exception for HD-FDD:

- In step 3, slots with transient periods are not under test. Half-duplex guard subframe are not under test.

#### 6.6.2.3E.4.3 Message contents

Message contents are according to TS 36.508 [7] subclause 4.6.

#### 6.6.2.3E.5 Test requirement

##### 6.6.2.3E.5.1 Test requirements E-UTRA

- The measured UE mean power in the channel bandwidth, derived in step 3, shall fulfil requirements in Table 6.2.3E.5-1 as appropriate,

and

- if the measured adjacent channel power is greater than  $-50$  dBm then the measured E-UTRA<sub>ACLR</sub>, derived in step 7, shall be higher than the limits in table 6.6.2.3E.5.1-1.

Table 6.6.2.3E.5.1-1: E-UTRA UE ACLR

	Channel bandwidth / E-UTRA <sub>ACLR1</sub> / measurement bandwidth					
	1.4 MHz	3.0 MHz	5 MHz	10 MHz	15 MHz	20 MHz
E-UTRA <sub>ACLR1</sub>	29.2 dB	29.2 dB	29.2 dB	29.2 dB	29.2 dB	29.2 dB
E-UTRA channel Measurement bandwidth	1.08 MHz	2.7 MHz	4.5 MHz	9.0 MHz	13.5 MHz	18 MHz
UE channel	+1.4 MHz or -1.4 MHz	+3 MHz or -3 MHz	+5MHz or -5MHz	+10MHz or -10MHz	+15MHz or -15MHz	+20MHz or -20MHz

Test requirements UTRA

If the measured UTRA channel power is greater than  $-50\text{dBm}$  then the measured UTRA<sub>ACLR1</sub>, UTRA<sub>ACLR2</sub>, derived in step 8, shall be higher than the limits in table 6.6.2.3E.5.2-1.

Table 6.6.2.3E.5.2-1: UTRA UE ACLR

	Channel bandwidth / UTRA <sub>ACLR1/2</sub> / measurement bandwidth					
	1.4 MHz	3.0 MHz	5 MHz	10 MHz	15 MHz	20 MHz
UTRA <sub>ACLR1</sub>	32.2 dB	32.2 dB	32.2 dB	32.2 dB	32.2 dB	32.2 dB
Adjacent channel centre frequency offset (in MHz)	$0.7+BW_{UTR}/2$ / $-0.7-BW_{UTR}/2$	$1.5+BW_{UTR}/2$ / $-1.5-BW_{UTR}/2$	$2.5+BW_{UTR}/2$ / $-2.5-BW_{UTR}/2$	$5+BW_{UTR}/2$ / $-5-BW_{UTR}/2$	$7.5+BW_{UTR}/2$ / $-7.5-BW_{UTR}/2$	$10+BW_{UTR}/2$ / $-10-BW_{UTR}/2$
UTRA <sub>ACLR2</sub>	-	-	35.2 dB	35.2 dB	35.2 dB	35.2 dB
Adjacent channel centre frequency offset (in MHz)	-	-	$2.5+3*BW_{UTR}/2$ / $-2.5-3*BW_{UTR}/2$	$5+3*BW_{UTR}/2$ / $-5-3*BW_{UTR}/2$	$7.5+3*BW_{UTR}/2$ / $-7.5-3*BW_{UTR}/2$	$10+3*BW_{UTR}/2$ / $-10-3*BW_{UTR}/2$
E-UTRA channel Measurement bandwidth	1.08 MHz	2.7 MHz	4.5 MHz	9.0 MHz	13.5 MHz	18 MHz

UTRA 1.6MHz channel measurement bandwidth <sup>2</sup>	1.28 MHz	1.28 MHz	1.28 MHz	1.28 MHz	1.28 MHz	1.28 MHz
Note 1: Applicable for E-UTRA FDD co-existence with UTRA FDD in paired spectrum.						
Note 2: Applicable for E-UTRA TDD co-existence with UTRA TDD in unpaired spectrum.						
Note 3: $BW_{UTR}$ for UTRA FDD is 5MHz and for UTRA TDD is 1.6MHz.						

### 6.6.2.3EA Adjacent Channel Leakage power Ratio for UE category M1

Editor's note: This test case is incomplete. The following aspects are either missing or not yet determined

- Test Channel Bandwidths is still in bracket.

- Reference tables from TC 6.2.3EA are not defined in current spec and are still in bracket.

#### 6.6.2.3EA.1 Test purpose

To verify that UE transmitter does not cause unacceptable interference to adjacent channels in terms of Adjacent Channel Leakage power Ratio (ACLR).

### 6.6.2.3EA.2 Test applicability

This test case applies to all types of E-UTRA UE release 13 and forward of UE category M1.

### 6.6.2.3EA.3 Minimum conformance requirements

ACLR requirements are specified for two scenarios for an adjacent E-UTRA<sub>ACLR</sub> and UTRA<sub>ACLR1/2</sub> as shown in Figure 6.6.2.3EA.3-1.

Figure 6.6.2.3EA.3-1: Adjacent Channel Leakage Power Ratio requirements

#### 6.6.2.3EA.3.1 Minimum conformance requirements for E-UTRA

E-UTRA ACLR (E-UTRA<sub>ACLR</sub>) is the ratio of the filtered mean power centred on the assigned channel frequency to the filtered mean power centred on an adjacent channel frequency at nominal channel spacing. The assigned E-UTRA channel power and adjacent E-UTRA channel power are measured with rectangular filters with measurement bandwidth specified in Table 6.6.2.3EA.3.1-1.

If the measured adjacent channel power is greater than  $-50$  dBm then the E-UTRA<sub>ACLR</sub> shall be higher than the valued specified in Table 6.6.2.3EA.3.1-1.

Table 6.6.2.3EA.3.1-1: General requirements for E-UTRA<sub>ACLR</sub>

	Channel bandwidth / E-UTRA <sub>ACLR1</sub> / measurement bandwidth					
	1.4 MHz	3.0 MHz	5 MHz	10 MHz	15 MHz	20 MHz
E-UTRA <sub>ACLR1</sub>	30 dB	30 dB	30 dB	30 dB	30 dB	30 dB
E-UTRA channel Measurement bandwidth	1.08 MHz	2.7 MHz	4.5 MHz	9.0 MHz	13.5 MHz	18 MHz

The normative reference for this requirement is TS 36.101 [2] subclause 6.6.2.3.1.

#### 6.6.2.3EA.3.2 Minimum conformance requirements for UTRA

UTRA ACLR (UTRA<sub>ACLR</sub>) is the ratio of the filtered mean power centred on the assigned E-UTRA channel frequency to the filtered mean power centred on an adjacent UTRA channel frequency.

UTRA ACLR is specified for both the first UTRA adjacent channel (UTRA<sub>ACLR1</sub>) and the 2<sup>nd</sup> UTRA adjacent channel (UTRA<sub>ACLR2</sub>). The UTRA channel power is measured with a RRC bandwidth filter with roll-off factor  $\alpha = 0.22$ . The assigned E-UTRA channel power is measured with a rectangular filter with measurement bandwidth specified in Table 6.6.2.3EA.3.2-1.

If the measured UTRA channel power is greater than  $-50$  dBm then the UTRA<sub>ACLR1</sub>, and UTRA<sub>ACLR2</sub> shall be higher than the valued specified in Table 6.6.2.3EA.3.2-1.

Table 6.6.2.3EA.3.2-1: General requirements for UTRA<sub>ACLR1/2</sub>

	Channel bandwidth / UTRA <sub>ACLR1/2</sub> / measurement bandwidth					
	1.4 MHz	3.0 MHz	5 MHz	10 MHz	15 MHz	20 MHz
UTRA <sub>ACLR1</sub>	33 dB	33 dB	33 dB	33 dB	33 dB	33 dB

Note 1: Applicable for E-UTRA FDD co-existence with UTRA FDD in paired spectrum.						
Note 2: Applicable for E-UTRA TDD co-existence with UTRA TDD in unpaired spectrum.						

The normative reference for this requirement is TS 36.101 subclause 6.6.2.3.2.

#### 6.6.2.3EA.4 Test description

##### 6.6.2.3EA.4.1 Initial conditions

Initial conditions are a set of test configurations the UE needs to be tested in and the steps for the SS to take with the UE to reach the correct measurement state.

The initial test configurations consist of environmental conditions, test frequencies, and channel bandwidths based on E-UTRA bands specified in clause 5.2E. All of these configurations shall be tested with applicable test parameters for each channel bandwidth, and are shown in table 6.6.2.3EA.4.1-1 and 6.6.2.3EA.4.1-2. The details of the uplink reference measurement channels (RMCs) are specified in Annex A.2. Configurations of PDSCH and MPDCCH before measurement are specified in Annex C.2.

Table 6.6.2.3EA.4.1-1: Test Configuration Table for Power Class 3

Initial Conditions						
Test Environment (as specified in TS 36.508 [7] subclause 4.1)				NC, TL/VL, TL/VH, TH/VL, TH/VH		
Test Frequencies (as specified in TS36.508 [7] subclause 4.3.1)				Low range, Mid range, High range

Note 1: Test Channel Bandwidths are checked separately for each E-UTRA band, which applicable channel bandwidths are specified in Table 5.4.2.1-1.						
Note 2: The RB <sub>start</sub> of partial RB allocation shall be RB#0 and RB# (max + 1 – RB allocation) of the channel bandwidth.						

1. Connect SS to the UE antenna connectors as shown in TS 36.508[7] Annex A Figure A.3 using only main UE Tx/Rx antenna.
2. The parameter settings for the cell are set up according to TS 36.508 [7] subclause 4.4.3.
3. Downlink signals are initially set up according to Annex C0, C.1 and C.3.0, and uplink signals according to Annex H.1 and H.3.0.
4. The UL Reference Measurement channels are set according to Table 6.6.2.3EA.4.1-1 and 6.6.2.3EA.4.1-2.
5. Propagation conditions are set according to Annex B.0.
6. Ensure the UE is in State 3A-RF according to TS 36.508 [7] clause 5.2A.2. Message contents are defined in clause 6.6.2.3EA.4.3.

#### 6.6.2.3EA.4.2 Test procedure

1. SS sends uplink scheduling information for each UL HARQ process via MPDCCH DCI format 6-0A for C\_RNTI to schedule the UL RMC according to Table 6.6.2.3EA.4.1-1 and 6.6.2.3EA.4.1-2. Since the UE has no payload data to send, the UE transmits uplink MAC padding bits on the UL RMC.
2. Send continuously uplink power control "up" commands in the uplink scheduling information to the UE until the UE transmits at P<sub>UMAX</sub> level.

3. Measure the mean power of the UE in the channel bandwidth of the radio access mode according to the test configuration, which shall meet the requirements described in Table 6.2.3EA.5-1 and 6.2.3EA.5-2. The period of the measurement shall be at least the continuous duration of one sub-frame (1ms). For TDD slots with transient periods are not under test. Half-duplex guard subframe are not under test.
4. Measure the rectangular filtered mean power for E-UTRA.
5. Measure the rectangular filtered mean power of the first E-UTRA adjacent channel on both lower and upper side of the E-UTRA channel, respectively.
6. Measure the RRC filtered mean power of the first and the second UTRA adjacent channel on both lower and upper side of the E-UTRA channel, respectively.
7. Calculate the ratios of the power between the values measured in step 4 over step 5 for lower and upper E-UTRA<sub>ACLR</sub>, respectively.
8. Calculated the ratios of the power between the values measured in step 4 over step 6 for lower and upper UTRA<sub>ACLR1</sub>, UTRA<sub>ACLR2</sub>, respectively.

#### 6.6.2.3EA.4.3 Message contents

Message contents are according to TS 36.508 [7] subclause 4.6.

#### 6.6.2.3EA.5 Test requirement

##### 6.6.2.3EA.5.1 Test requirements E-UTRA

- The measured UE mean power in the channel bandwidth, derived in step 3, shall fulfil requirements in [Table 6.2.3EA.5-1 and 6.2.3EA.5-2] as appropriate,

and

- if the measured adjacent channel power is greater than  $-50$  dBm then the measured E-UTRA<sub>ACLR</sub>, derived in step 7, shall be higher than the limits in table 6.6.2.3EA.5.1-1.

**Table 6.6.2.3EA.5.1-1: E-UTRA UE ACLR**

	Channel bandwidth / E-UTRA <sub>ACLR1</sub> / measurement bandwidth					
	1.4 MHz	3.0 MHz	5 MHz	10 MHz	15 MHz	20 MHz
<b>E-UTRA<sub>ACLR1</sub></b>	29.2 dB	29.2 dB	29.2 dB	29.2 dB	29.2 dB	29.2 dB
<b>E-UTRA channel Measurement bandwidth</b>	1.08 MHz	2.7 MHz	4.5 MHz	9.0 MHz	13.5 MHz	18 MHz
<b>UE channel</b>	+1.4 MHz or -1.4 MHz	+3 MHz or -3 MHz	+5MHz or -5MHz	+10MHz or -10MHz	+15MHz or -15MHz	+20MHz or -20MHz

##### Test requirements UTRA

If the measured UTRA channel power is greater than  $-50$  dBm then the measured UTRA<sub>ACLR1</sub>, UTRA<sub>ACLR2</sub>, derived in step 8, shall be higher than the limits in table 6.6.2.3EA.5.2-1.

**Table 6.6.2.3EA.5.2-1: UTRA UE ACLR**

	Channel bandwidth / UTRA <sub>ACLR1/2</sub> / measurement bandwidth					
	1.4 MHz	3.0 MHz	5 MHz	10 MHz	15 MHz	20 MHz

<b>UTRA<sub>ACLR1</sub></b>	32.2 dB	32.2 dB	32.2 dB	32.2 dB	32.2 dB	32.2 dB
<b>Adjacent channel centre frequency offset (in MHz)</b>	$0.7+BW_{UTR}/2$ / -0.7- $BW_{UTR}/2$	$1.5+BW_{UTR}/2$ / -1.5- $BW_{UTR}/2$	$2.5+BW_{UTR}/2$ / -2.5- $BW_{UTR}/2$	$5+BW_{UTR}/2$ / -5- $BW_{UTR}/2$	$7.5+BW_{UTR}/2$ / -7.5- $BW_{UTR}/2$	$10+BW_{UTR}/2$ / -10- $BW_{UTR}/2$
<b>UTRA<sub>ACLR2</sub></b>	-	-	35.2 dB	35.2 dB	35.2 dB	35.2 dB
<b>Adjacent channel centre frequency offset (in MHz)</b>	-	-	$2.5+3*BW_{UTR}/2$ / -2.5- $3*BW_{UTR}/2$	$5+3*BW_{UTR}/2$ / -5- $3*BW_{UTR}/2$	$7.5+3*BW_{UTR}/2$ / -7.5- $3*BW_{UTR}/2$	$10+3*BW_{UTR}/2$ / -10- $3*BW_{UTR}/2$
<b>E-UTRA channel Measurement bandwidth</b>	1.08 MHz	2.7 MHz	4.5 MHz	9.0 MHz	13.5 MHz	18 MHz

<b>UTRA 1.6MHz channel measurement bandwidth<sup>2</sup></b>	1.28 MHz	1.28 MHz	1.28 MHz	1.28 MHz	1.28 MHz	1.28 MHz
Note 1:	Applicable for E-UTRA FDD co-existence with UTRA FDD in paired spectrum.					
Note 2:	Applicable for E-UTRA TDD co-existence with UTRA TDD in unpaired spectrum.					
Note 3:	BW <sub>UTRA</sub> for UTRA FDD is 5MHz and for UTRA TDD is 1.6MHz.					

### 6.6.2.3F Adjacent Channel Leakage power Ratio for UE category NB1

*Editor's note: This test case is incomplete. The following aspects are either missing or not yet determined:*

- Uplink transmission are still in [ ] (currently assume single tone, subcarrier spacing 15 kHz and 3.75 kHz)
- References to TS 36.508 are undefined (cell parameters, test frequencies, UE state)
- The References to table of bands in 36.521-1 is undefined
- Scheduling and loopback are undefined
- Message contents TBC (Proposed values: p-Max = Not present, p0-NominalNPUSCH-r13 = -85 dBm, p0-UE-NPUSCH-r13 = 0 dBm, nrs-Power-r13 = 44dBm).
- The Annex A.2 Uplink reference measurement channel is undefined
- The Annex C Downlink signals are undefined
- The Annex H uplink channels are undefined

#### 6.6.2.3F.1 Test purpose

To verify that UE transmitter does not cause unacceptable interference to adjacent channels in terms of Adjacent Channel Leakage power Ratio (ACLR).

#### 6.6.2.3F.2 Test applicability

This test case applies to all types of UE release 13 and forward of UE category NB1.

#### 6.6.2.3F.3 Minimum conformance requirements

Adjacent Channel Leakage power Ratio is the ratio of the filtered mean power centred on the assigned channel frequency to the filtered mean power centred on an adjacent channel frequency. The assigned category NB1 channel power and adjacent channel power are measured with filters and measurement bandwidths specified in Table 6.6.2.3F-1. If the measured adjacent channel power is greater than -50dBm then the category NB1 UE ACLR shall be higher

than the value specified in Table 6.6.2.3F-1.  $GSM_{ACLR}$  requirement is intended for protection of GSM system.  $UTRA_{ACLR}$  requirement is intended for protection of UTRA and E-UTRA systems.

**Table 6.6.2.3F-1: category NB1 UE ACLR requirements**

	$GSM_{ACLR}$	$UTRA_{ACLR}$
<b>ACLR</b>	20 dB	37 dB
<b>Adjacent channel centre frequency offset from category NB1 Channel edge</b>	±200 kHz	±2.5 MHz
<b>Adjacent channel measurement bandwidth</b>	180 kHz	3.84 MHz
<b>Measurement filter</b>	Rectangular	RRC-filter $\alpha=0.22$
<b>Category NB1 channel measurement bandwidth</b>	180 kHz	180 kHz
<b>Category NB1 channel Measurement filter</b>	Rectangular	Rectangular

The normative reference for this requirement is TS 36.101 subclause 6.6.2F.3.

#### 6.6.2.3F.4 Test description

##### 6.6.2.3F.4.1 Initial conditions

Initial conditions are a set of test configurations the UE needs to be tested in and the steps for the SS to take with the UE to reach the correct measurement state.

The initial test configurations consist of environmental conditions and test frequencies based on the subset of E-UTRA operating bands defined for NB-IoT in clause 5.2F. All of these configurations shall be tested with applicable test parameters shown in table 6.6.2.3F.4.1-1. The details of the uplink reference measurement channels (RMCs) are specified in [Annexe A.2]. Configurations of NPDSCH and NPDCCH before measurement are specified in [Annex C.2].

Table 6.6.2.3F.4.1-1: Test Configuration Table

Initial Conditions				
Test Environment as specified in TS 36.508[7] subclause [X.4.1]		[NC, TL/VL, TL/VH, TH/VL, TH/VH]		
Test Frequencies as specified in TS 36.508 [7] subclause [X.4.3.1]		[FFS]		
Test Parameters				
Configuration ID	Downlink Configuration	Uplink Configuration		
		Modulation	$N_{\text{tones}}$	Sub-carrier spacing (kHz)
1	N/A	QPSK	1@0	3.75kHz
2		QPSK	1@47	3.75kHz
3		QPSK	1@0	15kHz
4		QPSK	1@11	15kHz
5 (Note 1)		QPSK	3@0	15kHz
6 (Note 1)		QPSK	3@3	15kHz
7 (Note 1)		QPSK	3@6	15kHz
8 (Note 1)		QPSK	3@9	15kHz
9 (Note 1)		QPSK	6@0	15kHz
10 (Note 1)		QPSK	6@6	15kHz
11 (Note 1)		QPSK	12@0	15kHz

Note 1: Applicable to UE supporting UL multi-tone transmissions

1. Connect the SS to the UE antenna connectors as shown in Figure TS 36.508 [7] Annex A, [Figure A.3 using only main Tx/Rx antenna].
2. The parameter settings for the cell are set up according to TS 36.508 [7] subclause [FFS].
3. Downlink signals are initially set up according to Annex C0, C.1 and C.3.0, and uplink signals according to [Annex H.1 and H.3.0].
4. The UL Reference Measurement channels are set according to Table 6.6.2.3F.4.1-1.
5. Propagation conditions are set according to Annex B.0.
6. Ensure the UE is in State [3aA-NB] according to TS 36.508 [7] clause [FFS]. Message contents are defined in clause 6.6.2.3F.4.3.

#### 6.6.2.3F.4.2 Test procedure

1. SS sends [uplink scheduling information for the UL HARQ process via NPDCCH DCI format N0 for C\_RNTI to schedule the UL RMC according to Table 6.6.2.3F.4.1-1. Since the UE has no payload data to send, the UE transmits uplink MAC padding bits on the UL RMC]. (UE should be already transmitting  $P_{\text{UMAX}}$  after Initial Conditions setting).
2. Measure the mean power of the UE in the channel bandwidth of the radio access mode according to the test configuration, which shall meet the requirements described in Table [6.2.3F.5-1]. The measurement period is at least one sub-frame (1ms) for 15 KHz channel spacing, and at least a 2ms slot (excluding the 2304Ts gap when UE is not transmitting) respectively for the 3.75 KHz channel spacing.
3. Measure the rectangular filtered mean power for category NB1 UE channel.
4. Measure the rectangular filtered mean power of the GSM adjacent channel on both lower and upper side of the category NB1 UE channel, respectively.
5. Measure the RRC filtered mean power of UTRA adjacent channel on both lower and upper side of the category NB1 UE channel, respectively.
6. Calculate the ratios of the power between the value measured in step 4 over step 5 for lower and upper  $\text{GSM}_{\text{ACLR}}$ .
7. Calculated the ratio of the power between the value measured in step 4 over step 6 for lower and upper  $\text{UTRA}_{\text{ACLR}}$ .

### 6.6.2.3F.4.3 Message contents

Message contents are according to TS 36.508 [7] subclause [FFS].

### 6.6.2.3F.5 Test requirement

- The measured UE mean power in the channel bandwidth, derived in step 3, shall fulfil requirements in Table [6.2.3F.5-1] as appropriate,
- and
- if the measured adjacent channel power is greater than  $-50$  dBm then the measured  $GSM_{ACLR}$  derived in step 7 and  $UTRA_{ACLR}$  derived in step 8 shall be higher than the limits in table 6.6.2.3F.5-1.

**Table 6.6.2.3F.5-1: Category NB1 UE ACLR Test requirements**

	<b><math>GSM_{ACLR}</math></b>	<b><math>UTRA_{ACLR}</math></b>
<b>ACLR</b>	[19.2] dB	[36.2] dB
<b>Adjacent channel centre frequency offset from category NB1 Channel edge</b>	$\pm 200$ kHz	$\pm 2.5$ MHz
<b>Adjacent channel measurement bandwidth</b>	180 kHz	3.84 MHz
<b>Measurement filter</b>	Rectangular	RRC-filter $\alpha=0.22$
<b>Category NB1 channel measurement bandwidth</b>	180 kHz	180 kHz
<b>Category NB1 channel Measurement filter</b>	Rectangular	Rectangular

### 6.6.2.4 Void

## 6.6.3 Spurious emissions

Spurious emissions are emissions which are caused by unwanted transmitter effects such as harmonics emission, parasitic emissions, intermodulation products and frequency conversion products, but exclude out of band emissions. The spurious emission limits are specified in terms of general requirements inline with SM.329 [3] and E-UTRA operating band requirement to address UE co-existence.

Unless otherwise stated, the spurious emission limits apply for the frequency ranges that are more than  $\Delta f_{OOB}$  (MHz) in Table 6.6.3.1.3-1 from the edge of the channel bandwidth. To improve measurement accuracy, sensitivity and efficiency, the resolution bandwidth may be smaller than the measurement bandwidth. When the resolution bandwidth is smaller than the measurement bandwidth, the result should be integrated over the measurement bandwidth in order to obtain the equivalent noise bandwidth of the measurement bandwidth.

### 6.6.3.1 Transmitter Spurious emissions

#### 6.6.3.1.1 Test purpose

To verify that UE transmitter does not cause unacceptable interference to other channels or other systems in terms of transmitter spurious emissions.

### 6.6.3.1.2 Test applicability

This test case applies to all types of E-UTRA UE release 8 and forward.

### 6.6.3.1.3 Minimum conformance requirements

This clause specifies the requirements for the specified E-UTRA band for Transmitter Spurious emissions requirement with frequency range as indicated in table 6.6.3.1.3-2.

The spurious emission limits apply for the frequency ranges that are more than  $\Delta f_{\text{OOB}}$  (MHz) from the edge of the channel bandwidth.

NOTE: For measurement conditions at the edge of each frequency range, the lowest frequency of the measurement position in each frequency range should be set at the lowest boundary of the frequency range plus MBW/2. The highest frequency of the measurement position in each frequency range should be set at the highest boundary of the frequency range minus MBW/2. MBW denotes the measurement bandwidth defined for the protected band.

**Table 6.6.3.1.3-1:  $\Delta f_{\text{OOB}}$  boundary between E-UTRA channel and spurious emission domain**

Channel bandwidth	1.4 MHz	3.0 MHz	5 MHz	10 MHz	15 MHz	20 MHz
$\Delta f_{\text{OOB}}$ (MHz)	2.8	6	10	15	20	25

The spurious emission limits in Table 6.6.3.1.3-2 apply for all transmitter band configurations (RB) and channel bandwidths.

**Table 6.6.3.1.3-2: Spurious emissions limits**

Frequency Range	Maximum Level	Measurement Bandwidth	Notes
$9 \text{ kHz} \leq f < 150 \text{ kHz}$	-36 dBm	1 kHz	
$150 \text{ kHz} \leq f < 30 \text{ MHz}$	-36 dBm	10 kHz	
$30 \text{ MHz} \leq f < 1000 \text{ MHz}$	-36 dBm	100 kHz	
$1 \text{ GHz} \leq f < 12.75 \text{ GHz}$	-30 dBm	1 MHz	
$12.75 \text{ GHz} \leq f < 5^{\text{th}}$ harmonic of the upper frequency edge of the UL operating band in GHz	-30 dBm	1 MHz	Note 1
Note 1: Applies for Band 22, Band 42 and Band 43			

The normative reference for this requirement is TS 36.101 [2] subclause 6.6.3.1.

### 6.6.3.1.4 Test description

#### 6.6.3.1.4.1 Initial conditions

Initial conditions are a set of test configurations the UE needs to be tested in and the steps for the SS to take with the UE to reach the correct measurement state.

The initial test configurations consist of environmental conditions, test frequencies, and channel bandwidths based on E-UTRA bands specified in Table 5.4.2.1-1. All of these configurations shall be tested with applicable test parameters for each channel bandwidth, and are shown in Table 6.6.3.1.4.1-1. The details of the uplink reference measurement channels (RMCs) are specified in Annex A.2. Configurations of PDSCH and PDCCH before measurement are specified in Annex C.2.

**Table 6.6.3.1.4.1-1: Test Configuration Table**

Initial Conditions						
Test Environment (as specified in TS 36.508 [7] subclause 4.1)				NC		
Test Frequencies (as specified in TS36.508 [7] subclause 4.3.1)				Low range, Mid range, High range		
Test Channel Bandwidths (as specified in TS 36.508 [7] subclause 4.3.1)				Lowest, 5MHz, Highest		
Test Parameters for Channel Bandwidths						
Ch BW	Downlink Configuration			Uplink Configuration		
	Mod'n	RB allocation		Mod'n	RB allocation	
		FDD	TDD		FDD	TDD
1.4MHz	N/A for Spurious Emissions testing			QPSK	6	6
1.4MHz				QPSK	1	1
3MHz				QPSK	15	15
3MHz				QPSK	1	1
5MHz				QPSK	25	25
5MHz				QPSK	1	1
10MHz				QPSK	50	50
10MHz				QPSK	1	1
15MHz				QPSK	75	75
15MHz				QPSK	1	1
20MHz				QPSK	100	100
20MHz				QPSK	1	1
Note 1: Test Channel Bandwidths are checked separately for each E-UTRA band, which applicable channel bandwidths are specified in Table 5.4.2.1-1.						
Note 2: The 1 RB allocation shall be tested at both RB #0 and RB #max.						

1. Connect the SS to the UE antenna connectors as shown in Figure TS 36.508 [7] Annex A, Figure A.7.
2. The parameter settings for the cell are set up according to TS 36.508 [7] subclause 4.4.3.
3. Downlink signals are initially set up according to Annex C0, C.1 and C.3.0, and uplink signals according to Annex H.1 and H.3.0.
4. The UL Reference Measurement channels are set according to Table 6.6.3.1.4.1-1.
5. Propagation conditions are set according to Annex B.0.
6. Ensure the UE is in State 3A-RF according to TS 36.508 [7] clause 5.2A.2. Message contents are defined in clause 6.6.3.1.4.3.

#### 6.6.3.1.4.2 Test procedure

1. SS sends uplink scheduling information for each UL HARQ process via PDCCH DCI format 0 for C\_RNTI to schedule the UL RMC according to Table 6.6.3.1.4.1-1. Since the UE has no payload data to send, the UE transmits uplink MAC padding bits on the UL RMC.
2. Send continuously uplink power control "up" commands in the uplink scheduling information to the UE until the UE transmits at  $P_{UMAX}$  level.
3. Measure the power of the transmitted signal with a measurement filter of bandwidths according to table 6.6.3.1.5-1. The centre frequency of the filter shall be stepped in contiguous steps according to table 6.6.3.1.5-1. The measured power shall be verified for each step. The measurement period shall capture the active time slots.

#### 6.6.3.1.4.3 Message contents

Message contents are according to TS 36.508 [7] subclause 4.6.

#### 6.6.3.1.5 Test requirement

This clause specifies the requirements for the specified E-UTRA band for Transmitter Spurious emissions requirement with frequency range as indicated in Table 6.6.3.1.5-1.

The measured average power of spurious emission, derived in step 3, shall not exceed the described value in Table 6.6.3.1.5-1.

The spurious emission limits apply for the frequency ranges that are more than  $\Delta f_{\text{OOB}}$  (MHz) from the edge of the channel bandwidth shown in Table 6.6.3.1.3-1.

NOTE: For measurement conditions at the edge of each frequency range, the lowest frequency of the measurement position in each frequency range should be set at the lowest boundary of the frequency range plus MBW/2. The highest frequency of the measurement position in each frequency range should be set at the highest boundary of the frequency range minus MBW/2. MBW denotes the measurement bandwidth defined for the protected band.

**Table 6.6.3.1.5-1: General spurious emissions test requirements**

Frequency Range	Maximum Level	Measurement Bandwidth	Notes
$9 \text{ kHz} \leq f < 150 \text{ kHz}$	-36 dBm	1 kHz	
$150 \text{ kHz} \leq f < 30 \text{ MHz}$	-36 dBm	10 kHz	
$30 \text{ MHz} \leq f < 1000 \text{ MHz}$	-36 dBm	100 kHz	
$1 \text{ GHz} \leq f < 12.75 \text{ GHz}$	-30 dBm	1 MHz	
$12.75 \text{ GHz} \leq f < 5^{\text{th}}$ harmonic of the upper frequency edge of the UL operating band in GHz	-30 dBm	1 MHz	Note 1
Note 1: Applies for Band 22, Band 42 and Band 43			

### 6.6.3.1\_1 Transmitter Spurious emissions for Multi-Cluster PUSCH

#### 6.6.3.1\_1.1 Test purpose

To verify that UE transmitter does not cause unacceptable interference to other channels or other systems in terms of transmitter spurious emissions for Multi-Cluster PUSCH transmission.

#### 6.6.3.1\_1.2 Test applicability

This test case applies to all types of E-UTRA UE release 10 and forward that support multi cluster PUSCH within a component carrier for the tested band.

#### 6.6.3.1\_1.3 Minimum conformance requirements

This clause specifies the requirements for the specified E-UTRA band for Transmitter Spurious emissions requirement with frequency range as indicated in table 6.6.3.1\_1.3-2.

The spurious emission limits apply for the frequency ranges that are more than  $\Delta f_{\text{OOB}}$  (MHz) from the edge of the channel bandwidth.

NOTE: For measurement conditions at the edge of each frequency range, the lowest frequency of the measurement position in each frequency range should be set at the lowest boundary of the frequency range plus MBW/2. The highest frequency of the measurement position in each frequency range should be set at the highest boundary of the frequency range minus MBW/2. MBW denotes the measurement bandwidth defined for the protected band.

**Table 6.6.3.1\_1.3-1:  $\Delta f_{\text{OOB}}$  boundary between E-UTRA channel and spurious emission domain**

Channel bandwidth	1.4 MHz	3.0 MHz	5 MHz	10 MHz	15 MHz	20 MHz
$\Delta f_{\text{OOB}}$ (MHz)	2.8	6	10	15	20	25

The spurious emission limits in Table 6.6.3.1\_1.3-2 apply for all transmitter band configurations (RB) and channel bandwidths.

**Table 6.6.3.1\_1.3-2: Spurious emissions limits**

Frequency Range	Maximum Level	Measurement Bandwidth	Notes
$9 \text{ kHz} \leq f < 150 \text{ kHz}$	-36 dBm	1 kHz	
$150 \text{ kHz} \leq f < 30 \text{ MHz}$	-36 dBm	10 kHz	
$30 \text{ MHz} \leq f < 1000 \text{ MHz}$	-36 dBm	100 kHz	
$1 \text{ GHz} \leq f < 12.75 \text{ GHz}$	-30 dBm	1 MHz	
$12.75 \text{ GHz} \leq f < 5^{\text{th}}$ harmonic of the upper frequency edge of the UL operating band in GHz	-30 dBm	1 MHz	Note 1
Note 1: Applies for Band 22, Band 42 and Band 43			

The normative reference for this requirement is TS 36.101 [2] subclause 6.6.3.1.

### 6.6.3.1\_1.4 Test description

#### 6.6.3.1\_1.4.1 Initial conditions

Initial conditions are a set of test configurations the UE needs to be tested in and the steps for the SS to take with the UE to reach the correct measurement state.

The initial test configurations consist of environmental conditions, test frequencies, and channel bandwidths based on E-UTRA bands specified in Table 5.4.2.1-1. All of these configurations shall be tested with applicable test parameters for each channel bandwidth, and are shown in Table 6.6.3.1\_1.4.1-1. The details of the uplink reference measurement channels (RMCs) are specified in Annex A.2. Configurations of PDSCH and PDCCH before measurement are specified in Annex C.2.

**Table 6.6.3.1\_1.4.1-1: Test Configuration Table**

Initial Conditions					
Test Environment as specified in TS 36.508[7] subclause 4.1			Normal		
Test Frequencies as specified in TS36.508 [7] subclause 4.3.1			Low range, Mid range, High range		
Test Channel Bandwidths as specified in TS 36.508 [7] subclause 4.3.1			Highest		
Test Parameters for Channel Bandwidths					
Configuration ID	Downlink Configuration		Uplink Configuration		
	Ch BW	N/A for SEM testing	Mod'n	Cluster1 RB allocations (LCRB @ RB <sub>start</sub> )	Cluster2 RB allocations (LCRB @ RB <sub>start</sub> )
1	5MHz		16QAM	2@0	1@24
2	5MHz		16QAM	18@0	2@22
3	5MHz		16QAM	2@0	18@6
4	10MHz		16QAM	3@0	2@48
5	10MHz		16QAM	42@0	3@45
6	10MHz		16QAM	3@0	42@6
7	15MHz		16QAM	8@0	7@68
8	15MHz		16QAM	60@0	4@68
9	15MHz		16QAM	4@0	60@12
10	20MHz		16QAM	4@0	4@96
11	20MHz		16QAM	92@0	4@96
12	20MHz		16QAM	4@0	92@8
Note 1: Test Channel Bandwidths are checked separately for each E-UTRA band, the applicable channel bandwidths are specified in Table 5.4.2.1-1.					

1. Connect the SS to the UE antenna connectors as shown in Figure TS 36.508 [7] Annex A, Figure A.7.
2. The parameter settings for the cell are set up according to TS 36.508 [7] subclause 4.4.3.

3. Downlink signals are initially set up according to Annex C0, C.1 and C.3.0, and uplink signals according to Annex H.1 and H.3.0.
4. The UL Reference Measurement channels are set according to Table 6.6.3.1\_1.4.1-1.
5. Propagation conditions are set according to Annex B.0.
6. Ensure the UE is in State 3A-RF according to TS 36.508 [7] clause 5.2A.2. Message contents are defined in clause 6.6.3.1\_1.4.3.

#### 6.6.3.1\_1.4.2 Test procedure

1. SS sends uplink scheduling information for each UL HARQ process via PDCCH DCI format 0 for C\_RNTI to schedule the UL RMC according to Table 6.6.3.1\_1.4.1-1. Since the UE has no payload data to send, the UE transmits uplink MAC padding bits on the UL RMC.
2. Send continuously uplink power control "up" commands in the uplink scheduling information to the UE until the UE transmits at  $P_{UMAX}$  level.
3. Measure the power of the transmitted signal with a measurement filter of bandwidths according to table 6.6.3.1\_1.5-1. The centre frequency of the filter shall be stepped in contiguous steps according to table 6.6.3.1\_1.5-1. The measured power shall be verified for each step. The measurement period shall capture the active time slots.

#### 6.6.3.1\_1.4.3 Message contents

Message contents are according to TS 36.508 [7] subclause 4.6.

#### 6.6.3.1\_1.5 Test requirement

This clause specifies the requirements for the specified E-UTRA band for Transmitter Spurious emissions requirement with frequency range as indicated in table 6.6.3.1\_1.5-1.

The measured average power of spurious emission, derived in step 3, shall not exceed the described value in Table 6.6.3.1\_1.5-1.

The spurious emission limits apply for the frequency ranges that are more than  $\Delta f_{OOB}$  (MHz) from the edge of the channel bandwidth shown in Table 6.6.3.1\_1.5-1.

NOTE: For measurement conditions at the edge of each frequency range, the lowest frequency of the measurement position in each frequency range should be set at the lowest boundary of the frequency range plus MBW/2. The highest frequency of the measurement position in each frequency range should be set at the highest boundary of the frequency range minus MBW/2. MBW denotes the measurement bandwidth defined for the protected band.

**Table 6.6.3.1\_1.5-1: General spurious emissions test requirements**

Frequency Range	Maximum Level	Measurement Bandwidth	Notes
$9 \text{ kHz} \leq f < 150 \text{ kHz}$	-36 dBm	1 kHz	
$150 \text{ kHz} \leq f < 30 \text{ MHz}$	-36 dBm	10 kHz	
$30 \text{ MHz} \leq f < 1000 \text{ MHz}$	-36 dBm	100 kHz	
$1 \text{ GHz} \leq f < 12.75 \text{ GHz}$	-30 dBm	1 MHz	
$12.75 \text{ GHz} \leq f < 5^{\text{th}}$ harmonic of the upper frequency edge of the UL operating band in GHz	-30 dBm	1 MHz	Note 1
Note 1: Applies for Band 22, Band 42 and Band 43			

## 6.6.3.1A Transmitter Spurious emissions for CA

### 6.6.3.1A.0 Minimum conformance requirements

This clause specifies the spurious emission requirements for carrier aggregation.

NOTE 1: For measurement conditions at the edge of each frequency range, the lowest frequency of the measurement position in each frequency range should be set at the lowest boundary of the frequency range plus MBW/2. The highest frequency of the measurement position in each frequency range should be set at the highest boundary of the frequency range minus MBW/2. MBW denotes the measurement bandwidth defined for the protected band.

For inter-band carrier aggregation with uplink assigned to two E-UTRA bands, the spurious emission requirement Table 6.6.3.1.3-2 apply for the frequency ranges that are more than  $F_{OOB}$  as defined in Table 6.6.3.1.3-1 away from edges of the assigned channel bandwidth on a component carrier. If for some frequency a spurious emission requirement of individual component carrier overlaps with the spectrum emission mask or channel bandwidth of another component carrier then it does not apply.

NOTE 2: For inter-band carrier aggregation with uplink assigned to two E-UTRA bands the requirements in Table 6.6.3.1.3-2 could be verified by measuring spurious emissions at the specific frequencies where second and third order intermodulation products generated by the two transmitted carriers can occur; in that case, the requirements for remaining applicable frequencies in Table 6.6.3.1.3-2 would be considered to be verified by the measurements verifying the one uplink inter-band CA spurious emission requirement.

For intra-band contiguous carrier aggregation the spurious emission limits apply for the frequency ranges that are more than  $F_{OOB}$  (MHz) in Table 6.6.3.1A.0-1 from the edge of the aggregated channel bandwidth (Table 5.4.2A-1). For frequencies  $\Delta f_{OOB}$  greater than  $F_{OOB}$  as specified in Table 6.6.3.1A.0-1 the spurious emission requirements in Table 6.6.3.1.3-2 are applicable.

**Table 6.6.3.1A.0-1: Boundary between E-UTRA out of band and spurious emission domain for intra-band contiguous carrier aggregation**

CA Bandwidth Class	OOB boundary $F_{OOB}$ (MHz)
A	Table 6.6.3.1.3-1
B	$BW_{Channel\_CA} + 5$
C	$BW_{Channel\_CA} + 5$

For intra-band non-contiguous carrier aggregation transmission the spurious emission requirement is defined as a composite spurious emission requirement. Composite spurious emission requirement applies to frequency ranges that are more than  $F_{OOB}$  away from the edges of the sub-blocks. Composite spurious emission requirement is defined as follows

- Composite spurious emission requirement is a combination of individual sub-block spurious emission requirements
- In case the sub-block consist of one component carrier the sub-block spurious emission requirement and  $F_{OOB}$  are defined in subclause 6.6.3.1.3
- If for some frequency an individual sub-block spurious emission requirement overlaps with the general spectrum emission mask or the sub-block bandwidth of another sub-block then it does not apply

The normative reference for this requirement is TS 36.101[2] clause 6.6.3.1A

### 6.6.3.1A.1 Transmitter Spurious emissions for CA (intra-band contiguous DL CA and UL CA)

#### 6.6.3.1A.1.1 Test purpose

To verify that transmitter of UE that support CA does not cause unacceptable interference to other channels or other systems in terms of transmitter spurious emissions.

#### 6.6.3.1A.1.2 Test applicability

This test case applies to all types of E-UTRA UE release 10 and forward that support intra-band contiguous DL CA and UL CA.

#### 6.6.3.1A.1.3 Minimum conformance requirements

The minimum conformance requirements are defined in clause 6.6.3.1A.0.

#### 6.6.3.1A.1.4 Test description

##### 6.6.3.1A.1.4.1 Initial condition

Initial conditions are a set of test configurations the UE needs to be tested in and the steps for the SS to take with the UE to reach the correct measurement state.

The initial test configurations consist of environmental conditions, test frequencies, and CC combinations based on E-UTRA CA bands specified in table 5.4.2A.1-1. All of these configurations shall be tested with applicable test parameters for each CA configuration, and are shown in table 6.6.3.1A.1.4.1-1. The details of the uplink and downlink reference measurement channels (RMCs) are specified in Annexes A.2 and A.3. Configurations of PDSCH and PDCCH before measurement are specified in Annex C.2.

**Table 6.6.3.1A.1.4.1-1: Test Configuration Table**

Initial Conditions								
Test Environment as specified in TS 36.508[7] subclause 4.1					NC			
Test Frequencies as specified in TS36.508 [7] subclause 4.3.1 for different CA bandwidth classes, and PCC and SCCs are mapped onto physical frequencies according to Table 6.1-2.					Low range, High range			
Test CC Combination setting ( $N_{RB\_agg}$ ) as specified in subclause 5.4.2A.1 for the CA Configuration					Lowest $N_{RB\_agg}$ , Highest $N_{RB\_agg}$ (Note 2)			
Test Parameters for CA Configurations								
CA Configuration / $N_{RB\_agg}$		DL Allocation	CC MOD	UL Allocation

100	75		QPSK	75	P_75@0	S_0@0		
100	75		QPSK	1	P_1@0	S_0@0		
100	75		QPSK	1	P_1@99	S_0@0		
100	75		QPSK	2	P_1@0	S_1@74		
100	75		QPSK	175	P_100@0	S_75@0		
100	100	QPSK	100	P_100@0	S_0@0	-	-	
100	100	QPSK	1	P_1@0	S_0@0	-	-	
100	100	QPSK	1	P_1@99	S_0@0	-	-	
100	100	QPSK	2	P_1@0	S_1@99	-	-	
100	100	QPSK	200	P_100@0	S_100@0	-	-	

Note 1: CA Configuration Test CC Combination settings are checked separately for each CA Configuration, which applicable aggregated channel bandwidths are specified in Table 5.4.2A.1-1

Note 2: If in the CA Configuration UE supports multiple CC Combinations with the same  $N_{RB\_agg}$ , only the first of those is tested, according to the order on the Test Configuration Table list.

1. Connect the SS to the UE antenna connectors as shown in TS 36.508[7] Annex A Figure group A.33 as appropriate.
2. The parameter settings for the cell are set up according to TS 36.508 [7] subclause 4.4.3.
3. Downlink signals for PCC are initially set up according to Annex C.0, C.1, and C.3.0, and uplink signals according to Annex H.1 and H.3.0.
4. The UL Reference Measurement channel is set according to Table 6.6.3.1A.1.4.1-1.
5. Propagation conditions are set according to Annex B.0.
6. Ensure the UE is in State 3A-RF according to TS 36.508 [7] clause 5.2A.2. Message contents are defined in clause 6.6.3.1A.1.4.3.

#### 6.6.3.1A.1.4.2 Test procedure

1. Configure SCC according to Annex C.0, C.1 and Annex C.3.0 for all downlink physical channels.
2. The SS shall configure SCC as per TS 36.508 [7] clause 5.2A.4. Message contents are defined in clause 6.6.3.1A.1.4.3
3. SS activates SCC by sending the activation MAC-CE (Refer TS 36.321 [13], clauses 5.13, 6.1.3.8). Wait for at least 2 seconds (Refer TS 36.133, clauses 8.3.3.2).
4. SS sends uplink scheduling information for each UL HARQ process via PDCCH DCI format 0 for C\_RNTI to schedule the UL RMC according to Table 6.6.3.1A.1.4.1-1 on both PCC and SCC. Since the UE has no payload and no loopback data to send the UE sends uplink MAC padding bits on the UL RMC.
5. Send continuously uplink power control “up” commands in every uplink scheduling information to the UE until the UE transmits at  $P_{UMAX}$  level.
6. Measure the power of the transmitted signal with a measurement filter of bandwidths according to Table 6.6.3.1A.1.5-1 for each component carrier. The centre frequency of the filter shall be stepped in contiguous steps according to Table 6.6.3.1A.1.5-1. The measured power shall be verified for each step. The measurement period shall capture the active time slots.

#### 6.6.3.1A.1.4.3 Message contents

Message contents are according to TS 36.508 [7] subclause 4.6. In test procedure step 2, for SCC configuration there are no additional message contents.

#### 6.6.3.1A.1.5 Test Requirements

This clause specifies the requirements for the specified E-UTRA band for Transmitter Spurious emissions requirement with frequency range as indicated in table 6.6.3.1A.1.5-1.

For frequencies  $\Delta f_{OOB}$  greater than  $F_{OOB}$  as specified in Table 6.6.3.1A.0-1 the measured average power of spurious emission, derived in step 6, shall not exceed the described value in Table 6.6.3.1A.1.5-1.

**NOTE:** For measurement conditions at the edge of each frequency range, the lowest frequency of the measurement position in each frequency range should be set at the lowest boundary of the frequency range plus  $MBW/2$ . The highest frequency of the measurement position in each frequency range should be set at the highest boundary of the frequency range minus  $MBW/2$ .  $MBW$  denotes the measurement bandwidth defined for the protected band.

**Table 6.6.3.1A.1.5-1: Spurious emissions limits**

Frequency Range	Maximum Level	Measurement Bandwidth	Notes
$9 \text{ kHz} \leq f < 150 \text{ kHz}$	-36 dBm	1 kHz	
$150 \text{ kHz} \leq f < 30 \text{ MHz}$	-36 dBm	10 kHz	
$30 \text{ MHz} \leq f < 1000 \text{ MHz}$	-36 dBm	100 kHz	
$1 \text{ GHz} \leq f < 12.75 \text{ GHz}$	-30 dBm	1 MHz	
$12.75 \text{ GHz} \leq f < 5^{\text{th}}$ harmonic of the upper frequency edge of the UL operating band in GHz	-30 dBm	1 MHz	Note 1
Note1: Applicability of this test requirement is FFS.			

### 6.6.3.1A.2 Transmitter Spurious emissions for CA (inter-band DL CA and UL CA)

#### 6.6.3.1A.2.1 Test purpose

To verify that transmitter of UE that support CA does not cause unacceptable interference to other channels or other systems in terms of transmitter spurious emissions.

#### 6.6.3.1A.2.2 Test applicability

This test case applies to all types of E-UTRA UE release 11 and forward that support inter-band DL CA and UL CA.

#### 6.6.3.1A.2.3 Minimum conformance requirements

The minimum conformance requirements are defined in clause 6.6.3.1A.0.

#### 6.6.3.1A.2.4 Test description

##### 6.6.3.1A.2.4.1 Initial condition

Same as in clause 6.6.3.1A.1.4.1 with the following exceptions:

- Instead of Table 5.4.2A.1-1 → use Table 5.4.2A.1-2 for CA configurations with two bands or Table 5.4.2A.1-2a for CA configurations with three bands.
- Instead of Table 6.6.3.1A.1.4.1-1 → use Table 6.6.3.1A.2.4.1-1.
- Instead of clause 6.6.3.1A.1.4.3 use clause 6.6.3.1A.2.4.3.

Table 6.6.3.1A.2.4.1-1: Test Configuration Table

Note 1: CA Configuration Test CC Combination settings are checked separately for each CA Configuration, which applicable aggregated channel bandwidths are specified in Table 5.4.2A.1-2. Note 2: If in the CA Configuration UE supports multiple CC Combinations with the same $N_{RB\_agg}$ , only the first of those is tested, according to the order on the Test Configuration Table list.							

#### 6.6.3.1A.2.4.2 Test procedure

Same test procedure as in clause 6.6.3.1A.1.4.2.

- Instead of Table 6.6.3.1A.1.4.1-1 → use Table 6.6.3.1A.2.4.1-1.
- Instead of Table 6.6.3.1A.1.5-1 → use Table 6.6.3.1A.2.5-1.
- Instead of clause 6.6.3.1A.1.4.3 use clause 6.6.3.1A.2.4.3.

#### 6.6.3.1A.2.4.3 Message contents

Message contents are according to TS 36.508 [7] clause 4.6 with exceptions as in clause 6.6.3.1A.1.4.3.

#### 6.6.3.1A.2.5 Test requirement

This clause specifies the requirements for the specified E-UTRA band for Transmitter Spurious emissions requirement with frequency range as indicated in table 6.6.3.1A.2.5-1.

For frequencies  $\Delta f_{OOB}$  greater than  $F_{OOB}$  as specified in Table 6.6.3.1A.0-1 the measured average power of spurious emission, derived in step 6, shall not exceed the described value in Table 6.6.3.1A.2.5-1.

- NOTE: For measurement conditions at the edge of each frequency range, the lowest frequency of the measurement position in each frequency range should be set at the lowest boundary of the frequency range plus  $MBW/2$ . The highest frequency of the measurement position in each frequency range should be set at the highest boundary of the frequency range minus  $MBW/2$ .  $MBW$  denotes the measurement bandwidth defined for the protected band.

Table 6.6.3.1A.2.5-1: Spurious emissions limits

### 6.6.3.1A.3 Transmitter Spurious emissions for CA (intra-band non-contiguous DL CA and UL CA)

#### 6.6.3.1A.3.1 Test purpose

To verify that transmitter of UE that support CA does not cause unacceptable interference to other channels or other systems in terms of transmitter spurious emissions.

#### 6.6.3.1A.3.2 Test applicability

This test case applies to all types of E-UTRA UE release 11 and forward that support intra-band non-contiguous DL CA and UL CA.

#### 6.6.3.1A.3.3 Minimum conformance requirements

The minimum conformance requirements are defined in clause 6.6.3.1A.0.

#### 6.6.3.1A.3.4 Test description

##### 6.6.3.1A.3.4.1 Initial condition

Same as in clause 6.6.3.1A.1.4.1 with the following exceptions:

- Instead of Table 5.4.2A.1-1 → use Table 5.4.2A.1-3 for CA configurations.
- Instead of Table 6.6.3.1A.1.4.1-1 → use Table 6.6.3.1A.3.4.1-1.
- Instead of clause 6.6.3.1A.1.4.3 → use clause 6.6.3.1A.3.4.3.

Table 6.6.3.1A.3.4.1-1: Test Configuration Table

Initial Conditions									
Test Environment as specified in TS 36.508[7] subclause 4.1				Normal					
Test Frequencies as specified in TS 36.508 [7] subclause 4.3.1 for different CA bandwidth classes, and PCC and SCCs are mapped onto physical frequencies according to Table 6.1-2.				Refer to test points A: N/A (Range is not relevant), Maximum Wgap					
Test CC Combination setting ( $N_{RB\_agg}$ ) as specified in subclause 5.4.2A.1 for the CA Configuration across bandwidth combination sets supported by the UE.				Refer to test point Test only test points with Lowest $N_{RB}$ for PCC and SCC Highest $N_{RB}$ for PCC and SCC					
Test Parameters for CA Configurations									
ID	CA Configuration / $N_{RB\_agg}$		$W_{gap}$ [MHz]	DL Allocation		UL Allocation			
	PCC $N_{RB}$	SCCs $N_{RB}$		CC MOD	PCC & SCC RB allocation	CC MOD	PCC $N_{RB\_alloc}$ ( $L_{CRB}$ @ $RB_{start}$ )	CC MOD	SCC $N_{RB\_alloc}$ ( $L_{CRB}$ @ $RB_{start}$ )
Test Parameters for CA_4A-4A Configurations									
1	25	25	35	N/A	QPSK	P_1@0	QPSK	S_1@0	
2	25	25	35		QPSK	P_1@24	QPSK	S_1@24	
3	25	25	35		QPSK	P_25@0	QPSK	S_25@0	
4	50	50	25		QPSK	P_1@0	QPSK	S_1@0	
5	50	50	25		QPSK	P_1@49	QPSK	S_1@49	
6	50	50	25		QPSK	P_50@0	QPSK	S_50@0	
7	100	100	5		QPSK	P_1@0	QPSK	S_1@0	
8	100	100	5		QPSK	P_1@99	QPSK	S_1@99	
9	100	100	5		QPSK	P_100@0	QPSK	S_100@0	
Note 1: CA Configuration Test CC Combination settings are checked separately for each CA Configuration, which applicable aggregated channel bandwidths are specified in Table 5.4.2A.1-3.									
Note 2: The measurements need to be executed for in-gap interferer positions when the sub-block gap size $W_{gap}$ allows.									

## 6.6.3.1A.3.4.2 Test procedure

1. Configure SCC according to Annex C.0, C.1 and Annex C.3.0 for all downlink physical channels.
2. The SS shall configure SCC as per TS 36.508 [7] clause 5.2A.4. Message contents are defined in clause 6.6.3.1A.3.4.3
3. SS activates SCC by sending the activation MAC-CE (Refer TS 36.321 [13], clauses 5.13, 6.1.3.8). Wait for at least 2 seconds (Refer TS 36.133, clauses 8.3.3.2).
4. SS sends uplink scheduling information for each UL HARQ process via PDCCH DCI format 0 for  $C\_RNTI$  to schedule the UL RMC according to Table 6.6.3.1A.3.4.1-1 on both PCC and SCC. Since the UE has no payload and no loopback data to send the UE sends uplink MAC padding bits on the UL RMC.
5. Send continuously uplink power control “up” commands in every uplink scheduling information to the UE until the UE transmits at  $P_{UMAX}$  level.
6. Measure the power of the transmitted signal with a measurement filter of bandwidths according to Table 6.6.3.1A.3.5-1 for each component carrier. The centre frequency of the filter shall be stepped in contiguous steps according to Table 6.6.3.1A.3.5-1. The measured power shall be verified for each step. The measurement period shall capture the active time slots.

7. Repeat the measurement for in-gap interferer positions when the sub-block gap size  $W_{\text{gap}}$  allows.

#### 6.6.3.1A.3.4.3 Message contents

Message contents are according to TS 36.508 [7] subclause 4.6. In test procedure step 2, for SCC configuration there are no additional message contents.

#### 6.6.3.1A.3.5 Test Requirements

This clause specifies the requirements for the specified E-UTRA band for Transmitter Spurious emissions requirement with frequency range as indicated in table 6.6.3.1A.3.5-1.

For frequencies  $\Delta f_{\text{OOB}}$  greater than  $F_{\text{OOB}}$  as specified in Table 6.6.3.1A.0-1 the measured average power of spurious emission, derived in step 6, shall not exceed the described value in Table 6.6.3.1A.3.5-1.

NOTE: For measurement conditions at the edge of each frequency range, the lowest frequency of the measurement position in each frequency range should be set at the lowest boundary of the frequency range plus MBW/2. The highest frequency of the measurement position in each frequency range should be set at the highest boundary of the frequency range minus MBW/2. MBW denotes the measurement bandwidth defined for the protected band.

**Table 6.6.3.1A.3.5-1: Spurious emissions limits**

Frequency Range	Maximum Level	Measurement Bandwidth	Notes
$9 \text{ kHz} \leq f < 150 \text{ kHz}$	-36 dBm	1 kHz	
$150 \text{ kHz} \leq f < 30 \text{ MHz}$	-36 dBm	10 kHz	
$30 \text{ MHz} \leq f < 1000 \text{ MHz}$	-36 dBm	100 kHz	
$1 \text{ GHz} \leq f < 12.75 \text{ GHz}$	-30 dBm	1 MHz	

### 6.6.3.2 Spurious emission band UE co-existence

*Editor's note: This test case contains different requirements for different UE releases*

#### 6.6.3.2.1 Test purpose

To verify that UE transmitter does not cause unacceptable interference to co-existing systems for the specified bands which has specific requirements in terms of transmitter spurious emissions.

#### 6.6.3.2.2 Test applicability

This test case applies to all types of E-UTRA UE release 8 and forward.

#### 6.6.3.2.3 Minimum conformance requirements

This clause specifies the requirements for the specified E-UTRA band for coexistence with protected bands as indicated in Table 6.6.3.2.3-1.

NOTE: For measurement conditions at the edge of each frequency range, the lowest frequency of the measurement position in each frequency range should be set at the lowest boundary of the frequency range plus MBW/2. The highest frequency of the measurement position in each frequency range should be set at the highest boundary of the frequency range minus MBW/2. MBW denotes the measurement bandwidth defined for the protected band.

Table 6.6.3.2.3-1: Spurious emission band UE co-existence limits Rel-8

38	E-UTRA Band 1, 3, 8, 33, 34	FDL_low	-	FDL_high	-50	1	
	Frequency range	2620	-	2645	-15.5	5	Note <sup>14</sup> Note <sup>16</sup> Note <sup>18</sup>
39	E-UTRA Band 34, 40	FDL_low	-	FDL_high	-50	1	
40	E-UTRA Band 1, 3, 33, 34, 39	FDL_low	-	FDL_high	-50	1	

Note 1: FDL\_low and FDL\_high refer to each E-UTRA frequency band specified in Table 5.2-1

Note 2: As exceptions, measurements with a level up to the applicable requirements defined in Table 6.6.3.1.3-2 are permitted for each assigned E-UTRA carrier used in the measurement due to 2nd or 3rd harmonic spurious emissions. An exception is allowed if there is at least one individual RE within the transmission bandwidth (see Figure 5.4.2-1) for which the 2nd or 3rd harmonic, i.e. the frequency equal to two or three times the frequency of that RE, is within the measurement bandwidth (MBW).

Note 3: To meet these requirements some restriction will be needed for either the operating band or protected band

Note 4: N/A

Note 5: For non synchronised TDD operation to meet these requirements some restriction will be needed for either the operating band or protected band

Note 6: N/A.

Note 7: Applicable when co-existence with PHS system operating in 1884.5-1919.6MHz.

Note 8: Applicable when co-existence with PHS system operating in 1884.5-1915.7MHz.

Note 9: N/A

Note 10: N/A

Note 11: Whether the applicable frequency range should be 793-805MHz instead of 799-805MHz is TBD

Note 12: The emissions measurement shall be sufficiently power averaged to ensure a standard deviation < 0.5 dB

Note 13: Applicable when UE transmits anywhere within 1749.9 – 1784.9MHz. Applicable when the assigned E-UTRA UL operating channel is  $\geq 1749.9$  MHz and  $\leq 1784.9$  MHz.

Note 14: These requirements also apply for the frequency ranges that are less than  $\Delta f_{\text{OOB}}$  (MHz) in Table 6.6.3.1.3-1 from the edge of the channel bandwidth.

Note 15: This requirement is applicable for an uplink transmission bandwidth less than or equal to 54 RB for carriers of 15 MHz bandwidth when carrier centre frequency is within the range 2560.5 - 2562.5 MHz and for carriers of 20 MHz bandwidth when carrier centre frequency is within the range 2552 - 2560 MHz. This requirement is applicable without any other uplink transmission bandwidth restriction for channel bandwidths within the range 2500 - 2570 MHz.

Note 16: This requirement is applicable for an uplink transmission bandwidth less than or equal to 54 RB for carriers of 15 MHz bandwidth when carrier centre frequency is within the range 2605.5 - 2607.5 MHz and for carriers of 20 MHz bandwidth when carrier centre frequency is within the range 2597 – 2605 MHz. This requirement is applicable without any other uplink transmission bandwidth restriction for channel bandwidths within the range 2570 – 2615 MHz. For assigned carriers with bandwidths overlapping the frequency range 2615-2620 MHz the requirements apply with the maximum output power configured to +19 dBm in the IE *P-Max*.

Note 17: This requirement is applicable for an uplink transmission bandwidth less than or equal to 54 RB for carriers of

15 MHz bandwidth when carrier centre frequency is within the range 1927.5 - 1929.5 MHz and for carriers of 20 MHz bandwidth when carrier centre frequency is within the range 1930 - 1938 MHz. This requirement is applicable without any other uplink transmission bandwidth restriction for channel bandwidths within the range 1920 - 1980 MHz.

Note 18: For these adjacent bands, the emission limit could imply risk of harmful interference to UE(s) operating in the protected operating band.

NOTE: The restriction on the maximum uplink transmission to 54 RB in Notes 15, 16, and 17 of Table 6.6.3.2.3-1 is intended for conformance testing and may be applied to network operation to facilitate coexistence when the aggressor and victim bands are deployed in the same geographical area. The applicable spurious emission requirement of -15.5 dBm/5MHz is a least restrictive technical condition for FDD/TDD coexistence and may have to be revised in the future.

Table 6.6.3.2.3-1A: Spurious emission band UE co-existence limits Rel-9

E-UTRA Band	Spurious emission						
	Protected band	Frequency range (MHz)			Maximum level (dBm)	MBW (MHz)	NOTE

40	E-UTRA Band 1, 3, 33, 34, 39	F <sub>DL_low</sub>	-	F <sub>DL_high</sub>	-50	1	
Note 1:	FDL_low and FDL_high refer to each E-UTRA frequency band specified in Table 5.2-1						
Note 2:	As exceptions, measurements with a level up to the applicable requirements defined in Table 6.6.3.1.3-2 are permitted for each assigned E-UTRA carrier used in the measurement due to 2nd or 3rd harmonic spurious emissions. An exception is allowed if there is at least one individual RE within the transmission bandwidth (see Figure 5.4.2-1) for which the 2nd or 3rd harmonic, i.e. the frequency equal to two or three times the frequency of that RE, is within the measurement bandwidth (MBW).						
Note 3:	To meet these requirements some restriction will be needed for either the operating band or protected band						
Note 4:	N/A						
Note 5:	For non synchronised TDD operation to meet these requirements some restriction will be needed for either the operating band or protected band						
Note 6:	N/A						
Note 7:	Applicable when co-existence with PHS system operating in 1884.5-1919.6MHz.						
Note 8:	Applicable when co-existence with PHS system operating in 1884.5 -1915.7MHz.						
Note 9:	N/A						
Note 10:	N/A						
Note 11:	Whether the applicable frequency range should be 793-805MHz instead of 799-805MHz is TBD						
Note 12:	The emissions measurement shall be sufficiently power averaged to ensure a standard deviation < 0.5 dB						
Note 13:	Applicable when the assigned E-UTRA UL operating channel is ≥1744.9MHz and ≤ 1784.9MHz.						
Note 14:	These requirements also apply for the frequency ranges that are less than Δf <sub>oob</sub> (MHz) in Table 6.6.3.1-1 from the edge of the channel bandwidth.						
Note 15:	This requirement is applicable for an uplink transmission bandwidth less than or equal to 54 RB for carriers of 15 MHz bandwidth when carrier centre frequency is within the range 2560.5 - 2562.5 MHz and for carriers of 20 MHz bandwidth when carrier centre frequency is within the range 2552 - 2560 MHz. This requirement is applicable without any other uplink transmission bandwidth restriction for channel bandwidths within the range 2500 - 2570 MHz.						
Note 16:	This requirement is applicable for an uplink transmission bandwidth less than or equal to 54 RB for carriers of 15 MHz bandwidth when carrier centre frequency is within the range 2605.5 - 2607.5 MHz and for carriers of 20 MHz bandwidth when carrier centre frequency is within the range 2597 – 2605 MHz. This requirement is						

	applicable without any other uplink transmission bandwidth restriction for channel bandwidths within the range 2570 – 2615 MHz. For assigned carriers with bandwidths overlapping the frequency range 2615-2620 MHz the requirements apply with the maximum output power configured to +19 dBm in the IE <i>P-Max</i> .
Note 17:	For carriers of 5 MHz channel bandwidth with carrier centre frequencies ( $F_c$ ) in the range $902.5\text{MHz} \leq F_c < 907.5\text{ MHz}$ , the requirement applies for uplink transmission bandwidths less than or equal to 20 RB. No restrictions apply in the range $907.5\text{ MHz} \leq F_c \leq 912.5\text{ MHz}$ . For carriers of 10 MHz channel bandwidth, the requirement only applies for $F_c = 910\text{ MHz}$ and uplink transmission bandwidths less than or equal to 32 RB with $\text{RB}_{\text{start}} > 3$ .
Note 18:	This requirement is applicable for an uplink transmission bandwidth less than or equal to 54 RB for carriers of 15 MHz bandwidth when carrier centre frequency is within the range 1927.5 - 1929.5 MHz and for carriers of 20 MHz bandwidth when carrier centre frequency is within the range 1930 - 1938 MHz. This requirement is applicable without any other uplink transmission bandwidth restriction for channel bandwidths within the range 1920 - 1980 MHz.
Note 19:	For these adjacent bands, the emission limit could imply risk of harmful interference to UE(s) operating in the protected operating band.

NOTE: The restriction on the maximum uplink transmission to 54 RB in Notes 15, 16 and 18 of Table 6.6.3.2.3-1A is intended for conformance testing and may be applied to network operation to facilitate coexistence when the aggressor and victim bands are deployed in the same geographical area. The applicable spurious emission requirement of -15.5 dBm/5MHz is a least restrictive technical condition for FDD/TDD coexistence and may have to be revised in the future.

	E-UTRA Band 43	F <sub>DL_low</sub>	-	F <sub>DL_high</sub>	-50	1	2
40	E-UTRA Band 1, 3, 7, 8, 20, 22, 33, 34, 38, 39, 42, 43	F <sub>DL_low</sub>	-	F <sub>DL_high</sub>	-50	1	

41	E-UTRA Band 2, 4, 5, 10, 12, 13, 14, 17, 23, 24, 25	$F_{DL\_low}$	-	$F_{DL\_high}$	-50	1	
42	E-UTRA Band 1, 2, 3, 4, 5, 7, 8, 10, 11, 18, 19, 20, 21, 25, 33, 34, 38, 40	$F_{DL\_low}$	-	$F_{DL\_high}$	-50	1	
	Frequency range	1884.5	-	1915.7	-41	0.3	8
43	E-UTRA Band 1, 2, 3, 4, 5, 7, 8, 10, 20, 25, 33, 34, 38, 40	$F_{DL\_low}$	-	$F_{DL\_high}$	-50	1	
	E-UTRA Band 42	$F_{DL\_low}$	-	$F_{DL\_high}$	-50	1	3
	E-UTRA Band 22	$F_{DL\_low}$	-	$F_{DL\_high}$	[-50]	[1]	3
Note 1:	$F_{DL\_low}$ and $F_{DL\_high}$ refer to each E-UTRA frequency band specified in Table 5.2-1						
Note 2:	As exceptions, measurements with a level up to the applicable requirements defined in Table 6.6.3.1.3-2 are permitted for each assigned E-UTRA carrier used in the measurement due to 2 <sup>nd</sup> , 3 <sup>rd</sup> , 4 <sup>th</sup> [or 5 <sup>th</sup> ] harmonic spurious emissions. Due to spreading of the harmonic emission the exception is also allowed for the first 1 MHz frequency range immediately outside the harmonic emission on both sides of the harmonic emission. This results in an overall exception interval centred at the harmonic emission of (2MHz + N x $L_{CRB}$ x 180kHz), where N is 2, 3, 4, [5] for the 2 <sup>nd</sup> , 3 <sup>rd</sup> , 4 <sup>th</sup> [or 5 <sup>th</sup> ] harmonic respectively. The exception is allowed if the measurement bandwidth (MBW) totally or partially overlaps the overall exception interval.						
Note 3:	To meet these requirements some restriction will be needed for either the operating band or protected band						
Note 4:	N/A						
Note 5:	For non synchronised TDD operation to meet these requirements some restriction will be needed for either the operating band or protected band						
Note 6:	N/A						
Note 7:	Applicable when co-existence with PHS system operating in 1884.5-1919.6MHz.						
Note 8:	Applicable when co-existence with PHS system operating in 1884.5 -1915.7MHz.						
Note 9:	N/A						
Note 10:	N/A						
Note 11:	Whether the applicable frequency range should be 793-805MHz instead of 799-805MHz is TBD						
Note 12:	The emissions measurement shall be sufficiently power averaged to ensure a standard deviation < 0.5 dB						
Note 13:	This requirement applies for 5, 10, 15 and 20 MHz E-UTRA channel bandwidth allocated within 1744.9MHz and 1784.9MHz.						
Note 14:	N/A						
Note 15:	These requirements also apply for the frequency ranges that are less than $F_{OoB}$ (MHz) in Table 6.6.3.1.3-1 and Table 6.6.3.1A.1.3-1 from the edge of the channel bandwidth.						
NOTE 16:	This requirement is applicable for any channel bandwidths within the range 2500 - 2570 MHz with the following restriction: for carriers of 15 MHz bandwidth when carrier centre frequency is within the range 2560.5 - 2562.5 MHz and for carriers of 20 MHz bandwidth when carrier centre frequency is within the range 2552 - 2560 MHz the requirement is applicable only for an uplink transmission bandwidth less than or equal to 54 RB.						
NOTE 17:	This requirement is applicable for any channel bandwidths within the range 2570 - 2615 MHz with the following restriction: for carriers of 15 MHz bandwidth when carrier centre frequency is within the range 2605.5 - 2607.5 MHz and for carriers of 20 MHz bandwidth when carrier centre frequency is within the range 2597 - 2605 MHz the requirement is applicable only for an uplink transmission bandwidth less than or equal to 54 RB. For carriers with channel bandwidth overlapping the frequency range 2615 - 2620 MHz the requirement applies with the maximum output power configured to +19 dBm in the IE <i>P-Max</i> .						
NOTE 18:	This requirement is applicable only for the following cases: - for carriers of 5 MHz channel bandwidth when carrier centre frequency ( $F_c$ ) is within the range $902.5 \text{ MHz} \leq F_c < 907.5 \text{ MHz}$ with an uplink transmission bandwidth less than or equal to 20 RB - for carriers of 5 MHz channel bandwidth when carrier centre frequency ( $F_c$ ) is within the range $907.5 \text{ MHz} \leq F_c \leq 912.5 \text{ MHz}$ without any restriction on uplink transmission bandwidth - for carriers of 10 MHz channel bandwidth when carrier centre frequency ( $F_c$ ) is $F_c = 910 \text{ MHz}$ with an uplink transmission bandwidth less than or equal to 32 RB with $RB_{start} > 3$ .						
NOTE 19:	This requirement is applicable for any channel bandwidths within the range 1920 - 1980 MHz with the following restriction: for carriers of 15 MHz bandwidth when carrier centre frequency is within the range 1927.5 - 1929.5 MHz and for carriers of 20 MHz bandwidth when carrier centre frequency is within the range 1930 - 1938 MHz the requirement is applicable only for an uplink transmission bandwidth less than or equal to 54 RB.						
Note 20:	For these adjacent bands, the emission limit could imply risk of harmful interference to UE(s) operating in the protected operating band.						
Note 21:	N/A						
Note 22:	N/A						

NOTE: The restriction on the maximum uplink transmission to 54 RB in Notes 16, 17, and 19 of Table 6.6.3.2.3-1B is intended for conformance testing and may be applied to network operation to facilitate coexistence when the aggressor and victim bands are deployed in the same geographical area. The applicable spurious emission requirement of -15.5 dBm/5MHz is a least restrictive technical condition for FDD/TDD coexistence and may have to be revised in the future.

Table 6.6.3.2.3-1C: Spurious emission band UE co-existence limits Rel-11

E-UTRA Band	Spurious emission						
	Protected band	Frequency range (MHz)			Maximum Level (dBm)	MBW (MHz)	Note

	E-UTRA Band 22	$F_{DL\_low}$	-	$F_{DL\_high}$	[-50]	[1]	3	
44	E-UTRA Band 3, 5, 8, 34, 39, 41	$F_{DL\_low}$	-	$F_{DL\_high}$	-50	1		
	E-UTRA Band 1, 40, 42	$F_{DL\_low}$	-	$F_{DL\_high}$	-50	1	2	

- Note 1:  $F_{DL\_low}$  and  $F_{DL\_high}$  refer to each E-UTRA frequency band specified in Table 5.2-1
- Note 2: As exceptions, measurements with a level up to the applicable requirements defined in Table 6.6.3.1.3-2 are permitted for each assigned E-UTRA carrier used in the measurement due to 2<sup>nd</sup>, 3<sup>rd</sup>, 4<sup>th</sup> [or 5<sup>th</sup>] harmonic spurious emissions. Due to spreading of the harmonic emission the exception is also allowed for the first 1 MHz frequency range immediately outside the harmonic emission on both sides of the harmonic emission. This results in an overall exception interval centred at the harmonic emission of  $(2\text{MHz} + N \times L_{CRB} \times 180\text{kHz})$ , where N is 2, 3, 4, [5] for the 2<sup>nd</sup>, 3<sup>rd</sup>, 4<sup>th</sup> [or 5<sup>th</sup>] harmonic respectively. The exception is allowed if the measurement bandwidth (MBW) totally or partially overlaps the overall exception interval.
- Note 3: To meet these requirements some restriction will be needed for either the operating band or protected band
- Note 4: N/A
- Note 5: For non synchronised TDD operation to meet these requirements some restriction will be needed for either the operating band or protected band
- Note 6: N/A
- Note 7: Applicable when co-existence with PHS system operating in 1884.5-1919.6MHz.
- Note 8: Applicable when co-existence with PHS system operating in 1884.5 -1915.7MHz.
- Note 9: N/A
- Note 10: N/A
- Note 11: Whether the applicable frequency range should be 793-805MHz instead of 799-805MHz is TBD
- Note 12: The emissions measurement shall be sufficiently power averaged to ensure a standard deviation < 0.5 dB
- Note 13: This requirement applies for 5, 10, 15 and 20 MHz E-UTRA channel bandwidth allocated within 1744.9MHz and 1784.9MHz.
- Note 14: N/A
- Note 15: These requirements also apply for the frequency ranges that are less than  $F_{OOB}$  (MHz) in Table 6.6.3.1.3-1 and Table 6.6.3.1A.1.3-1 from the edge of the channel bandwidth.
- Note 16: N/A
- Note 17: N/A
- Note 18: N/A
- Note 19: Applicable when the assigned E-UTRA carrier is confined within 718 MHz and 748 MHz and when the channel bandwidth used is 5 or 10 MHz.
- Note 20: N/A
- Note 21: This requirement is applicable for any channel bandwidths within the range 2500 - 2570 MHz with the following restriction: for carriers of 15 MHz bandwidth when carrier centre frequency is within the range 2560.5 - 2562.5 MHz and for carriers of 20 MHz bandwidth when carrier centre frequency is within the range 2552 - 2560 MHz the requirement is applicable only for an uplink transmission bandwidth less than or equal to 54 RB.
- Note 22: This requirement is applicable for any channel bandwidths within the range 2570 - 2615 MHz with the following restriction: for carriers of 15 MHz bandwidth when carrier centre frequency is within the range 2605.5 - 2607.5 MHz and for carriers of 20 MHz bandwidth when carrier centre frequency is within the range 2597 - 2605 MHz the requirement is applicable only for an uplink transmission bandwidth less than or equal to 54 RB.  
For carriers with channel bandwidth overlapping the frequency range 2615 - 2620 MHz the requirement applies with the maximum output power configured to +19 dBm in the IE *P-Max*.
- Note 23: This requirement is applicable only for the following cases:  
- for carriers of 5 MHz channel bandwidth when carrier centre frequency ( $F_c$ ) is within the range  $902.5 \text{ MHz} \leq F_c < 907.5 \text{ MHz}$  with an uplink transmission bandwidth less than or equal to 20 RB  
- for carriers of 5 MHz channel bandwidth when carrier centre frequency ( $F_c$ ) is within the range  $907.5 \text{ MHz} \leq F_c \leq 912.5 \text{ MHz}$  without any restriction on uplink transmission bandwidth  
- for carriers of 10 MHz channel bandwidth when carrier centre frequency ( $F_c$ ) is  $F_c = 910 \text{ MHz}$  with an uplink transmission bandwidth less than or equal to 32 RB with  $RB_{start} > 3$ .
- Note 24: As exceptions, measurements with a level up to the applicable requirement of -38 dBm/MHz is permitted for each assigned E-UTRA carrier used in the measurement due to 2<sup>nd</sup> harmonic spurious emissions. An exception is allowed if there is at least one individual RB within the transmission bandwidth (see Figure 5.6-1) for which the 2<sup>nd</sup> harmonic totally or partially overlaps the measurement bandwidth (MBW).
- Note 25: As exceptions, measurements with a level up to the applicable requirement of -36 dBm/MHz is permitted for each assigned E-UTRA carrier used in the measurement due to 3<sup>rd</sup> harmonic spurious emissions. An exception is allowed if there is at least one individual RB within the transmission bandwidth (see Figure 5.6-1) for which the 3<sup>rd</sup> harmonic totally or partially overlaps the measurement bandwidth (MBW).
- Note 26: For these adjacent bands, the emission limit could imply risk of harmful interference to UE(s) operating in the protected operating band.
- Note 27: This requirement is applicable for any channel bandwidths within the range 1920 - 1980 MHz with the following restriction: for carriers of 15 MHz bandwidth when carrier centre frequency is within the range 1927.5 - 1929.5 MHz and for carriers of 20 MHz bandwidth when carrier centre frequency is within the range 1930 - 1938 MHz the requirement is applicable only for an uplink

- transmission bandwidth less than or equal to 54 RB.
- Note 28: N/A
- Note 29: N/A
- Note 30: This requirement applies when the E-UTRA carrier is confined within 2545-2575 MHz and the channel bandwidth is 10 or 20 MHz
- Note 31: This requirement is applicable for 5 and 10 MHz E-UTRA channel bandwidth allocated within 718-728MHz. For carriers of 10 MHz bandwidth, this requirement applies for an uplink transmission bandwidth less than or equal to 30 RB with RBstart > 1 and RBstart<48.
- Note 32: This requirement is applicable in the case of a 10 MHz E-UTRA carrier confined within 703 MHz and 733 MHz, otherwise the requirement of -25 dBm with a measurement bandwidth of 8 MHz applies.

Table 6.6.3.2.3-1D: Spurious emission band UE co-existence limits Rel-12

E-UTRA Band	Spurious emission						
	Protected band	Frequency range (MHz)		Maximum Level (dBm)	MBW (MHz)	Note	
1	E-UTRA Band 1, 5, 7, 8, 11, 18, 19, 20, 21, 22, 26, 27, 28, 31, 32, 38, 40, 41, 42, 43, 44	$F_{DL\_low}$	-	$F_{DL\_high}$	-50	1

	E-UTRA Band 22	$F_{DL\_low}$	-	$F_{DL\_high}$	[-50]	[1]	3
44	E-UTRA Band 3, 5, 8, 34, 39, 41	$F_{DL\_low}$	-	$F_{DL\_high}$	-50	1	
	E-UTRA Band 1, 40, 42	$F_{DL\_low}$	-	$F_{DL\_high}$	-50	1	2

- Note 1:  $F_{DL\_low}$  and  $F_{DL\_high}$  refer to each E-UTRA frequency band specified in Table 5.5-1
- Note 2: As exceptions, measurements with a level up to the applicable requirements defined in Table 6.6.3.1.3-2 are permitted for each assigned E-UTRA carrier used in the measurement due to 2<sup>nd</sup>, 3<sup>rd</sup>, 4<sup>th</sup> [or 5<sup>th</sup>] harmonic spurious emissions. Due to spreading of the harmonic emission the exception is also allowed for the first 1 MHz frequency range immediately outside the harmonic emission on both sides of the harmonic emission. This results in an overall exception interval centred at the harmonic emission of  $(2\text{MHz} + N \times L_{CRB} \times 180\text{kHz})$ , where N is 2, 3, 4, [5] for the 2<sup>nd</sup>, 3<sup>rd</sup>, 4<sup>th</sup> [or 5<sup>th</sup>] harmonic respectively. The exception is allowed if the measurement bandwidth (MBW) totally or partially overlaps the overall exception interval.
- Note 3: To meet these requirements some restriction will be needed for either the operating band or protected band
- Note 4: N/A
- Note 5: For non synchronised TDD operation to meet these requirements some restriction will be needed for either the operating band or protected band
- Note 6: N/A
- Note 7: Applicable when co-existence with PHS system operating in 1884.5-1919.6MHz.
- Note 8: Applicable when co-existence with PHS system operating in 1884.5 -1915.7MHz.
- Note 9: N/A
- Note 10: N/A
- Note 11: Whether the applicable frequency range should be 793-805MHz instead of 799-805MHz is TBD
- Note 12: The emissions measurement shall be sufficiently power averaged to ensure a standard deviation < 0.5 dB
- Note 13: This requirement applies for 5, 10, 15 and 20 MHz E-UTRA channel bandwidth allocated within 1744.9MHz and 1784.9MHz.
- Note 14: N/A
- Note 15: These requirements also apply for the frequency ranges that are less than  $F_{OoB}$  (MHz) in Table 6.6.3.1.3-1 and Table 6.6.3.1A.1.3-1 from the edge of the channel bandwidth.
- Note 16: N/A
- Note 17: N/A
- Note 18: N/A
- Note 19: Applicable when the assigned E-UTRA carrier is confined within 718 MHz and 748 MHz and when the channel bandwidth used is 5 or 10 MHz.
- Note 20: N/A
- Note 21: This requirement is applicable for any channel bandwidths within the range 2500 - 2570 MHz with the following restriction: for carriers of 15 MHz bandwidth when carrier centre frequency is within the range 2560.5 - 2562.5 MHz and for carriers of 20 MHz bandwidth when carrier centre frequency is within the range 2552 - 2560 MHz the requirement is applicable only for an uplink transmission bandwidth less than or equal to 54 RB.
- Note 22: This requirement is applicable for any channel bandwidths within the range 2570 - 2615 MHz with the following restriction: for carriers of 15 MHz bandwidth when carrier centre frequency is within the range 2605.5 - 2607.5 MHz and for carriers of 20 MHz bandwidth when carrier centre frequency is within the range 2597 - 2605 MHz the requirement is applicable only for an uplink transmission bandwidth less than or equal to 54 RB.  
For carriers with channel bandwidth overlapping the frequency range 2615 - 2620 MHz the requirement applies with the maximum output power configured to +19 dBm in the IE *P-Max*.
- Note 23: This requirement is applicable only for the following cases:  
- for carriers of 5 MHz channel bandwidth when carrier centre frequency ( $F_c$ ) is within the range  $902.5 \text{ MHz} \leq F_c < 907.5 \text{ MHz}$  with an uplink transmission bandwidth less than or equal to 20 RB  
- for carriers of 5 MHz channel bandwidth when carrier centre frequency ( $F_c$ ) is within the range  $907.5 \text{ MHz} \leq F_c \leq 912.5 \text{ MHz}$  without any restriction on uplink transmission bandwidth  
- for carriers of 10 MHz channel bandwidth when carrier centre frequency ( $F_c$ ) is  $F_c = 910 \text{ MHz}$  with an uplink transmission bandwidth less than or equal to 32 RB with  $RB_{start} > 3$ .
- Note 24: As exceptions, measurements with a level up to the applicable requirement of -38 dBm/MHz is permitted for each assigned E-UTRA carrier used in the measurement due to 2<sup>nd</sup> harmonic spurious emissions. An exception is allowed if there is at least one individual RB within the transmission bandwidth (see Figure 5.6-1) for which the 2<sup>nd</sup> harmonic totally or partially overlaps the measurement bandwidth (MBW).
- Note 25: As exceptions, measurements with a level up to the applicable requirement of -36 dBm/MHz is permitted for each assigned E-UTRA carrier used in the measurement due to 3<sup>rd</sup> harmonic spurious emissions. An exception is allowed if there is at least one individual RB within the transmission bandwidth (see Figure 5.6-1) for which the 3<sup>rd</sup> harmonic totally or partially overlaps the measurement bandwidth (MBW).
- Note 26: For these adjacent bands, the emission limit could imply risk of harmful interference to UE(s) operating in the protected operating band.
- Note 27: This requirement is applicable for any channel bandwidths within the range 1920 - 1980 MHz with the following restriction: for carriers of 15 MHz bandwidth when carrier centre frequency is within the range 1927.5 - 1929.5 MHz and for carriers of 20 MHz bandwidth when carrier centre frequency is within the range 1930 - 1938 MHz the requirement is applicable only for an uplink

- transmission bandwidth less than or equal to 54 RB.
- Note 28: N/A
- Note 29: N/A
- Note 30: This requirement applies when the E-UTRA carrier is confined within 2545-2575MHz or 2595-2645MHz and the channel bandwidth is 10 or 20 MHz
- Note 31: N/A
- Note 32: This requirement is applicable for an uplink transmission bandwidth less than or equal to [54 RB] for carriers of 15 MHz bandwidth when carrier centre frequency is within the range 1887.5 - 1889.5 MHz and for carriers of 20 MHz bandwidth when carrier centre frequency is within the range 1890 - 1898 MHz.
- Note 33: This requirement is only applicable for carriers with bandwidth confined within 1885-1920 MHz (requirement for carriers with at least 1RB confined within 1880 - 1885 MHz is not specified). This requirement applies for an uplink transmission bandwidth less than or equal to [54 RB] for carriers of 15 MHz bandwidth when carrier centre frequency is within the range 1892.5 - 1894.5 MHz and for carriers of 20 MHz bandwidth when carrier centre frequency is within the range 1895 - 1903 MHz.
- Note 34: This requirement is applicable for 5 and 10 MHz E-UTRA channel bandwidth allocated within 718-728MHz. For carriers of 10 MHz bandwidth, this requirement applies for an uplink transmission bandwidth less than or equal to 30 RB with RBstart > 1 and RBstart<48.
- Note 35: This requirement is applicable in the case of a 10 MHz E-UTRA carrier confined within 703 MHz and 733 MHz, otherwise the requirement of -25 dBm with a measurement bandwidth of 8 MHz applies.

Table 6.6.3.2.3-1E: Spurious emission band UE co-existence limits Rel-13

E-UTRA Band	Spurious emission						
	Protected band	Frequency range (MHz)			Maximum Level (dBm)	MBW (MHz)	NOTE
1	E-UTRA Band 1, 5, 7, 8, 11, 18, 19, 20, 21, 22, 26, 27, 28, 31, 32, 38, 40, 41, 42, 43, 44, 45, 65, 67	F <sub>DL_low</sub>	-	F <sub>DL_high</sub>	-50	1

45	E-UTRA Band 1, 3, 5, 8, 34, 39, 40, 41, 42,44	$F_{DL\_low}$	-	$F_{DL\_high}$	-50	1	
65	E-UTRA Band 1, 7, 8, 20, 22, 28, 31, 32, 38, 40, 42, 43, 65	$F_{DL\_low}$	-	$F_{DL\_high}$	-50	1	
	E-UTRA Band 3	$F_{DL\_low}$	-	$F_{DL\_high}$	-50	1	15
	E-UTRA Band 5, 11, 18, 19, 21, 26, 27, 41	$F_{DL\_low}$	-	$F_{DL\_high}$	-50	1	
	E-UTRA Band 34	$F_{DL\_low}$	-	$F_{DL\_high}$	-50	1	36
	Frequency range	1884.5	-	1915.7	-41	0.3	37
	Frequency range	1900	-	1915	-15.5	5	15, 26, 27
	Frequency range	1915	-	1920	+1.6	5	15, 26, 27
66	E-UTRA Band 2, 4, 5, 7, 10, 12, 13, 14, 17, 23, 24, 25, 26, 27, 28, 29, 30, 38, 41, 43, 66	$F_{DL\_low}$	-	$F_{DL\_high}$	-50	1	
	E-UTRA Band 42	$F_{DL\_low}$	-	$F_{DL\_high}$	-50	1	2
Note 1:	$F_{DL\_low}$ and $F_{DL\_high}$ refer to each E-UTRA frequency band specified in Table 5.5-1.						
Note 2:	As exceptions, measurements with a level up to the applicable requirements defined in Table 6.6.3.1-2 are permitted for each assigned E-UTRA carrier used in the measurement due to 2 <sup>nd</sup> , 3 <sup>rd</sup> , 4 <sup>th</sup> [or 5 <sup>th</sup> ] harmonic spurious emissions. Due to spreading of the harmonic emission the exception is also allowed for the first 1 MHz frequency range immediately outside the harmonic emission on both sides of the harmonic emission. This results in an overall exception interval centred at the harmonic emission of (2MHz + N x $L_{CRB}$ x 180kHz), where N is 2, 3, 4, [5] for the 2 <sup>nd</sup> , 3 <sup>rd</sup> , 4 <sup>th</sup> [or 5 <sup>th</sup> ] harmonic respectively. The exception is allowed if the measurement bandwidth (MBW) totally or partially overlaps the overall exception interval.						
Note 3:	To meet these requirements some restriction will be needed for either the operating band or protected band.						
Note 4:	N/A						
Note 5:	For non synchronised TDD operation to meet these requirements some restriction will be needed for either the operating band or protected band.						
Note 6:	N/A						
Note 7:	Applicable when co-existence with PHS system operating in 1884.5-1919.6MHz.						
Note 8:	Applicable when co-existence with PHS system operating in 1884.5 -1915.7MHz.						
Note 9:	N/A						
Note 10:	N/A						
Note 11:	Whether the applicable frequency range should be 793-805MHz instead of 799-805MHz is TBD						
Note 12:	The emissions measurement shall be sufficiently power averaged to ensure a standard deviation <						

	0.5 dB
Note 13:	This requirement applies for 5, 10, 15 and 20 MHz E-UTRA channel bandwidth allocated within 1744.9MHz and 1784.9MHz.
Note 14:	N/A
Note 15:	These requirements also apply for the frequency ranges that are less than $F_{\text{OOB}}$ (MHz) in Table 6.6.3.1-1 and Table 6.6.3.1A-1 from the edge of the channel bandwidth.
Note 16:	N/A
Note 17:	N/A
Note 18:	N/A
Note 19:	Applicable when the assigned E-UTRA carrier is confined within 718 MHz and 748 MHz and when the channel bandwidth used is 5 or 10 MHz.
Note 20:	N/A
Note 21:	This requirement is applicable for any channel bandwidths within the range 2500 - 2570 MHz with the following restriction: for carriers of 15 MHz bandwidth when carrier centre frequency is within the range 2560.5 - 2562.5 MHz and for carriers of 20 MHz bandwidth when carrier centre frequency is within the range 2552 - 2560 MHz the requirement is applicable only for an uplink transmission bandwidth less than or equal to 54 RB.
Note 22:	This requirement is applicable for any channel bandwidths within the range 2570 - 2615 MHz with the following restriction: for carriers of 15 MHz bandwidth when carrier centre frequency is within the range 2605.5 - 2607.5 MHz and for carriers of 20 MHz bandwidth when carrier centre frequency is within the range 2597 - 2605 MHz the requirement is applicable only for an uplink transmission bandwidth less than or equal to 54 RB. For carriers with channel bandwidth overlapping the frequency range 2615 - 2620 MHz the requirement applies with the maximum output power configured to +19 dBm in the IE <i>P-Max</i> .
Note 23:	This requirement is applicable only for the following cases: - for carriers of 5 MHz channel bandwidth when carrier centre frequency ( $F_c$ ) is within the range $902.5 \text{ MHz} \leq F_c < 907.5 \text{ MHz}$ with an uplink transmission bandwidth less than or equal to 20 RB - for carriers of 5 MHz channel bandwidth when carrier centre frequency ( $F_c$ ) is within the range $907.5 \text{ MHz} \leq F_c \leq 912.5 \text{ MHz}$ without any restriction on uplink transmission bandwidth. - for carriers of 10 MHz channel bandwidth when carrier centre frequency ( $F_c$ ) is $F_c = 910 \text{ MHz}$ with an uplink transmission bandwidth less than or equal to 32 RB with $\text{RB}_{\text{start}} > 3$ .
Note 24:	As exceptions, measurements with a level up to the applicable requirement of -38 dBm/MHz is permitted for each assigned E-UTRA carrier used in the measurement due to 2 <sup>nd</sup> harmonic spurious emissions. An exception is allowed if there is at least one individual RB within the transmission bandwidth (see Figure 5.6-1) for which the 2 <sup>nd</sup> harmonic totally or partially overlaps the measurement bandwidth (MBW).
Note 25:	As exceptions, measurements with a level up to the applicable requirement of -36 dBm/MHz is permitted for each assigned E-UTRA carrier used in the measurement due to 3 <sup>rd</sup> harmonic spurious emissions. An exception is allowed if there is at least one individual RB within the transmission bandwidth (see Figure 5.6-1) for which the 3 <sup>rd</sup> harmonic totally or partially overlaps the measurement bandwidth (MBW).
Note 26:	For these adjacent bands, the emission limit could imply risk of harmful interference to UE(s) operating in the protected operating band.
Note 27:	This requirement is applicable for any channel bandwidths within the range 1920 - 1980 MHz with the following restriction: for carriers of 15 MHz bandwidth when carrier centre frequency is within the range 1927.5 - 1929.5 MHz and for carriers of 20 MHz bandwidth when carrier centre frequency is within the range 1930 - 1938 MHz the requirement is applicable only for an uplink transmission bandwidth less than or equal to 54 RB.
Note 28:	N/A
Note 29:	N/A
Note 30:	This requirement applies when the E-UTRA carrier is confined within 2545-2575MHz or 2595-2645MHz and the channel bandwidth is 10 or 20 MHz.
Note 31:	N/A
Note 32:	This requirement is applicable for an uplink transmission bandwidth less than or equal to [54 RB] for carriers of 15 MHz bandwidth when carrier centre frequency is within the range 1887.5 - 1889.5 MHz and for carriers of 20 MHz bandwidth when carrier centre frequency is within the range 1890 - 1898 MHz.
Note 33:	This requirement is only applicable for carriers with bandwidth confined within 1885-1920 MHz (requirement for carriers with at least 1RB confined within 1880 - 1885 MHz is not specified). This requirement applies for an uplink transmission bandwidth less than or equal to [54 RB] for carriers of 15 MHz bandwidth when carrier centre frequency is within the range 1892.5 - 1894.5 MHz and for carriers of 20 MHz bandwidth when carrier centre frequency is within the range 1895 - 1903 MHz.
Note 34:	This requirement is applicable for 5 and 10 MHz E-UTRA channel bandwidth allocated within 718-728MHz. For carriers of 10 MHz bandwidth, this requirement applies for an uplink transmission bandwidth less than or equal to 30 RB with $\text{RB}_{\text{start}} > 1$ and $\text{RB}_{\text{start}} < 48$ .
Note 35:	This requirement is applicable in the case of a 10 MHz E-UTRA carrier confined within 703 MHz and 733 MHz, otherwise the requirement of -25 dBm with a measurement bandwidth of 8 MHz

applies.  
Note 36: This requirement is applicable for E-UTRA channel bandwidth allocated within 1920-1980 MHz.  
Note 37: Applicable when the upper edge of the channel bandwidth frequency is greater than 1980MHz.

The normative reference for this requirement is TS 36.101 [2] subclause 6.6.3.2.

This test use minimum requirements from many releases of TS 36.101 [2] due to release independence defined in TS 36.307 [16]

#### 6.6.3.2.4 Test description

##### 6.6.3.2.4.1 Initial conditions

Initial conditions are a set of test configurations the UE needs to be tested in and the steps for the SS to take with the UE to reach the correct measurement state.

The initial test configurations consist of environmental conditions, test frequencies, and channel bandwidths based on E-UTRA bands specified in Table 5.4.2.1-1. All of these configurations shall be tested with applicable test parameters for each channel bandwidth, and are shown in Table 6.6.3.2.4.1-1. The details of the uplink reference measurement channels (RMCs) are specified in Annex A.2. Configurations of PDSCH and PDCCH before measurement are specified in Annex C.2.

Table 6.6.3.2.4.1-1: Test Configuration Table

Initial Conditions						
Test Environment (as specified in TS 36.508 [7] subclause 4.1)			NC			
Test Frequencies (as specified in TS36.508 [7] subclause 4.3.1) (Note 6, Note 7)			Low range, Mid range, High range (Note 6, 13, 16)			
Test Channel Bandwidths (as specified in TS 36.508 [7] subclause 4.3.1)			Lowest, 5MHz, Highest (Note 13, 16)			
Test Parameters for Channel Bandwidths						
Ch BW	Downlink Configuration			Uplink Configuration		
	Mod'n	RB allocation		Mod'n	RB allocation	
		FDD	TDD		FDD	TDD
1.4MHz	N/A for Spurious Emissions testing			QPSK	6	6
1.4MHz				QPSK	1	1
3MHz				QPSK	15	15
3MHz				QPSK	1	1
5MHz				QPSK	25	25 <sup>12</sup>
5MHz				QPSK	1	1 <sup>12</sup>
5MHz				QPSK	20 <sup>8</sup>	-
10MHz				QPSK	50	50
10MHz				QPSK	1	1
10MHz				QPSK	30 <sup>15</sup>	-
10MHz				QPSK	32 <sup>9</sup>	-
10MHz				QPSK	1 <sup>10, 14</sup>	-
15MHz				QPSK	75	75
15MHz				QPSK	54 <sup>3, 11</sup>	54 <sup>4, 17, 18</sup>
15MHz				QPSK	1	1 <sup>5</sup>
20MHz				QPSK	100	100
20MHz				QPSK	54 <sup>3, 11</sup>	54 <sup>4, 17, 18</sup>
20MHz				QPSK	1	1 <sup>5</sup>

Note 1:	Test Channel Bandwidths are checked separately for each E-UTRA band, which applicable channel bandwidths are specified in Table 5.4.2.1-1.
Note 2:	The 1 RB allocation shall be tested at both RB #0 and RB #max.
Note 3:	To be used for requirements under note 15 in table 6.6.3.2.3-1 and table 6.6.3.2.3-1A, note 16 in table 6.6.3.2.3-1B, note 21 in table 6.6.3.2.3-1C in high range at RB#(full allocation – 54), instead of full allocation.
Note 4:	To be used for requirements under note 16 in table 6.6.3.2.3-1 and table 6.6.3.2.3-1A, note 17 in table 6.6.3.2.3-1B, note 22 in table 6.6.3.2.3-1C in high range - 5MHz at RB#(full allocation – 54), instead of full allocation.
Note 5:	For requirements under note 16 in table 6.6.3.2.-1 and table 6.6.3.2.3-1A, note 17 in table 6.6.3.2.3-1B, note 22 in table 6.6.3.2.3-1C (high range – 5MHz) is tested instead of high channel.
Note 6:	Do not apply for requirements under Note 13 in Tables 6.6.3.2.3-1 to 6.6.3.2.3-1C. Test frequencies for these requirements are defined in Table 6.6.3.2.4.1-2.
Note 7:	Void
Note 8:	For requirements under note 17 in table 6.6.3.2.3-1A, note 18 in table 6.6.3.2.3-1B, note 23 in table 6.6.3.2.3-1C (high range – 10MHz) is tested with RB #0 to RB #19 used.
Note 9:	For requirements under note 17 in table 6.6.3.2.3-1A, note 18 in table 6.6.3.2.3-1B, note 23 in table 6.6.3.2.3-1C high range is tested with RB #4 to RB #35 used.
Note 10:	For requirements under note 17 in table 6.6.3.2.3-1A, note 18 in table 6.6.3.2.3-1B, note 23 in table 6.6.3.2.3-1C high range is tested with RB #4 and (RB#max -4) used.
Note 11:	To be used for requirements under note 17 in table 6.6.3.2.3-1, note 18 in table 6.6.3.2.3-1A, note 19 in table 6.6.3.2.3-1B and note 27 in table 6.6.3.2.3-1C in low range at RB#0, instead of full allocation.
Note 12:	For requirements under note 16 in table 6.6.3.2.3-1 and table 6.6.3.2.3-1A, note 17 in table 6.6.3.2.3-1B, note 22 in table 6.6.3.2.3-1C, the message exception in Table 6.6.3.2.4.3-1 is used to test with the high range.
Note 13:	For requirements under note 31 in table 6.6.3.2.3-1C and note 34 in table 6.6.3.2.3-1D only 720.5 MHz is tested with 5 MHz and only 723 MHz is tested with 10 MHz.
Note 14:	For requirements under note 31 in table 6.6.3.2.3-1C and note 34 in table 6.6.3.2.3-1D RB #2 and RB #47 used.
Note 15:	To be used for requirements under note 31 in table 6.6.3.2.3-1C and note 34 in table 6.6.3.2.3-1D at RB#2, instead of full allocation.
Note 16:	For requirements under note 32 in table 6.6.3.2.3-1C and note 35 in table 6.6.3.2.3-1D only low range and 728 MHz with 10 MHz is tested.
Note 17:	To be used for requirements under note 32 in table 6.6.3.2.3-1D in low range, instead of full allocation. RB allocation shall start at RBstart=0.
Note 18:	To be used for requirements under note 33 in table 6.6.3.2.3-1D (high range-7 MHz), instead of full allocation and high range. RB allocation shall start at RBstart=0.

**Table 6.6.3.2.4.1-2: Test frequencies for E-UTRA channel bandwidth for operating band 3 with Note 13 (in Tables 6.6.3.2.3-1 to 6.6.3.2.3-1E)**

Bandwidth [MHz]	N <sub>UL</sub>	Frequency of Uplink [MHz]	N <sub>DL</sub>	Frequency of Downlink [MHz]
1.4	19942	1784.2	1942	1879.2
3	19934	1783.4	1934	1878.4
5	19924	1782.4	1924	1877.4
10	19899	1779.9	1899	1874.9
15	19874	1777.4	1874	1872.4
20	19849	1774.9	1849	1869.9
Note: 1.4 and 3 MHz only tested for Rel8 and Rel9.				

1. Connect the SS to the UE to the UE antenna connectors as shown in Figure TS 36.508 [7] Annex A, Figure A.7.
2. The parameter settings for the cell are set up according to TS 36.508 [7] subclause 4.4.3.
3. Downlink signals are initially set up according to Annex C0, C.1 and C.3.0, and uplink signals according to Annex H.1 and H.3.0.
4. The UL Reference Measurement channels are set according to Table 6.6.3.2.4.1-1.
5. Propagation conditions are set according to Annex B.0.

6. Ensure the UE is in State 3A-RF according to TS 36.508 [7] clause 5.2A.2. Message contents are defined in clause 6.6.3.2.4.3.

#### 6.6.3.2.4.2 Test procedure

1. SS sends uplink scheduling information for each UL HARQ process via PDCCH DCI format 0 for C\_RNTI to schedule the UL RMC according to Table 6.6.3.2.4.1-1. Since the UE has no payload data to send, the UE transmits uplink MAC padding bits on the UL RMC.
2. Send continuously uplink power control "up" commands in the uplink scheduling information to the UE until the UE transmits at  $P_{UMAX}$  level.
3. Measure the power of the transmitted signal with a measurement filter of bandwidths according to table 6.6.3.2.3-1 to 6.6.3.2.3-1E. For band 14 measurements made in a bandwidth of 6.25kHz, measurement parameter settings defined in table 6.6.3.2.4.2-1 shall be used. The centre frequency of the filter shall be stepped in contiguous steps according to table 6.6.3.2.5-1. The measured power shall be verified for each step. The measurement period shall capture the active time slots.

**Table 6.6.3.2.4.2-1: Measurement setup for band 14**

	<b>Option 1: Measurement with No RMS VBW available</b>	<b>Option2 Measurement with VBW Filtering on Power scale</b>
VBW	$\geq 62.5$ kHz  (10 times or more the RBW)	$\leq 43$ Hz
RBW	$\leq 6.25$ kHz	$\leq 6.25$ kHz
Detector type	Averages signal envelope during each measurement point, such as "RMS detector"	Peak
Averaging mode (Trace averaging)	Power (RMS voltage)	Power (RMS voltage), as controlled by "Average Type"
Average Type (applies to detector)	Power (RMS voltage) (automatically occurs with "RMS detector")	Not applicable
Average Type (applies to VBW filter)	Not applicable	Power (RMS voltage)
Number of averages	30, to reduce variance as required, or use an even longer sweep time	1 or use an even narrower VBW filter, thus a longer sweep time
Sweep time	[Don't specify]	Sweep rate (span divided by sweep time) $\leq 0.8 \cdot RBW \cdot VBW$

#### 6.6.3.2.4.3 Message contents

Message contents are according to TS 36.508 [7] subclause 4.6 with the following exceptions:

**Table 6.6.3.2.4.3-1: SystemInformationBlockType1 for Note 16 in table 6.6.3.2.3-1 and table 6.6.3.2.3-1A, Note 17 in table 6.6.3.2.3-1B, Note 22 in table 6.6.3.2.3-1C, table 6.6.3.2.3-1D and table 6.6.3.2.3-1E**

### 6.6.3.2.5 Test requirement

Test requirements for Spurious Emissions UE Co-existence are the same as the minimum requirements and are not repeated in this section.

The measured average power of spurious emission, derived in step 3, shall not exceed the described value in tables 6.6.3.2.3-1 to 6.6.3.2.3-1E according to the following rule:

The requirements for the UE are release specific and can be found in Tables 6.6.3.2.3-1 to 6.6.3.2.3-1E. If the UE support a band, which is not defined in the table corresponding UE's release, the requirements for this band are taken from the table of earliest release where requirements for this band are defined. This has been described in following Table 6.6.3.2.5-1.

Table 6.6.3.2.5-1: UE Requirements according to UE E-UTRA release and supported E-UTRA band

66	N/A <sup>2</sup>	N/A <sup>2</sup>	Table 6.6.3.2.3-1E	Table 6.6.3.2.3-1E	Table 6.6.3.2.3-1E	Table 6.6.3.2.3-1E
Note 1:	Operating band with number > 64 requires Rel-9 signalling (refer to TS 36.307 Ch. 3A.1 [16]) and tests can only be done from Rel-9 and onwards.					
Note 2:	Asymmetric operating band is release independent from release 10 (refer to TS 36.307 Ch. 3A.1 [16]) and tests can only be done from Rel-10 and					

onwards.
----------

NOTE 1: The frequency range applicable with network signalled values of NS\_05, NS\_08, NS\_09, NS\_15 and NS\_16 are covered in 6.6.3.3 Additional Spurious Emissions.

NOTE 2: The following is applied to Note2 in Table 6.6.3.2.3-1, Table 6.6.3.2.3-1A, Table 6.6.3.2.3-1B, Table 6.6.3.2.3-1C and Table 6.6.3.2.3-1E. For frequency with 2nd, 3rd or 4th harmonic spurious emissions, the measurements are covered in 6.6.3.1.

NOTE 2: The restriction on the maximum uplink transmission to 54 RB in Notes 14 and 15 of Table 6.6.3.2.5-1 is intended for conformance testing and may be applied to network operation to facilitate coexistence when the aggressor and victim bands are deployed in the same geographical area. The applicable spurious emission requirement of -15.5 dBm/5MHz is a least restrictive technical condition for FDD/TDD coexistence and may have to be revised in the future.

### 6.6.3.2\_1 Void

### 6.6.3.2A Spurious emission band UE co-existence for CA

**Editor's note:** This test case contains different requirements for different UE releases

#### 6.6.3.2A.0 Minimum conformance requirements

This clause specifies the requirements for the specified carrier aggregation configurations for coexistence with protected bands.

NOTE 1: For measurement conditions at the edge of each frequency range, the lowest frequency of the measurement position in each frequency range should be set at the lowest boundary of the frequency range plus MBW/2. The highest frequency of the measurement position in each frequency range should be set at the highest boundary of the frequency range minus MBW/2. MBW denotes the measurement bandwidth defined for the protected band.

For inter-band carrier aggregation with the uplink assigned to two E-UTRA bands, the requirements in Table 6.6.3.2A.0-1a to 6.6.3.2A.0-1b apply on each component carrier with both component carriers are active.

NOTE 2: For inter-band carrier aggregation with uplink assigned to two E-UTRA bands the requirements in Table 6.6.3.2A.0-1a to 6.6.3.2A.0-1b could be verified by measuring spurious emissions at the specific frequencies where second and third order intermodulation products generated by the two transmitted carriers can occur; in that case, the requirements for remaining applicable frequencies in Table 6.6.3.2A.0-1a to 6.6.3.2A.0-1b would be considered to be verified by the measurements verifying the one uplink inter-band CA UE to UE co-existence requirements.

Table 6.6.3.2A.0-1a: Requirements for dual-uplink inter-band carrier aggregation limits for Rel-11 and Rel-12

E-UTRA CA Configuration	Spurious emission						
	Protected band	Frequency range (MHz)		Maximum Level (dBm)	MBW (MHz)	Note	
CA_1A-3A	E-UTRA Band 1, 5, 7, 8, 20, 26, 27, 28, 31, 32, 38, 40, 41, 43, 44	F <sub>DL_low</sub>	-	F <sub>DL_high</sub>	-50	1	
	E-UTRA band 3, 34	F <sub>DL_low</sub>	-	F <sub>DL_high</sub>	-50	1	3

	Frequency range	2595	-	2645	-50	1	
CA_39A-41A	E-UTRA Band 1, 8, 26, 34, 40, 42, 44	F <sub>DL_low</sub>	-	F <sub>DL_high</sub>	-50	1	
	Frequency range	1805	-	1855	[-40]	1	19
	Frequency range	1875	-	1880	[-15.5]	5	3, 13, 20
	Frequency range	1884.5	-	1915.7	-41	0.3	4, 18

NOTE 1: F<sub>DL\_low</sub> and F<sub>DL\_high</sub> refer to each E-UTRA frequency band specified in Table 5.2-1

NOTE 2: As exceptions, measurements with a level up to the applicable requirements defined in Table 6.6.3.1.3-2 are permitted for each assigned E-UTRA carrier used in the measurement due to 2<sup>nd</sup>, 3<sup>rd</sup>, 4<sup>th</sup> [or 5<sup>th</sup>] harmonic spurious emissions. An exception is allowed if there is at least one individual RB within the transmission bandwidth (see Figure 5.4.2-1) for which the 2<sup>nd</sup>, 3<sup>rd</sup> or 4<sup>th</sup> harmonic totally or partially overlaps the measurement bandwidth (MBW).

NOTE 3: These requirements also apply for the frequency ranges that are less than F<sub>OOB</sub> (MHz) in Table 6.6.3.1.3-1 and Table 6.6.3.1A.0-1 from the edge of the aggregated channel bandwidth.

NOTE 4: Applicable when co-existence with PHS system operating in 1884.5 -1915.7MHz.

NOTE 5: Applicable when the assigned E-UTRA carrier is confined within 718 MHz and 748 MHz and when the channel bandwidth used is 5 or 10 MHz.

- NOTE 6: As exceptions, measurements with a level up to the applicable requirement of -36 dBm/MHz is permitted for each assigned E-UTRA carrier used in the measurement due to 3<sup>rd</sup> harmonic spurious emissions. An exception is allowed if there is at least one individual RB within the transmission bandwidth (see Figure 5.6-1) for which the 3<sup>rd</sup> harmonic totally or partially overlaps the measurement bandwidth (MBW).
- NOTE 7: Applicable when NS\_05 in section 6.6.3.3.3.1 is signalled by the network.
- NOTE 8: Applicable when NS\_08 in subclause 6.6.3.3.3.3 is signalled by the network
- NOTE 9: Whether the applicable frequency range should be 793-805MHz instead of 799-805MHz is TBD.
- NOTE10: This requirement applies for 5, 10, 15 and 20 MHz E-UTRA channel bandwidth allocated within 1744.9MHz and 1784.9MHz.
- NOTE 11: This requirement is applicable only for the following cases:
- for carriers of 5 MHz channel bandwidth when carrier centre frequency ( $F_c$ ) is within the range  $902.5 \text{ MHz} \leq F_c < 907.5 \text{ MHz}$  with an uplink transmission bandwidth less than or equal to 20 RB
  - for carriers of 5 MHz channel bandwidth when carrier centre frequency ( $F_c$ ) is within the range  $907.5 \text{ MHz} \leq F_c \leq 912.5 \text{ MHz}$  without any restriction on uplink transmission bandwidth.
  - for carriers of 10 MHz channel bandwidth when carrier centre frequency ( $F_c$ ) is  $F_c = 910 \text{ MHz}$  with an uplink transmission bandwidth less than or equal to 32 RB with  $\text{RB}_{\text{start}} > 3$ .
- NOTE 12: This requirement is applicable for any channel bandwidths within the range 1920 - 1980 MHz with the following restriction: for carriers of 15 MHz bandwidth when carrier centre frequency is within the range 1927.5 - 1929.5 MHz and for carriers of 20 MHz bandwidth when carrier centre frequency is within the range 1930 - 1938 MHz the requirement is applicable only for an uplink transmission bandwidth less than or equal to 54 RB.
- NOTE13: For these adjacent bands, the emission limit could imply risk of harmful interference to UE(s) operating in the protected operating band.
- NOTE 14: This requirement is applicable for any channel bandwidths within the range 2500 - 2570 MHz with the following restriction: for carriers of 15 MHz bandwidth when carrier centre frequency is within the range 2560.5 - 2562.5 MHz and for carriers of 20 MHz bandwidth when carrier centre frequency is within the range 2552 - 2560 MHz the requirement is applicable only for an uplink transmission bandwidth less than or equal to 54 RB.
- NOTE 15: Applicable when NS\_15 in subclause 6.6.3.3.3.8 is signalled by the network.
- NOTE 16: Applicable when NS\_09 in subclause 6.6.3.3.3.4 is signalled by the network
- NOTE 17: This requirement is applicable only when Band 3 transmission frequency is less than or equal to 1765 MHz.
- NOTE 18: This requirement applies when the E-UTRA carrier is confined within 2545-2575MHz or 2595-2645MHz and the channel bandwidth is 10 or 20 MHz
- NOTE 19: This requirement is applicable for an uplink transmission bandwidth less than or equal to [54 RB] for carriers of 15 MHz bandwidth when carrier centre frequency is within the range 1887.5 - 1889.5 MHz and for carriers of 20 MHz bandwidth when carrier centre frequency is within the range 1890 - 1898 MHz.
- NOTE 20: This requirement is only applicable for carriers with bandwidth confined within 1885-1920 MHz (requirement for carriers with at least 1RB confined within 1880 - 1885 MHz is not specified). This requirement applies for an uplink transmission bandwidth less than or equal to [54 RB] for carriers of 15 MHz bandwidth when carrier centre frequency is within the range 1892.5 - 1894.5 MHz and for carriers of 20 MHz bandwidth when carrier centre frequency is within the range 1895 - 1903 MHz.

Table 6.6.3.2A.0-1b: Requirements for dual-uplink inter-band carrier aggregation limits for Rel-13

E-UTRA CA Configuration	Spurious emission						
	Protected band	Frequency range (MHz)		Maximum Level (dBm)	MBW (MHz)	NOTE	
CA_1A-3A	E-UTRA Band 1, 5, 7, 8, 20, 26, 27, 28, 31, 32, 38, 40, 41, 43, 44, 65, 67	F <sub>DL_low</sub>	-	F <sub>DL_high</sub>	-50	1

CA 39C-41A	E-UTRA Band 34, 40, 42, 44	$F_{DL\_low}$	-	$F_{DL\_high}$	-50	1	
<p>NOTE 1: <math>F_{DL\_low}</math> and <math>F_{DL\_high}</math> refer to each E-UTRA frequency band specified in Table 5.5-1</p> <p>NOTE 2: As exceptions, measurements with a level up to the applicable requirements defined in Table 6.6.3.1-2 are permitted for each assigned E-UTRA carrier used in the measurement due to 2<sup>nd</sup>, 3<sup>rd</sup>, 4<sup>th</sup> [or 5<sup>th</sup>] harmonic spurious emissions. In case the exceptions are allowed due to spreading of the harmonic emission the exception is also allowed for the first 1 MHz frequency range immediately outside the harmonic emission on both sides of the harmonic emission. This results in an overall exception interval centred at the harmonic emission of (2MHz + N x <math>L_{CRB}</math> x 180kHz), where N is 2, 3 or 4 for the 2<sup>nd</sup>, 3<sup>rd</sup> or 4<sup>th</sup> harmonic respectively. The exception is allowed if the measurement bandwidth (MBW) totally or partially overlaps the overall exception interval.</p> <p>NOTE 3: These requirements also apply for the frequency ranges that are less than <math>F_{OOB}</math> (MHz) in Table 6.6.3.1-1 and Table 6.6.3.1A-1 from the edge of the aggregated channel bandwidth.</p> <p>NOTE 4: Applicable when co-existence with PHS system operating in 1884.5 - 1915.7MHz.</p> <p>NOTE 5: Applicable when the assigned E-UTRA carrier is confined within 718 MHz and 748 MHz and when the channel bandwidth used is 5 or 10 MHz.</p> <p>NOTE 6: As exceptions, measurements with a level up to the applicable requirement of -36 dBm/MHz is permitted for each assigned E-UTRA carrier used in the measurement due to 3<sup>rd</sup> harmonic spurious emissions. An exception is allowed if there is at least one individual RB within the transmission bandwidth (see Figure 5.6-1) for which the 3<sup>rd</sup> harmonic totally or partially overlaps the measurement bandwidth (MBW).</p> <p>NOTE 7: Applicable when NS_05 in section 6.6.3.3.1 is signalled by the network.</p> <p>NOTE 8: Applicable when NS_08 in subclause 6.6.3.3.3 is signalled by the network</p> <p>NOTE 9: Whether the applicable frequency range should be 793-805MHz instead of 799-805MHz is TBD.</p> <p>NOTE10: This requirement applies for 5, 10, 15 and 20 MHz E-UTRA channel bandwidth allocated within 1744.9MHz and 1784.9MHz.</p> <p>NOTE 11: This requirement is applicable only for the following cases:  - for carriers of 5 MHz channel bandwidth when carrier centre frequency (<math>F_c</math>) is within the range 902.5 MHz <math>\leq F_c &lt;</math> 907.5 MHz with an uplink transmission bandwidth less than or equal to 20 RB  - for carriers of 5 MHz channel bandwidth when carrier centre frequency (<math>F_c</math>) is within the range 907.5 MHz <math>\leq F_c \leq</math> 912.5 MHz without any restriction on uplink transmission bandwidth.  - for carriers of 10 MHz channel bandwidth when carrier centre frequency (<math>F_c</math>) is <math>F_c =</math> 910 MHz with an uplink transmission bandwidth less than or equal to 32 RB with <math>RB_{start} &gt; 3</math>.</p> <p>NOTE 12: This requirement is applicable for any channel bandwidths within the range 1920 - 1980 MHz with the following restriction: for carriers of 15 MHz bandwidth when carrier centre frequency is within the range 1927.5 - 1929.5 MHz and for carriers of 20 MHz bandwidth when carrier centre frequency is within the range 1930 - 1938 MHz the requirement is applicable only for an uplink transmission bandwidth less than or equal to 54 RB.</p> <p>NOTE13: For these adjacent bands, the emission limit could imply risk of harmful interference to UE(s) operating in the protected operating band.</p> <p>NOTE 14: This requirement is applicable for any channel bandwidths within the range 2500 - 2570 MHz with the following restriction: for carriers of 15 MHz bandwidth when carrier centre frequency is within the range 2560.5 - 2562.5 MHz and for carriers of 20 MHz bandwidth when carrier centre frequency is within the range 2552 - 2560 MHz the requirement is applicable only for an uplink transmission bandwidth less than or equal to 54 RB.</p> <p>NOTE 15: Applicable when NS_15 in subclause 6.6.3.3.8 is signalled by the network.</p> <p>NOTE 16: Applicable when NS_09 in subclause 6.6.3.3.4 is signalled by the network</p> <p>NOTE 17: This requirement is applicable only when Band 3 transmission frequency is less than or equal to 1765 MHz.</p> <p>NOTE 18: This requirement applies when the E-UTRA carrier is confined within 2545-2575MHz or 2595-2645MHz and the channel bandwidth is 10 or 20 MHz</p> <p>NOTE 19: This requirement is applicable for an uplink transmission bandwidth less than or equal to [54 RB] for carriers of 15 MHz bandwidth when carrier centre frequency is within the range 1887.5 - 1889.5 MHz and for carriers of 20 MHz bandwidth when carrier centre frequency is within the range 1890 - 1898 MHz.</p> <p>NOTE 20: This requirement is only applicable for carriers with bandwidth confined within 1885-1920 MHz (requirement for carriers with at least 1RB confined within 1880 - 1885 MHz is not specified). This requirement applies for an uplink transmission bandwidth less than or equal to [54 RB] for carriers of 15 MHz bandwidth when carrier centre frequency is within the range 1892.5 - 1894.5 MHz and</p>							

for carriers of 20 MHz bandwidth when carrier centre frequency is within the range 1895 - 1903 MHz.

NOTE 21: As exceptions, measurements with a level up to the applicable requirement of -38 dBm/MHz is permitted for each assigned E-UTRA carrier used in the measurement due to 2<sup>nd</sup> harmonic spurious emissions. An exception is allowed if there is at least one individual RB within the transmission bandwidth (see Figure 5.6-1) for which the 2<sup>nd</sup> harmonic totally or partially overlaps the measurement bandwidth (MBW).

NOTE 22: This requirement is applicable in the case of a 10 MHz E-UTRA carrier confined within 703 MHz and 733 MHz, otherwise the requirement of -25 dBm with a measurement bandwidth of 8 MHz applies.

NOTE 23: This requirement is applicable for 5 and 10 MHz E-UTRA channel bandwidth allocated within 718-728MHz. For carriers of 10 MHz bandwidth, this requirement applies for an uplink transmission bandwidth less than or equal to 30 RB with RBstart > 1 and RBstart<48.

**Table 6.6.3.2A.0-2a: Spurious emission band UE co-existence for intraband carrier aggregation limits for Rel10**

E-UTRA CA Configuration	Spurious emission						
	Protected band	Frequency range (MHz)		Maximum Level (dBm)	MBW (MHz)	Note	
CA_1C	E-UTRA Band 1, 3, 7, 8, 11, 18, 19, 20, 21, 22, 38, 40, 42, 43	F <sub>DL_low</sub>	-	F <sub>DL_high</sub>	-50	1	
CA_40C	E-UTRA Band 1, 3, 7, 8, 20, 22, 33, 34, 38, 39, 42, 43	F <sub>DL_low</sub>	-	F <sub>DL_high</sub>	-50	1	
<p>NOTE 1: F<sub>DL_low</sub> and F<sub>DL_high</sub> refer to each E-UTRA frequency band specified in Table 5.2-1</p> <p>NOTE 2: As exceptions, measurements with a level up to the applicable requirements defined in Table 6.6.3.1.3-2 are permitted for each assigned E-UTRA carrier used in the measurement due to 2<sup>nd</sup>, 3<sup>rd</sup>, 4<sup>th</sup>, [or 5<sup>th</sup>] harmonic spurious emissions. Due to spreading of the harmonic emission the exception is also allowed for the first 1 MHz frequency range immediately outside the harmonic emission on both sides of the harmonic emission. This results in an overall exception interval centred at the harmonic emission of (2MHz + N x L<sub>CRB</sub> x 180kHz), where N is 2, 3, 4, [5] for the 2<sup>nd</sup>, 3<sup>rd</sup>, 4<sup>th</sup> [or 5<sup>th</sup>] harmonic respectively. The exception is allowed if the measurement bandwidth (MBW) totally or partially overlaps the overall exception interval.</p> <p>NOTE 3: To meet these requirements some restriction will be needed for either the operating band or protected band</p> <p>NOTE 4: N/A</p> <p>NOTE 5: N/A</p> <p>NOTE 6: N/A</p> <p>NOTE 7: N/A</p> <p>NOTE 8: The requirement also applies for the frequency ranges that are less than F<sub>OOB</sub> (MHz) in Table 6.6.3.1.3-1 and Table 6.6.3.1A.1.3-1 from the edge of the channel bandwidth.</p> <p>NOTE 9: For these adjacent bands, the emission limit could imply risk of harmful interference to UE(s) operating in the protected operating band.</p>

	Frequency range	1884.5	-	1915.7	-41	0.3	
NOTE 1: $F_{DL\_low}$ and $F_{DL\_high}$ refer to each E-UTRA frequency band specified in Table 5.5-1.							
NOTE 2: As exceptions, measurements with a level up to the applicable requirements defined in Table 6.6.3.1-2 are permitted for each assigned E-UTRA carrier used in the measurement due to 2 <sup>nd</sup> , 3 <sup>rd</sup> , 4 <sup>th</sup> [or 5 <sup>th</sup> ] harmonic spurious emissions. Due to spreading of the harmonic emission the exception is also allowed for the first 1 MHz frequency range immediately outside the harmonic emission on both sides of the harmonic emission. This results in an overall exception interval centred at the harmonic emission of (2MHz + N x $L_{CRB}$ x 180kHz), where N is 2, 3, 4, [5] for the 2 <sup>nd</sup> , 3 <sup>rd</sup> , 4 <sup>th</sup> [or 5 <sup>th</sup> ] harmonic respectively. The exception is allowed if the measurement bandwidth (MBW) totally or partially overlaps the overall exception interval.							
NOTE 3: To meet these requirements some restriction will be needed for either the operating band or protected band.							
NOTE 4: N/A							
NOTE 5: N/A							
NOTE 6: N/A							
NOTE 7: N/A							
NOTE 8: N/A							
NOTE 9: N/A							
NOTE 10: The requirement also applies for the frequency ranges that are less than $F_{OOB}$ (MHz) in Table 6.6.3.1-1 and Table 6.6.3.1A-1 from the edge of the aggregated channel bandwidth.							
NOTE 11: N/A							
NOTE 12: For these adjacent bands, the emission limit could imply risk of harmful interference to UE(s) operating in the protected operating band.							
NOTE 13: N/A							
NOTE 14: N/A							

Table 6.6.3.2A.0-3: Requirements for intraband non-contiguous CA

E-UTRA CA Configuration	Spurious emission						
	Protected band	Frequency range (MHz)		Maximum Level (dBm)	MBW (MHz)	Note	
CA_4A-4A	E-UTRA Band 2, 4, 5, 7, 10, 12, 13, 14, 17, 22, 23, 24, 25, 26, 27, 28, 29, 30, 41, 43, 66	F <sub>DL_low</sub>	-	F <sub>DL_high</sub>	-50	1	
	E-UTRA Band 42	F <sub>DL_low</sub>	-	F <sub>DL_high</sub>	-50	1	2
NOTE 1: F <sub>DL_low</sub> and F <sub>DL_high</sub> refer to each E-UTRA frequency band specified in Table 5.2-1							
NOTE 2: As exceptions, measurements with a level up to the applicable requirements defined in Table 6.6.3.1.3-2 are permitted for each assigned E-UTRA carrier used in the measurement due to 2nd or 3rd harmonic spurious emissions. An exception is allowed if there is at least one individual RE within the transmission bandwidth (see Figure 5.4.2-1) for which the 2nd or 3rd harmonic, i.e. the frequency equal to two or three times the frequency of that RE, is within the measurement bandwidth (MBW).							

The normative reference for this requirement is TS 36.101 [2] subclause 6.6.3.2A.

This test use minimum requirements from many releases of TS 36.101 [2] due to release independence defined in TS 36.307 [16].

#### 6.6.3.2A.1 Spurious emission band UE co-existence for CA (intra-band contiguous DL CA and UL CA)

**Editor's note: Applicability of Notes 8 and 9 in Table 6.6.3.2A.0-2a and Notes 10 and 12 in Table 6.6.3.2A.0-2b is undefined in TS 36.101**

##### 6.6.3.2A.1.1 Test purpose

To verify that UE transmitter does not cause unacceptable interference to co-existing systems for the specified bands which has specific requirements in terms of transmitter spurious emissions for intra-band contiguous DL CA and UL CA.

##### 6.6.3.2A.1.2 Test applicability

This test case applies to all types of E-UTRA UE release 10 and forward that support intra-band contiguous DL CA and UL CA.

##### 6.6.3.2A.1.3 Minimum conformance requirements

The minimum conformance requirements are defined in clause 6.6.3.2A.0.

##### 6.6.3.2A.1.4 Test description

###### 6.6.3.2A.1.4.1 Initial conditions

Initial conditions are a set of test configurations the UE needs to be tested in and the steps for the SS to take with the UE to reach the correct measurement state.

The initial test configurations consist of environmental conditions, test frequencies, and channel bandwidths based on E-UTRA bands specified in Table 5.4.2.1-1. All of these configurations shall be tested with applicable test parameters for each channel bandwidth, and are shown in Table 6.6.3.2A.1.4.1-1. The details of the uplink reference measurement channels (RMCs) are specified in Annex A.2. Configurations of PDSCH and PDCCH before measurement are specified in Annex C.2.

Table 6.6.3.2A.1.4.1-1: Test Configuration Table

Initial Conditions								
Test Environment as specified in TS 36.508[7] clause 4.1				NC				
Test Frequencies as specified in TS36.508 [7] clause 4.3.1 for different CA bandwidth classes, and PCC and SCCs are mapped onto physical frequencies according to Table 6.1-2.				Low range, High range				
Test CC Combination setting (NRB_agg) as specified in clause 5.4.2A.1 for the CA Configuration				Lowest N <sub>RB_agg</sub> Highest N <sub>RB_agg</sub> (Note 2)				
Test Parameters for CA Configurations								
CA Configuration / N <sub>RB_agg</sub>		DL Allocation	CC MOD	UL Allocation				
PCC N <sub>RB</sub>	SCCs N <sub>RB</sub>	PCC & SCC RB allocation		N <sub>RB_alloc</sub>	PCC & SCC RB allocations (L <sub>CRB</sub> @ RB <sub>start</sub> )			
25	50		QPSK	2	P_1@0	S_1@49		
25	50		QPSK	75	P_25@0	S_50@0		
50	50		QPSK	2	P_1@0	S_1@49		
50	50		QPSK	100	P_50@0	S_50@0

100	50		QPSK	2	P_1@0	S_1@49		
100	50		QPSK	150	P_100@0	S_50@0		
100	75		QPSK	2	P_1@0	S_1@74		
100	75		QPSK	175	P_100@0	S_75@0		
100	100		QPSK	2	P_1@0	S_1@99		
100	100		QPSK	200	P_100@0	S_100@0		
Note 1: CA Configuration Test CC Combination settings are checked separately for each CA Configuration, which applicable aggregated channel bandwidths are specified in Table 5.4.2A.1-1.								
Note 2: If in the CA Configuration UE supports multiple CC Combinations with the same N <sub>RB_agg</sub> , only the first of those is tested, according to the order on the Test Configuration Table list.								

1. Connect the SS to the UE antenna connectors as shown in Figure TS 36.508 [7] Annex A, Figure group A.33 as appropriate.
2. The parameter settings for the cell are set up according to TS 36.508 [7] subclause 4.4.3.
3. Downlink signals for PCC are initially set up according to Annex C.0, C.1 and Annex C.3.0, and uplink signals according to Annex H.1 and H.3.0.
4. The UL Reference Measurement channels are set according to Table 6.6.3.2A.1.4.1-1.
5. Propagation conditions are set according to Annex B.0.
6. Ensure the UE is in State 3A-RF according to TS 36.508 [7] clause 5.2A.2. Message contents are defined in clause 6.6.3.2A.1.4.3.

#### 6.6.3.2A.1.4.2 Test procedure

1. Configure SCC according to Annex C.0, C.1 and Annex C.3.0 for all downlink physical channels.
2. The SS shall configure SCC as per TS 36.508 [7] clause 5.2A.4. Message contents are defined in clause 6.6.3.2A.1.4.3
3. SS activates SCC by sending the activation MAC-CE (Refer TS 36.321 [13], clauses 5.13, 6.1.3.8). Wait for at least 2 seconds (Refer TS 36.133, clauses 8.3.3.2).
4. SS sends uplink scheduling information for each UL HARQ process via PDCCH DCI format 0 for C\_RNTI to schedule the UL RMC according to Table 6.6.3.2A.1.4.1-1 on both PCC and SCC. Since the UE has no payload and no loopback data to send the UE sends uplink MAC padding bits on the UL RMC.

5. Send continuously uplink power control “up” commands in every uplink scheduling information to the UE until the UE transmits at  $P_{UMAX}$  level.
6. Measure the power of the transmitted signal with a measurement filter of bandwidths according to Table 6.6.3.2A.0-2a to 6.6.3.2A.0-2c. The centre frequency of the filter shall be stepped in contiguous steps according to Table 6.6.3.2A.0-2a to 6.6.3.2A.0-2c. The measured power shall be verified for each step. The measurement period shall capture the active time slots.

#### 6.6.3.2A.1.4.3 Message contents

Message contents are according to TS 36.508 [7] subclause subclause 4.6 with the following exceptions:

**Table 6.6.3.2A.1.4.3-1: SystemInformationBlockType1 with Note 11 in table 6.6.3.2A.0-2b**

Derivation Path: TS 36.508 [7] clause 4.4.3.2, Table 4.4.3.2-3 SystemInformationBlockType1			
Information Element	Value/remark	Comment	Condition
p-Max	20		

#### 6.6.3.2A.1.5 Test requirement

Test requirements for Spurious Emissions UE Co-existence are the same as the minimum requirements and are not repeated in this section.

The measured average power of spurious emission, derived in step 6, shall not exceed the described value in Tables 6.6.3.2A.1.5-1.

The requirements for the UE are release specific and can be found in Tables 6.6.3.2A.0-2a to 6.6.3.2A.0-2d . If the UE support a band, which is not defined in the table corresponding UE’s release, the requirements for this band are taken from the table of earliest release where requirements for this band are defined. This has been described in following Table 6.6.3.2A.1.5-1.

**Table 6.6.3.2A.1.5-1: UE Requirements according to UE E-UTRA release and supported E-UTRA CA configuration**

E-UTRA CA Configuration	UE Requirements per release			
	Rel-10	Rel-11	Rel-12	Rel-13

CA_42C	Table 6.6.3.2A.0-2c	Table 6.6.3.2A.0-2c	Table 6.6.3.2A.0-2c	Table 6.6.3.2A.0-2d

**6.6.3.2A.2 Spurious emission band UE co-existence for CA (inter-band DL CA and UL CA)**

Editor's note: This clause is incomplete. The following aspects are either missing or not yet determined:

- Test points for CA configurations other than CA\_1A-19A, CA\_1A-21A, CA\_19A-21A, CA\_4A-12A, CA\_4A-17A and CA\_19A-21A will need an update to ensure sufficient test coverage.

**6.6.3.2A.2.1 Test purpose**

To verify that UE transmitter does not cause unacceptable interference to co-existing systems for the specified bands which has specific requirements in terms of transmitter spurious emissions for inter-band DL CA and UL CA.

**6.6.3.2A.2.2 Test applicability**

This test case applies to all types of E-UTRA UE release 11 and forward that support inter-band DL CA and UL CA.

**6.6.3.2A.2.3 Minimum conformance requirements**

The minimum conformance requirements are defined in clause 6.6.3.2A.0.

**6.6.3.2A.2.4 Test description****6.6.3.2A.2.4.1 Initial conditions**

Same as in clause 6.6.3.2A.1.4.1 with the following exceptions:

- Instead of Table 5.4.2A.1-1 → use Table 5.4.2A.1-2 for CA configurations with two bands or Table 5.4.2A.1-2a for CA configurations with three bands.

- Instead of Table 6.6.3.2A.1.4.1-1 → use Table 6.6.3.2A.2.4.1-1.
- Instead of clause 6.6.3.2A.1.4.3 use clause 6.6.3.2A.2.4.3.

**Table 6.6.3.2A.2.4.1-1: Test Configuration Table**

Initial Conditions												
Test Environment as specified in TS 36.508[7] subclause 4.1								NC				
Test Frequencies as specified in TS36.508 [7] subclause 4.3.1 for different CA bandwidth classes.								For test frequencies refer to “Range” columns.				
Test CC Combination setting ( $N_{RB\_agg}$ ) as specified in subclause 5.4.2A.1 for the CA Configuration across bandwidth combination sets supported by the UE.								Refer to “PCC $N_{RB}$ ” and “SCC $N_{RB}$ ” columns				
Test Parameters for CA Configurations												
ID	CA Configuration / $N_{RB\_agg}$						DL Allocation			UL Allocation (Note 2,3)		
	CA Configuration				PCC $N_{RB}$	SCC $N_{RB}$	CC MOD	PCC & SCC RB allocation		CC MOD	PCC & SCC RB allocations ( $L_{CRB}$ @ $RB_{start}$ )	
	PCC		SCC					PCC	SCC			
	Band	Range	Band	Range								
Default Test Settings for a CA_XA-YA Configuration												
1	X	Low	Y	Low	Highest $N_{RB}$	Highest $N_{RB}$	QPSK	NA	QPSK	1@ $RB_{start}$	1@ $RB_{start}$	
2	X	High	Y	High	Highest $N_{RB}$	Highest $N_{RB}$	QPSK	NA	QPSK	1@ $RB_{end}$	1@ $RB_{end}$	
Test Settings for CA_1A-19A Configuration												
1	1	Mid	19	Mid	25	25	QPSK	NA	QPSK	1@0	1@0	
2	1	Mid	19	Mid	25	25	QPSK	NA	QPSK	25@0	25@0	
3	1	Mid	19	Mid	100	75	QPSK	NA	QPSK	1@0	1@0	
4	1	Mid	19	Mid	100	75	QPSK	NA	QPSK	100@0	75@0	
Test Settings for CA_1A-21A Configuration												
1	1	Mid	21	Mid	25	25	QPSK	NA	QPSK	1@24	1@24	
2	1	Mid	21	Mid	25	25	QPSK	NA	QPSK	1@24	1@12	
3	1	Mid	21	Mid	25	25	QPSK	NA	QPSK	25@0	25@0	
4	1	Mid	21	Mid	100	75	QPSK	NA	QPSK	1@99	1@74	
5	1	Mid	21	Mid	100	75	QPSK	NA	QPSK	1@99	1@37	
6	1	Mid	21	Mid	100	75	QPSK	NA	QPSK	100@0	75@0	
Test Settings for CA_3A-19A Configuration												
1	3	High	19	Mid	25	25	QPSK	NA	QPSK	1@0	1@0	
2	3	High	19	Mid	25	25	QPSK	NA	QPSK	1@24	1@0	
3	3	High	19	Mid	25	25	QPSK	NA	QPSK	25@0	25@0	
4	3	High	19	Mid	100	75	QPSK	NA	QPSK	1@0	1@0	
5	3	High	19	Mid	100	75	QPSK	NA	QPSK	1@99	1@0	
6	3	High	19	Mid	100	75	QPSK	NA	QPSK	100@0	75@0	
Note 1: CA Configuration Test CC Combination test settings are checked separately for each CA Configuration.												
Note 2: Use CA Configuration – specific test points if present in the table. Otherwise use the Default Test Settings test points.												
Note 3: X,Y correspond to the different bands in the CA Configuration. E.g. for CA_1A-19A,X=1,Y=19.												

#### 6.6.3.2A.2.4.2 Test procedure

1. Configure SCC according to Annex C.0, C.1 and Annex C.3.0 for all downlink physical channels.

2. The SS shall configure SCC as per TS 36.508 [7] clause 5.2A.4. Message contents are defined in clause 6.6.3.2A.2.4.3
3. SS activates SCC by sending the activation MAC-CE (Refer TS 36.321 [13], clauses 5.13, 6.1.3.8). Wait for at least 2 seconds (Refer TS 36.133, clauses 8.3.3.2).
4. SS sends uplink scheduling information for each UL HARQ process via PDCCH DCI format 0 for C\_RNTI to schedule the UL RMC according to Table 6.6.3.2A.2.4.1-1 on both PCC and SCC. Since the UE has no payload and no loopback data to send the UE sends uplink MAC padding bits on the UL RMC.
5. Send continuously uplink power control “up” commands in every uplink scheduling information to the UE until the UE transmits at  $P_{UMAX}$  level.
6. Measure the power of the transmitted signal with a measurement filter of bandwidths according to Table 6.6.3.2A.5-1 to Table 6.3.2A.5-2. The centre frequency of the filter shall be stepped in contiguous steps according to Table 6.6.3.2A.5-1 to Table 6.6.3.2A.5-2. The measured power shall be verified for each step. The measurement period shall capture the active time slots.

#### 6.6.3.2A.2.4.3 Message contents

Message contents are according to TS 36.508 [7] clause 4.6. In test procedure step 2, for SCC configuration there are no additional message contents.

#### 6.6.3.2A.2.5 Test requirement

The measured average power of spurious emission, derived in step 6, shall not exceed the described value in Tables 6.6.3.2A.5-1 to 6.6.3.2A.5-2 according to the following rule:

The requirements for the UE are release specific and can be found in Tables 6.6.3.2A.5-1 to 6.6.3.2A.5-2. If the UE supports a CA configuration, which is not defined in the table corresponding to UE's release, the requirements for this CA configuration are taken from the table of earliest release where requirements for this CA Configuration are defined. This has been described in following Table 6.6.3.2A.2.5-0.

**Table 6.6.3.2A.2.5-0: UE Requirements according to UE E-UTRA release and supported E-UTRA CA Configuration**

E-UTRA CA Configuration	UE Requirements per release

	E-UTRA band 42	$F_{DL\_low}$	-	$F_{DL\_high}$	-50	1
CA_4A-12A	No requirement					
CA_4A-13A	E-UTRA Band 7, 41	$F_{DL\_low}$	-	$F_{DL\_high}$	-50	1
CA_4A-17A	No requirement					
CA_5A-7A	E-UTRA Band 5, 28, 42	$F_{DL\_low}$	-	$F_{DL\_high}$	-50	1
	E-UTRA band 26	859	-	869	-27	1
CA_5A-12A	E-UTRA Band 24, 30	$F_{DL\_low}$	-	$F_{DL\_high}$	-50	1
CA_5A-17A	E-UTRA Band 24, 30	$F_{DL\_low}$	-	$F_{DL\_high}$	-50	1
CA_7A-20A	E-UTRA Band 28	$F_{DL\_low}$	-	$F_{DL\_high}$	-50	1
	E-UTRA Band 20	$F_{DL\_low}$	-	$F_{DL\_high}$	-50	1
	E-UTRA Band 42	$F_{DL\_low}$	-	$F_{DL\_high}$	-50	1
CA_7A-28A	E-UTRA Band 3	$F_{DL\_low}$	-	$F_{DL\_high}$	-50	1
CA_19A-21A	No requirement					
CA_39A-41A	E-UTRA Band 42, 44	$F_{DL\_low}$	-	$F_{DL\_high}$	-50	1
NOTE 1: $F_{DL\_low}$ and $F_{DL\_high}$ refer to each E-UTRA frequency band specified in Table 5.2-1						
NOTE 2: As exceptions, measurements with a level up to the applicable requirements defined in Table 6.6.3.1.3-2 are permitted for each assigned E-UTRA carrier used in the measurement due to 2 <sup>nd</sup> , 3 <sup>rd</sup> , 4 <sup>th</sup> [or 5 <sup>th</sup> ] harmonic spurious emissions. An exception is allowed if there is at least one individual RB within the transmission bandwidth (see Figure 5.4.2-1) for which the 2 <sup>nd</sup> , 3 <sup>rd</sup> or 4 <sup>th</sup> harmonic totally or partially overlaps the measurement bandwidth (MBW).						
NOTE 3: These requirements also apply for the frequency ranges that are less than $F_{OOB}$ (MHz) in Table 6.6.3.1.3-1 and Table 6.6.3.1A.0-1 from the edge of the aggregated channel bandwidth.						
NOTE 4: Void.						
NOTE 5: Void.						
NOTE 6: Void.						

- NOTE 7: Void.
- NOTE 8: Applicable when NS\_08 in subclause 6.6.3.3.3 is signalled by the network.
- NOTE 9: Void.
- NOTE10: This requirement applies for 5, 10, 15 and 20 MHz E-UTRA channel bandwidth allocated within 1744.9MHz and 1784.9MHz.
- NOTE 11: This requirement is applicable only for the following cases:
- for carriers of 5 MHz channel bandwidth when carrier centre frequency ( $F_c$ ) is within the range  $902.5 \text{ MHz} \leq F_c < 907.5 \text{ MHz}$  with an uplink transmission bandwidth less than or equal to 20 RB
  - for carriers of 5 MHz channel bandwidth when carrier centre frequency ( $F_c$ ) is within the range  $907.5 \text{ MHz} \leq F_c \leq 912.5 \text{ MHz}$  without any restriction on uplink transmission bandwidth.
  - for carriers of 10 MHz channel bandwidth when carrier centre frequency ( $F_c$ ) is  $F_c = 910 \text{ MHz}$  with an uplink transmission bandwidth less than or equal to 32 RB with  $\text{RB}_{\text{start}} > 3$ .
- NOTE 12: Void.
- NOTE13: For these adjacent bands, the emission limit could imply risk of harmful interference to UE(s) operating in the protected operating band.
- NOTE 14: This requirement is applicable for any channel bandwidths within the range 2500 - 2570 MHz with the following restriction: for carriers of 15 MHz bandwidth when carrier centre frequency is within the range 2560.5 - 2562.5 MHz and for carriers of 20 MHz bandwidth when carrier centre frequency is within the range 2552 - 2560 MHz the requirement is applicable only for an uplink transmission bandwidth less than or equal to 54 RB.
- NOTE 15: Void.
- NOTE 16: Void.
- NOTE 17: This requirement is applicable only when Band 3 transmission frequency is less than or equal to 1765 MHz.
- NOTE 18: Void.
- NOTE 19: Void.
- NOTE 20: Void.

Table 6.6.3.2A.5-2: Requirements for dual-uplink inter-band carrier aggregation for Rel-13

E-UTRA CA Configuration	Spurious emission					
	Protected band	Frequency range (MHz)		Maximum Level (dBm)	MBW (MHz)	Note

### 6.6.3.2A.3 Spurious emission band UE co-existence for CA (intra-band non-contiguous DL CA and UL CA)

#### 6.6.3.2A.3.1 Test purpose

To verify that UE transmitter does not cause unacceptable interference to co-existing systems for the specified bands which has specific requirements in terms of transmitter spurious emissions for intra-band non-contiguous DL CA and UL CA.

#### 6.6.3.2A.3.2 Test applicability

This test case applies to all types of E-UTRA UE release 11 and forward that support intra-band non-contiguous DL CA and UL CA.

#### 6.6.3.2A.3.3 Minimum conformance requirements

The minimum conformance requirements are defined in clause 6.6.3.2A.0.

#### 6.6.3.2A.3.4 Test description

##### 6.6.3.2A.3.4.1 Initial conditions

Same as in clause 6.6.3.2A.1.4.1 with the following exceptions:

- Instead of Table 6.6.3.2A.1.4.1-1 → use Table 6.6.3.2A.3.4.1-1.
- Instead of clause 6.6.3.2A.1.4.3 → use clause 6.6.3.2A.3.4.3.

Table 6.6.3.2A.3.4.1-1: Test Configuration Table

Initial Conditions									
Test Environment as specified in TS 36.508[7] subclause 4.1				NC					
Test Frequencies as specified in TS36.508 [7] subclause 4.3.1 for different CA bandwidth classes, and PCC and SCCs are mapped onto physical frequencies according to Table 6.1-2.				Refer to test points A: N/A (Range is not relevant), Maximum W <sub>gap</sub> (low + high frequency)					
Test CC Combination setting (N <sub>RB,agg</sub> ) as specified in subclause 5.4.2A.1 for the CA Configuration across bandwidth combination sets supported by the UE.				Refer to test points Test only test points with Lowest N <sub>RB</sub> for PCC and SCC Highest N <sub>RB</sub> for PCC and SCC					
Test Parameters for CA Configurations									
ID	CA Configuration / N <sub>RB,agg</sub>		W <sub>gap</sub> [MHz]	DL Allocation		UL Allocation			
	PCC N <sub>RB</sub>	SCCs N <sub>RB</sub>		CC MOD	PCC & SCC RB allocation	CC MOD	PCC N <sub>RB,alloc</sub> (L <sub>CRB</sub> @ RB <sub>start</sub> )	CC MOD	SCC N <sub>RB,alloc</sub> (L <sub>CRB</sub> @ RB <sub>start</sub> )
Test Parameters for CA_4A-4A Configurations									
1	25	25	35	N/A	N/A	QPSK	P_1@0	QPSK	S_1@24
2	25	25	35	N/A	N/A	QPSK	P_25@0	QPSK	S_25@0
3	100	100	5	N/A	N/A	QPSK	P_1@0	QPSK	S_1@99
4	100	100	5	N/A	N/A	QPSK	P_100@0	QPSK	S_100@0

#### 6.6.3.2A.3.4.2 Test procedure

Same test procedure as in clause 6.6.3.2A.1.4.2 with the following exceptions:

- Instead of Table 6.6.3.2A.1.4.1-1 → use Table 6.6.3.2A.3.4.1-1.
- Instead of Table 6.6.3.2A.0-2a to 6.6.3.2A.0-2c → use Table 6.6.3.2A.0-3
- Instead of clause 6.6.3.2A.1.4.3 → use clause 6.6.3.2A.3.4.3.

#### 6.6.3.2A.3.4.3 Message contents

Message contents are according to TS 36.508 [7] clause 4.6. In test procedure step 2, for SCC configuration there are no additional message contents.

#### 6.6.3.2A.3.5 Test requirement

Test requirements for Spurious Emissions UE Co-existence are the same as the minimum requirements and are not repeated in this section.

The measured average power of spurious emission, derived in step 6, shall not exceed the described value in Table 6.6.3.2A.3.5-1.

The requirements for the UE are release specific and can be found in Table 6.6.3.2A.0-3. If the UE supports a band, which is not defined in the table corresponding UE's release, the requirements for this band are taken from the table of earliest release where requirements for this band are defined. This has been described in following Table 6.6.3.2A.3.5-1.

**Table 6.6.3.2A.3.5-1: UE Requirements according to UE E-UTRA release and supported E-UTRA CA configuration**

E-UTRA CA Configuration	UE Requirements per release
	Rel-12
CA_4A-4A	Table 6.6.3.2A.0-3

### 6.6.3.3 Additional spurious emissions

**Editor's note:** For a transition period until RAN5#72, this test case in version 13.0.1 of 36.521-1 shall be used. This is to ensure no test coverage is lost before the UL 64QAM test case becomes available.

#### 6.6.3.3.1 Test purpose

To verify that UE transmitter does not cause unacceptable interference to other channels or other systems in terms of transmitter spurious emissions under the deployment scenarios where additional requirements are specified.

#### 6.6.3.3.2 Test applicability

This test case applies to all types of E-UTRA UE release 8 and forward.

#### 6.6.3.3.3 Minimum conformance requirements

These requirements are specified in terms of an additional spectrum emission requirement. Additional spurious emission requirements are signalled by the network to indicate that the UE shall meet an additional requirement for a specific deployment scenario as part of the cell handover/broadcast message.

**NOTE:** For measurement conditions at the edge of each frequency range, the lowest frequency of the measurement position in each frequency range should be set at the lowest boundary of the frequency range plus MBW/2. The highest frequency of the measurement position in each frequency range should be set at the highest boundary of the frequency range minus MBW/2. MBW denotes the measurement bandwidth defined for the protected band.

#### 6.6.3.3.3.1 Minimum conformance requirements (network signalled value "NS\_05")

When "NS\_05" is indicated in the cell, the power of any UE emission shall not exceed the levels specified in Table 6.6.3.3.3.1-1. This requirement also applies for the frequency ranges that are less than  $\Delta f_{\text{OBS}}$  (MHz) in Table 6.6.3.1.3-1 from the edge of the channel bandwidth.

**Table 6.6.3.3.3.1-1: Additional requirements (PHS)**

Frequency band (MHz)	Channel bandwidth / Spectrum emission limit (dBm)				Measurement bandwidth
	5 MHz	10 MHz	15 MHz	20 MHz	
$1884.5 \leq f \leq 1915.7^{*1}$	-41	-41	-41	-41	300 KHz
Note 1: Applicable when the lower edge of the assigned E-UTRA UL channel bandwidth frequency is larger than or equal to the upper edge of PHS band (1915.7 MHz) + 4 MHz + the Channel BW assigned, where Channel BW is as defined in sub-clause 5.4.2. Additional restrictions apply for operations below this point.					

The normative reference for this requirement is TS 36.101[2] subclause 6.6.3.3.1.

#### 6.6.3.3.3.2 Minimum conformance requirements (network signalled value "NS\_07")

When "NS\_07" is indicated in the cell, the power of any UE emission shall not exceed the levels specified in Table 6.6.3.3.3.2-1. These requirements also apply for the frequency ranges that are less than  $\Delta f_{\text{OOB}}$  (MHz) in Table 6.6.3.1.3-1 from the edge of the channel bandwidth.

**Table 6.6.3.3.3.2-1: Additional requirements**

Frequency band (MHz)	Channel bandwidth / Spectrum emission limit (dBm)		Measurement bandwidth
	10 MHz		
$769 \leq f \leq 775$	-57		6.25 kHz
Note: The emissions measurement shall be sufficiently power averaged to ensure a standard deviation < 0.5 dB.			

The normative reference for this requirement is TS 36.101[2] subclause 6.6.3.3.2.

#### 6.6.3.3.3.3 Minimum requirement (network signalled value "NS\_08")

When "NS\_08" is indicated in the cell, the power of any UE emission shall not exceed the levels specified in Table 6.6.3.3.3-1. This requirement also applies for the frequency ranges that are less than  $\Delta f_{\text{OOB}}$  (MHz) in Table 6.6.3.1.3-1 from the edge of the channel bandwidth.

**Table 6.6.3.3.3-1: Additional requirement**

Frequency band (MHz)	Channel bandwidth / Spectrum emission limit (dBm)			Measurement bandwidth
	5MHz	10MHz	15MHz	
$860 \leq f \leq 895$	-40	-40	-40	1 MHz

#### 6.6.3.3.3.4 Minimum requirement (network signalled value "NS\_09")

When "NS\_09" is indicated in the cell, the power of any UE emission shall not exceed the levels specified in Table 6.6.3.3.3.4-1. This requirement also applies for the frequency ranges that are less than  $\Delta f_{\text{OOB}}$  (MHz) in Table 6.6.3.1.3-1 from the edge of the channel bandwidth.

**Table 6.6.3.3.3.4-1: Additional requirement**

Frequency band (MHz)	Channel bandwidth / Spectrum emission limit (dBm)			Measurement bandwidth
	5MHz	10MHz	15MHz	
$1475.9 \leq f \leq 1510.9$	-35	-35	-35	1 MHz

NOTE 1: To improve measurement accuracy, A-MPR values for NS\_09 specified in Table 6.2.4.3-1 in sub-clause 6.2.4 are derived based on 100 kHz RBW.

#### 6.6.3.3.3.5 Minimum requirement (network signalled value "NS\_12")

When "NS\_12" is indicated in the cell, the power of any UE emission shall not exceed the levels specified in Table 6.6.3.3.5-1. This requirement also applies for the frequency ranges that are less than  $\Delta f_{\text{OOB}}$  (MHz) in Table 6.6.3.1.3-1 from the edge of the channel bandwidth.

**Table 6.6.3.3.3.5-1: Additional requirements**

Frequency band (MHz)	Channel bandwidth/ Spectrum emission limit (dBm)	Measurement bandwidth
	1.4 MHz, 3 MHz, 5 MHz, 10 MHz, 15 MHz	
$806 \leq f \leq 813.5$	-42	6.25 kHz
NOTE 1: The requirement applies for E-UTRA carriers with lower channel edge at or above 814.2 MHz.		
NOTE 2: The emissions measurement shall be sufficiently power averaged to ensure a standard deviation < 0.5 dB.		

#### 6.6.3.3.3.6 Minimum requirement (network signalled value "NS\_13")

When "NS 13" is indicated in the cell, the power of any UE emission shall not exceed the levels specified in Table 6.6.3.3.6-1. This requirement also applies for the frequency ranges that are less than  $\Delta f_{\text{OOB}}$  (MHz) in Table 6.6.3.1.3-1 from the edge of the channel bandwidth.

**Table 6.6.3.3.3.6-1: Additional requirements**

Frequency band (MHz)	Channel bandwidth/ Spectrum emission limit (dBm)	Measurement bandwidth
	1.4, 3, 5 MHz	
$806 \leq f \leq 816$	-42	6.25 kHz
NOTE 1: The requirement applies for E-UTRA carriers with lower channel edge at or above 819 MHz.		
NOTE 2: The emissions measurement shall be sufficiently power averaged to ensure a standard deviation < 0.5 dB.		

#### 6.6.3.3.3.7 Minimum requirement (network signalled value "NS\_14")

When "NS 14" is indicated in the cell, the power of any UE emission shall not exceed the levels specified in Table 6.6.3.3.7-1. This requirement also applies for the frequency ranges that are less than  $\Delta f_{\text{OOB}}$  (MHz) in Table 6.6.3.1.3-1 from the edge of the channel bandwidth.

**Table 6.6.3.3.3.7-1: Additional requirements**

Frequency band (MHz)	Channel bandwidth/ Spectrum emission limit (dBm)	Measurement bandwidth
	10 MHz, 15 MHz	
$806 \leq f \leq 816$	-42	6.25 kHz
NOTE 1: The requirement applies for E-UTRA carriers with lower channel edge at or above 824 MHz.		
NOTE 2: The emissions measurement shall be sufficiently power averaged to ensure a standard deviation < 0.5 dB.		

#### 6.6.3.3.3.8 Minimum requirement (network signalled value "NS\_15")

When "NS 15" is indicated in the cell, the power of any UE emission shall not exceed the levels specified in Table 6.6.3.3.8-1. This requirement also applies for the frequency ranges that are less than  $\Delta f_{\text{OOB}}$  (MHz) in Table 6.6.3.1.3-1 from the edge of the channel bandwidth.

**Table 6.6.3.3.8-1: Additional requirements**

Frequency band (MHz)	Channel bandwidth / Spectrum emission limit (dBm)	Measurement bandwidth	Note
	1.4, 3, 5, 10, 15 MHz		
$851 \leq f \leq 859$	-53	6.25 kHz	1
Note 1: The emissions measurement shall be sufficiently power averaged to ensure standard deviation < 0.5 dB.			

#### 6.6.3.3.3.9 Minimum requirement (network signalled value "NS\_16")

When "NS\_16" is indicated in the cell, the power of any UE emission shall not exceed the levels specified in Table 6.6.3.3.9-1. This requirement also applies for the frequency ranges that are less than  $\Delta f_{\text{OOB}}$  (MHz) in Table 6.6.3.1-1 from the edge of the channel bandwidth.

**Table 6.6.3.3.9-1: Additional requirements**

Frequency band (MHz)	Channel bandwidth / Spectrum emission limit (dBm)	Measurement bandwidth	Note
	1.4, 3, 5, 10 MHz		
$790 \leq f \leq 803$	-32	1 MHz	

#### 6.6.3.3.3.10 Minimum requirement (network signalled value "NS\_17")

When "NS\_17" is indicated in the cell, the power of any UE emission shall not exceed the levels specified in Table 6.6.3.3.3.10-1. This requirement also applies for the frequency ranges that are less than  $\Delta f_{\text{OOB}}$  (MHz) in Table 6.6.3.3.3.10-1 from the edge of the channel bandwidth.

**Table 6.6.3.3.10-1: Additional requirements**

Frequency band (MHz)	Channel bandwidth / Spectrum emission limit (dBm)	Measurement bandwidth	Note
	5, 10 MHz		
$470 \leq f \leq 710$	-26.2	6 MHz	1
Note 1: Applicable when the assigned E-UTRA carrier is confined within 718 MHz and 748 MHz and when the channel bandwidth used is 5 or 10 MHz.			

#### 6.6.3.3.3.11 Minimum requirement (network signalled value "NS\_18")

When "NS\_18" is indicated in the cell, the power of any UE emission shall not exceed the levels specified in Table 6.6.3.3.3.11-1. This requirement also applies for the frequency ranges that are less than  $\Delta f_{\text{OOB}}$  (MHz) in Table 6.6.3.1.3-1 from the edge of the channel bandwidth.

**Table 6.6.3.3.11-1: Additional requirements**

Frequency band (MHz)	Channel bandwidth / Spectrum emission limit (dBm)	Measurement bandwidth	Note
	5, 10, 15, 20 MHz		
$692 \leq f \leq 698$	-26.2	6 MHz	

#### 6.6.3.3.3.12 Minimum requirement (network signalled value "NS\_19")

When "NS\_19" is indicated in the cell, the power of any UE emission shall not exceed the levels specified in Table 6.6.3.3.3.12-1. This requirement also applies for the frequency ranges that are less than  $\Delta f_{\text{OOB}}$  (MHz) in Table 6.6.3.1.3-1 from the edge of the channel bandwidth.

**Table 6.6.3.3.3.12-1: Additional requirements**

Frequency band (MHz)	Channel bandwidth / Spectrum emission limit (dBm)	Measurement bandwidth	Note
	3, 5, 10, 15, 20 MHz		
$662 \leq f \leq 694$	-25	8 MHz	

#### 6.6.3.3.3.13 Minimum requirement (network signalled value "NS\_11")

When "NS\_11" is indicated in the cell, the power of any UE emission shall not exceed the levels specified in Table 6.6.3.3.3.13-1. These requirements also apply for the frequency ranges that are less than  $F_{OOB}$  (MHz) in Table 6.6.3.1.3-1 from the edge of the channel bandwidth.

**Table 6.6.3.3.3.13-1: Additional requirements**

Frequency band (MHz)	Channel bandwidth / Spectrum emission limit (dBm)	Measurement bandwidth	Note
	1.4, 3, 5, 10, 15, 20 MHz		
E-UTRA Band 2	-50	1 MHz	
$1998 \leq f \leq 1999$	-21	1 MHz	
$1997 \leq f < 1998$	-27	1 MHz	
$1996 \leq f < 1997$	-32	1 MHz	
$1995 \leq f < 1996$	-37	1 MHz	
$1990 \leq f < 1995$	-40	1 MHz	

#### 6.6.3.3.3.14 Minimum requirement (network signalled value "NS\_20")

When "NS\_20" is indicated in the cell, the power of any UE emission shall not exceed the levels specified in Table 6.6.3.3.3.14-1. These requirements also apply for the frequency ranges that are less than  $F_{OOB}$  (MHz) in Table 6.6.3.1.3-1 from the edge of the channel bandwidth.

**Table 6.6.3.3.3.14-1: Additional requirements**

Frequency band (MHz)	Channel bandwidth / Spectrum emission limit (dBm)	Measurement bandwidth	Note
	5, 10, 15, 20 MHz		
$1990 \leq f < 1999$	-40	1 MHz	
$1999 \leq f \leq 2000$	-40	Note 1	
Note 1: The measurement bandwidth is 1% of the applicable E-UTRA channel bandwidth (5.4.2.1-1).			

#### 6.6.3.3.3.15 Minimum requirement (network signalled value "NS\_21")

When "NS\_21" is indicated in the cell, the power of any UE emission shall not exceed the levels specified in Table 6.6.3.3.3.15-1. These requirements also apply for the frequency ranges that are less than  $F_{OOB}$  (MHz) in Table 6.6.3.1.3-1 and Table 6.6.3.1A-1 from the edge of the channel bandwidth.

**Table 6.6.3.3.15-1: Additional requirements**

Frequency band (MHz)	Channel bandwidth / Spectrum emission limit (dBm)	Measurement bandwidth
	5, 10 MHz	
$2200 \leq f < 2288$	-40	1 MHz
$2288 \leq f < 2292$	-37	1 MHz
$2292 \leq f < 2296$	-31	1 MHz
$2296 \leq f < 2300$	-25	1 MHz
$2320 \leq f < 2324$	-25	1 MHz
$2324 \leq f < 2328$	-31	1 MHz
$2328 \leq f < 2332$	-37	1 MHz
$2332 \leq f \leq 2395$	-40	1 MHz

#### 6.6.3.3.16 Minimum requirement (network signalled value "NS\_24")

When "NS\_24" is indicated in the cell, the power of any UE emission shall not exceed the levels specified in Table 6.6.3.3.16-1. This requirement also applies for the frequency ranges that are less than  $F_{\text{OOB}}$  (MHz) in Table 6.6.3.1.3-1 from the edge of the channel bandwidth.

**Table 6.6.3.3.16-1: Additional requirements**

Frequency band (MHz)	Channel bandwidth / Spectrum emission limit (dBm)	Measurement bandwidth
	5 MHz, 10 MHz, 15 MHz, 20 MHz	
Band 34	-50	MHz
Note 1: This requirement applies at a frequency offset equal or larger than 5 MHz from the upper edge of the channel bandwidth, whenever these frequencies overlap with the specified frequency band.		

#### 6.6.3.3.17 Minimum requirement (network signalled value "NS\_25")

When "NS\_25" is indicated in the cell, the power of any UE emission shall not exceed the levels specified in Table 6.6.3.3.17-1. This requirement also applies for the frequency ranges that are less than  $F_{\text{OOB}}$  (MHz) in Table 6.6.3.1.3-1 from the edge of the channel bandwidth.

**Table 6.6.3.3.17-1: Additional requirements**

Frequency band (MHz)	Channel bandwidth / Spectrum emission limit (dBm)	Measurement bandwidth
	5 MHz, 10 MHz, 15 MHz, 20 MHz	
Band 34	-40	MHz
Note 1: This requirement applies at a frequency offset equal or larger than 5 MHz from the upper edge of the channel bandwidth, whenever these frequencies overlap with the specified frequency band.		

### 6.6.3.3.4 Test description

#### 6.6.3.3.4.1 Initial conditions

Initial conditions are a set of test configurations the UE needs to be tested in and the steps for the SS to take with the UE to reach the correct measurement state.

The initial test configurations consist of environmental conditions, test frequencies, and channel bandwidths based on E-UTRA operating bands specified in table 5.4.2.1-1. All of these configurations shall be tested with applicable test parameters for each channel bandwidth, and are shown in Table 6.6.3.3.4.1-1 through Table 6.6.3.3.4.1-17. The details of the uplink reference measurement channels (RMCs) are specified in Annexes A.2. Configurations of PDSCH and PDCCH before measurement are specified in Annex C.2.

Table 6.6.3.3.4.1-1: Test Configuration Table (network signalled value "NS\_05")

Initial Conditions							
Test Environment as specified in TS 36.508[7] subclause 4.1		Normal					
Test Frequencies as specified in TS36.508 [7] subclause 4.3.1		Low range, Mid range  In case of Low range: <ul style="list-style-type: none"> <li>- For 5MHz Channel Bandwidth: 1927.2MHz (<math>N_{UL} = 18072</math>)</li> <li>- For 10MHz Channel Bandwidth: 1934.7MHz (<math>N_{UL} = 18147</math>)</li> <li>- For 15MHz Channel Bandwidth: 1932.5MHz (<math>N_{UL} = 18125</math>)</li> <li>- For 20MHz Channel Bandwidth: 1930MHz (<math>N_{UL} = 18100</math>)</li> </ul>					
Test Channel Bandwidths as specified in TS 36.508 [7] subclause 4.3.1		5MHz, 10MHz, 15MHz, 20MHz

34	High	20MHz			QPSK	18	82
35 (Notes 2,3)	High	20MHz			16QAM	18	82
36 (Notes 2,3)	High	20MHz			16QAM	100	0

Note 1: The Configuration ID will be used to map the applicable Test Configuration to the corresponding Test Requirement in subclause 6.2.4.5 as not all combinations are necessarily required based on the applicability of the UE.

Note 2: Applies only for UE-Categories  $\geq 2$ .

Note 3: The 16QAM configurations shall not apply to UEs which support UL 64QAM.

**Table 6.6.3.3.4.1-17: Test Configuration Table (network signalled value "NS\_25")**

Initial Conditions							
Test Environment (as specified in TS 36.508 [7] subclause 4.1)			Normal				
Test Frequencies (as specified in TS 36.508 [7] subclause 4.3.1)			Refer to $F_{UL}$ in test parameters with following: 10 and 15 MHz CH BW: - 1980 MHz ( $N_{UL} = 132672$ ) - 1990 MHz ( $N_{UL} = 132772$ )				
Test Channel Bandwidths (as specified in TS 36.508 [7] subclause 4.3.1)			5MHz, 10MHz, 15MHz, 20MHz				
Test Parameters for NS_25 A-MPR							
Configuratio n ID	$F_{UL}$	Ch BW	Downlink Configuration		Uplink Configuration		
			Mod'n	RB allocation FDD	Mod'n	RB allocation FDD	RB <sub>start</sub> FDD
1	High	5MHz	N/A for A-MPR testing		QPSK	25	0
2 (Notes 2,3)	High	5MHz			16QAM	25	0

51 (Notes 2,3)	High	20MHz		16QAM	100	0
Note 1:	The Configuration ID will be used to map the applicable Test Configuration to the corresponding Test Requirement in subclause 6.2.4.5 as not all combinations are necessarily required based on the applicability of the UE.					
Note 2:	Applies only for UE-Categories $\geq 2$ .					
Note 3:	The 16QAM configurations shall not apply to UEs which support UL 64QAM.					

**Editor's note:** The following lines belong at the end of section 6.2.4.4.1. As new tables are added to this section, these lines should always follow the tables.

1. Connect the SS to the UE to the UE antenna connectors as shown in Figure TS 36.508 [7] Annex A, Figure A.7.
2. The parameter settings for the cell are set up according to TS 36.508 [7] subclause 4.4.3.
3. Downlink signals are initially set up according to Annex C0, C.1 and C.3.0, and uplink signals according to Annex H.1 and H.3.0.
4. The UL Reference Measurement channels are set according to Table 6.6.3.3.4.1-1 to Table 6.6.3.3.4.1-17 depending on network signal value.
5. Propagation conditions are set according to Annex B.0.
6. Ensure the UE is in State 3A-RF according to TS 36.508 [7] clause 5.2A.2. Message contents are defined in clause 6.6.3.3.4.3.

#### 6.6.3.3.4.2 Test procedure

1. SS sends uplink scheduling information for each UL HARQ process via PDCCH DCI format 0 for C\_RNTI to schedule the UL RMC according to Table 6.6.3.3.4.1-1 to 6.6.3.3.4.1-17. Since the UE has no payload and no loopback data to send the UE sends uplink MAC padding bits on the UL RMC.
2. Send continuously uplink power control "up" commands in the uplink scheduling information to the UE until the UE transmits at  $P_{UMAX}$  level.
3. Measure the mean power of the UE in the channel bandwidth of the radio access mode according to the test configuration, which shall meet the requirements described in Tables 6.2.4.5-1 to 6.2.4.5-25 as appropriate. The period of the measurement shall be at least one sub-frame (1ms).
4. Measure the power of the transmitted signal with a measurement filter of bandwidths according to Table 6.6.3.3.5.1-1 to 6.6.3.3.5.17-1 as appropriate. The centre frequency of the filter shall be stepped in contiguous steps according to the same table. For NS\_07 measurements made in a bandwidth of 6.25kHz, measurement parameter settings defined in table 6.6.3.3.4.2-1 shall be used. The measured power shall be verified for each step. The measurement period shall capture the active time slots.

Table 6.6.3.3.4.2-1: Measurement setup for NS\_07

	Option 1: Measurement with No RMS VBW available	Option2 Measurement with VBW Filtering on Power scale
VBW	>=62.5 kHz (10 times or more the RBW)	<=43Hz
RBW	<=6.25kHz	<=6.25kHz
Detector type	Averages signal envelope during each measurement point, such as "RMS detector"	Peak
Averaging mode (Trace averaging)	Power (RMS voltage)	Power (RMS voltage), as controlled by "Average Type"
Average Type (applies to detector)	Power (RMS voltage) (automatically occurs with "RMS detector")	Not applicable
Average Type (applies to VBW filter)	Not applicable	Power (RMS voltage)
Number of averages	30, to reduce variance as required, or use an even longer sweep time	1 or use an even narrower VBW filter, thus a longer sweep time
Sweep time	[Don't specify]	Sweep rate (span divided by sweep time) <= 0.8 * RBW*VBW

## 6.6.3.3.4.3 Message contents

## 6.6.3.3.4.3.1 Message contents (network signalled value "NS\_05")

Message contents are according to TS 36.508 [7] subclause 4.6, with the following exceptions:

1. Information element `additionalSpectrumEmission` is set to NS\_05. This can be set in the *SystemInformationBlockType2* as part of the cell broadcast message. This exception indicates that the UE shall meet the additional spurious emission requirement for a specific deployment scenario.

Table 6.6.3.3.4.3.1-1: *SystemInformationBlockType2*: Additional spurious emissions requirement

Derivation Path: TS 36.508 [7] clause 4.4.3.3, Table 4.4.3.3-1			
Information Element	Value/remark	Comment	Condition
<code>additionalSpectrumEmission</code>	5 (NS_05)		

## 6.6.3.3.4.3.2 Message contents (network signalled value "NS\_07")

Message contents are according to TS 36.508 [7] subclause 4.6, with the following exceptions:

1. Information element `additionalSpectrumEmission` is set to NS\_07. This can be set in the *SystemInformationBlockType2* as part of the cell broadcast message. This exception indicates that the UE shall meet the additional spurious emission requirement for a specific deployment scenario.

Table 6.6.3.3.4.3.2-1: *SystemInformationBlockType2*: Additional spurious emissions requirement

Derivation Path: TS 36.508 [7] clause 4.4.3.3, Table 4.4.3.3-1			
Information Element	Value/remark	Comment	Condition
<code>additionalSpectrumEmission</code>	7 (NS_07)		

## 6.6.3.3.4.3.3 Message contents (network signalled value "NS\_08")

Message contents are according to TS 36.508 [7] subclause 4.6, with the following exceptions:

1. Information element `additionalSpectrumEmission` is set to `NS_08`. This can be set in the *SystemInformationBlockType2* as part of the cell broadcast message. This exception indicates that the UE shall meet the additional spurious emission requirement for a specific deployment scenario.

**Table 6.6.3.3.4.3.3-1: SystemInformationBlockType2 :Additional spurious emissions requirement**

Derivation Path: TS 36.508 [7] clause 4.4.3.3, Table 4.4.3.3-1			
Information Element	Value/remark	Comment	Condition
<code>additionalSpectrumEmission</code>	8 (NS_08)		

#### 6.6.3.3.4.3.4 Message contents (network signalled value "NS\_09")

Message contents are according to TS 36.508 [7] subclause 4.6, with the following exceptions:

1. Information element `additionalSpectrumEmission` is set to `NS_09`. This can be set in the *SystemInformationBlockType2* as part of the cell broadcast message. This exception indicates that the UE shall meet the additional spurious emission requirement for a specific deployment scenario.

**Table 6.6.3.3.4.3.4-1: SystemInformationBlockType2 :Additional spurious emissions requirement**

Derivation Path: TS 36.508 [7] clause 4.4.3.3, Table 4.4.3.3-1			
Information Element	Value/remark	Comment	Condition
<code>additionalSpectrumEmission</code>	9 (NS_09)		

#### 6.6.3.3.4.3.5 Message contents exceptions (network signalled value "NS\_12")

1. Information element `additionalSpectrumEmission` is set to `NS_12`. This can be set in the *SystemInformationBlockType2* as part of the cell broadcast message. This exception indicates that the UE shall meet the additional spurious emission requirement for a specific deployment scenario.

**Table 6.6.3.3.4.3.5-1: SystemInformationBlockType2 :Additional spurious emissions test requirement for "NS\_12"**

Derivation Path: TS 36.508 [7] clause 4.4.3.3, Table 4.4.3.3-1			
Information Element	Value/remark	Comment	Condition
<code>additionalSpectrumEmission</code>	12 (NS_12)		

#### 6.6.3.3.4.3.6 Message contents exceptions (network signalled value "NS\_13")

1. Information element `additionalSpectrumEmission` is set to `NS_13`. This can be set in the *SystemInformationBlockType2* as part of the cell broadcast message. This exception indicates that the UE shall meet the additional spurious emission requirement for a specific deployment scenario.

**Table 6.6.3.3.4.3.6-1: SystemInformationBlockType2 :Additional spurious emissions test requirement for "NS\_13"**

Derivation Path: TS 36.508 [7] clause 4.4.3.3, Table 4.4.3.3-1			
Information Element	Value/remark	Comment	Condition
<code>additionalSpectrumEmission</code>	13 (NS_13)		

#### 6.6.3.3.4.3.7 Message contents exceptions (network signalled value "NS\_14")

1. Information element `additionalSpectrumEmission` is set to `NS_14`. This can be set in the *SystemInformationBlockType2* as part of the cell broadcast message. This exception indicates that the UE shall meet the additional spurious emission requirement for a specific deployment scenario.

**Table 6.6.3.3.4.3.7-1: SystemInformationBlockType2 :Additional spurious emissions test requirement for "NS\_14"**

Derivation Path: TS 36.508 [7] clause 4.4.3.3, Table 4.4.3.3-1			
Information Element	Value/remark	Comment	Condition
additionalSpectrumEmission	14 (NS_14)		

## 6.6.3.3.4.3.8 Message contents exceptions (network signalled value "NS\_15")

- Information element additionalSpectrumEmission is set to NS\_15. This can be set in the *SystemInformationblockType2* as part of the cell broadcast message. This exception indicates that the UE shall meet the additional spurious emission requirement for a specific deployment scenario.

**Table 6.6.3.3.4.3.8-1: SystemInformationBlockType2 :Additional spurious emissions test requirement for "NS\_15"**

Derivation Path: TS 36.508 [7] clause 4.4.3.3, Table 4.4.3.3-1			
Information Element	Value/remark	Comment	Condition
additionalSpectrumEmission	15 (NS_15)		

## 6.6.3.3.4.3.9 Message contents exceptions (network signalled value "NS\_16")

- Information element additionalSpectrumEmission is set to NS\_16. This can be set in the *SystemInformationblockType2* as part of the cell broadcast message. This exception indicates that the UE shall meet the additional spurious emission requirement for a specific deployment scenario.

**Table 6.6.3.3.4.3.9-1: SystemInformationBlockType2 :Additional spurious emissions test requirement for "NS\_16"**

Derivation Path: TS 36.508 [7] clause 4.4.3.3, Table 4.4.3.3-1			
Information Element	Value/remark	Comment	Condition
additionalSpectrumEmission	16 (NS_16)		

## 6.6.3.3.4.3.10 Message contents exceptions (network signalled value "NS\_17")

- Information element additionalSpectrumEmission is set to NS\_17. This can be set in the *SystemInformationblockType2* as part of the cell broadcast message. This exception indicates that the UE shall meet the additional spurious emission requirement for a specific deployment scenario.

**Table 6.6.3.3.4.3.10-1: SystemInformationBlockType2 :Additional spurious emissions test requirement for "NS\_17"**

Derivation Path: TS 36.508 [7] clause 4.4.3.3, Table 4.4.3.3-1			
Information Element	Value/remark	Comment	Condition
additionalSpectrumEmission	17 (NS_17)		

## 6.6.3.3.4.3.11 Message contents exceptions (network signalled value "NS\_18")

- Information element additionalSpectrumEmission is set to NS\_18. This can be set in the *SystemInformationblockType2* as part of the cell broadcast message. This exception indicates that the UE shall meet the additional spurious emission requirement for a specific deployment scenario.

**Table 6.6.3.3.4.3.11-1: SystemInformationBlockType2 :Additional spurious emissions test requirement for "NS\_18"**

Derivation Path: TS 36.508 [7] clause 4.4.3.3, Table 4.4.3.3-1			
Information Element	Value/remark	Comment	Condition
additionalSpectrumEmission	18 (NS_18)		

## 6.6.3.3.4.3.12 Message contents exceptions (network signalled value "NS\_19")

1. Information element `additionalSpectrumEmission` is set to NS\_19. This can be set in the *SystemInformationBlockType2* as part of the cell broadcast message. This exception indicates that the UE shall meet the additional spurious emission requirement for a specific deployment scenario.

**Table 6.6.3.3.4.3.12-1: SystemInformationBlockType2 :Additional spurious emissions test requirement for "NS\_19"**

Derivation Path: TS 36.508 [7] clause 4.4.3.3, Table 4.4.3.3-1			
Information Element	Value/remark	Comment	Condition
<code>additionalSpectrumEmission</code>	19 (NS_19)		

## 6.6.3.3.4.3.13 Message contents exceptions (network signalled value "NS\_11")

1. Information element `additionalSpectrumEmission` is set to NS\_11. This can be set in the *SystemInformationBlockType2* as part of the cell broadcast message. This exception indicates that the UE shall meet the additional spurious emission requirement for a specific deployment scenario.

**Table 6.6.3.3.4.3.13-1: SystemInformationBlockType2 :Additional spurious emissions test requirement for "NS\_11"**

Derivation Path: TS 36.508 [7] clause 4.4.3.3, Table 4.4.3.3-1			
Information Element	Value/remark	Comment	Condition
<code>additionalSpectrumEmission</code>	11 (NS_11)		

## 6.6.3.3.4.3.14 Message contents exceptions (network signalled value "NS\_20")

1. Information element `additionalSpectrumEmission` is set to NS\_20. This can be set in the *SystemInformationBlockType2* as part of the cell broadcast message. This exception indicates that the UE shall meet the additional spurious emission requirement for a specific deployment scenario.

**Table 6.6.3.3.4.3.14-1: SystemInformationBlockType2 :Additional spurious emissions test requirement for "NS\_20"**

Derivation Path: TS 36.508 [7] clause 4.4.3.3, Table 4.4.3.3-1			
Information Element	Value/remark	Comment	Condition
<code>additionalSpectrumEmission</code>	20 (NS_20)		

## 6.6.3.3.4.3.15 Message contents exceptions (network signalled value "NS\_21")

1. Information element `additionalSpectrumEmission` is set to NS\_21. This can be set in the *SystemInformationBlockType2* as part of the cell broadcast message. This exception indicates that the UE shall meet the additional spurious emission requirement for a specific deployment scenario.

**Table 6.6.3.3.4.3.15-1: SystemInformationBlockType2 :Additional spurious emissions test requirement for "NS\_21"**

Derivation Path: TS 36.508 [7] clause 4.4.3.3, Table 4.4.3.3-1			
Information Element	Value/remark	Comment	Condition
<code>additionalSpectrumEmission</code>	21 (NS_21)		

## 6.6.3.3.4.3.16 Message contents exceptions (network signalled value "NS\_24")

1. Information element `additionalSpectrumEmission` is set to NS\_24. This can be set in the *SystemInformationBlockType2* as part of the cell broadcast message. This exception indicates that the UE shall meet the additional spurious emission requirement for a specific deployment scenario.

**Table 6.6.3.3.4.3.16-1: SystemInformationBlockType2 :Additional spurious emissions test requirement for "NS\_24"**

Derivation Path: TS 36.508 [7] clause 4.4.3.3, Table 4.4.3.3-1			
Information Element	Value/remark	Comment	Condition
additionalSpectrumEmission	24 (NS_24)		

#### 6.6.3.3.4.3.17 Message contents exceptions (network signalled value "NS\_25")

- Information element additionalSpectrumEmission is set to NS\_25. This can be set in the *SystemInformationblockType2* as part of the cell broadcast message. This exception indicates that the UE shall meet the additional spurious emission requirement for a specific deployment scenario.

**Table 6.6.3.3.4.3.17-1: SystemInformationBlockType2 :Additional spurious emissions test requirement for "NS\_25"**

Derivation Path: TS 36.508 [7] clause 4.4.3.3, Table 4.4.3.3-1			
Information Element	Value/remark	Comment	Condition
additionalSpectrumEmission	25 (NS_25)		

#### 6.6.3.3.5 Test requirement

This clause specifies the requirements for the specified E-UTRA band for an additional spectrum emission requirement with protected bands as indicated from table 6.6.3.3.5.1-1 to table 6.6.3.3.5.17-1.

NOTE: For measurement conditions at the edge of each frequency range, the lowest frequency of the measurement position in each frequency range should be set at the lowest boundary of the frequency range plus MBW/2. The highest frequency of the measurement position in each frequency range should be set at the highest boundary of the frequency range minus MBW/2. MBW denotes the measurement bandwidth defined for the protected band.

#### 6.6.3.3.5.1 Test requirement (network signalled value "NS\_05")

When "NS\_05" is indicated in the cell:

- the measured UE mean power in the channel bandwidth, derived in step 3, shall fulfil requirements in Table 6.2.4.5-4 as appropriate,

and

the measured average power of spurious emission, derived in step 2, shall not exceed the described value in Table 6.6.3.3.5.1-1. This requirement also applies for the frequency ranges that are less than  $\Delta f_{\text{OoB}}$  (MHz) in Table 6.6.3.1.3-1 from the edge of the channel bandwidth.

**Table 6.6.3.3.5.1-1: Additional requirements (PHS) test requirements**

Frequency band (MHz)	Channel bandwidth / Spectrum emission limit (dBm)				Measurement bandwidth
	5 MHz	10 MHz	15 MHz	20 MHz	
$1884.5 \leq f \leq 1915.7^{*1}$	-41	-41	-41	-41	300 KHz
Note 1: Applicable when the lower edge of the assigned E-UTRA UL channel bandwidth frequency is larger than or equal to the upper edge of PHS band (1915.7 MHz) + 4 MHz + the Channel BW assigned, where Channel BW is as defined in sub-clause 5.4.2. Additional restrictions apply for operations below this point.					

The requirements in Table 6.6.3.3.5.1-1 apply with the additional restrictions specified in Table 6.6.3.3.5.1-2 when the lower edge of the assigned E-UTRA UL channel bandwidth frequency is less than the upper edge of PHS band (1915.7 MHz) + 4 MHz + the channel BW assigned.

**Table 6.6.3.3.5.1-2: RB restrictions for additional requirement (PHS) (Rel-11 and earlier and bit number 1 in modifiedMPRbehavior = 0)**

15 MHz channel bandwidth with $f_c = 1932.5$ MHz			
RB <sub>start</sub>	0-7	8-66	67-74
LCRB	N/A	$\leq \text{MIN}(30, 67 - \text{RB}_{\text{start}})$	N/A
20 MHz channel bandwidth with $f_c = 1930$ MHz			
RB <sub>start</sub>	0-23	24-75	76-99
LCRB	N/A	$\leq \text{MIN}(24, 76 - \text{RB}_{\text{start}})$	N/A

**6.6.3.3.5.2 Test requirement (network signalled value "NS\_07")**

When "NS\_07" is indicated in the cell:

- the measured UE mean power in the channel bandwidth, derived in step 3, shall fulfil requirements in Table 6.2.4.5-7 as appropriate,

and

- the measured average power of spurious emission, derived in step 4, shall not exceed the described value in Table 6.6.3.3.5.2-1. These requirements also apply for the frequency ranges that are less than  $\Delta f_{\text{OOB}}$  (MHz) in Table 6.6.3.1.3-1 from the edge of the channel bandwidth.

**Table 6.6.3.3.5.2-1: Additional requirements (network signalled value "NS\_07")**

Frequency band (MHz)	Channel bandwidth / Spectrum emission limit (dBm)		Measurement bandwidth
	10 MHz		
$769 \leq f \leq 775$	-55.5		6.25 kHz
Note: The emissions measurement shall be sufficiently power averaged to ensure a standard deviation < 0.5 dB			

**6.6.3.3.5.3 Test requirement (network signalled value "NS\_08")**

When "NS\_08" is indicated in the cell:

- the measured UE mean power in the channel bandwidth, derived in step 3, shall fulfil requirements in Table 6.2.4.5-8 as appropriate,

and

the measured average power of spurious emission, derived in step 4, shall not exceed the described value in Table 6.6.3.3.5.3-1. This requirement also applies for the frequency ranges that are less than  $\Delta f_{\text{OOB}}$  (MHz) in Table 6.6.3.1.3-1 from the edge of the channel bandwidth.

**Table 6.6.3.3.5.3-1: Additional requirements (network signalled value "NS\_08")**

Frequency band (MHz)	Channel bandwidth / Spectrum emission limit (dBm)			Measurement bandwidth
	5MHz	10MHz	15MHz	
$860 \leq f \leq 895$	-40	-40	-40	1 MHz

**6.6.3.3.5.4 Test requirement (network signalled value "NS\_09")**

When "NS\_09" is indicated in the cell:

- the measured UE mean power in the channel bandwidth, derived in step 3, shall fulfil requirements in Table 6.2.4.5-9 as appropriate,

and

- the measured average power of spurious emission, derived in step 4, shall not exceed the described value in table 6.6.3.3.5.4-1. This requirement also applies for the frequency ranges that are less than  $\Delta f_{\text{OoB}}$  (MHz) in Table 6.6.3.1.3-1 from the edge of the channel bandwidth.

**Table 6.6.3.3.5.4-1: Additional requirements (network signalled value "NS\_09")**

Frequency band (MHz)	Channel bandwidth / Spectrum emission limit (dBm)			Measurement bandwidth
	5MHz	10MHz	15MHz	
$1475.9 \leq f \leq 1510.9$	-35	-35	-35	1 MHz

NOTE 1: To improve measurement accuracy, A-MPR values for NS\_09 specified in Table 6.2.4.3-1 in sub-clause 6.2.4 are derived based on 100 kHz RBW.

#### 6.6.3.3.5.5 Test requirement (network signalled value "NS\_12")

When "NS 12" is indicated in the cell:

- the measured UE mean power in the channel bandwidth, derived in step 3, shall fulfil requirements in Table 6.2.4.5-12 as appropriate,

and

- the power of any UE emission shall not exceed the levels specified in Table 6.6.3.3.5-1. This requirement also applies for the frequency ranges that are less than  $\Delta f_{\text{OoB}}$  (MHz) in Table 6.6.3.1.3-1 from the edge of the channel bandwidth.

**Table 6.6.3.3.5.5-1: Additional requirements**

Frequency band (MHz)	Channel bandwidth/ Spectrum emission limit (dBm)	Measurement bandwidth
	1.4 MHz, 3 MHz, 5 MHz, 10 MHz, 15 MHz	
$806 \leq f \leq 813.5$	-42	6.25 kHz
NOTE 1: The requirement applies for E-UTRA carriers with lower channel edge at or above 814.2 MHz.		
NOTE 2: The emissions measurement shall be sufficiently power averaged to ensure a standard deviation < 0.5 dB.		

#### 6.6.3.3.5.6 Test requirement (network signalled value "NS\_13")

When "NS 13" is indicated in the cell:

- the measured UE mean power in the channel bandwidth, derived in step 3, shall fulfil requirements in Table 6.2.4.5-13 as appropriate,

and

- the power of any UE emission shall not exceed the levels specified in Table 6.6.3.3.5.6-1. This requirement also applies for the frequency ranges that are less than  $\Delta f_{\text{OoB}}$  (MHz) in Table 6.6.3.1.3-1 from the edge of the channel bandwidth.

**Table 6.6.3.3.5.6-1: Additional requirements**

Frequency band (MHz)	Channel bandwidth/ Spectrum emission limit (dBm)	Measurement bandwidth
	1.4, 3, 5 MHz	
$806 \leq f \leq 816$	-42	6.25 kHz
NOTE 1: The requirement applies for E-UTRA carriers with lower channel edge at or above 819 MHz.		
NOTE 2: The emissions measurement shall be sufficiently power averaged to ensure a standard deviation < 0.5 dB.		

**6.6.3.3.5.7 Test requirement (network signalled value "NS\_14")**

When "NS 14" is indicated in the cell:

- the measured UE mean power in the channel bandwidth, derived in step 3, shall fulfil requirements in Table 6.2.4.5-14 as appropriate,

and

- the power of any UE emission shall not exceed the levels specified in Table 6.6.3.3.5.7-1. This requirement also applies for the frequency ranges that are less than  $\Delta f_{\text{OoB}}$  (MHz) in Table 6.6.3.1.3-1 from the edge of the channel bandwidth.

**Table 6.6.3.3.5.7-1: Additional requirements**

Frequency band (MHz)	Channel bandwidth/ Spectrum emission limit (dBm)	Measurement bandwidth
	10 MHz, 15 MHz	
$806 \leq f \leq 816$	-42	6.25 kHz
NOTE 1: The requirement applies for E-UTRA carriers with lower channel edge at or above 824 MHz.		
NOTE 2: The emissions measurement shall be sufficiently power averaged to ensure a standard deviation < 0.5 dB.		

**6.6.3.3.5.8 Test requirement (network signalled value "NS\_15")**

When "NS 15" is indicated in the cell:

- the measured UE mean power in the channel bandwidth, derived in step 3, shall fulfil requirements in Table 6.2.4.5-15 as appropriate,

and

- the power of any UE emission shall not exceed the levels specified in Table 6.6.3.3.5.8-1. This requirement also applies for the frequency ranges that are less than  $\Delta f_{\text{OoB}}$  (MHz) in Table 6.6.3.1.3-1 from the edge of the channel bandwidth.

**Table 6.6.3.3.5.8-1: Additional requirements**

Frequency band (MHz)	Channel bandwidth / Spectrum emission limit (dBm)	Measurement bandwidth	Note
	1.4, 3, 5, 10, 15 MHz		
$851 \leq f \leq 859$	-53	6.25 kHz	

**6.6.3.3.5.9 Test requirement (network signalled value "NS\_16")**

When "NS 16" is indicated in the cell:

the measured UE mean power in the channel bandwidth, derived in step 3, shall fulfil requirements in Table 6.2.4.5-16 as appropriate,

and

- the power of any UE emission shall not exceed the levels specified in Table 6.6.3.3.5.9-1. This requirement also applies for the frequency ranges that are less than  $\Delta f_{\text{OOB}}$  (MHz) in Table 6.6.3.1.3-1 from the edge of the channel bandwidth.

**Table 6.6.3.3.5.9-1: Additional requirements**

Frequency band (MHz)	Channel bandwidth / Spectrum emission limit (dBm)	Measurement bandwidth	Note
	1.4, 3, 5, 10 MHz		
$790 \leq f \leq 803$	-32	1 MHz	

#### 6.6.3.3.5.10 Test requirement (network signalled value "NS\_17")

When "NS 17" is indicated in the cell:

the measured UE mean power in the channel bandwidth, derived in step 3, shall fulfil requirements in Table 6.2.4.5-17 as appropriate,

and

- the power of any UE emission shall not exceed the levels specified in Table 6.6.3.3.5.10-1. This requirement also applies for the frequency ranges that are less than  $\Delta f_{\text{OOB}}$  (MHz) in Table 6.6.3.1.3-1 from the edge of the channel bandwidth.

**Table 6.6.3.3.5.10-1: Additional requirements**

Frequency band (MHz)	Channel bandwidth / Spectrum emission limit (dBm)	Measurement bandwidth	Note
	5, 10 MHz		
$470 \leq f \leq 710$	-26.2	6 MHz	1
Note 1: Applicable when the assigned E-UTRA carrier is confined within 718 MHz and 748 MHz and when the channel bandwidth used is 5 or 10 MHz.			

#### 6.6.3.3.5.11 Test requirement (network signalled value "NS\_18")

When "NS 18" is indicated in the cell:

the measured UE mean power in the channel bandwidth, derived in step 3, shall fulfil requirements in Table 6.2.4.5-18 as appropriate,

and

- the power of any UE emission shall not exceed the levels specified in Table 6.6.3.3.5.11-1. This requirement also applies for the frequency ranges that are less than  $\Delta f_{\text{OOB}}$  (MHz) in Table 6.6.3.1.3-1 from the edge of the channel bandwidth.

**Table 6.6.3.3.5.11-1: Additional requirements**

Frequency band (MHz)	Channel bandwidth / Spectrum emission limit (dBm)	Measurement bandwidth	Note
	5, 10, 15, 20 MHz		
$692 \leq f \leq 698$	-26.2	6 MHz	

## 6.6.3.3.5.12 Test requirement (network signalled value "NS\_19")

When "NS 19" is indicated in the cell:

the measured UE mean power in the channel bandwidth, derived in step 3, shall fulfil requirements in Table 6.2.4.5-19 as appropriate,

and

- the power of any UE emission shall not exceed the levels specified in Table 6.6.3.3.5.12-1. This requirement also applies for the frequency ranges that are less than  $\Delta f_{\text{OOB}}$  (MHz) in Table 6.6.3.1.3-1 from the edge of the channel bandwidth.

**Table 6.6.3.3.5.12-1: Additional requirements**

Frequency band (MHz)	Channel bandwidth / Spectrum emission limit (dBm)	Measurement bandwidth	Note
	3, 5, 10, 15, 20 MHz		
$662 \leq f \leq 694$	-25	8 MHz	

## 6.6.3.3.5.13 Test requirement (network signalled value "NS\_11")

When "NS 11" is indicated in the cell:

the measured UE mean power in the channel bandwidth, derived in step 3, shall fulfil requirements in Table 6.2.4.5-11 as appropriate,

and

- the power of any UE emission shall not exceed the levels specified in Table 6.6.3.3.5.13-1. This requirement also applies for the frequency ranges that are less than  $\Delta f_{\text{OOB}}$  (MHz) in Table 6.6.3.1.3-1 from the edge of the channel bandwidth.

**Table 6.6.3.3.5.13-1: Additional requirements**

Frequency band (MHz)	Channel bandwidth / Spectrum emission limit (dBm)	Measurement bandwidth	Note
	1.4, 3, 5, 10, 15, 20 MHz		
E-UTRA Band 2	-50	1 MHz	
$1998 \leq f \leq 1999$	-21	1 MHz	
$1997 \leq f < 1998$	-27	1 MHz	
$1996 \leq f < 1997$	-32	1 MHz	
$1995 \leq f < 1996$	-37	1 MHz	
$1990 \leq f < 1995$	-40	1 MHz	

## 6.6.3.3.5.14 Test requirement (network signalled value "NS\_20")

When "NS 20" is indicated in the cell:

the measured UE mean power in the channel bandwidth, derived in step 3, shall fulfil requirements in Table 6.2.4.5-20 as appropriate,

and

- the power of any UE emission shall not exceed the levels specified in Table 6.6.3.3.5.14-1. This requirement also applies for the frequency ranges that are less than  $\Delta f_{\text{OOB}}$  (MHz) in Table 6.6.3.1.3-1 from the edge of the channel bandwidth.

**Table 6.6.3.3.5.14-1: Additional requirements**

Frequency band (MHz)	Channel bandwidth / Spectrum emission limit (dBm)	Measurement bandwidth	Note
	5, 10, 15, 20 MHz		
$1990 \leq f < 1999$	-40	1 MHz	
$1999 \leq f \leq 2000$	-40	Note 1	
Note 1: The measurement bandwidth is 1% of the applicable E-UTRA channel bandwidth (5.4.2.1-1).			

#### 6.6.3.3.5.15 Test requirement (network signalled value "NS\_21")

When "NS\_21" is indicated in the cell, the power of any UE emission shall not exceed the levels specified in Table 6.6.3.3.5.15-1. These requirements also apply for the frequency ranges that are less than  $F_{\text{OOB}}$  (MHz) in Table 6.6.3.1.3-1 and Table 6.6.3.1A-1 from the edge of the channel bandwidth.

**Table 6.6.3.3.5.15-1: Additional requirements**

Frequency band (MHz)	Channel bandwidth / Spectrum emission limit (dBm)	Measurement bandwidth
	5, 10 MHz	
$2200 \leq f < 2288$	-40	1 MHz
$2288 \leq f < 2292$	-37	1 MHz
$2292 \leq f < 2296$	-31	1 MHz
$2296 \leq f < 2300$	-25	1 MHz
$2320 \leq f < 2324$	-25	1 MHz
$2324 \leq f < 2328$	-31	1 MHz
$2328 \leq f < 2332$	-37	1 MHz
$2332 \leq f \leq 2395$	-40	1 MHz

#### 6.6.3.3.5.16 Test requirement (network signalled value "NS\_24")

When "NS\_24" is indicated in the cell, the power of any UE emission shall not exceed the levels specified in Table 6.6.3.3.5.16-1. This requirement also applies for the frequency ranges that are less than  $F_{\text{OOB}}$  (MHz) in Table 6.6.3.1.3-1 from the edge of the channel bandwidth.

**Table 6.6.3.3.5.16-1: Additional requirements**

Frequency band (MHz)	Channel bandwidth / Spectrum emission limit (dBm)	Measurement bandwidth
	5 MHz, 10 MHz, 15 MHz, 20 MHz	
Band 34	-50	MHz
Note 1: This requirement applies at a frequency offset equal or larger than 5 MHz from the upper edge of the channel bandwidth, whenever these frequencies overlap with the specified frequency band.		

#### 6.6.3.3.5.17 Test requirement (network signalled value "NS\_25")

When "NS\_25" is indicated in the cell, the power of any UE emission shall not exceed the levels specified in Table 6.6.3.3.17-1. This requirement also applies for the frequency ranges that are less than  $F_{\text{OOB}}$  (MHz) in Table 6.6.3.1.3-1 from the edge of the channel bandwidth.

**Table 6.6.3.3.5.17-1: Additional requirements**

Frequency band (MHz)	Channel bandwidth / Spectrum emission limit (dBm)	Measurement bandwidth
	5 MHz, 10 MHz, 15 MHz, 20 MHz	
Band 34	-40	MHz
Note 1: This requirement applies at a frequency offset equal or larger than 5 MHz from the upper edge of the channel bandwidth, whenever these frequencies overlap with the specified frequency band.		

### 6.6.3.3\_1 Additional spurious emissions for UL 64QAM

#### 6.6.3.3\_1.1 Test purpose

Same test purpose as in clause 6.6.3.3.1.

#### 6.6.3.3\_1.2 Test applicability

This test case applies to all types of E-UTRA UE from release 13 and forward that support UL 64QAM.

#### 6.6.3.3\_1.3 Minimum conformance requirements

Same minimum conformance requirements as in clause 6.6.3.3.3.

#### 6.6.3.3\_1.4 Test description

##### 6.6.3.3\_1.4.1 Initial conditions

Initial conditions are a set of test configurations the UE needs to be tested in and the steps for the SS to take with the UE to reach the correct measurement state.

The initial test configurations consist of environmental conditions, test frequencies, and channel bandwidths based on E-UTRA operating bands specified in table 5.4.2.1-1. All of these configurations shall be tested with applicable test parameters for each channel bandwidth, and are shown in Table 6.6.3.3\_1.4.1-1 through Table 6.6.3.3\_1.4.1-17. The details of the uplink reference measurement channels (RMCs) are specified in Annexes A.2. Configurations of PDSCH and PDCCH before measurement are specified in Annex C.2.

**Table 6.6.3.3\_1.4.1-1: Test Configuration Table (network signalled value "NS\_05")**

Initial Conditions						
Test Environment as specified in TS 36.508[7] subclause 4.1			Normal			
Test Frequencies as specified in TS36.508 [7] subclause 4.3.1			Low range, Mid range  In case of Low range: - For 5MHz Channel Bandwidth: 1927.2MHz ( $N_{UL} = 18072$ ) - For 10MHz Channel Bandwidth: 1934.7MHz ( $N_{UL} = 18147$ ) - For 15MHz Channel Bandwidth: 1932.5MHz ( $N_{UL} = 18125$ ) - For 20MHz Channel Bandwidth: 1930MHz ( $N_{UL} = 18100$ )			
Test Channel Bandwidths as specified in TS 36.508 [7] subclause 4.3.1			5MHz, 10MHz, 15MHz, 20MHz			
Test Parameters for Channel Bandwidths						
Downlink Configuration			Uplink Configuration			
Ch BW	Mod'n	RB allocation		Mod'n	RB allocation	
		FDD	TDD		FDD	TDD
5MHz	N/A for Additional Spurious Emissions testing			64QAM	25	NA
10MHz				64QAM	50 (Note 1)	
15MHz				64QAM	75 (Note 1)	
20MHz				64QAM	100 (Note 1)	
10MHz				64QAM	50 (Note 2)	
15MHz				64QAM	75 (Note 2)	
20MHz				64QAM	100 (Note 2)	
Note 1: Applies only for Low Range. Note 2: Applies only for Mid Range.						

**Table 6.6.3.3\_1.4.1-2: Test Configuration Table (network signalled value "NS\_07")**

Initial Conditions						
Test Environment as specified in TS 36.508 [7] subclause 4.1				NC		
Test Frequencies as specified in TS36.508 [7] subclause 4.3.1				Mid range

**Editor's note:** The following lines belong at the end of section 6.6.3.3\_1.4.1. As new tables are added to this section, these lines should always follow the tables.

1. Connect the SS to the UE to the UE antenna connectors as shown in Figure TS 36.508 [7] Annex A, Figure A.7.
2. The parameter settings for the cell are set up according to TS 36.508 [7] subclause 4.4.3.
3. Downlink signals are initially set up according to Annex C0, C.1 and C.3.0, and uplink signals according to Annex H.1 and H.3.0.
4. The UL Reference Measurement channels are set according to Table 6.6.3.3\_1.4.1-1 to Table 6.6.3.3\_1.4.1-17 depending on network signal value.
5. Propagation conditions are set according to Annex B.0.
6. Ensure the UE is in State 3A-RF according to TS 36.508 [7] clause 5.2A.2. Message contents are defined in clause 6.6.3.3\_1.4.3.

#### 6.6.3.3\_1.4.2 Test procedure

Same test procedure as in clause 6.6.3.3.4.2.

#### 6.6.3.3\_1.4.3 Message contents

Same message contents as in clause 6.6.3.3.4.3.

#### 6.6.3.3\_1.5 Test requirement

Same test requirement as in clause 6.6.3.3.5.

### 6.6.3.3A Additional spurious emissions for CA

#### 6.6.3.3A.1 Additional spurious emissions for CA (intra-band contiguous DL CA and UL CA)

**Editor's note:** This clause is incomplete. The following aspects are either missing or not yet determined:

- For a transition period until RAN5#72, this test case in version 13.0.1 of 36.521-1 shall be used. This is to ensure no test coverage is lost before the UL 64QAM test case becomes available.

### 6.6.3.3A.1.1 Test purpose

To verify that UE transmitter does not cause unacceptable interference to other channels or other systems in terms of transmitter spurious emissions in intra-band contiguous carrier aggregation under the deployment scenarios where additional requirements are specified.

### 6.6.3.3A.1.2 Test applicability

This test case applies to all types of E-UTRA UE release 10 and forward that support intra-band contiguous DL CA and UL CA but do not support UL 64QAM.

### 6.6.3.3A.1.3 Minimum conformance requirements

This clause specifies the requirements for the specified E-UTRA band for an additional spectrum emission for CA requirement with protected bands as indicated from Table 6.6.3.3A.1.3.1-1 to Table 6.6.3.3A.1.3.6-1.

NOTE: For measurement conditions at the edge of each frequency range, the lowest frequency of the measurement position in each frequency range should be set at the lowest boundary of the frequency range plus MBW/2. The highest frequency of the measurement position in each frequency range should be set at the highest boundary of the frequency range minus MBW/2. MBW denotes the measurement bandwidth defined for the protected band.

#### 6.6.3.3A.1.3.1 Minimum conformance requirements for CA\_1C (network signalled value "CA\_NS\_01")

When "CA\_NS\_01" is indicated in the cell, the power of any UE emission shall not exceed the levels specified in Table 6.6.3.3A.1.3.1-1. This requirement also applies for the frequency ranges that are less than  $\Delta f_{\text{OOB}}$  (MHz) in Table 6.6.3.1A.3-1 from the edge of the channel bandwidth.

**Table 6.6.3.3A.1.3.1-1: Additional requirements (PHS) for CA**

Protected band	Frequency range (MHz)			Maximum Level (dBm)	MBW (MHz)	Note
E-UTRA band 34	$F_{\text{DL\_low}}$	-	$F_{\text{DL\_high}}$	-50	1	
Frequency range	1884.5	-	1915.7	-41	0.3	1
Note 1: Applicable when the aggregated channel bandwidth is confined within frequency range 1940 – 1980 MHz						

The normative reference for this requirement is TS 36.101[2] subclause 6.6.3.3A.1.

#### 6.6.3.3A.1.3.2 Minimum conformance requirements for CA\_1C (network signalled value "CA\_NS\_02")

When "CA\_NS\_02" is indicated in the cell, the power of any UE emission shall not exceed the levels specified in Table 6.6.3.3A.1.3.2-1. These requirements also apply for the frequency ranges that are less than  $\Delta f_{\text{OOB}}$  (MHz) in Table 6.6.3.1A.3-1 from the edge of the channel bandwidth.

**Table 6.6.3.3A.1.3.2-1: Additional requirements for CA**

Protected band	Frequency range (MHz)			Maximum Level (dBm)	MBW (MHz)
E-UTRA band 34	$F_{\text{DL\_low}}$	-	$F_{\text{DL\_high}}$	-50	1
Frequency range	1900	-	1915	-15.5	5
Frequency range	1915	-	1920	+1.6	5

The normative reference for this requirement is TS 36.101[2] subclause 6.6.3.3A.2.

### 6.6.3.3A.1.3.3 Minimum requirement for CA\_1C (network signalled value "CA\_NS\_03")

When "CA\_NS\_03" is indicated in the cell, the power of any UE emission shall not exceed the levels specified in Table 6.6.3.3A.1.3.3-1. This requirement also applies for the frequency ranges that are less than  $\Delta f_{\text{OOB}}$  (MHz) in Table 6.6.3.1A.3-1 from the edge of the channel bandwidth.

**Table 6.6.3.3A.1.3.3-1: Additional requirement for CA**

Protected band	Frequency range (MHz)			Maximum Level (dBm)	MBW (MHz)
E-UTRA band 34	$F_{\text{DL\_low}}$	-	$F_{\text{DL\_high}}$	-50	1
Frequency range	1880	-	1895	-40	1
Frequency range	1895	-	1915	-15.5	5
Frequency range	1915	-	1920	+1.6	5

### 6.6.3.3A.1.3.4 Minimum requirement for CA\_38C (network signalled value "CA\_NS\_05")

When "CA\_NS\_05" is indicated in the cell, the power of any UE emission shall not exceed the levels specified in Table 6.6.3.3A.1.3.4-1. This requirement also applies for the frequency ranges that are less than  $F_{\text{OOB}}$  (MHz) in Table 6.6.3.1A.3-1 from the edge of the aggregated channel bandwidth.

**Table 6.6.3.3A.1.3.4-1: Additional requirements**

Protected band	Frequency range (MHz)			Maximum Level (dBm)	MBW (MHz)
Frequency range	2620	-	2645	-15.5	5
Frequency range	2645	-	2690	-40	1

### 6.6.3.3A.1.3.5 Minimum requirement for CA\_7C (network signalled value "CA\_NS\_06")

When "CA\_NS\_06" is indicated in the cell, the power of any UE emission shall not exceed the levels specified in Table 6.6.3.3A.1.3.5-1. This requirement also applies for the frequency ranges that are less than  $F_{\text{OOB}}$  (MHz) in Table 6.6.3.1A.3-1 from the edge of the aggregated channel bandwidth.

**Table 6.6.3.3A.1.3.5-1: Additional requirements**

Protected band	Frequency range (MHz)			Maximum Level (dBm)	MBW (MHz)
Frequency range	2570	-	2575	+1.6	5
Frequency range	2575	-	2595	-15.5	5
Frequency range	2595	-	2620	-40	1

### 6.6.3.3A.1.3.6 Minimum requirement for CA\_39C (network signalled value "CA\_NS\_07")

When "CA\_NS\_07" is indicated in the cell, the power of any UE emission shall not exceed the levels specified in Table 6.6.3.3A.1.3.6-1. This requirement also applies for the frequency ranges that are less than  $F_{\text{OOB}}$  (MHz) in Table 6.6.3.1A.3-1 from the edge of the aggregated channel bandwidth.

**Table 6.6.3.3A.1.3.6-1: Additional requirements**

Protected band	Frequency range (MHz)			Maximum Level (dBm)	MBW (MHz)
Frequency range	1805	-	1855	[-40]	1
Frequency range	1855	-	1875	[-15.5]	5
Frequency range	1875	-	1880	[-15.5] <sup>1</sup>	5
NOTE 1: This requirement is applicable for carriers with aggregated channel bandwidths confined in 1885-1920 MHz.					

The normative reference for this requirement is TS 36.101[2] subclause 6.6.3.3A.3.

## 6.6.3.3A.1.4 Test description

## 6.6.3.3A.1.4.1 Initial conditions

Initial conditions are a set of test configurations the UE needs to be tested in and the steps for the SS to take with the UE to reach the correct measurement state.

The initial test configurations consist of environmental conditions, test frequencies, and CC combinations based on E-UTRA CA configurations specified in table 5.4.2A.1-1. All of these configurations shall be tested with applicable test parameters for each CA Configuration, and are shown in tables' 6.6.3.3A.1.4.1-1 to 6.6.3.3A.1.4.1-3. The details of the uplink reference measurement channels (RMCs) are specified in Annexes A.2. Configurations of PDSCH and PDCCH before measurement are specified in Annex C.2.

**Table 6.6.3.3A.1.4.1-1: Test Configuration Table for CA (network signalled value "CA\_NS\_01")**

Initial Conditions								
Test Environment as specified in TS 36.508[7] subclause 4.1					NC			
Test Frequencies as specified in TS36.508 [7] subclause 4.3.1 for different CA bandwidth classes, and PCC and SCCs are mapped onto physical frequencies according to Table 6.1-2.					C: Low and High range			
Test CC Combination setting ( $N_{RB\_agg}$ ) as specified in subclause 5.4.2A.1 for the CA Configuration					Lowest $N_{RB\_agg}$ Highest $N_{RB\_agg}$			
Test Parameters for CA Configurations								
ID	CA Configuration / $N_{RB\_agg}$		DL Allocation (PDCCH on PCC)	CC MOD	UL Allocation			
	PCC $N_{RB}$	SCCs $N_{RB}$			PCC & SCC RB allocation	$N_{RB\_alloc}$	PCC & SCC RB allocations ( $L_{CRB}$ @ $RB_{start}$ )	
1	75	75	N/A	QPSK			1	P_1@0
2	75	75		QPSK	150	P_75@0	S_75@0	
3	75	75		QPSK	45	P_45@7	S_0@0	
4	75	75		QPSK	8	P_0@0	S_8@67	
5	75	75		QPSK	129	P_75@0	S_54@0	
6	75	75		QPSK	2	P_1@0	S_1@74	
7	100	100		QPSK	200	P_100@0	S_100@0	
8	100	100		QPSK	1	P_1@0	S_0@0	
9	100	100		QPSK	175	P_75@25	S_100@0	
10	100	100		QPSK	25	P_0@0	S_25@75

Note 1: CA Configuration Test CC Combination settings are checked separately for each CA Configuration which applicable aggregated channel bandwidths are specified in Table 5.4.2A.1-1

1. Connect the SS to the UE to the UE antenna connectors as shown in Figure TS 36.508 [7] Annex A, Figure group A.33 as appropriate.
2. The parameter settings for the cell are set up according to TS 36.508 [7] subclause 4.4.3.
3. Downlink signals for PCC are initially set up according to Annex C.0, C.1 and C.3.0, and uplink signals according to Annex H.1 and H.3.0.
4. The UL Reference Measurement channels are set according to Table 6.6.3.3A.1.4.1-1, Table 6.6.3.3A.1.4.1-2, Table 6.6.3.3A.1.4.1-3, Table 6.6.3.3A.1.4.1-4, Table 6.6.3.3A.1.4.1-5 or Table 6.6.3.3A.1.4.1-6 depending on network signal value.

5. Propagation conditions are set according to Annex B.0.
6. Ensure the UE is in State 3A-RF according to TS 36.508 [7] clause 5.2A.2. Message contents are defined in clause 6.6.3.3A.1.4.3.

#### 6.6.3.3A.1.4.2 Test procedure

1. Configure SCC according to Annex C.0, C.1 and Annex C.3.0 for all downlink physical channels.
2. The SS shall configure SCC as per TS 36.508 [7] clause 5.2A.4. Message contents are defined in clause 6.6.3.3A.1.4.3
3. SS activates SCC by sending the activation MAC-CE (Refer TS 36.321 [13], clauses 5.13, 6.1.3.8). Wait for at least 2 seconds (Refer TS 36.133, clauses 8.3.3.2).
4. SS sends uplink scheduling information for each UL HARQ process via PDCCH DCI format 0 for C\_RNTI to schedule the UL RMC according to Table 6.6.3.3A.1.4.1-1 on both PCC and SCC. Since the UE has no payload and no loopback data to send the UE sends uplink MAC padding bits on the UL RMC.
5. Send continuously uplink power control “up” commands in every uplink scheduling information to the UE until the UE transmits at  $P_{UMAX}$  level.
6. Measure the mean power of the UE in the channel bandwidth of the radio access mode according to the test configuration, which shall meet the requirements described in Tables 6.2.4A.1.5-1 to 6.2.4A.1.5-7 as appropriate. The period of the measurement shall be at least one sub-frame (1ms).
7. Measure the power of the transmitted signal with a measurement filter of bandwidths according to Table 6.6.3.3A.1.5.1-1, 6.6.3.3A.1.5.2-1, 6.6.3.3A.1.5.3-1, 6.6.3.3A.1.5.4-1, 6.6.3.3A.1.5.5-1 and 6.6.3.3A.1.5.6-1 as appropriate. The centre frequency of the filter shall be stepped in contiguous steps according to the same table. The measured power shall be verified for each step. The measurement period shall capture the active time slots.

#### 6.6.3.3A.1.4.3 Message contents

Message contents are according to TS 36.508 [7] subclause 4.6, with the following exceptions for each network signalled value.

##### 6.6.3.3A.1.4.3.1 Message contents (network signalled value "CA\_NS\_01")

1. Information element `additionalSpectrumEmissionSCell-r10` is set to `CA_NS_01`. This can be set in the *RadioResourceConfigCommonSCell-r10-DEFAULT* as part of the common RRC messages. This exception indicates that the UE shall meet the additional spurious emission requirement for a specific deployment scenario.

**Table 6.6.3.3A.1.4.3.1-1: *RadioResourceConfigCommonSCell-r10-DEFAULT*: Additional spectrum emission test requirement for “CA\_NS\_01”**

Derivation Path: TS 36.508 [7] clause 4.6.3, Table 4.6.3-13A			
Information Element	Value/remark	Comment	Condition
<code>additionalSpectrumEmissionSCell-r10</code>	1 (CA_NS_01)		

##### 6.6.3.3A.1.4.3.2 Message contents exceptions (network signalled value "CA\_NS\_02")

1. Information element `additionalSpectrumEmissionSCell-r10` is set to `CA_NS_02`. This can be set in the *RadioResourceConfigCommonSCell-r10-DEFAULT* as part of the common RRC messages. This exception indicates that the UE shall meet the additional spurious emission requirement for a specific deployment scenario.

**Table 6.6.3.3A.1.4.3.2-1: *RadioResourceConfigCommonSCell-r10-DEFAULT*: Additional spectrum emission test requirement for “CA\_NS\_02”**

Derivation Path: TS 36.508 [7] clause 4.6.3, Table 4.6.3-13A			
Information Element	Value/remark	Comment	Condition
<code>additionalSpectrumEmissionSCell-r10</code>	2 (CA_NS_02)		

## 6.6.3.3A.1.4.3.3 Message contents exceptions (network signalled value "CA\_NS\_03")

- Information element `additionalSpectrumEmission` is set to NS\_08. This can be set in the *RadioResourceConfigCommonSCell-r10-DEFAULT* as part of the common RRC messages. This exception indicates that the UE shall meet the additional spurious emission requirement for a specific deployment scenario.

**Table 6.6.3.3A.1.4.3.3-1: *RadioResourceConfigCommonSCell-r10-DEFAULT*: Additional spectrum emission test requirement for "CA\_NS\_03"**

Derivation Path: TS 36.508 [7] clause 4.6.3, Table 4.6.3-13A			
Information Element	Value/remark	Comment	Condition
<code>additionalSpectrumEmissionSCell-r10</code>	3 (CA_NS_03)		

## 6.6.3.3A.1.4.3.4 Message contents exceptions (network signalled value "CA\_NS\_05")

- Information element `additionalSpectrumEmission` is set to CA\_NS\_05. This can be set in the *RadioResourceConfigCommonSCell-r10-DEFAULT* as part of the common RRC messages. This exception indicates that the UE shall meet the additional spurious emission requirement for a specific deployment scenario.

**Table 6.6.3.3A.1.4.3.4-1: *RadioResourceConfigCommonSCell-r10-DEFAULT*: Additional spectrum emission test requirement for "CA\_NS\_05"**

Derivation Path: TS 36.508 [7] clause 4.6.3, Table 4.6.3-13A			
Information Element	Value/remark	Comment	Condition
<code>additionalSpectrumEmissionSCell-r10</code>	5 (CA_NS_05)		

## 6.6.3.3A.1.4.3.5 Message contents exceptions (network signalled value "CA\_NS\_06")

- Information element `additionalSpectrumEmission` is set to CA\_NS\_06. This can be set in the *RadioResourceConfigCommonSCell-r10-DEFAULT* as part of the common RRC messages. This exception indicates that the UE shall meet the additional spurious emission requirement for a specific deployment scenario.

**Table 6.6.3.3A.1.4.3.5-1: *RadioResourceConfigCommonSCell-r10-DEFAULT*: Additional spectrum emission test requirement for "CA\_NS\_06"**

Derivation Path: TS 36.508 [7] clause 4.6.3, Table 4.6.3-13A			
Information Element	Value/remark	Comment	Condition
<code>additionalSpectrumEmissionSCell-r10</code>	6 (CA_NS_06)		

## 6.6.3.3A.1.4.3.6 Message contents exceptions (network signalled value "CA\_NS\_07")

- Information element `additionalSpectrumEmission` is set to CA\_NS\_07. This can be set in the *RadioResourceConfigCommonSCell-r10-DEFAULT* as part of the common RRC messages. This exception indicates that the UE shall meet the additional spurious emission requirement for a specific deployment scenario.

**Table 6.6.3.3A.1.4.3.6-1: *RadioResourceConfigCommonSCell-r10-DEFAULT*: Additional spectrum emission test requirement for "CA\_NS\_07"**

Derivation Path: TS 36.508 [7] clause 4.6.3, Table 4.6.3-13A			
Information Element	Value/remark	Comment	Condition
<code>additionalSpectrumEmissionSCell-r10</code>	7 (CA_NS_07)		

## 6.6.3.3A.1.5 Test requirement

This clause specifies the requirements for the specified E-UTRA band for an additional spectrum emission for CA requirement with protected bands as indicated from table 6.6.3.3A.1.5.1-1 to table 6.6.3.3A.1.5.6-1.

NOTE: For measurement conditions at the edge of each frequency range, the lowest frequency of the measurement position in each frequency range should be set at the lowest boundary of the frequency range plus MBW/2. The highest frequency of the measurement position in each frequency range should be set at the highest boundary of the frequency range minus MBW/2. MBW denotes the measurement bandwidth defined for the protected band.

#### 6.6.3.3A.1.5.1 Test requirement for CA (network signalled value "CA\_NS\_01")

When "CA\_NS\_01" is indicated in the cell:

- the measured UE mean power in the channel bandwidth, derived in step 3, shall fulfil requirements in Table 6.2.4A.1.5-1 as appropriate,

and

the measured average power of spurious emission, derived in step 2, shall not exceed the described value in Table 6.6.3.3A.1.5.1-1. This requirement also applies for the frequency ranges that are less than  $\Delta f_{\text{OoB}}$  (MHz) in Table 6.6.3.1A.1.3-1 from the edge of the channel bandwidth.

**Table 6.6.3.3A.1.5.1-1: Additional requirements (PHS) for CA**

Protected band	Frequency range (MHz)			Maximum Level (dBm)	MBW (MHz)	Note
E-UTRA band 34	$F_{\text{DL\_low}}$	-	$F_{\text{DL\_high}}$	-50	1	
Frequency range	1884.5	-	1915.7	-41	0.3	1
Note 1: Applicable when the aggregated channel bandwidth is confined within frequency range 1940 – 1980 MHz.						

#### 6.6.3.3A.1.5.2 Test requirement for CA (network signalled value "CA\_NS\_02")

When "CA\_NS\_02" is indicated in the cell:

- the measured UE mean power in the channel bandwidth, derived in step 3, shall fulfil requirements in Table 6.2.4A.1.5-2 as appropriate,

and

the measured average power of spurious emission, derived in step 2, shall not exceed the described value in Table 6.6.3.3A.1.5.2-1. This requirement also applies for the frequency ranges that are less than  $\Delta f_{\text{OoB}}$  (MHz) in Table 6.6.3.1A.1.3-1 from the edge of the channel bandwidth.

**Table 6.6.3.3A.1.5.2-1: Additional requirements for CA**

Protected band	Frequency range (MHz)			Maximum Level (dBm)	MBW (MHz)
E-UTRA band 34	$F_{\text{DL\_low}}$	-	$F_{\text{DL\_high}}$	-50	1
Frequency range	1900	-	1915	-15.5	5
Frequency range	1915	-	1920	+1.6	5

#### 6.6.3.3A.1.5.3 Test requirement for CA (network signalled value "CA\_NS\_03")

When "CA\_NS\_03" is indicated in the cell:

- the measured UE mean power in the channel bandwidth, derived in step 3, shall fulfil requirements in Table 6.2.4A.1.5-3 as appropriate,

and

the measured average power of spurious emission, derived in step 2, shall not exceed the described value in Table 6.6.3.3A.1.5.3-1. This requirement also applies for the frequency ranges that are less than  $\Delta f_{\text{OoB}}$  (MHz) in Table 6.6.3.1A.1.3-1 from the edge of the channel bandwidth.

**Table 6.6.3.3A.1.5.3-1: Additional requirement for CA**

Protected band	Frequency range (MHz)			Maximum Level (dBm)	MBW (MHz)
E-UTRA band 34	F <sub>DL_low</sub>	-	F <sub>DL_high</sub>	-50	1
Frequency range	1880	-	1895	-40	1
Frequency range	1895	-	1915	-15.5	5
Frequency range	1915	-	1920	+1.6	5

#### 6.6.3.3A.1.5.4 Test requirement for CA (network signalled value "CA\_NS\_05")

When "CA\_NS\_05" is indicated in the cell:

- the measured UE mean power in the channel bandwidth, derived in step 3, shall fulfil requirements in Table 6.2.4A.1.5-5 as appropriate,

and

the measured average power of spurious emission, derived in step 2, shall not exceed the described value in Table 6.6.3.3A.1.5.4-1. This requirement also applies for the frequency ranges that are less than  $\Delta f_{\text{OoB}}$  (MHz) in Table 6.6.3.1A.1.3-1 from the edge of the channel bandwidth.

**Table 6.6.3.3A.1.5.4-1: Additional requirement for CA**

Protected band	Frequency range (MHz)			Maximum Level (dBm)	MBW (MHz)
Frequency range	2620	-	2645	-15.5	5
Frequency range	2645	-	2690	-40	1

#### 6.6.3.3A.1.5.5 Test requirement for CA (network signalled value "CA\_NS\_06")

When "CA\_NS\_06" is indicated in the cell:

- the measured UE mean power in the channel bandwidth, derived in step 3, shall fulfil requirements in Table 6.2.4A.1.5-6 as appropriate,

and

the measured average power of spurious emission, derived in step 2, shall not exceed the described value in Table 6.6.3.3A.1.5.5-1. This requirement also applies for the frequency ranges that are less than  $\Delta f_{\text{OoB}}$  (MHz) in Table 6.6.3.1A.1.3-1 from the edge of the channel bandwidth.

**Table 6.6.3.3A.1.5.5-1: Additional requirements**

Protected band	Frequency range (MHz)			Maximum Level (dBm)	MBW (MHz)
Frequency range	2570	-	2575	+1.6	5
Frequency range	2575	-	2595	-15.5	5
Frequency range	2595	-	2620	-40	1

#### 6.6.3.3A.1.5.6 Test requirement for CA (network signalled value "CA\_NS\_07")

When "CA\_NS\_07" is indicated in the cell:

- the measured UE mean power in the channel bandwidth, derived in step 3, shall fulfil requirements in Table 6.2.4A.1.5-7 as appropriate,

and

the measured average power of spurious emission, derived in step 2, shall not exceed the described value in Table 6.6.3.3A.1.5.6-1. This requirement also applies for the frequency ranges that are less than  $\Delta f_{\text{OoB}}$  (MHz) in Table 6.6.3.1A.1.3-1 from the edge of the channel bandwidth.

**Table 6.6.3.3A.1.5.6-1: Additional requirement for CA**

Protected band	Frequency range (MHz)			Maximum Level (dBm)	MBW (MHz)
Frequency range	1805	-	1855	[-40]	1
Frequency range	1855	-	1875	[-15.5]	5
Frequency range	1875	-	1880	[-15.5] <sup>1</sup>	5
NOTE 1: This requirement is applicable for carriers with aggregated channel bandwidths confined in 1885-1920 MHz					

#### 6.6.3.3A.1\_1 Additional spurious emissions for CA (intra-band contiguous DL CA and UL CA) for UL 64QAM

**Editor's note:**

- The minimum conformance requirements for CA\_39C are still FFS in core spec, so that the test requirements for CA\_39C are still FFS.

##### 6.6.3.3A.1\_1.1 Test purpose

Same test purpose as in clause 6.6.3.3A.1.1

##### 6.6.3.3A.1\_1.2 Test applicability

This test case applies to all types of E-UTRA UE from release 13 and forward that support intra-band contiguous DL CA, UL CA and UL 64QAM.

##### 6.6.3.3A.1\_1.3 Minimum conformance requirements

Same minimum conformance requirements as in clause 6.6.3.3A.1.3

##### 6.6.3.3A.1\_1.4 Test description

##### 6.6.3.3A.1\_1.4.1 Initial conditions

Initial conditions are a set of test configurations the UE needs to be tested in and the steps for the SS to take with the UE to reach the correct measurement state.

The initial test configurations consist of environmental conditions, test frequencies, and CC combinations based on E-UTRA CA configurations specified in table 5.4.2A.1-1. All of these configurations shall be tested with applicable test parameters for each CA Configuration, and are shown in tables' 6.6.3.3A.1\_1.4.1-1 to 6.6.3.3A.1\_1.4.1-3. The details of the uplink reference measurement channels (RMCs) are specified in Annexes A.2. Configurations of PDSCH and PDCCH before measurement are specified in Annex C.2.

**Table 6.6.3.3A.1\_1.4.1-1: Test Configuration Table for CA (network signalled value “CA\_NS\_01”)**

Initial Conditions								
Test Environment as specified in TS 36.508[7] subclause 4.1					NC			
Test Frequencies as specified in TS36.508 [7] subclause 4.3.1 for different CA bandwidth classes, and PCC and SCCs are mapped onto physical frequencies according to Table 6.1-2.					C: Low and High range			
Test CC Combination setting ( $N_{RB\_agg}$ ) as specified in subclause 5.4.2A.1 for the CA Configuration					Lowest $N_{RB\_agg}$ Highest $N_{RB\_agg}$			
Test Parameters for CA Configurations								
ID	CA Configuration / $N_{RB\_agg}$		DL Allocation (PDCCH on PCC)	CC MOD	UL Allocation

Note 1: CA Configuration Test CC Combination settings are checked separately for each CA Configuration which applicable aggregated channel bandwidths are specified in Table 5.4.2A.1-1

1. Connect the SS to the UE to the UE antenna connectors as shown in Figure TS 36.508 [7] Annex A, Figure group A.33 as appropriate.
2. The parameter settings for the cell are set up according to TS 36.508 [7] subclause 4.4.3.
3. Downlink signals for PCC are initially set up according to Annex C.0, C.1 and C.3.0, and uplink signals according to Annex H.1 and H.3.0.
4. The UL Reference Measurement channels are set according to Table 6.6.3.3A.1\_1.4.1-1, Table 6.6.3.3A.1\_1.4.1-2, Table 6.6.3.3A.1\_1.4.1-3, Table 6.6.3.3A.1\_1.4.1-4, Table 6.6.3.3A.1\_1.4.1-5 or Table 6.6.3.3A.1\_1.4.1-6 depending on network signal value.

5. Propagation conditions are set according to Annex B.0.
6. Ensure the UE is in State 3A-RF according to TS 36.508 [7] clause 5.2A.2. Message contents are defined in clause 6.6.3.3A.1\_1.4.3.

#### 6.6.3.3A.1\_1.4.2 Test procedure

Same test procedure as in clause 6.6.3.3A.1.4.2

#### 6.6.3.3A.1\_1.4.3 Message contents

Same message contents as in clause 6.6.2.2A.1.4.3

#### 6.6.3.3A.1\_1.5 Test requirement

Same test requirements as in clause 6.6.2.2A.1.5

### 6.6.3.3A.2 Additional spurious emissions for CA (inter-band DL CA and UL CA)

#### 6.6.3.3A.2.1 Test purpose

To verify that UE transmitter does not cause unacceptable interference to other channels or other systems in terms of transmitter spurious emissions in inter-band carrier aggregation under the deployment scenarios where additional requirements are specified.

#### 6.6.3.3A.2.2 Test applicability

This test case applies to all types of E-UTRA UE release 11 and forward that support inter-band DL CA and UL CA.

#### 6.6.3.3A.2.3 Minimum conformance requirements

The minimum conformance requirements are defined in clause 6.6.3.3.3.

#### 6.6.3.3A.2.4 Test description

##### 6.6.3.3A.2.4.1 Initial conditions

Initial conditions are a set of test configurations the UE needs to be tested in and the steps for the SS to take with the UE to reach the correct measurement state. For the UE maximum output power modified by A-MPR specified in table 6.6.3.3A.2.4.1-1, the power limits specified in subclause 6.2.5A.2.3 apply

Table 6.6.3.3A.2.4.1-1: Additional spurious emissions for inter-band CA

<p>Note 1: For CCs with NS_01, there are no additional requirements defined in 36.101. Only CCs with NS-value different than NS_01 and present in 6.6.3.3.3 needs to be tested.</p> <p>Note 2: A-MPR values for NS-values in this table are the same as in section 6.2.4.3.</p> <p>Note 3: No test required since only A-Spur requirements apply, and the frequency range to test is unaffected by intermodulation products as described in section 4.3 in TR 36.905.</p>				

The initial test configurations consist of environmental conditions, test frequencies, and CC combinations based on E-UTRA CA configurations specified in table 5.4.2A.1-2. All of these configurations shall be tested with applicable test parameters for each CA Configuration, and are shown in tables 6.6.3.3A.2.4.1-2 to 6.6.3.3A.2.4.1-5. The details of the uplink reference measurement channels (RMCs) are specified in Annex A.2. Configurations of PDSCH and PDCCH before measurement are specified in Annex C.2.

**Table 6.6.3.3A.2.4.1-2: Test Configuration Table (network signalled value NS\_05/NS\_01)**

Initial Conditions							
Test Environment as specified in TS 36.508[7] subclause 4.1						NC	
Test Frequencies as specified in TS 36.508 [7] subclause 4.3.1 for different CA bandwidth classes						Low and High range for both PCC and SCC (Note 3)	
Test CC Combination setting (NRB_agg) as specified in subclause 5.4.2A.1 for the CA Configuration across bandwidth combination sets supported by the UE.						Lowest and Highest N <sub>RBagg</sub> (Note 2)	
Test Parameters for CA Configurations							
Config ID	CA Configuration / NRB_agg		DL Allocation	CC MOD		UL Allocation

Note 1:	CA Configuration Test CC Combination settings are checked separately for each CA Configuration, which applicable aggregated channel bandwidths are specified in Table 5.4.2A.1-1.						
Note 2:	If in the CA Configuration UE supports multiple CC Combinations with the same NRB_agg . only the first of those is tested, according to the order on the Test Configuration Table list.						
Note 3:	For Low range place test point with RB <sub>start</sub> =0. For High range place test point with RB <sub>start</sub> =RB <sub>max</sub> *L <sub>CRB</sub> +1.						

1. Connect the SS to the UE to the UE antenna connectors as shown in Figure TS 36.508 [7] Annex A, Figure group A.33 as appropriate.
2. The parameter settings for the cell are set up according to TS 36.508 [7] subclause 4.4.3.
3. Downlink signals for PCC are initially set up according to Annex C.0, C.1 and C.3.0, and uplink signals according to Annex H.1 and H.3.0.
4. The UL Reference Measurement channels are set according to Tables 6.6.3.3A.2.4.1-2 to 6.6.3.3A.2.4.1-5 depending on network signal value.
5. Propagation conditions are set according to Annex B.0.
6. Ensure the UE is in State 3A-RF according to TS 36.508 [7] clause 5.2A.2. Message contents are defined in clause 6.6.3.3A.2.4.3.

#### 6.6.3.3A.2.4.2 Test procedures

1. Configure SCC according to Annex C.0, C.1 and Annex C.3.0 for all downlink physical channels.
2. The SS shall configure SCC as per TS 36.508 [7] clause 5.2A.4. Message contents are defined in clause 6.6.3.3A.2.4.3

3. SS activates SCC by sending the activation MAC-CE (Refer TS 36.321 [13], clauses 5.13, 6.1.3.8). Wait for at least 2 seconds (Refer TS 36.133, clauses 8.3.3.2).
4. SS sends uplink scheduling information for each UL HARQ process via PDCCH DCI format 0 for C\_RNTI to schedule the UL RMC according to Tables 6.6.3.3A.2.4.1-2 to 6.6.3.3A.2.4.1-5 as appropriate on both PCC and SCC. Since the UE has no payload and no loopback data to send the UE sends uplink MAC padding bits on the UL RMC.
5. Send continuously uplink power control “up” commands in every uplink scheduling information to the UE until the UE transmits at  $P_{UMAX}$  level.
6. Measure the mean power of the UE in the channel bandwidth of the radio access mode according to the test configuration, which shall meet the requirements described in Tables 6.6.3.3A.2.4.1-2 to 6.6.3.3A.2.4.1-5 as appropriate. The period of the measurement shall be at least one sub-frame (1ms).
7. Measure the power of the transmitted signal with a measurement filter of bandwidths according to Tables 6.6.3.3A.2.4.1-2 to 6.6.3.3A.2.4.1-5 as appropriate. The centre frequency of the filter shall be stepped in contiguous steps according to the same table. The measured power shall be verified for each step. The measurement period shall capture the active time slots.

#### 6.6.3.3A.2.4.3 Message contents

Same message contents as in clause 6.6.3.3.4.3.

#### 6.6.3.3A.2.5 Test requirement

Same test requirements as in clause 6.6.3.3.5 depending on network signal value.

### 6.6.3.3A.2\_1 Additional spurious emissions for CA (inter-band DL CA and UL CA) for UL 64QAM

#### 6.6.3.3A.2\_1.1 Test purpose

To verify that UE transmitter does not cause unacceptable interference to other channels or other systems in terms of transmitter spurious emissions in inter-band carrier aggregation under the deployment scenarios where additional requirements are specified.

#### 6.6.3.3A.2\_1.2 Test applicability

This test case applies to all types of E-UTRA UE release 13 and forward that support inter-band DL CA and UL CA and UL 64QAM.

#### 6.6.3.3A.2\_1.3 Minimum conformance requirements

The minimum conformance requirements are defined in clause 6.6.3.3.3.

#### 6.6.3.3A.2\_1.4 Test description

##### 6.6.3.3A.2\_1.4.1 Initial conditions

Initial conditions are a set of test configurations the UE needs to be tested in and the steps for the SS to take with the UE to reach the correct measurement state. For the UE maximum output power modified by A-MPR specified in table 6.6.3.3A.2\_1.4.1-1, the power limits specified in subclause 6.2.5A.2.3 apply

### 6.6.3.3A.2\_1.4.1-1 Additional spurious emissions for inter-band CA

Uplink CA Configuration	NS-value per CC (in same order as UL CA Configuration column)		Applicable emissions requirements (in same order as UL CA Configuration column)	
CA_1A-5A CA_1A-7A CA_1A-8A	NS_05	NS_01	Table 6.6.3.3.5.1-1	N/A
CA_2A-13A, CA_4A-13A	NS_03	NS_07	Table 6.6.2.2.3.1-1	Table 6.6.2.2.3.3-1 Table 6.6.3.3.3.2-1
CA_3A-26A	NS_01	NS_12	N/A	Table 6.6.3.3.3.5-1
CA_3A-26A	NS_01	NS_15	N/A	Table 6.6.3.3.3.8-1
Note 1: For CCs with NS_01, there are no additional requirements defined in 36.101. Only CCs with NS-value different than NS_01 needs to be tested.				
Note 2: A-MPR values for NS-values in this table are the same as in section 6.2.4.3.				

The initial test configurations consist of environmental conditions, test frequencies, and CC combinations based on E-UTRA CA configurations specified in table 5.4.2A.1-2. All of these configurations shall be tested with applicable test parameters for each CA Configuration, and are shown in tables 6.6.3.3A.2\_1.4.1-2 to 6.6.3.3A.2\_1.4.1-5. The details of the uplink reference measurement channels (RMCs) are specified in Annex A.2. Configurations of PDSCH and PDCCH before measurement are specified in Annex C.2.

1. Connect the SS to the UE to the UE antenna connectors as shown in Figure TS 36.508 [7] Annex A, Figure group A.33 as appropriate.
2. The parameter settings for the cell are set up according to TS 36.508 [7] subclause 4.4.3.
3. Downlink signals for PCC are initially set up according to Annex C.0, C.1 and C.3.0, and uplink signals according to Annex H.1 and H.3.0.
4. The UL Reference Measurement channels are set according to Tables 6.6.3.3A.2\_1.4.1-2 to 6.6.3.3A.2\_1.4.1-5 depending on network signal value.
5. Propagation conditions are set according to Annex B.0.
6. Ensure the UE is in State 3A-RF according to TS 36.508 [7] clause 5.2A.2. Message contents are defined in clause 6.6.3.3A.2\_1.4.3.

#### 6.6.3.3A.2\_1.4.2 Test procedures

Same test procedure as in clause 6.6.3.3A.2.4.2.

#### 6.6.3.3A.2\_1.4.3 Message contents

Same message content as in clause 6.6.3.3A.2.4.3.

#### 6.6.3.3A.2\_1.5 Test requirement

Same test requirements as in clause 6.6.3.3A.2.5.

#### 6.6.3.3A.3 Additional spurious emissions for CA (intra-band non-contiguous DL CA and UL CA)

**Editor's note: No test case details specified because the additional maximum power reduction and the additional spurious emissions cannot be verified for the intra-band non-contiguous UL CA case due to A-MPR is N/A and no additional requirement is needed in current non-contiguous Uplink CA configuration CA\_4A-4A according to Table 6.2.4A-2 in TS 36.101.**

### 6.6.3B Spurious emission for UL-MIMO

For UE supporting UL-MIMO, the requirements for Spurious emissions which are caused by unwanted transmitter effects such as harmonics emission, parasitic emissions, intermodulation products and frequency conversion products are specified at each transmit antenna connector.

For UEs with two transmit antenna connectors in closed-loop spatial multiplexing scheme, the requirements in subclause 6.6.3 apply to each transmit antenna connector. The requirements shall be met with the UL-MIMO configurations specified in Table 6.2.2B-1.

For single-antenna port scheme, the general requirements in subclause 6.6.2 apply.

#### 6.6.3B.1 Transmitter Spurious emissions for UL-MIMO

##### 6.6.3B.1.1 Test purpose

To verify that UE transmitter with a UL-MIMO does not cause unacceptable interference to other channels or other systems in terms of transmitter spurious emissions.

##### 6.6.3B.1.2 Test applicability

This test case applies to all types of E-UTRA UE release 10 and forward that support UL-MIMO.

##### 6.6.3B.1.3 Minimum conformance requirements

For UE with multiple transmit antenna connectors, the requirements for Spurious emissions which are caused by unwanted transmitter effects such as harmonics emission, parasitic emissions, intermodulation products and frequency conversion products are specified at each transmit antenna connector.

For UEs with two transmit antenna connectors, the requirements in clause 6.6.3 apply to each transmit antenna with the UL-MIMO configurations specified in Table 6.2.2B-1 for closed-loop spatial multiplexing scheme.

The normative reference for this requirement is TS 36.101 [2] clause 6.6.3B.

##### 6.6.3B.1.4 Test description

###### 6.6.3B.1.4.1 Initial conditions

Initial conditions are a set of test configurations the UE needs to be tested in and the steps for the SS to take with the UE to reach the correct measurement state.

The initial test configurations consist of environmental conditions, test frequencies, and channel bandwidths based on E-UTRA bands specified in Table 5.4.2.1-1. All of these configurations shall be tested with applicable test parameters for each channel bandwidth, and are shown in Table 6.6.3B.1.4.1-1. The details of the uplink reference measurement

channels (RMCs) are specified in Annex A.2. Configurations of PDSCH and PDCCH before measurement are specified in Annex C.2.

**Table 6.6.3B.1.4.1-1: Test Configuration Table**

Initial Conditions						
Test Environment (as specified in TS 36.508 [7] clause 4.1)		NC				
Test Frequencies (as specified in TS 36.508 [7] clause 4.3.1)		Low range, Mid range, High range				
Test Channel Bandwidths (as specified in TS 36.508 [7] clause 4.3.1)		Lowest, 5MHz, Highest				
Test Parameters for Channel Bandwidths						
Ch BW	Downlink Configuration			Uplink Configuration		
	Mod'n	RB allocation		Mod'n	RB allocation	
		FDD	TDD		FDD	TDD
1.4MHz	N/A for Spurious Emissions testing			QPSK	6	6
1.4MHz				QPSK	1	1
3MHz				QPSK	15	15
3MHz				QPSK	1	1
5MHz				QPSK	25	25
5MHz				QPSK	1	1
10MHz				QPSK	50	50
10MHz				QPSK	1	1
15MHz				QPSK	75	75
15MHz				QPSK	1	1
20MHz				QPSK	100	100
20MHz				QPSK	1	1
Note 1: Test Channel Bandwidths are checked separately for each E-UTRA band, which applicable channel bandwidths are specified in Table 5.4.2.1-1.						
Note 2: The 1 RB allocation shall be tested at both RB #0 and RB #max.						

1. Connect the SS to the UE antenna connectors as shown in Figure TS 36.508 [7] Annex A, Figure A.38.
2. The parameter settings for the cell are set up according to TS 36.508 [7] clause 4.4.3.
3. Downlink signals are initially set up according to Annex C0, C.1 and C.3.0, and uplink signals according to Annex H.1 and H.3.0.
4. The UL Reference Measurement channels are set according to Table 6.6.3B.1.4.1-1.
5. Propagation conditions are set according to Annex B.0.
6. Ensure the UE is in State 3A-RF according to TS 36.508 [7] clause 5.2A.2. Message contents are defined in clause 6.6.3B.1.4.3.

#### 6.6.3B.1.4.2 Test procedure

1. SS sends uplink scheduling information for each UL HARQ process via PDCCH DCI format 4 for C\_RNTI to schedule the UL RMC according to Table 6.6.3B.1.4.1-1. Since the UE has no payload data to send, the UE transmits uplink MAC padding bits on the UL RMC.
2. Send continuously uplink power control "up" commands in the uplink scheduling information to the UE until the UE transmits at PUMAX level.
3. Measure the power of the transmitted signal at each UE antenna connector with a measurement filter of bandwidths according to table 6.6.3B.1.5-1. The centre frequency of the filter shall be stepped in contiguous steps according to table 6.6.3B.1.5-1. The measured power shall be verified for each step. The measurement period shall capture the active time slots.

### 6.6.3B.1.4.3 Message contents

Message contents are according to TS 36.508 [7] subclause 4.6.

### 6.6.3B.1.5 Test requirement

The measured average power of spurious emission, derived in step 3, shall not exceed the described value in table 6.6.3B.1.5-1.

The spurious emission limits apply for the frequency ranges that are more than  $\Delta f_{OOB}$  (MHz) from the edge of the channel bandwidth shown in Table 6.6.3.1.3-1.

**Table 6.6.3B.1.5-1: General spurious emissions test requirements**

Frequency Range	Maximum Level	Measurement Bandwidth	Notes
$9 \text{ kHz} \leq f < 150 \text{ kHz}$	-36 dBm	1 kHz	
$150 \text{ kHz} \leq f < 30 \text{ MHz}$	-36 dBm	10 kHz	
$30 \text{ MHz} \leq f < 1000 \text{ MHz}$	-36 dBm	100 kHz	
$1 \text{ GHz} \leq f < 12.75 \text{ GHz}$	-30 dBm	1 MHz	
$12.75 \text{ GHz} \leq f < 5\text{th}$ harmonic of the upper frequency edge of the UL operating band in GHz	-30 dBm	1 MHz	Note 1
Note 1: Applies for Band 22, Band 42 and Band 43.			

NOTE: In order that the measurement of spurious emissions falls within the frequency ranges that are more than  $\Delta f_{OOB}$  (MHz) from the edge of the channel bandwidth, the minimum offset of the measurement frequency from each edge of the channel should be  $\Delta f_{OOB} + MBW/2$ . MBW denotes the measurement bandwidth defined in Table 6.6.3B.1.5-1.

## 6.6.3B.2 Spurious emission band UE co-existence for UL-MIMO

**Editor's note: This test case contains different requirements for different UE releases**

### 6.6.3B.2.1 Test purpose

To verify that UE transmitter with a UL-MIMO does not cause unacceptable interference to co-existing systems for the specified bands which has specific requirements in terms of transmitter spurious emissions.

### 6.6.3B.2.2 Test applicability

This test case applies to all types of E-UTRA UE release 10 and forward that support UL-MIMO.

### 6.6.3B.2.3 Minimum conformance requirements

For UE with multiple transmit antenna connectors, the requirements for Spurious emissions which are caused by unwanted transmitter effects such as harmonics emission, parasitic emissions, intermodulation products and frequency conversion products are specified at each transmit antenna connector.

For UEs with two transmit antenna connectors, the requirements in clause 6.6.3 apply to each transmit antenna with the UL-MIMO configurations specified in Table 6.2.2B-1 for closed-loop spatial multiplexing scheme.

The normative reference for this requirement is TS 36.101 [2] clause 6.6.3B.

This test use minimum requirements from many releases of TS 36.101 [2] due to release independence defined in TS 36.307 [16].

## 6.6.3B.2.4 Test description

## 6.6.3B.2.4.1 Initial conditions

Initial conditions are a set of test configurations the UE needs to be tested in and the steps for the SS to take with the UE to reach the correct measurement state.

The initial test configurations consist of environmental conditions, test frequencies, and channel bandwidths based on E-UTRA bands specified in Table 5.4.2.1-1. All of these configurations shall be tested with applicable test parameters for each channel bandwidth, and are shown in Table 6.6.3B.2.4.1-1. The details of the uplink reference measurement channels (RMCs) are specified in Annex A.2. Configurations of PDSCH and PDCCH before measurement are specified in Annex C.2.

Table 6.6.3B.2.4.1-1: Test Configuration Table

Initial Conditions						
Test Environment (as specified in TS 36.508 [7] clause 4.1)			NC			
Test Frequencies (as specified in TS 36.508 [7] clause 4.3.1) (Note 3)			Low range, Mid range, High range (Note 3)			
Test Channel Bandwidths (as specified in TS 36.508 [7] clause 4.3.1)			Lowest, 5MHz, Highest			
Test Parameters for Channel Bandwidths						
Ch BW	Downlink Configuration			Uplink Configuration		
	Mod'n	RB allocation		Mod'n	RB allocation	
		FDD	TDD		FDD	TDD
1.4MHz	N/A for Spurious Emissions testing			QPSK	6	6
1.4MHz				QPSK	1	1
3MHz				QPSK	15	15
3MHz				QPSK	1	1
5MHz				QPSK	25	25 <sup>b</sup>
5MHz				QPSK	1	1 <sup>b</sup>
10MHz				QPSK	50	50
10MHz				QPSK	1	1
15MHz				QPSK	75	75
15MHz				QPSK	1	1
20MHz				QPSK	100	100
20MHz				QPSK	1	1
Note 1: Test Channel Bandwidths are checked separately for each E-UTRA band, which applicable channel bandwidths are specified in Table 5.4.2.1-1. Note 2: The 1 RB allocation shall be tested at both RB #0 and RB #max. Note 3: Do not apply for requirements under Note 13 in Tables 6.6.3.2.3-1B to 6.6.3.2.3-1E. Test frequencies for these requirements are defined in Table 6.6.3B.2.4.1-2. Note 4: Void Note 5: For requirements under note 22 in Table 6.6.3B.2.5-1, the message exception in Table 6.6.3B.2.4.3-1 is used to test with the high channel.						

Table 6.6.3B.2.4.1-2: Test frequencies for E-UTRA channel bandwidth for operating band 3 with Note 13 (in Tables 6.6.3.2.3-1B to 6.6.3.2.3-1E)

Bandwidth [MHz]	N <sub>UL</sub>	Frequency of Uplink [MHz]	N <sub>DL</sub>	Frequency of Downlink [MHz]
5	19924	1782.4	1924	1877.4
10	19899	1779.9	1899	1874.9
15	19874	1777.4	1874	1872.4
20	19849	1774.9	1849	1869.9

1. Connect the SS to the UE antenna connectors as shown in Figure TS 36.508 [7] Annex A, Figure A.38.
2. The parameter settings for the cell are set up according to TS 36.508 [7] clause 4.4.3.

3. Downlink signals are initially set up according to Annex C0, C.1 and C.3.0, and uplink signals according to Annex H.1 and H.3.0.
4. The UL Reference Measurement channels are set according to Table 6.6.3B.2.4.1-1.
5. Propagation conditions are set according to Annex B.0.
6. Ensure the UE is in State 3A-RF according to TS 36.508 [7] clause 5.2A.2. Message contents are defined in clause 6.6.3B.2.4.3.

#### 6.6.3B.2.4.2 Test procedure

1. SS sends uplink scheduling information for each UL HARQ process via PDCCH DCI format 4 for C\_RNTI to schedule the UL RMC according to Table 6.6.3B.2.4.1-1. Since the UE has no payload data to send, the UE transmits uplink MAC padding bits on the UL RMC.
2. Send continuously uplink power control "up" commands in the uplink scheduling information to the UE until the UE transmits at  $P_{UMAX}$  level.
3. Measure the power of the transmitted signal at each UE antenna connector with a measurement filter of bandwidths according to table 6.6.3B.2.5-1. For band 14 measurements made in a bandwidth of 6.25kHz, measurement parameter settings defined in table 6.6.3B.2.4.2-1 shall be used. The centre frequency of the filter shall be stepped in contiguous steps according to table 6.6.3B.2.5-1. The measured power shall be verified for each step. The measurement period shall capture the active time slots.

**Table 6.6.3B.2.4.2-1: Measurement setup for band 14**

	<b>Option 1: Measurement with No RMS VBW available</b>	<b>Option2 Measurement with VBW Filtering on Power scale</b>
VBW	$\geq 62.5$ kHz  (10 times or more the RBW)	$\leq 43$ Hz
RBW	$\leq 6.25$ kHz	$\leq 6.25$ kHz
Detector type	Averages signal envelope during each measurement point, such as "RMS detector"	Peak
Averaging mode (Trace averaging)	Power (RMS voltage)	Power (RMS voltage), as controlled by "Average Type"
Average Type (applies to detector)	Power (RMS voltage) (automatically occurs with "RMS detector")	Not applicable
Average Type (applies to VBW filter)	Not applicable	Power (RMS voltage)
Number of averages	30, to reduce variance as required, or use an even longer sweep time	1 or use an even narrower VBW filter, thus a longer sweep time
Sweep time	[Don't specify]	Sweep rate (span divided by sweep time) $\leq 0.8 * RBW * VBW$

### 6.6.3B.2.5 Test requirement

Test requirements for Spurious Emissions UE Co-existence for UL-MIMO are the same as the minimum requirements and are not repeated in this section.

The measured average power of spurious emission, derived in step 3, shall not exceed the described value in tables 6.6.3.2.3-1B to 6.6.3.2.3-1E according to the following rule:

The requirements for the UE are release specific and can be found in Tables 6.6.3.2.3-1B to 6.6.3.2.3-1E. If the UE support a band, which is not defined in the table corresponding UE's release, the requirements for this band are taken from the table of earliest release where requirements for this band are defined. This has been described in following Table 6.6.3B.2.5-1.

The spurious emission limits apply for the frequency ranges that are more than  $\Delta f_{OOB}$  (MHz) from the edge of the channel bandwidth shown in Table 6.6.3.1.3-1.

NOTE: The frequency range applicable with network signalled values of NS\_05, NS\_08, and NS\_09 are covered in 6.6.3B.3 Additional Spurious Emissions for UL-MIMO.

### 6.6.3B.3 Additional spurious emissions for UL-MIMO

**Editor's note: This clause is incomplete. for Rel-10 as it is also testing Rel-11 minimum requirements.**

#### 6.6.3B.3.1 Test purpose

To verify that UE transmitter with a UL-MIMO does not cause unacceptable interference to other channels or other systems in terms of transmitter spurious emissions under the deployment scenarios where additional requirements are specified.

#### 6.6.3B.3.2 Test applicability

This test case applies to all types of E-UTRA UE release 10 and forward that support UL-MIMO.

#### 6.6.3B.3.3 Minimum conformance requirements

For UE with multiple transmit antenna connectors, the requirements for Spurious emissions which are caused by unwanted transmitter effects such as harmonics emission, parasitic emissions, intermodulation products and frequency conversion products are specified at each transmit antenna connector.

For UEs with two transmit antenna connectors, the requirements in clause 6.6.3 apply to each transmit antenna with the UL-MIMO configurations specified in Table 6.2.2B-1 for closed-loop spatial multiplexing scheme.

The normative reference for this requirement is TS 36.101 [2] clause 6.6.3B.

#### 6.6.3B.3.4 Test description

##### 6.6.3B.3.4.1 Initial conditions

Initial conditions are a set of test configurations the UE needs to be tested in and the steps for the SS to take with the UE to reach the correct measurement state.

The initial test configurations consist of environmental conditions, test frequencies, and channel bandwidths based on E-UTRA operating bands specified in table 5.4.2.1-1. All of these configurations shall be tested with applicable test parameters for each channel bandwidth, and are shown in tables 6.6.3B.3.4.1-1 through table, 6.6.3B.3.4.1-15. The details of the uplink reference measurement channels (RMCs) are specified in Annexes A.2. Configurations of PDSCH and PDCCH before measurement are specified in Annex C.2.

<p>Note 1: The Configuration ID will be used to map the applicable Test Configuration to the corresponding Test Requirement in subclause 6.2.4.5 as not all combinations are necessarily required based on the applicability of the UE.</p> <p>Note 2: Applies only for UE-Categories <math>\geq 2</math>.</p> <p>Note 3: The 16QAM configurations shall not apply to UEs which support UL 64QAM.</p>						

**Editor's note:** The following lines belong at the end of section 6.2.4.4.1. As new tables are added to this section, these lines should always follow the tables.

1. Connect the SS to the UE antenna connectors as shown in Figure TS 36.508 [7] Annex A, Figure A.38.
2. The parameter settings for the cell are set up according to TS 36.508 [7] clause 4.4.3.
3. Downlink signals are initially set up according to Annex C0, C.1 and C.3.0, and uplink signals according to Annex H.1 and H.3.0.
4. The UL Reference Measurement channels are set according to Tables 6.6.3B.3.4.1-1 through Table, 6.6.3B.3.4.1-15 depending on network signal value.
5. Propagation conditions are set according to Annex B.0.
6. Ensure the UE is in State 3A-RF according to TS 36.508 [7] clause 5.2A.2. Message contents are defined in clause 6.6.3B.3.4.3.

#### 6.6.3B.3.4.2 Test procedure

1. SS sends uplink scheduling information for each UL HARQ process via PDCCH DCI format 4 for C\_RNTI to schedule the UL RMC according to Tables 6.6.3B.3.4.1-1 through table, 6.6.3B.3.4.1-15. Since the UE has no payload and no loopback data to send the UE sends uplink MAC padding bits on the UL RMC.
2. Send continuously uplink power control "up" commands in the uplink scheduling information to the UE until the UE transmits at  $P_{UMAX}$  level.
3. Measure the mean power of the UE in the channel bandwidth of the radio access mode according to the test configuration, which shall meet the requirements described in Tables 6.2.4B.5-1 to 6.2.4B.5-21 as appropriate. The period of the measurement shall be at least one sub-frame (1ms).
4. Measure the power of the transmitted signal at each UE antenna connector with a measurement filter of bandwidths according to Tables 6.6.3B.3.5.1-1 through table, 6.6.3B.3.5.1-15 as appropriate. The centre frequency of the filter shall be stepped in contiguous steps according to the same table. For NS\_07 measurements made in a bandwidth of 6.25kHz, measurement parameter settings defined in table 6.6.3B.3.4.2-1 shall be used. The measured power shall be verified for each step. The measurement period shall capture the active time slots.

**Table 6.6.3B.3.4.2-1: Measurement setup for NS\_07**

	<b>Option 1: Measurement with No RMS VBW available</b>	<b>Option 2: Measurement with VBW Filtering on Power scale</b>
VBW	>=62.5 kHz  (10 times or more the RBW)	<=43Hz
RBW	<=6.25kHz	<=6.25kHz
Detector type	Averages signal envelope during each measurement point, such as "RMS detector"	Peak
Averaging mode (Trace averaging)	Power (RMS voltage)	Power (RMS voltage), as controlled by "Average Type"
Average Type (applies to detector)	Power (RMS voltage) (automatically occurs with "RMS detector")	Not applicable
Average Type (applies to VBW filter)	Not applicable	Power (RMS voltage)
Number of averages	30, to reduce variance as required, or use an even longer sweep time	1 or use an even narrower VBW filter, thus a longer sweep time
Sweep time	[Don't specify]	Sweep rate (span divided by sweep time) <= 0.8 * RBW*VBW

## 6.6.3B.3.4.3 Message contents

## 6.6.3B.3.4.3.1 Message contents (network signalled value "NS\_05")

Message contents are according to TS 36.508 [7] subclause 4.6, with the following exceptions:

1. Information element `additionalSpectrumEmission` is set to NS\_05. This can be set in the *SystemInformationBlockType2* as part of the cell broadcast message. This exception indicates that the UE shall meet the additional spurious emission requirement for a specific deployment scenario.

**Table 6.6.3B.3.4.3.1-1: SystemInformationBlockType2 :Additional spurious emissions requirement**

Derivation Path: TS 36.508 [7] clause 4.4.3.3, Table 4.4.3.3-1			
Information Element	Value/remark	Comment	Condition
<code>additionalSpectrumEmission</code>	5 (NS_05)		

## 6.6.3B.3.4.3.2 Message contents (network signalled value "NS\_07")

Message contents are according to TS 36.508 [7] subclause 4.6, with the following exceptions:

1. Information element `additionalSpectrumEmission` is set to NS\_07. This can be set in the *SystemInformationBlockType2* as part of the cell broadcast message. This exception indicates that the UE shall meet the additional spurious emission requirement for a specific deployment scenario.

**Table 6.6.3B.3.4.3.2-1: SystemInformationBlockType2 :Additional spurious emissions requirement**

Derivation Path: TS 36.508 [7] clause 4.4.3.3, Table 4.4.3.3-1			
Information Element	Value/remark	Comment	Condition
<code>additionalSpectrumEmission</code>	7 (NS_07)		

## 6.6.3B.3.4.3.3 Message contents (network signalled value "NS\_08")

Message contents are according to TS 36.508 [7] subclause 4.6, with the following exceptions:

1. Information element `additionalSpectrumEmission` is set to `NS_08`. This can be set in the *SystemInformationBlockType2* as part of the cell broadcast message. This exception indicates that the UE shall meet the additional spurious emission requirement for a specific deployment scenario.

**Table 6.6.3B.3.4.3.3-1: SystemInformationBlockType2 :Additional spurious emissions requirement**

Derivation Path: TS 36.508 [7] clause 4.4.3.3, Table 4.4.3.3-1

Information Element	Value/remark	Comment	Condition
<code>additionalSpectrumEmission</code>	25 (NS_25)		

## 6.6.3B.3.5 Test requirement

## 6.6.3B.3.5.1 Test requirement (network signalled value "NS\_05")

When "NS\_05" is indicated in the cell:

- the measured UE mean power in the channel bandwidth, derived in step 3, shall fulfil requirements in Table 6.2.4B.5-4 as appropriate,
- and
- the measured average power of spurious emission, derived in step 2, shall not exceed the described value in Table 6.6.3B.3.5.1-1. This requirement also applies for the frequency ranges that are less than  $\Delta f_{OOB}$  (MHz) in Table 6.6.3.1.3-1 from the edge of the channel bandwidth.

**Table 6.6.3B.3.5.1-1: Additional requirements (PHS) test requirements**

Frequency band (MHz)	Channel bandwidth / Spectrum emission limit (dBm)				Measurement bandwidth
	5 MHz	10 MHz	15 MHz	20 MHz	
$1884.5 \leq f \leq 1915.7^*1$	-41	-41	-41	-41	300 KHz
Note 1: Applicable when the lower edge of the assigned E-UTRA UL channel bandwidth frequency is larger than or equal to the upper edge of PHS band (1915.7 MHz) + 4 MHz + the Channel BW assigned, where Channel BW is as defined in clause 5.4.2. <b>Additional restrictions apply for operations below this point.</b>					

The requirements in Table 6.6.3B.3.5.1-1 apply with the additional restrictions specified in Table 6.6.3B.3.5.1-2 when the lower edge of the assigned E-UTRA UL channel bandwidth frequency is less than the upper edge of PHS band (1915.7 MHz) + 4 MHz + the channel BW assigned.

**Table 6.6.3B.3.5.1-2: RB restrictions for additional requirement (PHS)(Rel-11 and earlier and bit number 1 in modifiedMPRbehavior = 0)**

15 MHz channel bandwidth with $f_c = 1932.5$ MHz			
$RB_{start}$	0-7	8-66	67-74
$LCRB$	N/A	$\leq \text{MIN}(30, 67 - RB_{start})$	N/A
20 MHz channel bandwidth with $f_c = 1930$ MHz			
$RB_{start}$	0-23	24-75	76-99
$LCRB$	N/A	$\leq \text{MIN}(24, 76 - RB_{start})$	N/A

NOTE: (only for testing requirements in Table 6.6.3B.3.5.1-1):  
 For measurement conditions at the edge of each frequency range, the lowest frequency of the measurement position in each frequency range should be set at the lowest boundary of the frequency range plus  $MBW/2$ . The highest frequency of the measurement position in each frequency range should be set at the highest boundary of the frequency range minus  $MBW/2$ .  $MBW$  denotes the measurement bandwidth (300 kHz).

#### 6.6.3B.3.5.2 Test requirement (network signalled value "NS\_07")

When "NS\_07" is indicated in the cell:

- the measured UE mean power in the channel bandwidth, derived in step 3, shall fulfil requirements in Table 6.2.4B.5-7 as appropriate,
- and
- the measured average power of spurious emission, derived in step 4, shall not exceed the described value in Table 6.6.3B.3.5.2-1. These requirements also apply for the frequency ranges that are less than  $\Delta f_{OOB}$  (MHz) in Table 6.6.3.1.3-1 from the edge of the channel bandwidth.

**Table 6.6.3B.3.5.2-1: Additional requirements (network signalled value "NS\_07")**

Frequency band (MHz)	Channel bandwidth / Spectrum emission limit (dBm)		Measurement bandwidth
	10 MHz		
$769 \leq f \leq 775$	-55.5		6.25 kHz
Note: The emissions measurement shall be sufficiently power averaged to ensure a standard deviation < 0.5 dB.			

NOTE: (only for testing requirements in Table 6.6.3B.3.5.2-1):  
For measurement conditions at the edge of each frequency range, the lowest frequency of the measurement position in each frequency range should be set at the lowest boundary of the frequency range plus MBW/2. The highest frequency of the measurement position in each frequency range should be set at the highest boundary of the frequency range minus MBW/2. MBW denotes the measurement bandwidth (6.25 kHz).

### 6.6.3B.3.5.3 Test requirement (network signalled value "NS\_08")

When "NS\_08" is indicated in the cell:

- the measured UE mean power in the channel bandwidth, derived in step 3, shall fulfil requirements in Table 6.2.4B.5-8 as appropriate,
- and
- the measured average power of spurious emission, derived in step 4, shall not exceed the described value in Table 6.6.3B.3.5.3-1. This requirement also applies for the frequency ranges that are less than  $\Delta f_{OOB}$  (MHz) in Table 6.6.3.1.3-1 from the edge of the channel bandwidth.

**Table 6.6.3B.3.5.3-1: Additional requirements (network signalled value "NS\_08")**

Frequency band (MHz)	Channel bandwidth / Spectrum emission limit (dBm)			Measurement bandwidth
	5MHz	10MHz	15MHz	
$860 \leq f \leq 890$	-40	-40	-40	1 MHz

NOTE: (only for testing requirements in Table 6.6.3B.3.5.3-1):  
For measurement conditions at the edge of each frequency range, the lowest frequency of the measurement position in each frequency range should be set at the lowest boundary of the frequency range plus MBW/2. The highest frequency of the measurement position in each frequency range should be set at the highest boundary of the frequency range minus MBW/2. MBW denotes the measurement bandwidth (1 MHz).

### 6.6.3B.3.5.4 Test requirement (network signalled value "NS\_09")

When "NS\_09" is indicated in the cell:

- the measured UE mean power in the channel bandwidth, derived in step 3, shall fulfil requirements in Table 6.2.4B.5-9 as appropriate,
- and
- the measured average power of spurious emission, derived in step 4, shall not exceed the described value in table 6.6.3B.3.5.4-1. This requirement also applies for the frequency ranges that are less than  $\Delta f_{OOB}$  (MHz) in Table 6.6.3.1.3-1 from the edge of the channel bandwidth.

**Table 6.6.3B.3.5.4-1: Additional requirements (network signalled value "NS\_09")**

Frequency band (MHz)	Channel bandwidth / Spectrum emission limit (dBm)			Measurement bandwidth
	5MHz	10MHz	15MHz	
$1475.9 \leq f \leq 1510.9$	-35	-35	-35	1 MHz

NOTE 1: (only for testing requirements in Table 6.6.3B.3.5.4-1):

For measurement conditions at the edge of each frequency range, the lowest frequency of the measurement position in each frequency range should be set at the lowest boundary of the frequency range plus MBW/2. The highest frequency of the measurement position in each frequency range should be set at the highest boundary of the frequency range minus MBW/2. MBW denotes the measurement bandwidth (1 MHz).

NOTE 2: To improve measurement accuracy, A-MPR values for NS\_09 specified in Table 6.2.4B.3-1 in clause 6.2.4B are derived based on both the above NOTE 1 and 100 kHz RBW.

#### 6.6.3B.3.5.5 Test requirement (network signalled value "NS\_12")

When "NS 12" is indicated in the cell:

- the measured UE mean power in the channel bandwidth, derived in step 3, shall fulfil requirements in Table 6.2.4B.5-12 as appropriate,
- and
- the power of any UE emission shall not exceed the levels specified in Table 6.6.3B.3.5-1. This requirement also applies for the frequency ranges that are less than  $\Delta f_{OOB}$  (MHz) in Table 6.6.3.1.3-1 from the edge of the channel bandwidth.

**Table 6.6.3B.3.5.5-1: Additional requirements**

Frequency band (MHz)	Channel bandwidth/ Spectrum emission limit (dBm)	Measurement bandwidth
	1.4 MHz, 3 MHz, 5 MHz, 10 MHz, 15 MHz	
$806 \leq f \leq 813.5$	-42	6.25 kHz
NOTE 1: The requirement applies for E-UTRA carriers with lower channel edge at or above 814.2 MHz.		
NOTE 2: The emissions measurement shall be sufficiently power averaged to ensure a standard deviation < 0.5 dB.		

#### 6.6.3B.3.5.6 Test requirement (network signalled value "NS\_13")

When "NS 13" is indicated in the cell:

- the measured UE mean power in the channel bandwidth, derived in step 3, shall fulfil requirements in Table 6.2.4B.5-13 as appropriate,
- and
- the power of any UE emission shall not exceed the levels specified in Table 6.6.3B.3.5.6-1. This requirement also applies for the frequency ranges that are less than  $\Delta f_{OOB}$  (MHz) in Table 6.6.3.1.3-1 from the edge of the channel bandwidth.

**Table 6.6.3B.3.5.6-1: Additional requirements**

Frequency band (MHz)	Channel bandwidth/ Spectrum emission limit (dBm)	Measurement bandwidth
	1.4, 3, 5 MHz	
$806 \leq f \leq 816$	-42	6.25 kHz
NOTE 1: The requirement applies for E-UTRA carriers with lower channel edge at or above 819 MHz.		
NOTE 2: The emissions measurement shall be sufficiently power averaged to ensure a standard deviation < 0.5 dB.		

#### 6.6.3B.3.5.7 Test requirement (network signalled value "NS\_14")

When "NS 14" is indicated in the cell:

- the measured UE mean power in the channel bandwidth, derived in step 3, shall fulfil requirements in Table 6.2.4B.5-14 as appropriate,

and

- the power of any UE emission shall not exceed the levels specified in Table 6.6.3B.3.5.7-1. This requirement also applies for the frequency ranges that are less than  $\Delta f_{\text{OOB}}$  (MHz) in Table 6.6.3.1.3-1 from the edge of the channel bandwidth.

**Table 6.6.3B.3.5.7-1: Additional requirements**

Frequency band (MHz)	Channel bandwidth/ Spectrum emission limit (dBm)	Measurement bandwidth
	10 MHz, 15 MHz	
$806 \leq f \leq 816$	-42	6.25 kHz
NOTE 1: The requirement applies for E-UTRA carriers with lower channel edge at or above 824 MHz.		
NOTE 2: The emissions measurement shall be sufficiently power averaged to ensure a standard deviation < 0.5 dB.		

#### 6.6.3B.3.5.8 Test requirement (network signalled value "NS\_15")

When "NS 15" is indicated in the cell:

- the measured UE mean power in the channel bandwidth, derived in step 3, shall fulfil requirements in Table 6.2.4B.5-15 as appropriate,

and

- the power of any UE emission shall not exceed the levels specified in Table 6.6.3B.3.5.8-1. This requirement also applies for the frequency ranges that are less than  $\Delta f_{\text{OOB}}$  (MHz) in Table 6.6.3.1.3-1 from the edge of the channel bandwidth.

**Table 6.6.3B.3.5.8-1: Additional requirements**

Frequency band (MHz)	Channel bandwidth / Spectrum emission limit (dBm)	Measurement bandwidth	Note
	1.4, 3, 5, 10, 15 MHz		
$851 \leq f \leq 859$	-53	6.25 kHz	
Note: The emissions measurement shall be sufficiently power averaged to ensure standard deviation < 0.5 dB.			

#### 6.6.3B.3.5.9 Test requirement (network signalled value "NS\_16")

When "NS 16" is indicated in the cell:

- the measured UE mean power in the channel bandwidth, derived in step 3, shall fulfil requirements in Table 6.2.4B.5-16 as appropriate,

and

- the power of any UE emission shall not exceed the levels specified in Table 6.6.3B.3.5.9-1. This requirement also applies for the frequency ranges that are less than  $\Delta f_{\text{OOB}}$  (MHz) in Table 6.6.3.1.3-1 from the edge of the channel bandwidth.

**Table 6.6.3B.3.5.9-1: Additional requirements**

Frequency band (MHz)	Channel bandwidth / Spectrum emission limit (dBm)	Measurement bandwidth	Note
	1.4, 3, 5, 10 MHz		
$790 \leq f \leq 803$	-32	1 MHz	

## 6.6.3B.3.5.10 Test requirement (network signalled value "NS\_17")

When "NS 17" is indicated in the cell:

the measured UE mean power in the channel bandwidth, derived in step 3, shall fulfil requirements in Table 6.2.4B.5-17 as appropriate, s

and

- the power of any UE emission shall not exceed the levels specified in Table 6.6.3B.3.5.10-1. This requirement also applies for the frequency ranges that are less than  $\Delta f_{\text{OOB}}$  (MHz) in Table 6.6.3.1.3-1 from the edge of the channel bandwidth.

**Table 6.6.3B.3.5.10-1: Additional requirements**

Frequency band (MHz)	Channel bandwidth / Spectrum emission limit (dBm)	Measurement bandwidth	Note
	5, 10 MHz		
$470 \leq f \leq 710$	-26.2	6 MHz	1
Note 1: Applicable when the assigned E-UTRA carrier is confined within 718 MHz and 748 MHz and when the channel bandwidth used is 5 or 10 MHz.			

## 6.6.3B.3.5.11 Test requirement (network signalled value "NS\_18")

When "NS 18" is indicated in the cell:

the measured UE mean power in the channel bandwidth, derived in step 3, shall fulfil requirements in Table 6.2.4B.5-18 as appropriate,

and

- the power of any UE emission shall not exceed the levels specified in Table 6.6.3B.3.5.11-1. This requirement also applies for the frequency ranges that are less than  $\Delta f_{\text{OOB}}$  (MHz) in Table 6.6.3.1.3-1 from the edge of the channel bandwidth.

**Table 6.6.3B.3.5.11-1: Additional requirements**

Frequency band (MHz)	Channel bandwidth / Spectrum emission limit (dBm)	Measurement bandwidth	Note
	5, 10, 15, 20 MHz		
692-698	-26.2	6 MHz	

## 6.6.3B.3.5.12 Test requirement (network signalled value "NS\_19")

When "NS\_19" is indicated in the cell:

- the measured UE mean power in the channel bandwidth, derived in step 3, shall fulfil requirements in Table 6.2.4B.5-18 as appropriate,

and

- the power of any UE emission shall not exceed the levels specified in Table 6.6.3B.3.5.12-1. This requirement also applies for the frequency ranges that are less than  $F_{\text{OOB}}$  (MHz) in Table 6.6.3.1.3-1 from the edge of the channel bandwidth.

**Table 6.6.3B.3.5.12-1: Additional requirements**

Frequency band (MHz)	Channel bandwidth / Spectrum emission limit (dBm)	Measurement bandwidth	Note
	3, 5, 10, 15, 20 MHz		

$662 \leq f \leq 694$	-25	8 MHz	
-----------------------	-----	-------	--

#### 6.6.3B.3.5.13 Test requirement (network signalled value "NS\_21")

When "NS\_21" is indicated in the cell, the power of any UE emission shall not exceed the levels specified in Table 6.6.3B.3.5.13-1. These requirements also apply for the frequency ranges that are less than  $F_{OOB}$  (MHz) in Table 6.6.3.1.3-1 and Table 6.6.3.1A-1 from the edge of the channel bandwidth.

**Table 6.6.3B.3.5.13-1: Additional requirements**

Frequency band (MHz)	Channel bandwidth / Spectrum emission limit (dBm)	Measurement bandwidth
	5, 10 MHz	
$2200 \leq f < 2288$	-40	1 MHz
$2288 \leq f < 2292$	-37	1 MHz
$2292 \leq f < 2296$	-31	1 MHz
$2296 \leq f < 2300$	-25	1 MHz
$2320 \leq f < 2324$	-25	1 MHz
$2324 \leq f < 2328$	-31	1 MHz
$2328 \leq f < 2332$	-37	1 MHz
$2332 \leq f \leq 2395$	-40	1 MHz

#### 6.6.3B.3.5.14 Test requirement (network signalled value "NS\_24")

When "NS\_24" is indicated in the cell, the power of any UE emission shall not exceed the levels specified in Table 6.6.3B.3.5.14-1. This requirement also applies for the frequency ranges that are less than  $F_{OOB}$  (MHz) in Table 6.6.3.1.3-1 from the edge of the channel bandwidth.

**Table 6.6.3B.3.5.14-1: Additional requirements**

Frequency band (MHz)	Channel bandwidth / Spectrum emission limit (dBm)	Measurement bandwidth
	5 MHz, 10 MHz, 15 MHz, 20 MHz	
Band 34	-50	MHz
Note 1: This requirement applies at a frequency offset equal or larger than 5 MHz from the upper edge of the channel bandwidth, whenever these frequencies overlap with the specified frequency band.		

#### 6.6.3B.3.5.15 Test requirement (network signalled value "NS\_25")

When "NS\_25" is indicated in the cell, the power of any UE emission shall not exceed the levels specified in Table 6.6.3B.3.5.15-1. This requirement also applies for the frequency ranges that are less than  $F_{OOB}$  (MHz) in Table 6.6.3.1.3-1 from the edge of the channel bandwidth.

**Table 6.6.3B.3.5.15-1: Additional requirements**

Frequency band (MHz)	Channel bandwidth / Spectrum emission limit (dBm)	Measurement bandwidth
	5 MHz, 10 MHz, 15 MHz, 20 MHz	
Band 34	-40	MHz
Note 1: This requirement applies at a frequency offset equal or larger than 5 MHz from the upper edge of the channel bandwidth, whenever these frequencies overlap with the specified frequency band.		

## 6.6.3E Spurious emission for UE category 0

### 6.6.3E.1 Transmitter Spurious emissions for UE category 0

#### 6.6.3E.1.1 Test purpose

Same test purpose as in clause 6.6.3.1.1.

#### 6.6.3E.1.2 Test applicability

This test case applies to all types of E-UTRA UE release 12 and forward of UE category 0.

#### 6.6.3E.1.3 Minimum conformance requirements

Same minimum conformance requirements as in clause 6.6.3.1.3.

#### 6.6.3E.1.4 Test description

##### 6.6.3E.1.4.1 Initial conditions

Same initial conditions as in clause 6.6.3.1.4.1 with following exceptions for HD-FDD:

- Instead of Table 6.6.3.1.4.1-1 → use Table 6.6.3E.1.4.1-1.
- Connect SS to the UE antenna connectors as shown in TS 36.508[7] Annex A Figure A.3 using only main UE Tx/Rx antenna.

**Table 6.6.3E.1.4.1-1: Test Configuration Table**

Initial Conditions						
Test Environment (as specified in TS 36.508 [7] subclause 4.1)			NC			
Test Frequencies (as specified in TS36.508 [7] subclause 4.3.1)			Low range, Mid range, High range			
Test Channel Bandwidths (as specified in TS 36.508 [7] subclause 4.3.1)			Lowest, 5MHz, Highest			
Test Parameters for Channel Bandwidths						
Ch BW	Downlink Configuration			Uplink Configuration		
	Mod'n	RB allocation		Mod'n	RB allocation	
		FDD	TDD		FDD and HD-FDD	TDD
1.4MHz	N/A for Spurious Emissions testing			QPSK	6	6
1.4MHz				QPSK	1	1
3MHz				QPSK	15	15
3MHz				QPSK	1	1
5MHz				QPSK	25	25
5MHz				QPSK	1	1
10MHz				QPSK	36	36
10MHz				QPSK	1	1
15MHz				QPSK	36	36
15MHz				QPSK	1	1
20MHz				QPSK	36	36
20MHz				QPSK	1	1
Note 1: Test Channel Bandwidths are checked separately for each E-UTRA band, which applicable channel bandwidths are specified in Table 5.4.2.1-1.						
Note 2: The 1 RB allocation shall be tested at both RB #0 and RB #max.						

##### 6.6.3E.1.4.2 Test procedure

Same test procedure as in clause 6.6.3E.1.4.2 with following exception for HD-FDD:

- In step 3, slots with transient periods are not under test. Half-duplex guard subframe are not under test.

#### 6.6.3E.1.4.3 Message contents

Message contents are according to TS 36.508 [7] subclause 4.6.

#### 6.6.3E.1.5 Test requirement

This clause specifies the requirements for the specified E-UTRA band for Transmitter Spurious emissions requirement with frequency range as indicated in table. 6.6.3E.1.5-1.

The measured average power of spurious emission, derived in step 3, shall not exceed the described value in Table 6.6.3E.1.5-1.

The spurious emission limits apply for the frequency ranges that are more than  $\Delta f_{\text{OOB}}$  (MHz) from the edge of the channel bandwidth shown in Table 6.6.3.1.3-1.

NOTE: For measurement conditions at the edge of each frequency range, the lowest frequency of the measurement position in each frequency range should be set at the lowest boundary of the frequency range plus MBW/2. The highest frequency of the measurement position in each frequency range should be set at the highest boundary of the frequency range minus MBW/2. MBW denotes the measurement bandwidth defined for the protected band.

**Table 6.6.3E.1.5-1: General spurious emissions test requirements**

Frequency Range	Maximum Level	Measurement Bandwidth	Notes
$9 \text{ kHz} \leq f < 150 \text{ kHz}$	-36 dBm	1 kHz	
$150 \text{ kHz} \leq f < 30 \text{ MHz}$	-36 dBm	10 kHz	
$30 \text{ MHz} \leq f < 1000 \text{ MHz}$	-36 dBm	100 kHz	
$1 \text{ GHz} \leq f < 12.75 \text{ GHz}$	-30 dBm	1 MHz	

#### 6.6.3E.2 Spurious emission band UE co-existence for UE category 0

##### 6.6.3E.2.1 Test purpose

Same test purpose as in clause 6.6.3.2.1.

##### 6.6.3E.2.2 Test applicability

This test case applies to all types of E-UTRA UE release 12 and forward of UE category 0.

##### 6.6.3E.2.3 Minimum conformance requirements

Same minimum conformance requirements as in clause 6.6.3.2.3 with the following exceptions:

- Instead of Tables 6.6.3.2.3-1 through 6.6.3.2.3-1D → use Table 6.6.3E.2.3-1.

Table 6.6.3E.2.3-1: Spurious emission band limits Rel-12

E-UTRA Band	Spurious emission						
	Protected band	Frequency range (MHz)		Maximum Level (dBm)	MBW (MHz)	Note	
2	E-UTRA Band 4, 5, 10, 12, 13, 14, 17, 22, 23, 24, 26, 27, 28, 29, 30, 41, 42	F <sub>DL_low</sub>	-	F <sub>DL_high</sub>	-50	1

	E-UTRA Band 43	F <sub>DL_low</sub>	-	F <sub>DL_high</sub>	-50	1	2
3	E-UTRA Band 1, 5, 7, 8, 20, 26, 27, 28, 31, 32, 33, 34, 38, 41, 43, 44	F <sub>DL_low</sub>	-	F <sub>DL_high</sub>	-50	1	
	E-UTRA Band 3	F <sub>DL_low</sub>	-	F <sub>DL_high</sub>	-50	1	15
	E-UTRA Band 11, 18, 19, 21	F <sub>DL_low</sub>	-	F <sub>DL_high</sub>	-50	1	13
	E-UTRA Band 22, 42	F <sub>DL_low</sub>	-	F <sub>DL_high</sub>	-50	1	2
	Frequency range	1884.5	-	1915.7	-41	0.3	13
4	E-UTRA Band 2, 4, 5, 10, 12, 13, 14, 17, 22, 23, 24, 25, 26, 27, 28, 29, 30, 41, 43	F <sub>DL_low</sub>	-	F <sub>DL_high</sub>	-50	1	
	E-UTRA Band 42	F <sub>DL_low</sub>	-	F <sub>DL_high</sub>	-50	1	2
5	E-UTRA Band 1, 2, 3, 4, 5, 7, 8, 10, 12, 13, 14, 17, 23, 24, 25, 28, 29, 30, 31, 38, 40, 42, 43	F <sub>DL_low</sub>	-	F <sub>DL_high</sub>	-50	1	
	E-UTRA Band 41	F <sub>DL_low</sub>	-	F <sub>DL_high</sub>	-50	1	2
	E-UTRA Band 26	859	-	869	-27	1	
8	E-UTRA Band 1, 20, 28, 31, 32, 33, 34, 38, 39, 40	F <sub>DL_low</sub>	-	F <sub>DL_high</sub>	-50	1	
	E-UTRA band 3	F <sub>DL_low</sub>	-	F <sub>DL_high</sub>	-50	1	2
	E-UTRA band 7	F <sub>DL_low</sub>	-	F <sub>DL_high</sub>	-50	1	2
	E-UTRA Band 8	F <sub>DL_low</sub>	-	F <sub>DL_high</sub>	-50	1	15
	E-UTRA Band 22, 41, 42, 43	F <sub>DL_low</sub>	-	F <sub>DL_high</sub>	-50	1	2
	E-UTRA Band 11, 21	F <sub>DL_low</sub>	-	F <sub>DL_high</sub>	-50	1	23
	Frequency range	860	-	890	-40	1	15, 23
	Frequency range	1884.5	-	1915.7	-41	0.3	8, 23
13	E-UTRA Band 2, 4, 5, 10, 12, 13, 17, 23, 25, 26, 27, 29, 41	F <sub>DL_low</sub>	-	F <sub>DL_high</sub>	-50	1	
	Frequency range	769	-	775	-35	0.00625	15
	Frequency range	799	-	805	-35	0.00625	11, 15
	E-UTRA Band 14	F <sub>DL_low</sub>	-	F <sub>DL_high</sub>	-50	1	15
	E-UTRA Band 24, 30	F <sub>DL_low</sub>	-	F <sub>DL_high</sub>	-50	1	2
20	E-UTRA Band 1, 3, 7, 8, 20, 22, 31, 32, 33, 34, 40, 43	F <sub>DL_low</sub>	-	F <sub>DL_high</sub>	-50	1	
	E-UTRA Band 20	F <sub>DL_low</sub>	-	F <sub>DL_high</sub>	-50	1	15
	E-UTRA Band 38, 42	F <sub>DL_low</sub>	-	F <sub>DL_high</sub>	-50	1	2
	Frequency range	758	-	788	-50	1	
39	E-UTRA Band 22, 34, 40, 41, 42, 44	F <sub>DL_low</sub>	-	F <sub>DL_high</sub>	-50	1	
	Frequency range	1805		1855	-40	1	32
	Frequency range	1855		1875	-15.5	5	15,26,32
	Frequency range	1875		1880	-15.5	5	15,26,33
41	E-UTRA Band 1, 2, 3, 4, 5, 8, 10, 12, 13, 14, 17, 23, 24, 25, 26, 27, 28, 29, 30, 34, 39, 40, 42, 44	F <sub>DL_low</sub>	-	F <sub>DL_high</sub>	-50	1	
	E-UTRA Band 9, 11, 18, 19, 21	F <sub>DL_low</sub>	-	F <sub>DL_high</sub>	-50	1	30
	Frequency range	1839.9		1879.9	-50	1	30
	Frequency range	1884.5		1915.7	-41	0.3	8, 30

- Note 1:  $F_{DL\_low}$  and  $F_{DL\_high}$  refer to each E-UTRA frequency band specified in Table 5.5-1.
- Note 2: As exceptions, measurements with a level up to the applicable requirements defined in Table 6.6.3.1.3-2 are permitted for each assigned E-UTRA carrier used in the measurement due to 2<sup>nd</sup>, 3<sup>rd</sup>, 4<sup>th</sup> [or 5<sup>th</sup>] harmonic spurious emissions. Due to spreading of the harmonic emission the exception is also allowed for the first 1 MHz frequency range immediately outside the harmonic emission on both sides of the harmonic emission. This results in an overall exception interval centred at the harmonic emission of  $(2\text{MHz} + N \times L_{CRB} \times 180\text{kHz})$ , where N is 2, 3, 4, [5] for the 2<sup>nd</sup>, 3<sup>rd</sup>, 4<sup>th</sup> [or 5<sup>th</sup>] harmonic respectively. The exception is allowed if the measurement bandwidth (MBW) totally or partially overlaps the overall exception interval.
- Note 3: To meet these requirements some restriction will be needed for either the operating band or protected band.
- Note 4: N/A
- Note 5: For non synchronised TDD operation to meet these requirements some restriction will be needed for either the operating band or protected band.
- Note 6: N/A
- Note 7: Applicable when co-existence with PHS system operating in 1884.5-1919.6MHz.
- Note 8: Applicable when co-existence with PHS system operating in 1884.5 -1915.7MHz.
- Note 9: N/A
- Note 10: N/A
- Note 11: Whether the applicable frequency range should be 793-805MHz instead of 799-805MHz is TBD.
- Note 12: The emissions measurement shall be sufficiently power averaged to ensure a standard deviation < 0.5 dB.
- Note 13: This requirement applies for 5, 10, 15 and 20 MHz E-UTRA channel bandwidth allocated within 1744.9MHz and 1784.9MHz.
- Note 14: N/A
- Note 15: These requirements also apply for the frequency ranges that are less than  $F_{OOB}$  (MHz) in Table 6.6.3.1.3-1 from the edge of the channel bandwidth.
- Note 16: N/A
- Note 17: N/A
- Note 18: N/A
- Note 19: Applicable when the assigned E-UTRA carrier is confined within 718 MHz and 748 MHz and when the channel bandwidth used is 5 or 10 MHz.
- Note 20: N/A
- Note 21: This requirement is applicable for any channel bandwidths within the range 2500 - 2570 MHz with the following restriction: for carriers of 15 MHz bandwidth when carrier centre frequency is within the range 2560.5 - 2562.5 MHz and for carriers of 20 MHz bandwidth when carrier centre frequency is within the range 2552 - 2560 MHz the requirement is applicable only for an uplink transmission bandwidth less than or equal to 54 RB.
- Note 22: This requirement is applicable for any channel bandwidths within the range 2570 - 2615 MHz with the following restriction: for carriers of 15 MHz bandwidth when carrier centre frequency is within the range 2605.5 - 2607.5 MHz and for carriers of 20 MHz bandwidth when carrier centre frequency is within the range 2597 - 2605 MHz the requirement is applicable only for an uplink transmission bandwidth less than or equal to 54 RB.  
For carriers with channel bandwidth overlapping the frequency range 2615 - 2620 MHz the requirement applies with the maximum output power configured to +19 dBm in the IE *P-Max*.
- Note 23: This requirement is applicable only for the following cases:  
- for carriers of 5 MHz channel bandwidth when carrier centre frequency ( $F_c$ ) is within the range  $902.5 \text{ MHz} \leq F_c < 907.5 \text{ MHz}$  with an uplink transmission bandwidth less than or equal to 20 RB  
- for carriers of 5 MHz channel bandwidth when carrier centre frequency ( $F_c$ ) is within the range  $907.5 \text{ MHz} \leq F_c \leq 912.5 \text{ MHz}$  without any restriction on uplink transmission bandwidth  
- for carriers of 10 MHz channel bandwidth when carrier centre frequency ( $F_c$ ) is  $F_c = 910 \text{ MHz}$  with an uplink transmission bandwidth less than or equal to 32 RB with  $RB_{start} > 3$ .
- Note 24: As exceptions, measurements with a level up to the applicable requirement of -38 dBm/MHz is permitted for each assigned E-UTRA carrier used in the measurement due to 2<sup>nd</sup> harmonic spurious emissions. An exception is allowed if there is at least one individual RB within the transmission bandwidth (see Figure 5.6-1) for which the 2<sup>nd</sup> harmonic totally or partially overlaps the measurement bandwidth (MBW).
- Note 25: As exceptions, measurements with a level up to the applicable requirement of -36 dBm/MHz is permitted for each assigned E-UTRA carrier used in the measurement due to 3<sup>rd</sup> harmonic spurious emissions. An exception is allowed if there is at least one individual RB within the transmission bandwidth (see Figure 5.6-1) for which the 3<sup>rd</sup> harmonic totally or partially overlaps the measurement bandwidth (MBW).
- Note 26: For these adjacent bands, the emission limit could imply risk of harmful interference to UE(s) operating in the protected operating band.
- Note 27: This requirement is applicable for any channel bandwidths within the range 1920 - 1980 MHz with the following restriction: for carriers of 15 MHz bandwidth when carrier centre frequency is within the range 1927.5 - 1929.5 MHz and for carriers of 20 MHz bandwidth when carrier centre frequency is within the range 1930 - 1938 MHz the requirement is applicable only for an uplink

	transmission bandwidth less than or equal to 54 RB.
Note 28:	N/A
Note 29:	N/A
Note 30:	This requirement applies when the E-UTRA carrier is confined within 2545-2575MHz or 2595-2645MHz and the channel bandwidth is 10 or 20 MHz.
Note 31:	N/A
Note 32:	This requirement is applicable for an uplink transmission bandwidth less than or equal to [54 RB] for carriers of 15 MHz bandwidth when carrier centre frequency is within the range 1887.5 - 1889.5 MHz and for carriers of 20 MHz bandwidth when carrier centre frequency is within the range 1890 - 1898 MHz.
Note 33:	This requirement is only applicable for carriers with bandwidth confined within 1885-1920 MHz (requirement for carriers with at least 1RB confined within 1880 - 1885 MHz is not specified). This requirement applies for an uplink transmission bandwidth less than or equal to [54 RB] for carriers of 15 MHz bandwidth when carrier centre frequency is within the range 1892.5 - 1894.5 MHz and for carriers of 20 MHz bandwidth when carrier centre frequency is within the range 1895 - 1903 MHz.
Note 34:	This requirement is applicable for 5 and 10 MHz E-UTRA channel bandwidth allocated within 718-728MHz. For carriers of 10 MHz bandwidth, this requirement applies for an uplink transmission bandwidth less than or equal to 30 RB with RBstart > 1 and RBstart<48.
Note 35:	This requirement is applicable in the case of a 10 MHz E-UTRA carrier confined within 703 MHz and 733 MHz, otherwise the requirement of -25 dBm with a measurement bandwidth of 8 MHz applies.

The normative reference for this requirement is TS 36.101 [2] subclause 6.6.3E.2.

This test use minimum requirements from many releases of TS 36.101 [2] due to release independence defined in TS 36.307 [16]

#### 6.6.3E.2.4 Test description

##### 6.6.3E.2.4.1 Initial conditions

Same initial conditions as in clause 6.6.3.2.4.1 with the following exceptions:

- Instead of Table 6.6.3.2.4.1-1 and Table 6.6.3.2.4.1-2 → use Table 6.6.3E.2.4.1-1 and Table 6.6.3E.2.4.1-2.
- Connect the SS to the UE antenna connectors as shown in TS 36.508[7] Annex A Figure A.3 using only main UE Tx/Rx antenna.

Table 6.6.3E.2.4.1-1: Test Configuration Table

Initial Conditions

20MHz				QPSK	36 <sup>3, 11</sup>	36 <sup>4, 17, 18</sup>
20MHz				QPSK	1	1 <sup>5</sup>

Note 1:	Test Channel Bandwidths are checked separately for each E-UTRA band, which applicable channel bandwidths are specified in Table 5.4.2.1-1.
Note 2:	The 1 RB allocation shall be tested at both RB #0 and RB #max.
Note 3:	To be used for requirements under note 15 in table 6.6.3.2.3-1 in high range at RB#, instead of full allocation.
Note 4:	To be used for requirements under note 16 in table 6.6.3.2.3-1 and table 6.6.3.2.3-1A, note 17 in table 6.6.3.2.3-1B, note 22 in table 6.6.3.2.3-1C in high range - 5MHz at RB#(full allocation – 54), instead of full allocation.
Note 5:	For requirements under note 16 in table 6.6.3.2.-1 and table 6.6.3.2.3-1A, note 17 in table 6.6.3.2.3-1B, note 22 in table 6.6.3.2.3-1C (high range – 5MHz) is tested instead of high channel.
Note 6:	Do not apply for requirements under Note 13 in Tables 6.6.3.2.3-1 to 6.6.3.2.3-1C. Test frequencies for these requirements are defined in Table 6.6.3.2.4.1-2.
Note 7:	Void
Note 8:	For requirements under note 17 in table 6.6.3.2.3-1A, note 18 in table 6.6.3.2.3-1, note 23 in table 6.6.3.2.3-1C (high range – 10MHz) is tested with RB #0 to RB #19 used.
Note 9:	For requirements under note 17 in table 6.6.3.2.3-1A, note 18 in table 6.6.3.2.3-1B, note 23 in table 6.6.3.2.3-1C high range is tested with RB #4 to RB #35 used.
Note 10:	For requirements under note 17 in table 6.6.3.2.3-1A, note 18 in table 6.6.3.2.3-1B, note 23 in table 6.6.3E.2.3-1C high range is tested with RB #4 and (RB#max -4) used.
Note 11:	To be used for requirements under note 17 in table 6.6.3.2.3-1, note 18 in table 6.6.3.2.3-1A, note 19 in table 6.6.3.2.3-1B and note 27 in table 6.6.3.2.3-1C in low range at RB#0, instead of full allocation.
Note 12:	For requirements under note 16 in table 6.6.3E.2.3-1 and table 6.6.3.2.3-1A, note 17 in table 6.6.3.2.3-1B, note 22 in table 6.6.3.2.3-1C, the message exception in Table 6.6.3.2.4.3-1 is used to test with the high range.
Note 13:	For requirements under note 31 in table 6.6.3.2.3-1C and note 34 in table 6.6.3E.2.3-1 only 720.5 MHz is tested with 5 MHz and only 723 MHz is tested with 10 MHz.
Note 14:	For requirements under note 31 in table 6.6.3.2.3-1C and note 34 in table 6.6.3E.2.3-1 RB #2 and RB #47 used.
Note 15:	To be used for requirements under note 31 in table 6.6.3.2.3-1C and note 34 in table 6.6.3E.2.3-1 at RB#2, instead of full allocation.
Note 16:	For requirements under note 32 in table 6.6.3.2.3-1C and note 35 in table 6.6.3E.2.3-1 only low range and 728 MHz with 10 MHz is tested.
Note 17:	To be used for requirements under note 32 in table 6.6.3E.2.3-1 in low range, instead of full allocation.
Note 18:	To be used for requirements under note 33 in table 6.6.3E.2.3-1 (high range-7 MHz), instead of full allocation and high range.

**Table 6.6.3E.2.4.1-2: Test frequencies for E-UTRA channel bandwidth for operating band 3 with Note 13 (in Tables 6.6.3E.2.3-1)**

Bandwidth [MHz]	N <sub>UL</sub>	Frequency of Uplink [MHz]	N <sub>DL</sub>	Frequency of Downlink [MHz]
5	19924	1782.4	1924	1877.4
10	19899	1779.9	1899	1874.9
15	19874	1777.4	1874	1872.4
20	19849	1774.9	1849	1869.9

#### 6.6.3E.2.4.2 Test procedure

Same test procedure as in clause 6.6.3.2.4.2 with the following exception for HD-FDD:

- In step 3, slots with transient periods are not under test. Half-duplex guard subframes are not under test.

#### 6.6.3E.2.4.3 Message contents

Message contents are according to TS 36.508 [7] subclause 4.6 with the following exceptions:

#### 6.6.3E.2.5 Test requirement

Test requirements for Spurious Emissions UE Co-existence are the same as the minimum requirements and are not repeated in this section.

The measured average power of spurious emission, derived in step 3, shall not exceed the described value in table 6.6.3E.2.3-1 according to the following rule:

The requirements for the UE are release specific and can be found in Tables 6.6.3E.2.3-1. If the UE support a band, which is not defined in the table corresponding UE's release, the requirements for this band are taken from the table of earliest release where requirements for this band are defined. This has been described in following Table 6.6.3E.2.5-1.

**Table 6.6.3E.2.5-1: UE Requirements according to UE E-UTRA release and supported E-UTRA band**

Band	UE Requirements per release
	Rel-12
2	Table 6.6.3E.2.3-1
3	Table 6.6.3E.2.3-1
4	Table 6.6.3E.2.3-1
5	Table 6.6.3E.2.3-1
8	Table 6.6.3E.2.3-1
13	Table 6.6.3E.2.3-1
20	Table 6.6.3E.2.3-1
39	Table 6.6.3E.2.3-1
41	Table 6.6.3E.2.3-1

NOTE 1: The following is applied to Note2 in Table 6.6.3E.2.3-1. For frequency with 2nd, 3rd or 4th harmonic spurious emissions, the measurements are covered in 6.6.3.1.

NOTE 2: The restriction on the maximum uplink transmission to 36 RB in Notes 14 and 15 of Table 6.6.3E.2.5-1 is intended for conformance testing and may be applied to network operation to facilitate coexistence when the aggressor and victim bands are deployed in the same geographical area. The applicable spurious emission requirement of -15.5 dBm/5MHz is a least restrictive technical condition for FDD/TDD coexistence and may have to be revised in the future.6.6.3E.3 Additional spurious emissions for UE category 0

#### 6.6.3E.3.1 Test purpose

Same test purpose as in clause 6.6.3.3.1.

#### 6.6.3E.3.2 Test applicability

This test case applies to all types of E-UTRA UE release 12 and forward of UE category 0.

#### 6.6.3E.3.3 Minimum conformance requirements

Same minimum conformance requirements as in clause 6.6.3.3.3.

#### 6.6.3E.3.4 Test description

##### 6.6.3E.3.4.1 Initial conditions

Same initial conditions as in clause 6.2.3.4.1 with following exceptions for HD-FDD:

- Instead of Table 6.6.3.3.4.1-1 through 6.6.3.3.4.1-15 → use Table 6.6.3E.3.4.1-1 1.
- Connect SS to the UE antenna connectors as shown in TS 36.508[7] Annex A Figure A.3 using only main UE Tx/Rx antenna.

**Table 6.6.3E.3.4.1-1: Test Configuration Table (network signalled value "NS\_07")**

Initial Conditions						
Test Environment (as specified in TS 36.508 [7] subclause 4.1)			NC			
Test Frequencies (as specified in TS36.508 [7] subclause 4.3.1)			Mid range			
Test Channel Bandwidths (as specified in TS 36.508 [7] subclause 4.3.1)			10MHz			
Test Parameters for Channel Bandwidths						
Test Number	Ch BW	Downlink Configuration		Uplink Configuration		
		Mod'n	RB allocation	Mod'n	RB allocation	RB <sub>start</sub>
1	10MHz	N/A for Additional Spurious Emissions testing.		QPSK	1	0
2	10MHz			QPSK	8	0
3	10MHz			QPSK	6	13
4	10MHz			QPSK	20	13
5	10MHz			QPSK	12	13
6	10MHz			16QAM	5	13
7	10MHz			QPSK	16	19
8	10MHz			QPSK	12	19
9	10MHz			16QAM	5	19
10	10MHz			QPSK	30	19
11	10MHz			QPSK	6	43
12	10MHz			QPSK	2	48
13	10MHz			QPSK	36	0
14	10MHz			QPSK	12	0

Editor's note: The following lines belong at the end of section 6.2.4.4.1. As new tables are added to this section, these lines should always follow the tables.

#### 6.6.3E.3.4.2 Test procedure

Same test procedure as in clause 6.2.3.4.2 with following exception for HD-FDD:

- In step 3, slots with transient periods are not under test. Half-duplex guard subframe are not under test.

**Table 6.6.3E.3.4.2-1: Measurement setup for NS\_07**

	<b>Option 1: Measurement with No RMS VBW available</b>	<b>Option2 Measurement with VBW Filtering on Power scale</b>
VBW	$\geq 62.5$ kHz (10 times or more the RBW)	$\leq 43$ Hz
RBW	$\leq 6.25$ kHz	$\leq 6.25$ kHz
Detector type	Averages signal envelope during each measurement point, such as "RMS detector"	Peak
Averaging mode (Trace averaging)	Power (RMS voltage)	Power (RMS voltage), as controlled by "Average Type"
Average Type (applies to detector)	Power (RMS voltage) (automatically occurs with "RMS detector")	Not applicable
Average Type (applies to VBW filter)	Not applicable	Power (RMS voltage)
Number of averages	30, to reduce variance as required, or use an even longer sweep time	1 or use an even narrower VBW filter, thus a longer sweep time
Sweep time	[Don't specify]	Sweep rate (span divided by sweep time) $\leq 0.8 *RBW * VBW$

#### 6.6.3E.3.4.3 Message contents

Same message contents as in clause 6.6.3.3.4.3.

#### 6.6.3E.3.5 Test requirement

This clause specifies the requirements for the specified E-UTRA band for an additional spectrum emission requirement with protected bands as indicated from table 6.6.3E.3.5.1-1 to table 6.6.3E.3.5.2-1.

**NOTE:** For measurement conditions at the edge of each frequency range, the lowest frequency of the measurement position in each frequency range should be set at the lowest boundary of the frequency range plus  $MBW/2$ . The highest frequency of the measurement position in each frequency range should be set at the highest boundary of the frequency range minus  $MBW/2$ .  $MBW$  denotes the measurement bandwidth defined for the protected band.

#### 6.6.3E.3.5.1 Test requirement (network signalled value "NS\_07")

When "NS\_07" is indicated in the cell:

- the measured UE mean power in the channel bandwidth, derived in step 3, shall fulfil requirements in Table 6.2.4.5-7 as appropriate,

and

- the measured average power of spurious emission, derived in step 4, shall not exceed the described value in Table 6.6.3E.3.5.1-1. These requirements also apply for the frequency ranges that are less than  $\Delta f_{\text{OoB}}$  (MHz) in Table 6.6.3.1.3-1 from the edge of the channel bandwidth.

**Table 6.6.3E.3.5.1-1: Additional requirements (network signalled value "NS\_07")**

Frequency band (MHz)	Channel bandwidth / Spectrum emission limit (dBm)	Measurement bandwidth
	10 MHz	

$769 \leq f \leq 775$	-55.5	6.25 kHz
Note: The emissions measurement shall be sufficiently power averaged to ensure a standard deviation < 0.5 dB.		

## 6.6.3EA Spurious emission for UE category M1

### 6.6.3EA.1 Transmitter Spurious emissions for UE category M1

#### 6.6.3EA.1.1 Test purpose

To verify that UE transmitter does not cause unacceptable interference to other channels or other systems in terms of transmitter spurious emissions.

#### 6.6.3EA.1.2 Test applicability

This test case applies to all types of E-UTRA UE release 13 and forward of UE category M1.

#### 6.6.3EA.1.3 Minimum conformance requirements

This clause specifies the requirements for the specified E-UTRA band for Transmitter Spurious emissions requirement with frequency range as indicated in table 6.6.3EA.1.3-2.

The spurious emission limits apply for the frequency ranges that are more than  $\Delta f_{\text{OOB}}$  (MHz) from the edge of the channel bandwidth.

NOTE: For measurement conditions at the edge of each frequency range, the lowest frequency of the measurement position in each frequency range should be set at the lowest boundary of the frequency range plus MBW/2. The highest frequency of the measurement position in each frequency range should be set at the highest boundary of the frequency range minus MBW/2. MBW denotes the measurement bandwidth defined for the protected band.

**Table 6.6.3EA.1.3-1:  $\Delta f_{\text{OOB}}$  boundary between E-UTRA channel and spurious emission domain**

Channel bandwidth	1.4 MHz	3.0 MHz	5 MHz	10 MHz	15 MHz	20 MHz
$\Delta f_{\text{OOB}}$ (MHz)	2.8	6	10	15	20	25

The spurious emission limits in Table 6.6.3EA.1.3-2 apply for all transmitter band configurations (RB) and channel bandwidths.

**Table 6.6.3EA.1.3-2: Spurious emissions limits**

Frequency Range	Maximum Level	Measurement Bandwidth	Notes
$9 \text{ kHz} \leq f < 150 \text{ kHz}$	-36 dBm	1 kHz	
$150 \text{ kHz} \leq f < 30 \text{ MHz}$	-36 dBm	10 kHz	
$30 \text{ MHz} \leq f < 1000 \text{ MHz}$	-36 dBm	100 kHz	
$1 \text{ GHz} \leq f < 12.75 \text{ GHz}$	-30 dBm	1 MHz	
$12.75 \text{ GHz} \leq f < 5^{\text{th}}$ harmonic of the upper frequency edge of the UL operating band in GHz	-30 dBm	1 MHz	Note 1
Note 1: Applies for Band 22, Band 42 and Band 43			

The normative reference for this requirement is TS 36.101 [2] subclause 6.6.3.1.

## 6.6.3EA.1.4 Test description

## 6.6.3EA.1.4.1 Initial conditions

Initial conditions are a set of test configurations the UE needs to be tested in and the steps for the SS to take with the UE to reach the correct measurement state.

The initial test configurations consist of environmental conditions, test frequencies, and channel bandwidths based on E-UTRA bands specified in clause 5.2E. All of these configurations shall be tested with applicable test parameters for each channel bandwidth, and are shown in Table 6.6.3EA.1.4.1-1. The details of the uplink reference measurement channels (RMCs) are specified in Annex A.2. Configurations of PDSCH and MPDCCH before measurement are specified in Annex C.2.

Table 6.6.3EA.1.4.1-1: Test Configuration Table

Initial Conditions						
Test Environment as specified in TS 36.508[7] subclause 4.1	NC					
Test Frequencies as specified in TS 36.508 [7] subclause [4.3.1]	Low range, Mid range, High range					
Test Channel Bandwidths as specified in TS 36.508 [7] subclause [4.3.1]	Lowest					
Test Parameters for Channel Bandwidths and Narrowband positions						
Ch BW	Downlink Configuration		Uplink Configuration			
	N/A		Mod'n	RB allocation		
				FDD and HD-FDD	TDD	Narrowband index (Note 1)
Low range, Mid range						
1.4MHz	N/A		QPSK	1	1	0
1.4MHz			QPSK	6	6	0
3.0MHz			QPSK	1	1	0
3.0MHz			QPSK	6	6	0
5MHz			QPSK	1	1	0
5MHz			QPSK	6	6	0
High range						
1.4MHz	N/A		QPSK	1	1	0
1.4MHz			QPSK	6	6	0
3.0MHz			QPSK	1	1	1
3.0MHz			QPSK	6	6	1
5MHz			QPSK	1	1	3
5MHz			QPSK	6	6	3
Note 1:	Denotes where in the channel Bandwidth the narrowband shall be placed. Narrowband and Narrowband index are defined in TS36.211, 5.2.4					
Note 2:	Test Channel Bandwidths are checked separately for each E-UTRA band, the applicable channel bandwidths are specified in Table 5.4.2.1-1.					
Note 3:	The RB <sub>start</sub> of partial RB allocation shall be RB#0 and RB# (6 - RB allocation) of the narrowband.					

1. Connect SS to the UE antenna connectors as shown in TS 36.508[7] Annex A Figure A.3 using only main UE Tx/Rx antenna.
2. The parameter settings for the cell are set up according to TS 36.508 [7] subclause 4.4.3.
3. Downlink signals are initially set up according to Annex C0, C.1 and C.3.0, and uplink signals according to Annex H.1 and H.3.0.
4. The UL Reference Measurement channels are set according to Table 6.6.3EA.1.4.1-1.
5. Propagation conditions are set according to Annex B.0.
6. Ensure the UE is in State 3A-RF-CE according to TS 36.508 [7] clause 5.2A.2AA. Message contents are defined in clause 6.6.3EA.1.4.3.

#### 6.6.3EA.1.4.2 Test procedure

1. SS sends uplink scheduling information for each UL HARQ process via MPDCCH DCI format 6-0A for C\_RNTI to schedule the UL RMC according to Table 6.6.3EA.1.4.1-1. Since the UE has no payload data to send, the UE transmits uplink MAC padding bits on the UL RMC.
2. Send continuously uplink power control "up" commands in the uplink scheduling information to the UE until the UE transmits at  $P_{UMAX}$  level.
3. Measure the power of the transmitted signal with a measurement filter of bandwidths according to table 6.6.3EA.1.5-1. The centre frequency of the filter shall be stepped in contiguous steps according to table 6.6.3.1.5-1. The measured power shall be verified for each step. The measurement period shall capture the active time slots. For HD-FDD slots with transient periods and Half-duplex guard subframe are not under test.

#### 6.6.3EA.1.4.3 Message contents

Message contents are according to TS 36.508 [7] subclause 4.6 with the condition CEmodeA.

#### 6.6.3EA.1.5 Test requirement

This clause specifies the requirements for the specified E-UTRA band for Transmitter Spurious emissions requirement with frequency range as indicated in table. 6.6.3EA.1.5-1.

The measured average power of spurious emission, derived in step 3, shall not exceed the described value in Table 6.6.3EA.1.5-1.

The spurious emission limits apply for the frequency ranges that are more than  $\Delta f_{OOB}$  (MHz) from the edge of the channel bandwidth shown in Table 6.6.3.1.3-1.

NOTE: For measurement conditions at the edge of each frequency range, the lowest frequency of the measurement position in each frequency range should be set at the lowest boundary of the frequency range plus MBW/2. The highest frequency of the measurement position in each frequency range should be set at the highest boundary of the frequency range minus MBW/2. MBW denotes the measurement bandwidth defined for the protected band.

**Table 6.6.3EA.1.5-1: General spurious emissions test requirements**

Frequency Range	Maximum Level	Measurement Bandwidth	Notes
$9 \text{ kHz} \leq f < 150 \text{ kHz}$	-36 dBm	1 kHz	
$150 \text{ kHz} \leq f < 30 \text{ MHz}$	-36 dBm	10 kHz	
$30 \text{ MHz} \leq f < 1000 \text{ MHz}$	-36 dBm	100 kHz	
$1 \text{ GHz} \leq f < 12.75 \text{ GHz}$	-30 dBm	1 MHz	

#### 6.6.3EA.2 Spurious emission band UE co-existence for UE category M1

##### 6.6.3EA.2.1 Test purpose

To verify that UE transmitter does not cause unacceptable interference to co-existing systems for the specified bands which has specific requirements in terms of transmitter spurious emissions.

##### 6.6.3EA.2.2 Test applicability

This test case applies to all types of E-UTRA UE release 13 and forward of UE category M1.

##### 6.6.3EA.2.3 Minimum conformance requirements

This clause specifies the requirements for the specified E-UTRA band for coexistence with protected bands as indicated in Table 6.6.3.2.3-1.

NOTE: For measurement conditions at the edge of each frequency range, the lowest frequency of the measurement position in each frequency range should be set at the lowest boundary of the frequency range plus MBW/2. The highest frequency of the measurement position in each frequency range should be set at the highest boundary of the frequency range minus MBW/2. MBW denotes the measurement bandwidth defined for the protected band.

**Table 6.6.3EA.2.3-1: Spurious emission band limits Rel-13**

E-UTRA Band	Spurious emission						
	Protected band	Frequency range (MHz)			Maximum Level (dBm)	MBW (MHz)	NOTE
1	E-UTRA Band 1, 5, 7, 8, 11, 18, 19, 20, 21, 22, 26, 27, 28, 31, 32, 38, 40, 41, 42, 43, 44, 45, 65, 67, 68	F <sub>DL_low</sub>	-	F <sub>DL_high</sub>	-50	1	
	E-UTRA Band 3, 34	F <sub>DL_low</sub>	-	F <sub>DL_high</sub>	-50	1	15
	Frequency range	1839.9	-	1879.9	-50	1	15
	Frequency range	1880	-	1895	-40	1	15, 27
	Frequency range	1895	-	1915	-15.5	5	15, 26, 27
	Frequency range	1915	-	1920	+1.6	5	15, 26, 27
2	E-UTRA Band 4, 5, 10, 12, 13, 14, 17, 23, 24, 26, 27, 28, 29, 30, 41, 42, 66	F <sub>DL_low</sub>	-	F <sub>DL_high</sub>	-50	1	
	E-UTRA Band 2, 25	F <sub>DL_low</sub>	-	F <sub>DL_high</sub>	-50	1	15
	E-UTRA Band 43	F <sub>DL_low</sub>	-	F <sub>DL_high</sub>	-50	1	2
3	E-UTRA Band 1, 5, 7, 8, 20, 26, 27, 28, 31, 32, 33, 34, 38, 39, 40, 41, 43, 44, 45, 65, 67, 68	F <sub>DL_low</sub>	-	F <sub>DL_high</sub>	-50	1	
	E-UTRA Band 3	F <sub>DL_low</sub>	-	F <sub>DL_high</sub>	-50	1	15

	Frequency range	1839.9		1879.9	-50	1	30
	Frequency range	1884.5		1915.7	-41	0.3	8, 30

NOTE 1:  $F_{DL\_low}$  and  $F_{DL\_high}$  refer to each E-UTRA frequency band specified in Table 5.5-1

NOTE 2: As exceptions, measurements with a level up to the applicable requirements defined in Table 6.6.3.1-2 are permitted for each assigned E-UTRA carrier used in the measurement due to 2<sup>nd</sup>, 3<sup>rd</sup>, 4<sup>th</sup> [or 5<sup>th</sup>] harmonic spurious emissions. Due to spreading of the harmonic emission the exception is also allowed for the first 1 MHz frequency range immediately outside the harmonic emission on both sides of the harmonic emission. This results in an overall exception interval centred at the harmonic emission of (2MHz + N x  $L_{CRB}$  x 180kHz), where N is 2, 3, 4, [5] for the 2<sup>nd</sup>, 3<sup>rd</sup>, 4<sup>th</sup> [or 5<sup>th</sup>] harmonic respectively. The exception is allowed if the measurement bandwidth (MBW) totally or partially overlaps the overall exception interval.

NOTE 3: To meet these requirements some restriction will be needed for either the operating band or protected band

NOTE 4: N/A

NOTE 5: For non synchronised TDD operation to meet these requirements some restriction will be needed for either the operating band or protected band

- NOTE 6: N/A
- NOTE 7: Applicable when co-existence with PHS system operating in 1884.5-1919.6MHz.
- NOTE 8: Applicable when co-existence with PHS system operating in 1884.5 -1915.7MHz.
- NOTE 9: N/A
- NOTE 10: N/A
- NOTE 11: Whether the applicable frequency range should be 793-805MHz instead of 799-805MHz is TBD
- NOTE 12: The emissions measurement shall be sufficiently power averaged to ensure a standard deviation < 0.5 dB
- NOTE 13: This requirement applies for 5, 10, 15 and 20 MHz E-UTRA channel bandwidth allocated within 1744.9MHz and 1784.9MHz.
- NOTE 14: N/A
- NOTE 15: These requirements also apply for the frequency ranges that are less than  $F_{\text{OOB}}$  (MHz) in Table 6.6.3.1-1 and Table 6.6.3.1A-1 from the edge of the channel bandwidth.
- NOTE 16: N/A
- NOTE 17: N/A
- NOTE 18: N/A
- NOTE 19: Applicable when the assigned E-UTRA carrier is confined within 718 MHz and 748 MHz and when the channel bandwidth used is 5 or 10 MHz.
- NOTE 20: N/A
- NOTE 21: This requirement is applicable for any channel bandwidths within the range 2500 - 2570 MHz with the following restriction: for carriers of 15 MHz bandwidth when carrier centre frequency is within the range 2560.5 - 2562.5 MHz and for carriers of 20 MHz bandwidth when carrier centre frequency is within the range 2552 - 2560 MHz the requirement is applicable only for an uplink transmission bandwidth less than or equal to 54 RB.
- NOTE 22: This requirement is applicable for any channel bandwidths within the range 2570 - 2615 MHz with the following restriction: for carriers of 15 MHz bandwidth when carrier centre frequency is within the range 2605.5 - 2607.5 MHz and for carriers of 20 MHz bandwidth when carrier centre frequency is within the range 2597 - 2605 MHz the requirement is applicable only for an uplink transmission bandwidth less than or equal to 54 RB.  
For carriers with channel bandwidth overlapping the frequency range 2615 - 2620 MHz the requirement applies with the maximum output power configured to +19 dBm in the IE *P-Max*.
- NOTE 23: This requirement is applicable only for the following cases:  
- for carriers of 5 MHz channel bandwidth when carrier centre frequency ( $F_c$ ) is within the range  $902.5 \text{ MHz} \leq F_c < 907.5 \text{ MHz}$  with an uplink transmission bandwidth less than or equal to 20 RB  
- for carriers of 5 MHz channel bandwidth when carrier centre frequency ( $F_c$ ) is within the range  $907.5 \text{ MHz} \leq F_c \leq 912.5 \text{ MHz}$  without any restriction on uplink transmission bandwidth.  
- for carriers of 10 MHz channel bandwidth when carrier centre frequency ( $F_c$ ) is  $F_c = 910 \text{ MHz}$  with an uplink transmission bandwidth less than or equal to 32 RB with  $\text{RB}_{\text{start}} > 3$ .
- NOTE 24: As exceptions, measurements with a level up to the applicable requirement of -38 dBm/MHz is permitted for each assigned E-UTRA carrier used in the measurement due to 2<sup>nd</sup> harmonic spurious emissions. An exception is allowed if there is at least one individual RB within the transmission bandwidth (see Figure 5.6-1) for which the 2<sup>nd</sup> harmonic totally or partially overlaps the measurement bandwidth (MBW).
- NOTE 25: As exceptions, measurements with a level up to the applicable requirement of -36 dBm/MHz is permitted for each assigned E-UTRA carrier used in the measurement due to 3<sup>rd</sup> harmonic spurious emissions. An exception is allowed if there is at least one individual RB within the transmission bandwidth (see Figure 5.6-1) for which the 3<sup>rd</sup> harmonic totally or partially overlaps the measurement bandwidth (MBW).
- NOTE 26: For these adjacent bands, the emission limit could imply risk of harmful interference to UE(s) operating in the protected operating band.
- NOTE 27: This requirement is applicable for any channel bandwidths within the range 1920 - 1980 MHz with the following restriction: for carriers of 15 MHz bandwidth when carrier centre frequency is within the range 1927.5 - 1929.5 MHz and for carriers of 20 MHz bandwidth when carrier centre frequency is within the range 1930 - 1938 MHz the requirement is applicable only for an uplink transmission bandwidth less than or equal to 54 RB.
- NOTE 28: N/A
- NOTE 29: N/A
- NOTE 30: This requirement applies when the E-UTRA carrier is confined within 2545-2575MHz or 2595-2645MHz and the channel bandwidth is 10 or 20 MHz
- NOTE 31: N/A
- NOTE 33: This requirement is only applicable for carriers with bandwidth confined within 1885-1920 MHz (requirement for carriers with at least 1RB confined within 1880 - 1885 MHz is not specified). This requirement applies for an uplink transmission bandwidth less than or equal to [54 RB] for carriers of 15 MHz bandwidth when carrier centre frequency is within the range 1892.5 - 1894.5 MHz and for carriers of 20 MHz bandwidth when carrier centre frequency is within the range 1895 - 1903 MHz.
- NOTE 34: This requirement is applicable for 5 and 10 MHz E-UTRA channel bandwidth allocated within 718-728MHz. For carriers of 10 MHz bandwidth, this requirement applies for an uplink transmission

bandwidth less than or equal to 30 RB with RBstart > 1 and RBstart<48.

NOTE 35: This requirement is applicable in the case of a 10 MHz E-UTRA carrier confined within 703 MHz and 733 MHz, otherwise the requirement of -25 dBm with a measurement bandwidth of 8 MHz applies.

NOTE 36: This requirement is applicable for E-UTRA channel bandwidth allocated within 1920-1980 MHz.

NOTE 37: Applicable when the upper edge of the channel bandwidth frequency is greater than 1980MHz.

The normative reference for this requirement is TS 36.101 [2] subclause 6.6.3.2.

This test use minimum requirements from many releases of TS 36.101 [2] due to release independence defined in TS 36.307 [16]

#### 6.6.3EA.2.4 Test description

##### 6.6.3EA.2.4.1 Initial conditions

Initial conditions are a set of test configurations the UE needs to be tested in and the steps for the SS to take with the UE to reach the correct measurement state.

The initial test configurations consist of environmental conditions, test frequencies, and channel bandwidths based on E-UTRA bands specified in clause 5.2E. All of these configurations shall be tested with applicable test parameters for each channel bandwidth, and are shown in Table 6.6.3EA.2.4.1-1. The details of the uplink reference measurement channels (RMCs) are specified in Annex A.2. Configurations of PDSCH and MPDCCH before measurement are specified in Annex C.2.

**Table 6.6.3EA.2.4.1-1: Test Configuration Table**

Initial Conditions								
Test Environment (as specified in TS 36.508 [7] subclause 4.1)			NC					
Test Frequencies (as specified in TS36.508 [7] subclause 4.3.1) (Note 6, Note 7)			Low range, Mid range, High range (Note 6, 13, 16)					
Test Channel Bandwidths (as specified in TS 36.508 [7] subclause 4.3.1)			Lowest, 5MHz, Highest (Note 13, 16)					
Test Parameters for Channel Bandwidths								
Ch BW	Downlink Configuration			Uplink Configuration

20MHz				QPSK	6 <sup>3, 11</sup>	6 <sup>4, 18</sup>		
20MHz				QPSK	1	1 <sup>5</sup>		
<p>Note 1: Test Channel Bandwidths are checked separately for each E-UTRA band, which applicable channel bandwidths are specified in Table 5.4.2.1-1.</p> <p>Note 2: The 1 RB allocation shall be tested at both RB #0 with narrowband index 0 and at RB #max with max narrowband index. Unless otherwise specified, the 6 RB allocation shall be tested with narrowband index 0 and max.</p> <p>Note 3: For requirements under note 21 in table 6.6.3EA.2.3-1 in high range with max narrowband index.</p> <p>Note 4: For requirements under note 22 in table 6.6.3EA.2.3-1 in high range - 5MHz at max narrowband index.</p> <p>Note 5: For requirements under note 22 in table 6.6.3EA.2.3-1 (high range – 5MHz) is tested instead of high channel.</p> <p>Note 6: Do not apply for requirements under Note 13 in Table 6.6.3EA.2.3-1. Test frequencies for these requirements are defined in Table 6.6.3.2.4.1-2.</p> <p>Note 7: Void</p> <p>Note 8: For requirements under note 23 in table 6.6.3EA.2.3-1 (high range – 10MHz) is tested with RB #0 to RB #5 used.</p> <p>Note 9: For requirements under note 23 in table 6.6.3EA.2.3-1 high range is tested with RB #4 to RB #9 used.</p> <p>Note 10: For requirements under note 23 in table 6.6.3EA.2.3-1 high range is tested with RB #4 and (RB#max -4) used.</p> <p>Note 11: For requirements under note 27 in table 6.6.3EA.2.3-1 in low range with narrowband index 0.</p> <p>Note 12: For requirements under note 22 in table 6.6.3EA.2.3-1, the message exception in Table 6.6.3.2.4.3-1 is used to test with the high range.</p> <p>Note 13: For requirements under note 31 in table 6.6.3.2.3-1C and note 34 in table 6.6.3.2.3-1D only 720.5 MHz is tested with 5 MHz and only 723 MHz is tested with 10 MHz.</p> <p>Note 14: For requirements under note 34 in table 6.6.3EA.2.3-1 RB#2 and RB#47 used.</p> <p>Note 15: For requirements under note 34 in table 6.6.3EA.2.3-1 RB#2 to RB#7 is used</p> <p>Note 16: For requirements under note 35 in table 6.6.3EA.2.3-1 only low range and 728 MHz with 10 MHz is tested.</p> <p>Note 17: Void</p> <p>Note 18: For requirements under note 33 in table 6.6.3EA.2.3-1 (high range-7 MHz) is tested.</p>								

**Table 6.6.3EA.2.4.1-2: Test frequencies for E-UTRA channel bandwidth for operating band 3 with Note 13 (in Tables 6.6.3EA.2.3-1)**

Bandwidth [MHz]	N <sub>UL</sub>	Frequency of Uplink [MHz]	N <sub>DL</sub>	Frequency of Downlink [MHz]
5	19924	1782.4	1924	1877.4
10	19899	1779.9	1899	1874.9
15	19874	1777.4	1874	1872.4
20	19849	1774.9	1849	1869.9

1. Connect the SS to the UE antenna connectors as shown in TS 36.508[7] Annex A Figure A.3 using only main UE Tx/Rx antenna.
2. The parameter settings for the cell are set up according to TS 36.508 [7] subclause 4.4.3.
3. Downlink signals are initially set up according to Annex C0, C.1 and C.3.0, and uplink signals according to Annex H.1 and H.3.0.
4. The UL Reference Measurement channels are set according to Table 6.6.3EA.2.4.1-1.
5. Propagation conditions are set according to Annex B.0.
6. Ensure the UE is in State 3A-RF-CE according to TS 36.508 [7] clause 5.2A.2AA. Message contents are defined in clause 6.6.3EA.2.4.3.

#### 6.6.3EA.2.4.2 Test procedure

1. SS sends uplink scheduling information for each UL HARQ process via MPDCCH DCI format 6-0A for C\_RNTI to schedule the UL RMC according to Table 6.6.3EA.2.4.1-1. Since the UE has no payload data to send, the UE transmits uplink MAC padding bits on the UL RMC.
2. Send continuously uplink power control "up" commands in the uplink scheduling information to the UE until the UE transmits at P<sub>UMAX</sub> level.
3. Measure the power of the transmitted signal with a measurement filter of bandwidths according to table 6.6.3EA.2.3-1. The centre frequency of the filter shall be stepped in contiguous steps according to table 6.6.3EA.2.5-1. The measured power shall be verified for each step. The measurement period shall capture the active time slots. For HD-FDD slots with transient periods and Half-duplex guard subframe are not under test.

#### 6.6.3EA.2.4.3 Message contents

Message contents are according to TS 36.508 [7] subclause 4.6 with the condition CEModeA.

#### 6.6.3EA.2.5 Test requirement

Test requirements for Spurious Emissions UE Co-existence are the same as the minimum requirements and are not repeated in this section.

The measured average power of spurious emission, derived in step 3, shall not exceed the described value in table 6.6.3EA.2.3-1 according to the following rule:

The requirements for the UE are release specific and can be found in Tables 6.6.3EA.2.3-1. If the UE support a band, which is not defined in the table corresponding UE's release, the requirements for this band are taken from the table of earliest release where requirements for this band are defined. This has been described in following Table 6.6.3EA.2.5-1.

**Table 6.6.3EA.2.5-1: UE Requirements according to UE E-UTRA release and supported E-UTRA band**

Band	UE Requirements per release
	Rel-13
1	Table 6.6.3EA.2.3-1
2	Table 6.6.3EA.2.3-1
3	Table 6.6.3EA.2.3-1
4	Table 6.6.3EA.2.3-1
5	Table 6.6.3EA.2.3-1
7	Table 6.6.3EA.2.3-1
8	Table 6.6.3EA.2.3-1
11	Table 6.6.3EA.2.3-1
12	Table 6.6.3EA.2.3-1
13	Table 6.6.3EA.2.3-1
18	Table 6.6.3EA.2.3-1
19	Table 6.6.3EA.2.3-1
20	Table 6.6.3EA.2.3-1
21	Table 6.6.3EA.2.3-1
26	Table 6.6.3EA.2.3-1
27	Table 6.6.3EA.2.3-1
28	Table 6.6.3EA.2.3-1
31	Table 6.6.3EA.2.3-1
39	Table 6.6.3EA.2.3-1
41	Table 6.6.3EA.2.3-1

NOTE 1: The following is applied to Note2 in Table 6.6.3EA.2.3-1. For frequency with 2nd, 3rd or 4th harmonic spurious emissions, the measurements are covered in 6.6.3.1.

NOTE 2: The restriction on the maximum uplink transmission to 36 RB in Notes 14 and 15 of Table 6.6.3EA.2.5-1 is intended for conformance testing and may be applied to network operation to facilitate coexistence when the aggressor and victim bands are deployed in the same geographical area. The applicable spurious emission requirement of -15.5 dBm/5MHz is a least restrictive technical condition for FDD/TDD coexistence and may have to be revised in the future.6.6.3EA.3 Additional spurious emissions for UE category M1

### 6.6.3EA.3 Additional spurious emissions for UE category M1

**Editor's note: Following aspects missing or not yet determined:**

- Test configuration tables, minimum requirements and test requirement tables FFS for NS\_08, NS\_09, NS\_12, NS\_13, NS\_14, NS\_15, NS\_16, NS\_18

#### 6.6.3EA.3.1 Test purpose

To verify that UE transmitter does not cause unacceptable interference to other channels or other systems in terms of transmitter spurious emissions under the deployment scenarios where additional requirements are specified.

#### 6.6.3EA.3.2 Test applicability

This test case applies to all types of E-UTRA UE release 13 and forward of UE category M1.

#### 6.6.3EA.3.3 Minimum conformance requirements

These requirements are specified in terms of an additional spectrum emission requirement. Additional spurious emission requirements are signalled by the network to indicate that the UE shall meet an additional requirement for a specific deployment scenario as part of the cell handover/broadcast message.

NOTE: For measurement conditions at the edge of each frequency range, the lowest frequency of the measurement position in each frequency range should be set at the lowest boundary of the frequency range plus MBW/2. The highest frequency of the measurement position in each frequency range should be set at the highest boundary of the frequency range minus MBW/2. MBW denotes the measurement bandwidth defined for the protected band.

6.6.3EA.3.3.1 Minimum requirement (network signalled value "NS\_05")

FFS

6.6.3EA.3.3.2 Minimum requirement (network signalled value "NS\_07")

FFS

6.6.3EA.3.3.3 Minimum requirement (network signalled value "NS\_08")

When "NS\_08" is indicated in the cell, the power of any UE emission shall not exceed the levels specified in Table 6.6.3EA.3.3.3-1. This requirement also applies for the frequency ranges that are less than  $\Delta f_{\text{OoB}}$  (MHz) in Table 6.6.3.1-1 from the edge of the channel bandwidth.

**Table 6.6.3EA.3.3.3-1: Additional requirement**

Frequency band (MHz)	Channel bandwidth / Spectrum emission limit (dBm)			Measurement bandwidth
	5MHz	10MHz	15MHz	
$860 \leq f \leq 895$	-40	-40	-40	1 MHz

6.6.3EA.3.3.4 Minimum requirement (network signalled value "NS\_09")

When "NS\_09" is indicated in the cell, the power of any UE emission shall not exceed the levels specified in Table 6.6.3EA.3.3.4-1. This requirement also applies for the frequency ranges that are less than  $\Delta f_{\text{OoB}}$  (MHz) in Table 6.6.3.1.3-1 from the edge of the channel bandwidth.

**Table 6.6.3EA.3.3.4-1: Additional requirement**

Frequency band (MHz)	Channel bandwidth / Spectrum emission limit (dBm)			Measurement bandwidth
	5MHz	10MHz	15MHz	
$1475.9 \leq f \leq 1510.9$	-35	-35	-35	1 MHz

NOTE 1: To improve measurement accuracy, A-MPR values for NS\_09 specified in TS 36.101 [2] Table 6.2.4.3-1 in sub-clause 6.2.4 are derived based on 100 kHz RBW.

6.6.3EA.3.3.5 Minimum requirement (network signalled value "NS\_12")

FFS

6.6.3EA.3.3.6 Minimum requirement (network signalled value "NS\_13")

FFS

6.6.3EA.3.3.7 Minimum requirement (network signalled value "NS\_14")

FFS

6.6.3EA.3.3.8 Minimum requirement (network signalled value "NS\_15")

FFS

6.6.3EA.3.3.9 Minimum requirement (network signalled value "NS\_16")

FFS

6.6.3EA.3.3.10 Minimum requirement (network signalled value "NS\_17")

FFS

6.6.3EA.3.3.11 Minimum requirement (network signalled value "NS\_18")

FFS

The normative reference for this requirement is TS 36.101 [2] subclause 6.6.3.3.

6.6.3EA.3.4 Test description

6.6.3EA.3.4.1 Initial conditions

Initial conditions are a set of test configurations the UE needs to be tested in and the steps for the SS to take with the UE to reach the correct measurement state.

The initial test configurations consist of environmental conditions, test frequencies, and channel bandwidths based on E-UTRA bands specified in clause 5.2E. All of these configurations shall be tested with applicable test parameters for each channel bandwidth, and are shown in Table 6.6.3EA.3.4.1-1 to Table 6.6.3EA.3.4.1-11. The details of the uplink reference measurement channels (RMCs) are specified in Annex A.2. Configurations of PDSCH and MPDCCH before measurement are specified in Annex C.2.

4	5MHz		16QAM	5 (2 dB)	0
Note 1: Denotes where in the channel Bandwidth the narrowband shall be placed. Narrowband and Narrowband index are defined in TS36.211, 5.2.4					
Note 2: Test Channel Bandwidths are checked separately for each E-UTRA band, the applicable channel bandwidths are specified in Table 5.4.2.1-1.					
Note 3: The RB <sub>start</sub> of partial RB allocation shall be RB#0 and RB# (6 - RB allocation) of the narrowband.					

**Table 6.6.3EA.3.4.1-11: Test Configuration Table (network signalled value "NS\_18")**

FFS

1. Connect SS to the UE antenna connectors as shown in TS 36.508[7] Annex A Figure A.3 using only main UE Tx/Rx antenna.
2. The parameter settings for the cell are set up according to TS 36.508 [7] subclause 4.4.3.
3. Downlink signals are initially set up according to Annex C0, C.1 and C.3.0, and uplink signals according to Annex H.1 and H.3.0.
4. The UL Reference Measurement channels are set according to Table 6.6.3EA.3.4.1-1 to Table 6.6.3EA.3.4.1-11.
5. Propagation conditions are set according to Annex B.0.
6. Ensure the UE is in State 3A-RF-CE according to TS 36.508 [7] clause 5.2A.2AA. Message contents are defined in clause 6.6.3EA.3.4.3.

**6.6.3EA.3.4.2 Test procedure**

1. SS sends uplink scheduling information for each UL HARQ process via MPDCCH DCI format 6-0A for C\_RNTI to schedule the UL RMC according to Table 6.6.3EA.3.4.1-1 to Table 6.6.3EA.3.4.1-11 depending on NS-value. Since the UE has no payload and no loopback data to send the UE sends uplink MAC padding bits on the UL RMC
2. Send continuously uplink power control "up" commands in the uplink scheduling information to the UE to ensure that the UE transmits at P<sub>UMAX</sub> level.
3. Measure the mean power of the UE in the channel bandwidth of the radio access mode. The period of measurement shall be at least the continuous duration one sub-frame (1ms). For TDD slots with transient periods are not under test. For HD-FDD slots with transient periods and Half-duplex guard subframe are not under test.

## 6.6.3F Spurious emission for UE category NB1

### 6.6.3F.1 Transmitter Spurious emissions for UE category NB1

**Editor's note: This clause is incomplete. The following aspects are either missing or not yet determined:**

- UL RMC is undefined in Annex A
- Annex C
- Annex H
- Annex F test tolerances
- Message contents undefined
- Parameters ensuring UE is transmitting NPUSCH with maximum power are TBC. (Proposed values: p-Max = Not present, p0-NominalNPUSCH-r13 = -85 dBm, p0-UE-NPUSCH-r13 = 0 dBm, nrs-Power-r13 = 44 dBm).

#### 6.6.3F.1.1 Test purpose

To verify that UE transmitter does not cause unacceptable interference to other channels or other systems in terms of transmitter spurious emissions.

#### 6.6.3F.1.2 Test applicability

This test case applies to all types of UE release 13 and forward of UE category NB1.

#### 6.6.3F.1.3 Minimum conformance requirements

Unless otherwise stated, the spurious emission limits apply for the frequency ranges that are more than FOOB (MHz) from the edge of the channel bandwidth. The spurious emission limits in Table 6.6.3F.1.3-1 apply for all transmitter band configurations (NRB) and channel bandwidths.

**NOTE:** For measurement conditions at the edge of each frequency range, the lowest frequency of the measurement position in each frequency range should be set at the lowest boundary of the frequency range plus MBW/2. The highest frequency of the measurement position in each frequency range should be set at the highest boundary of the frequency range minus MBW/2. MBW denotes the measurement bandwidth defined for the protected band.

**Table 6.6.3F.1.3-1: Spurious emissions limits**

Frequency Range	Maximum Level	Measurement bandwidth	NOTE
$9 \text{ kHz} \leq f < 150 \text{ kHz}$	-36 dBm	1 kHz	
$150 \text{ kHz} \leq f < 30 \text{ MHz}$	-36 dBm	10 kHz	
$30 \text{ MHz} \leq f < 1000 \text{ MHz}$	-36 dBm	100 kHz	
$1 \text{ GHz} \leq f < 12.75 \text{ GHz}$	-30 dBm	1 MHz	

...

When UE is configured for category NB1 uplink transmissions the boundary between category NB1 out of band and spurious emission domain shall be  $F_{\text{OOB}} = 1.7 \text{ MHz}$ .

The normative reference for this requirement is TS 36.101 [2] subclauses 6.6.3.1 and 6.6.3F.

### 6.6.3F.1.4 Test description

#### 6.6.3F.1.4.1 Initial conditions

Initial conditions are a set of test configurations the UE needs to be tested in and the steps for the SS to take with the UE to reach the correct measurement state.

The initial test configurations consist of environmental conditions and test frequencies based on the subset of E-UTRA operating bands defined for NB-IoT in clause 5.2F. All of these configurations shall be tested with applicable test parameters, and are shown in table 6.6.3F.1.4.1-1. The details of the uplink reference measurement channels (RMCs) are specified in [Annexes A.2]. Configurations of NPDSCH and NPDCCH before measurement are specified in [Annex C.2].

**Table 6.6.3F.1.4.1-1: Test Configuration Table**

Initial Conditions				
Test Environment as specified in TS 36.508[7] subclause 4.1		NC		
Test Frequencies as specified in TS 36.508 [7] subclause [4.3.1]		FFS		
Test Parameters				
Configuration ID	Downlink Configuration	Uplink Configuration		
	N/A for Maximum Power Reduction (MPR) test case	Modulation	N <sub>tones</sub>	Subcarrier spacing (kHz)
1		QPSK	1@0	3.75
2		QPSK	1@47	3.75
3		BPSK	1@0	15
4		BPSK	1@11	15
5 (Note 1)		QPSK	12@0	15
Note 1: Applicable to UE supporting UL multi-tone transmissions				

1. Connect the SS to the UE antenna connectors as shown in TS 36.508[7] Annex A Figure A.3 using only main UE Tx/Rx antenna.
2. The parameter settings for the cell are set up according to TS 36.508 [7] subclause TBD.
3. Downlink signals are initially set up according to Annex [C.0, C.1, and C.3.0], and uplink signals according to Annex [H.1 and H.3.0].
4. The UL Reference Measurement channels are set according to Table 6.6.3F.1.4.1-1.
5. Ensure the UE is in State TBD according to TS 36.508 [7] clause TBD. Message contents are defined in clause [6.2.2F.4.3].

#### 6.6.3E.1.4.2 Test procedure

1. SS sends uplink scheduling information via NPDCCH DCI format N0 for C\_RNTI to schedule the UL RMC according to Table 6.6.3F.1.4.1-1 and with the scheduling pattern according to [Annex A.2.X]. Since the UE has no payload and no loopback data to send the UE sends uplink MAC padding bits on the UL RMC
2. Measure the power of the transmitted signal with a measurement filter of bandwidths according to table 6.6.3F.1.5-1. The centre frequency of the filter shall be stepped in contiguous steps according to table 6.6.3F.1.5-1. The measured power shall be verified for each step. The measurement period shall capture the active time slots.

#### 6.6.3F.1.4.3 Message contents

Message contents are according to TS 36.508 [7] subclause TBD.

### 6.6.3F.1.5 Test requirement

This clause specifies the requirements for the specified E-UTRA band for Transmitter Spurious emissions requirement with frequency range as indicated in table. 6.6.3F.1.5-1.

The measured average power of spurious emission, derived in step 3, shall not exceed the described value in Table 6.6.3F.1.5-1.

The spurious emission limits apply for the frequency ranges that are more than  $\Delta f_{\text{OOB}}$  (MHz) from the edge of the channel bandwidth.

**NOTE:** For measurement conditions at the edge of each frequency range, the lowest frequency of the measurement position in each frequency range should be set at the lowest boundary of the frequency range plus MBW/2. The highest frequency of the measurement position in each frequency range should be set at the highest boundary of the frequency range minus MBW/2. MBW denotes the measurement bandwidth defined for the protected band.

**Table 6.6.3F.1.5-1: General spurious emissions test requirements**

Frequency Range	Maximum Level	Measurement Bandwidth	Notes
$9 \text{ kHz} \leq f < 150 \text{ kHz}$	-36 dBm	1 kHz	
$150 \text{ kHz} \leq f < 30 \text{ MHz}$	-36 dBm	10 kHz	
$30 \text{ MHz} \leq f < 1000 \text{ MHz}$	-36 dBm	100 kHz	
$1 \text{ GHz} \leq f < 12.75 \text{ GHz}$	-30 dBm	1 MHz	

## 6.7 Transmit intermodulation

### 6.7.1 Test purpose

*To verify that the UE transmit intermodulation does not exceed the described value in the test requirement.*

*The transmit intermodulation performance is a measure of the capability of the transmitter to inhibit the generation of signals in its non linear elements caused by presence of the wanted signal and an interfering signal reaching the transmitter via the antenna.*

### 6.7.2 Test applicability

This test applies to all types of E-UTRA UE release 8 and forward.

### 6.7.3 Minimum conformance requirements

User Equipment(s) transmitting in close vicinity of each other can produce intermodulation products, which can fall into the UE, or eNode B receive band as an unwanted interfering signal. The UE intermodulation attenuation is defined by the ratio of the mean power of the wanted signal to the mean power of the intermodulation product when an interfering CW signal is added at a level below the wanted signal at each of the transmitter antenna port with the other antenna port(s) if any is terminated. Both the wanted signal power and the intermodulation product power are measured through E-UTRA rectangular filter with measurement bandwidth shown in Table 6.7.3-1.

The requirement of transmitting intermodulation is prescribed in Table 6.7.3-1.

**Table 6.7.3-1: Transmit Intermodulation**

BWChannel (UL)	5MHz		10MHz		15MHz		20MHz	
Interference Signal Frequency Offset	5MHz	10MHz	10MHz	20MHz	15MHz	30MHz	20MHz	40MHz
Interference CW Signal Level	-40dBc							
Intermodulation Product	-29dBc	-35dBc	-29dBc	-35dBc	-29dBc	-35dBc	-29dBc	-35dBc
Measurement bandwidth	4.5MHz	4.5MHz	9.0MHz	9.0MHz	13.5MHz	13.5MHz	18MHz	18MHz

The normative reference for this requirement is TS 36.101 [2] clause 6.7.1.

## 6.7.4 Test description

### 6.7.4.1 Initial conditions

Initial conditions are a set of test configurations the UE needs to be tested in and the steps for the SS to take with the UE to reach the correct measurement state.

The initial test configurations consist of environmental conditions, test frequencies, and channel bandwidths based on E-UTRA operating bands specified in table 5.4.2.1-1. All of these configurations shall be tested with applicable test parameters for each channel bandwidth, and are shown in table 6.7.4.1-1. The details of the uplink reference measurement channels (RMCs) are specified in Annexes A.2. Configurations of PDSCH and PDCCH before measurement are specified in Annex C.2.

**Table 6.7.4.1-1: Test Configuration Table**

Initial Conditions					
Test Environment as specified in TS 36.508[7] subclause 4.1		Normal			
Test Frequencies as specified in TS36.508 [7] subclause 4.3.1		Mid range			
Test Channel Bandwidths as specified in TS 36.508 [7] subclause 4.3.1		5MHz and Highest			
Test Parameters for Channel Bandwidths					
Ch BW	Downlink Configuration		Uplink Configuration		
	N/A for Transmit Intermodulation		Mod'n	RB allocation	
			FDD	TDD	
5MHz			QPSK	8	8
10MHz			QPSK	12	12
15MHz			QPSK	16	16
20MHz	QPSK	18	18		
Note 1: Test Channel Bandwidths are checked separately for each E-UTRA band, the applicable channel bandwidths are specified in Table 5.4.2.1-1.					

1. Connect the SS to the UE antenna connectors as shown in TS 36.508 [7] Annex A, Figure A.2.
2. The parameter settings for the cell are set up according to TS 36.508 [7] subclause 4.4.3.
3. Downlink signals are initially set up according to Annex C.0, C.1, and C.3.0, and uplink signals according to Annex H.1 and H.3.0.
4. The UL Reference Measurement channels are set according to Table 6.7.4.1-1.
5. Propagation conditions are set according to Annex B.0.
6. Ensure the UE is in State 3A-RF according to TS 36.508 [7] clause 5.2A.2. Message contents are defined in clause 6.7.4.3.

### 6.7.4.3 Test procedure

1. SS sends uplink scheduling information for each UL HARQ process via PDCCH DCI format 0 for C\_RNTI to schedule the UL RMC according to Table 6.7.4.1-1. Since the UE has no payload and no loopback data to send the UE sends uplink MAC padding bits on the UL RMC.
2. Send continuously uplink power control "up" commands to the UE until the UE transmits at its  $P_{UMAX}$  level.
3. Measure the rectangular filtered mean power of the UE. For TDD slots with transient periods are not under test for the wanted signal and for the intermodulation product.
4. Set the interference signal frequency below the UL carrier frequency using the first offset in table 6.7.5-1.
5. Set the interference CW signal level according to table 6.7.5-1.
6. Search the intermodulation product signals below and above the UL carrier frequency, then measure the rectangular filtered mean power of transmitting intermodulation for both signals, and calculate the ratios with the power measured in step 3.
7. Set the interference signal frequency above the UL carrier frequency using the first offset in table 6.7.5-1.
8. Search the intermodulation product signals below and above the UL carrier frequency, then measure the rectangular filtered mean power of transmitting intermodulation for both signals, and calculate the ratios with the power measured in step 3.

Repeat the measurement using the second offset in table 6.7.5-1.

### 6.7.4.3 Message contents

Message contents are according to TS 36.508 [7] subclause 4.6.

### 6.7.5 Test requirement

The ratio derived in step 5 and 7, shall not exceed the described value in table 6.7.5-1

**Table 6.7.5-1: Transmit Intermodulation**

BWChannel (UL)	5MHz		10MHz		15MHz		20MHz	
Interference Signal Frequency Offset	5MHz	10MHz	10MHz	20MHz	15MHz	30MHz	20MHz	40MHz (Note 1)
Interference CW Signal Level	-40dBc							
Intermodulation Product	-29dBc	-35dBc	-29dBc	-35dBc	-29dBc	-35dBc	-29dBc	-35dBc
Measurement bandwidth	4.5MHz	4.5MHz	9.0MHz	9.0MHz	13.5MHz	13.5MHz	18MHz	18MHz
Note 1: For Band 20, only applicable for interference signal frequency above the UL carrier frequency.								

## 6.7A Transmit intermodulation for CA

### 6.7A.0 Minimum conformance requirements

User Equipment(s) transmitting in close vicinity of each other can produce intermodulation products, which can fall into the UE, or eNode B receive band as an unwanted interfering signal. The UE intermodulation attenuation is defined by the ratio of the mean power of the wanted signal to the mean power of the intermodulation product on both component carriers when an interfering CW signal is added at a level below the wanted signal at each of the transmitter antenna port with the other antenna port(s) if any is terminated. Both the wanted signal power and the intermodulation product power are measured through rectangular filter with measurement bandwidth shown in Table 6.7A.0-1.

For inter-band carrier aggregation with uplink assigned to two E-UTRA bands, the requirement is specified in Table 6.7.3-1 which shall apply on each component carrier with both component carriers active.

For intra-band contiguous carrier aggregation the requirement of transmitting intermodulation is specified in Table 6.7A.0-1.

**Table 6.7A.0-1: Transmit Intermodulation**

CA bandwidth class(UL)	B and C	
Interference Signal Frequency Offset	$BW_{\text{Channel\_CA}}$	$2 \cdot BW_{\text{Channel\_CA}}$
Interference CW Signal Level	-40dBc	
Intermodulation Product	-29dBc	-35dBc
Measurement bandwidth	$BW_{\text{Channel\_CA}} + 2 \cdot BW_{\text{GB}}$	

The normative reference for this requirement is TS 36.101 [2] clause 6.7.1A.

## 6.7A.1 Transmit intermodulation for CA (intra-band contiguous DL CA and UL CA)

### 6.7A.1.1 Test purpose

To verify that the UE transmit intermodulation does not exceed the described value in the test requirement.

The transmit intermodulation performance is a measure of the capability of the transmitter to inhibit the generation of signals in its non linear elements caused by presence of the wanted signal and an interfering signal reaching the transmitter via the antenna.

### 6.7A.1.2 Test applicability

This test applies to all types of E-UTRA UE release 10 and forward that supports intra-band contiguous DL CA and UL CA.

### 6.7A.1.3 Minimum conformance requirements

The minimum conformance requirements are defined in clause 6.7A.0.

### 6.7A.1.4 Test description

#### 6.7A.1.4.1 Initial conditions

Initial conditions are a set of test configurations the UE needs to be tested in and the steps for the SS to take with the UE to reach the correct measurement state.

The initial test configurations consist of environmental conditions, test frequencies, and channel bandwidths based on E-UTRA CA configurations specified in table 5.4.2A.1-1. All of these configurations shall be tested with applicable test parameters for each channel bandwidth, and are shown in table 6.7A.1.4.1-1. The details of the uplink reference measurement channels (RMCs) are specified in Annexes A.2. Configurations of PDSCH and PDCCH before measurement are specified in Annex C.2.

Table 6.7A.1.4.1-1: Test Configuration Table

Initial Conditions								
Test Environment as specified in TS 36.508[7] subclause 4.1					Normal			
Test Frequencies as specified in TS36.508 [7] subclause 4.3.1 for different CA bandwidth classes, and PCC and SCCs are mapped onto physical frequencies according to Table 6.1-2.					Mid range			
Test CC Combination setting ( $N_{RB\_agg}$ ) as specified in subclause 5.4.2A.1 for the CA Configuration					Lowest $N_{RB\_agg}$ Highest $N_{RB\_agg}$ (Note 2)			
Test Parameters for CA Configurations								
CA Configuration / $N_{RB\_agg}$		DL Allocation	CC MOD	UL Allocation				
PCC $N_{RB}$	SCCs $N_{RB}$	PCC & SCC RB allocation		$N_{RB\_alloc}$	PCC & SCC RB allocations ( $L_{CRB}$ @ $RB_{start}$ )			
25	50	N/A	QPSK	8	P_8@0	S_0@0	-	-
50	50		QPSK	12	P_12@0	S_0@0	-	-
75	75		QPSK	16	P_16@0	S_0@0	-	-
100	25		QPSK	8	P_8@0	S_0@0	-	-
100	50		QPSK	12	P_12@0	S_0@0	-	-
100	100		QPSK	18	P_18@0	S_0@0	-	-
<p>Note 1: CA Configuration Test CC Combination settings are checked separately for each CA Configuration, which applicable aggregated channel bandwidths are specified in Table 5.4.2A.1-1</p> <p>Note 2: If in the CA Configuration UE supports multiple CC Combinations with the same <math>N_{RB\_agg}</math>, only the first of those is tested, according to the order on the Test Configuration Table list.</p>								

1. Connect the SS to the UE antenna connectors as shown in TS 36.508 [7] Annex A, Figure group A.37 as appropriate.
2. The parameter settings for the cell are set up according to TS 36.508 [7] subclause 4.4.3.
3. Downlink signals for PCC are initially set up according to Annex C.0, C.1, and C.3.0, and uplink signals according to Annex H.1 and H.3.0.
4. Propagation conditions are set according to Annex B.0.
5. Ensure the UE is in State 3A-RF according to TS 36.508 [7] clause 5.2A.2. Message contents are defined in clause 6.7A.1.4.3.

#### 6.7A.1.4.2 Test procedure

1. Configure SCC according to Annex C.0, C.1 and Annex C.3.0 for all downlink physical channels.
2. The SS shall configure SCC as per TS 36.508 [7] clause 5.2A.4. Message contents are defined in clause 6.7A.1.4.3
3. SS activates SCC by sending the activation MAC-CE (Refer TS 36.321 [13], clauses 5.13, 6.1.3.8). Wait for at least 2 seconds (Refer TS 36.133, clauses 8.3.3.2).
4. SS sends uplink scheduling information for each UL HARQ process via PDCCH DCI format 0 for  $C\_RNTI$  to schedule the UL RMC according to Table 6.7A.1.4.1-1. Since the UE has no payload and no loopback data to send the UE sends uplink MAC padding bits on the UL RMC.
5. Send continuously uplink power control "up" commands on PCC and SCC to the UE until the UE transmits at its  $P_{UMAX}$  level; allow at least 200ms for the UE to reach  $P_{UMAX}$  level.

6. Measure the rectangular filtered mean power of the UE. For TDD slots with transient periods are not under test for the wanted signal and for the intermodulation product.
7. Set the interference signal frequency below  $F_{CA\_low}$  using the first offset in table 6.7A.0-1.
8. Set the interference CW signal level according to table 6.7A.0-1.
9. Search the intermodulation product signals below and above the aggregated UL carrier, then measure the rectangular filtered mean power of transmitting intermodulation for both signals, and calculate the ratios with the power measured in step 6.
10. Set the interference signal frequency above  $F_{CA\_high}$  using the first offset in table 6.7A.0-1.
11. Search the intermodulation product signals below and above the aggregated UL carrier, then measure the rectangular filtered mean power of transmitting intermodulation for both signals, and calculate the ratios with the power measured in step 6.
12. Repeat the measurement using the second offset in table 6.7A.0-1.

#### 6.7A.1.4.3 Message contents

Message contents are according to TS 36.508 [7] subclause 4.6. In test procedure step 2, for SCC configuration there are no additional message contents.

#### 6.7A.1.5 Test requirement

The ratio derived in step 9 and 11, shall not exceed the described value in table 6.7A.1.5-1

**Table 6.7A.1.5-1: Transmit Intermodulation**

CA bandwidth class(UL)	B and C	
Interference Signal Frequency Offset	$BW_{Channel\_CA}$	$2 * BW_{Channel\_CA}$
Interference CW Signal Level	-40dBc	
Intermodulation Product	-29dBc	-35dBc
Measurement bandwidth	$BW_{Channel\_CA} - 2 * BW_{GB}$	

### 6.7A.2 Transmit intermodulation for CA (inter-band DL CA and UL CA)

#### 6.7A.2.1 Test purpose

To verify that the UE transmit intermodulation does not exceed the described value in the test requirement.

The transmit intermodulation performance is a measure of the capability of the transmitter to inhibit the generation of signals in its non linear elements caused by presence of the wanted signal and an interfering signal reaching the transmitter via the antenna.

#### 6.7A.2.2 Test applicability

This test applies to all types of E-UTRA UE release 11 and forward that supports inter-band DL CA and UL CA.

#### 6.7A.2.3 Minimum conformance requirements

The minimum conformance requirements are defined in clause 6.7A.0.

## 6.7A.2.4 Test description

### 6.7A.2.4.1 Initial conditions

Same as in clause 6.7A.1.4.1 with the following exceptions:

- Instead of Table 5.4.2A.1-1 → use Table 5.4.2A.1-2 for CA configurations with two bands or Table 5.4.2A.1-2a for CA configurations with three bands.
- Instead of Table 6.7A.1.4.1-1 → use Table 6.7A.2.4.1-1.
- Instead of clause 6.7A.1.4.3 → use clause 6.7A.2.4.3.

Table 6.7A.2.4.1-1: Test Configuration Table

Initial Conditions								
Test Environment as specified in TS 36.508[7] subclause 4.1					Normal			
Test Frequencies as specified in TS 36.508 [7] subclause 4.3.1 for different CA bandwidth classes.					Mid range for PCC and SCC			
Test CC Combination setting ( $N_{RB\_agg}$ ) as specified in subclause 5.4.2A.1 for the CA Configuration across bandwidth combination sets supported by the UE.					Lowest $N_{RB\_agg}$ Highest $N_{RB\_agg}$ (Note 2)			
Test Parameters for CA Configurations								
CA Configuration / $N_{RB\_agg}$		DL Allocation	CC MOD	UL Allocation				
PCC $N_{RB}$	SCCs $N_{RB}$	PCC & SCC RB allocation		$N_{RB\_alloc}$	PCC & SCC RB allocations ( $L_{CRB}$ @ $RB_{start}$ )			
6	25	N/Afor this test	QPSK	13	P_5@0	S_8@0	-	-
6	50		QPSK	17	P_5@0	S_12@0	-	-

100	75		QPSK	34	P_18@0	S_16@0	-	-
100	100		QPSK	36	P_18@0	S_18@0	-	-
Note 1: CA Configuration Test CC Combination settings are checked separately for each CA Configuration, which applicable aggregated channel bandwidths are specified in Table 5.4.2A.1-2								
Note 2: If in the CA Configuration UE supports multiple CC Combinations with the same $N_{RB\_agg}$ , only the first of those is tested, according to the order on the Test Configuration Table list.								

#### 6.7A.2.4.2 Test procedure

1. Configure SCC according to Annex C.0, C.1 and Annex C.3.0 for all downlink physical channels.
2. The SS shall configure SCC as per TS 36.508 [7] clause 5.2A.4. Message contents are defined in clause 6.7A.2.4.3
3. SS activates SCC by sending the activation MAC-CE (Refer TS 36.321 [13], clauses 5.13, 6.1.3.8). Wait for at least 2 seconds (Refer TS 36.133, clauses 8.3.3.2).

4. SS sends uplink scheduling information for each UL HARQ process via PDCCH DCI format 0 for C\_RNTI to schedule the UL RMC according to Table 6.7A.2.4.1-1. Since the UE has no payload and no loopback data to send the UE sends uplink MAC padding bits on the UL RMC.
5. Send continuously uplink power control "up" commands on PCC and SCC to the UE until the UE transmits at its  $P_{UMAX}$  level; allow at least 200ms for the UE to reach PUMAX level.
6. Measure the rectangular filtered mean power of the UE. For TDD slots with transient periods are not under test for the wanted signal and for the intermodulation product.
7. Set the interference signal frequency below the UL carrier frequency of the PCC using the first offset in table 6.7.3-1.
8. Set the interference CW signal level according to table 6.7.3-1.
9. Search the intermodulation product signals below and above the UL carrier of the PCC, then measure the rectangular filtered mean power of transmitting intermodulation for both signals, and calculate the ratios with the power measured in step 6.
10. Set the interference signal frequency above the UL carrier frequency of the PCC using the first offset in table 6.7.3-1.
11. Search the intermodulation product signals below and above the UL carrier of the PCC, then measure the rectangular filtered mean power of transmitting intermodulation for both signals, and calculate the ratios with the power measured in step 6.
12. Set the interference signal frequency below the UL carrier frequency of the SCC using the first offset in table 6.7.3-1.
13. Search the intermodulation product signals below and above the UL carrier of the SCC, then measure the rectangular filtered mean power of transmitting intermodulation for both signals, and calculate the ratios with the power measured in step 6.
14. Set the interference signal frequency above the UL carrier frequency of the SCC using the first offset in table 6.7.3-1.
15. Search the intermodulation product signals below and above the UL carrier of the SCC, then measure the rectangular filtered mean power of transmitting intermodulation for both signals, and calculate the ratios with the power measured in step 6.
16. Repeat the measurement using the second offset in table 6.7.3-1.

#### 6.7A.2.4.3 Message contents

Message contents are according to TS 36.508 [7] subclause 4.6. In test procedure step 2, for SCC configuration there are no additional message contents.

#### 6.7A.2.5 Test requirement

The ratio derived in step 9, 11, 13 and 15, shall not exceed the described value in table 6.7A.2.5-1

**Table 6.7A.2.5-1: Transmit Intermodulation**

BWChannel (UL)	5MHz		10MHz		15MHz		20MHz	
Interference Signal Frequency Offset	5MHz	10MHz	10MHz	20MHz	15MHz	30MHz	20MHz	40MHz (Note 1)
Interference CW Signal Level	-40dBc							
Intermodulation Product	-29dBc	-35dBc	-29dBc	-35dBc	-29dBc	-35dBc	-29dBc	-35dBc
Measurement bandwidth	4.5MHz	4.5MHz	9.0MHz	9.0MHz	13.5MHz	13.5MHz	18MHz	18MHz
Note 1:	For PCC belonging to Band 20, only applicable for interference signal frequency above the UL carrier frequency.							

## 6.7B Transmit intermodulation for UL-MIMO

### 6.7B.1 Test purpose

To verify that the UE transmit intermodulation at each transmit antenna does not exceed the described value in the test requirement.

The transmit intermodulation performance is a measure of the capability of the transmitter to inhibit the generation of signals in its non linear elements caused by presence of the wanted signal and an interfering signal reaching the transmitter via the antenna.

### 6.7B.2 Test applicability

This test applies to all types of E-UTRA UE release 10 and forward that support UL-MIMO.

### 6.7B.3 Minimum conformance requirements

For UE with multiple antenna transmit connectors, the transmit intermodulation requirements are specified at each transmit antenna connector and the wanted signal is defined as the sum of output power at each transmit antenna connector.

For UEs with two transmit antenna connectors supporting dual-layer transmission, the requirements in subclause 6.7.3-1 apply to each transmit antenna connector with the UL-MIMO configurations specified in Table 6.2.2B.3-2.

The normative reference for this requirement is TS 36.101 [2] clause 6.7.1B.

### 6.7B.4 Test description

#### 6.7B.4.1 Initial conditions

Initial conditions are a set of test configurations the UE needs to be tested in and the steps for the SS to take with the UE to reach the correct measurement state.

The initial test configurations consist of environmental conditions, test frequencies, and channel bandwidths based on E-UTRA operating bands specified in table 5.4.2.1-1. All of these configurations shall be tested with applicable test parameters for each channel bandwidth, and are shown in table 6.7B.4.1-1. The details of the uplink reference measurement channels (RMCs) are specified in Annexes A.2. Configurations of PDSCH and PDCCCH before measurement are specified in Annex C.2.

**Table 6.7B.4.1-1: Test Configuration Table**

Initial Conditions				
Test Environment as specified in TS 36.508[7] subclause 4.1		Normal		
Test Frequencies as specified in <b>TS36.508 [7] subclause 4.3.1</b>		Mid range		
Test Channel Bandwidths as specified in <b>TS 36.508 [7] subclause 4.3.1</b>		5MHz and Highest		
Test Parameters for Channel Bandwidths				
Ch BW	Downlink Configuration	Uplink Configuration		
	N/A for Transmit Intermodulation	Mod'n	RB allocation	
		FDD	TDD	
5MHz		QPSK	8	8
10MHz		QPSK	12	12
15MHz		QPSK	16	16
20MHz	QPSK	18	18	
Note 1: Test Channel Bandwidths are checked separately for each E-UTRA band, the applicable channel bandwidths are specified in Table 5.4.2.1-1.				

1. Connect the SS to the UE antenna connectors as shown in TS 36.508 [7] Annex A, Figure A.39.
2. The parameter settings for the cell are set up according to TS 36.508 [7] subclause 4.4.3.
3. Downlink signals are initially set up according to Annex C.0, C.1, and C.3.0, and uplink signals according to Annex H.1 and H.3.0.
4. The UL Reference Measurement channels are set according to Table 6.7B.4.1-1.
5. Propagation conditions are set according to Annex B.0.
6. Ensure the UE is in State 3A-RF according to TS 36.508 [7] clause 5.2A.2. Message contents are defined in clause 6.7B.4.3.

#### 6.7B.4.2 Test procedure

1. SS sends uplink scheduling information for each UL HARQ process via PDCCH DCI format 4 for C\_RNTI to schedule the UL RMC according to Table 6.7B.4.1-1. Since the UE has no payload and no loopback data to send the UE sends uplink MAC padding bits on the UL RMC.
2. Send continuously uplink power control "up" commands to the UE until the UE transmits at its  $P_{UMAX}$  level.
3. Measure the rectangular filtered mean power of the UE. For TDD slots with transient periods are not under test for the wanted signal and for the intermodulation product.
4. Set the interference signal frequency below the UL carrier frequency using the first offset in table 6.7B.5-1.
5. Set the interference CW signal level according to table 6.7B.5-1.
6. Search the intermodulation product signals below and above the UL carrier frequency, then measure the rectangular filtered mean power of transmitting intermodulation for both signals, and calculate the ratios with the power measured in step 3.
7. Set the interference signal frequency above the UL carrier frequency using the first offset in table 6.7B.5-1.
8. Search the intermodulation product signals below and above the UL carrier frequency, then measure the rectangular filtered mean power of transmitting intermodulation for both signals, and calculate the ratios with the power measured in step 3.
9. Repeat the measurement using the second offset in table 6.7B.5-1.
10. Repeat step 3) until 9) for each of transmit antenna of the UE.

### 6.7B.4.3 Message contents

Message contents are according to TS 36.508 [7] clause 4.6.6.7B.5 Test requirement

The ratio derived in step 5 and 7 at each transmit antenna of UE shall not exceed the described value in table 6.7B.5-1.

**Table 6.7B.5-1: Transmit Intermodulation**

BWChannel (UL)	5MHz		10MHz		15MHz		20MHz	
Interference Signal Frequency Offset	5MHz	10MHz	10MHz	20MHz	15MHz	30MHz	20MHz	40MHz (Note 1)
Interference CW Signal Level	-40dBc							
Intermodulation Product	-29dBc	-35dBc	-29dBc	-35dBc	-29dBc	-35dBc	-29dBc	-35dBc
Measurement bandwidth	4.5MHz	4.5MHz	9.0MHz	9.0MHz	13.5MHz	13.5MHz	18MHz	18MHz
Note 1: For Band 20, only applicable for interference signal frequency above the UL carrier frequency.								

## 6.7E Transmit intermodulation for UE category 0

### 6.7E.1 Test purpose

Same test purpose as in clause 6.7.1.

### 6.7E.2 Test applicability

This test case applies to all types of E-UTRA UE release 12 and forward of UE category 0.

### 6.7E.3 Minimum conformance requirements

Same minimum conformance requirements as in clause 6.7.3.

### 6.7E.4 Test description

#### 6.7E.4.1 Initial conditions

Same initial conditions as in clause 6.7.4.1 with following exceptions for HD-FDD:

- Connect SS to the UE antenna connectors as shown in TS 36.508[7] Annex A Figure A.4 using only main UE Tx/Rx antenna.

#### 6.7E.4.2 Test procedure

Same test procedure as in clause 6.7.4.2 with following exception for HD-FDD:

- In step 3, slots with transient periods are not under test. Half-duplex guard subframe are not under test.

#### 6.7E.4.3 Message contents

Message contents are according to TS 36.508 [7] subclause 4.6.

### 6.7E.5 Test requirement

The ratio derived in step 5 and 7, shall not exceed the described value in table 6.7E.5-1

**Table 6.7E.5-1: Transmit Intermodulation**

BWChannel (UL)	5MHz		10MHz		15MHz		20MHz	
Interference Signal Frequency Offset	5MHz	10MHz	10MHz	20MHz	15MHz	30MHz	20MHz	40MHz (Note 1)
Interference CW Signal Level	-40dBc							
Intermodulation Product	-29dBc	-35dBc	-29dBc	-35dBc	-29dBc	-35dBc	-29dBc	-35dBc
Measurement bandwidth	4.5MHz	4.5MHz	9.0MHz	9.0MHz	13.5MHz	13.5MHz	18MHz	18MHz
Note 1: For Band 20, only applicable for interference signal frequency above the UL carrier frequency.								

## 6.7F Transmit intermodulation for UE category NB1

*Editor's note: This test case is incomplete. The following aspects are either missing or not yet determined:*

- Uplink transmission are still in [ ]
- References to TS 36.508 are undefined (cell parameters, test frequencies, UE state)
- The References to table of bands in 36.521-1 is undefined
- Scheduling and loopback are undefined
- Message contents TBC (Proposed values: p-Max = Not present, p0-NominalNPUSCH-r13 = -85 dBm, p0-UE-NPUSCH-r13 = 0 dBm, nrs-Power-r13 = 44 dBm).
- The Annex A.2 Uplink reference measurement channel is undefined
- The Annex C Downlink signals are undefined
- The Annex H uplink channels are undefined

### 6.7F.1 Test purpose

To verify that the UE transmit intermodulation does not exceed the described value in the test requirement.

### 6.7F.2 Test applicability

This test case applies to all types of UE release 13 and forward of UE category NB1.

### 6.7F.3 Minimum conformance requirements

The transmit intermodulation performance is a measure of the capability of the transmitter to inhibit the generation of signals in its non linear elements caused by presence of the wanted signal and an interfering signal reaching the transmitter via the antenna.

The UE category NB1 transmitter intermodulation attenuation is defined by the ratio of the mean power of the wanted signal to the mean power of the intermodulation product as defined in Table 6.7F.3-1 when an interfering CW signal is added at a level below the wanted signal at the transmitter antenna port. Both the wanted signal power and the intermodulation product power are measured through rectangular filter with measurement bandwidth shown in Table 6.7F.3-1.

**Table 6.7F.3-1: UE category NB1 transmitter IM requirement**

Parameters for transmitter intermodulation		
BW Channel (UL)	15 kHz (1 tone)	
Interference Signal Frequency Offset	180 kHz	360 kHz
Interference CW Signal Level	-40dBc	
Intermodulation Product	-20 dBc	-39 dBc
Measurement bandwidth	180 kHz	180 kHz

The normative reference for this requirement is TS 36.101 [2] clause 6.7.1F.

## 6.7F.4 Test description

### 6.7F.4.1 Initial conditions

Initial conditions are a set of test configurations the UE needs to be tested in and the steps for the SS to take with the UE to reach the correct measurement state.

The initial test configurations consist of environmental conditions and test frequencies based on the subset of E-UTRA operating bands defined for NB-IoT in clause 5.2F. All of these configurations shall be tested with applicable test parameters shown in table 6.7F.4.1-1. The details of the uplink reference measurement channels (RMCs) are specified in [Annexes A.2]. Configurations of NPDSCH and NPDCCH before measurement are specified in [Annex C.2].

**Table 6.7F.4.1-1: Test Configuration Table**

Initial Conditions				
Test Environment as specified in TS 36.508[7] subclause [X.4.1]		[Normal]		
Test Frequencies as specified in TS 36.508 [7] subclause [X.4.3.1]		[FFS]		
Test Parameters				
Configuration ID	Downlink Configuration	Uplink Configuration		
	N/A	Modulation	$N_{\text{tones}}$	Sub-carrier spacing (kHz)
1		QPSK	1@0	15kHz
2		QPSK	1@11	15kHz

1. Connect the SS to the UE antenna connectors as shown in TS 36.508 [7] Annex A, [Figure A.2 using only main Tx/Rx antenna].
2. The parameter settings for the cell are set up according to TS 36.508 [7] subclause [FFS].
3. Downlink signals are initially set up according to Annex C.0, C.1, and C.3.0, and uplink signals according to [Annex H.1 and H.3.0].
4. The UL Reference Measurement channels are set according to Table 6.7F.4.1-1.
5. Propagation conditions are set according to Annex B.0.
6. Ensure the UE is in State [3aA-NB] according to TS 36.508 [7] clause [FFS]. Message contents are defined in clause 6.7F.4.3.

### 6.7F.4.3 Test procedure

1. SS sends [uplink scheduling information for the UL HARQ process via NPDCCH DCI format N0 for C\_RNTI to schedule the UL RMC according to Table 6.7F.4.1-1. Since the UE has no payload and no loopback data to

send the UE sends uplink MAC padding bits on the UL RMC]. (UE should be already transmitting  $P_{UMAX}$  after Initial Conditions setting).

2. Measure the mean power of the UE in the channel bandwidth of the radio access mode according to the test configuration, which shall meet the requirements described in Table [6.2.3F.5-1]. The measurement period is at least one sub-frame (1ms) for 15 KHz channel spacing, and at least a 2ms slot (excluding the 2304Ts gap when UE is not transmitting) respectively for the 3.75 KHz channel spacing.
3. Set the interference signal frequency below the UL carrier frequency using the first offset in table 6.7F.5-1.
4. Set the interference CW signal level according to table 6.7F.5-1.
5. Search the intermodulation product signals below and above the UL carrier frequency, then measure the rectangular filtered mean power of transmitting intermodulation for both signals, and calculate the ratios with the power measured in step 3.
6. Set the interference signal frequency above the UL carrier frequency using the first offset in table 6.7F.5-1.
7. Search the intermodulation product signals below and above the UL carrier frequency, then measure the rectangular filtered mean power of transmitting intermodulation for both signals, and calculate the ratios with the power measured in step 3.

Repeat the measurement using the second offset in table 6.7F.5-1.

### 6.7F.4.3 Message contents

Message contents are according to TS 36.508 [7] subclause [FFS].

### 6.7F.5 Test requirement

The ratio derived in step 6 and 8, shall not exceed the described value in table 6.7F.5-1

**Table 6.7F.5-1: Transmit Intermodulation**

BW Channel (UL)	15 kHz (1 tone)	
Interference Signal Frequency Offset	180 kHz	360 kHz
Interference CW Signal Level	-40dBc	
Intermodulation Product	-20 dBc	-39 dBc
Measurement bandwidth	180 kHz	180 kHz

## 6.8 Time alignment

FFS.

## 6.8.1 Void

## 6.8A Void

## 6.8B Time alignment error for UL-MIMO

### 6.8B.1 Test purpose

To verify that the error of time alignment in UL MIMO does not exceed the range prescribed by the specified UL MIMO Time Alignment Error (TAE) and tolerance.

An excess time alignment error has the possibility to interfere to other channels or other systems and decrease UL MIMO performance because of the timing unsynchronization.

### 6.8B.2 Test applicability

This test case applies to all types of E-UTRA UE release 10 and forward that support UL MIMO.

### 6.8B.3 Minimum conformance requirements

For UE(s) with multiple transmit antenna connectors, the Time Alignment Error (TAE) shall not exceed 130 ns.

**Table 6.8B.3-1: UL-MIMO configuration in closed-loop spatial multiplexing scheme**

Transmission mode	DCI format	Codebook Index
Mode 2	DCI format 4	Codebook index 0

The normative reference for this requirement is TS 36.101 [2] clause 6.8B.

### 6.8B.4 Test description

#### 6.8B.4.1 Initial condition

Initial conditions are a set of test configurations the UE needs to be tested in and the steps for the SS to take with the UE to reach the correct measurement state.

The initial test configurations consist of environmental conditions, test frequencies, and channel bandwidths based on E-UTRA operating bands specified in table 5.4.2.1-1. All of these configurations shall be tested with applicable test parameters for each channel bandwidth, and are shown in table 6.8B.4.1-1. The details of the uplink reference measurement channels (RMCs) are specified in Annex A.2. Configurations of PDSCH and PDCCH before measurement are specified in Annex C.2.

**Table 6.8B.4.1-1: Test Configuration Table**

Initial Conditions				
Test Environment as specified in TS 36.508[7] clause 4.1	Normal			
Test Frequencies as specified in TS36.508 [7] clause 4.3.1	Mid range			
Test Channel Bandwidths as specified in TS 36.508 [7] clause 4.3.1	Lowest, 5MHz, Highest			
Test Parameters for Channel Bandwidths				
Ch BW	Downlink Configuration	Uplink Configuration		
		Mod'n	RB allocation	
	N/A		FDD	TDD
1.4MHz		QPSK	6	6
3MHz		QPSK	15	15
5MHz		QPSK	25	25
10MHz		QPSK	50	50
15MHz		QPSK	75	75
20MHz		QPSK	100	100
Note 1: Test Channel Bandwidths are checked separately for each E-UTRA band, the applicable channel bandwidths are specified in Table 5.4.2.1-1.				

1. Connect the SS to the UE antenna connectors as shown in TS 36.508[7] Annex A Figure A.28.
2. The parameter settings for the cell are set up according to TS 36.508 [7] clause 4.4.3.
3. Downlink signals are initially set up according to Annex C.0, C.1, and C.3.0, and uplink signals according to Annex H.1 and H.3.0.
4. The UL Reference Measurement channel is set according to Table 6.8B.4.1-1.
5. Propagation conditions are set according to Annex B.0.
6. Ensure the UE is in State 3A-RF according to TS 36.508 [7] clause 5.2A.2. Message contents are defined in clause 6.8B.4.3.

#### 6.8B.4.2 Test procedure

1. SS sends uplink scheduling information for each UL HARQ process via PDCCH DCI format 4 for C\_RNTI to schedule the UL RMC according to Table 6.8B.4.1-1. Since the UE has no payload and no loopback data to send the UE sends uplink MAC padding bits on the UL RMC.
2. Send continuously uplink power control "up" commands in every uplink scheduling information to the UE; allow at least 200ms for the UE to reach PUMAX level for UE.
3. Measure the timing of one sub-frame at each antenna connector.

#### 6.8B.4.3 Message contents

Message contents are according to TS 36.508 [7] clause 4.6.

#### 6.8B.5 Test requirements

For UE(s) with multiple transmit antenna connectors, the Time Alignment Error (TAE) shall not exceed 155 ns.

## 7 Receiver Characteristics

### 7.1 General

Unless otherwise stated the receiver characteristics are specified at the antenna connector(s) of the UE. For UE(s) with an integral antenna only, a reference antenna(s) with a gain of 0 dBi is assumed for each antenna port(s). UE with an integral antenna(s) may be taken into account by converting these power levels into field strength requirements, assuming a 0 dBi gain antenna. For UEs with more than one receiver antenna connector, identical interfering signals shall be applied to each receiver antenna port if more than one of these is used (diversity).

Unless otherwise stated, the test signal levels are defined at each antenna port, and specified in the respective sections below. Any specific test conditions are defined in the paragraph for each test. Unless stated otherwise, power control of the Downlink is OFF.

In general, the UE is set into the correct state in the "Initial conditions" part of the test, using normal SS signalling procedures over the air interface under easy radio conditions to ensure reliable message exchange. In the "Test procedure" part of the test, specific radio conditions are applied according to the test requirement and the desired measurement is made or the desired response is tested.

The ACS, blocking, spurious emissions and intermodulation requirements in sections 7.5, 7.6, 7.7 and 7.8 are defined for full band width signals i.e. for signals where all resource blocks are allocated for a specific user.

With the exception of Clause 7.3, the requirements shall be verified with the network signalling value NS\_01 configured (Table 6.2.4.3-1).

All the parameters in clause 7 are defined using the UL reference measurement channels specified in Annexes A.2.2 and A.2.3, the DL reference measurement channels specified in Annex A.3.2 and using the set-up specified in Annex C.3.1.

For the additional requirements for intra-band non-contiguous carrier aggregation of two component carriers (one component carrier per sub-block), an in-gap test refers to the case when the interfering signal is located at a negative offset with respect to the assigned channel frequency of the highest carrier frequency and located at a positive offset with respect to the assigned channel frequency of the lowest carrier frequency.

For the additional requirements for intra-band non-contiguous carrier aggregation of two component carriers (one component carrier per sub-block), an out-of-gap test refers to the case when the interfering signal(s) is (are) located at a positive offset with respect to the assigned channel frequency of the highest carrier frequency, or located at a negative offset with respect to the assigned channel frequency of the lowest carrier frequency.

For the additional requirements for intra-band non-contiguous carrier aggregation of two component carriers with channel bandwidth larger than or equal to 5 MHz (one component carrier per sub-block), the existing adjacent channel selectivity requirements, in-band blocking requirements (for each case), and narrow band blocking requirements apply for in-gap tests only if the corresponding interferer frequency offsets with respect to the two measured carriers satisfy the following condition in relation to the sub-block gap size  $W_{\text{gap}}$  for at least one of these carriers  $j$ ,  $j = 1, 2$ , so that the interferer frequency position does not change the nature of the core requirement tested:

$$W_{\text{gap}} \geq 2 \cdot |F_{\text{Interferer (offset)}_j} - BW_{\text{Channel}(j)}|$$

where  $F_{\text{Interferer (offset)}_j}$  is the interferer frequency offset with respect to carrier  $j$  as specified in subclause 7.5.1A, subclause 7.6.1A and subclause 7.6.3A for the respective requirement and  $BW_{\text{Channel}(j)}$  the channel bandwidth of carrier  $j$ . The interferer frequency offsets for adjacent channel selectivity, each in-band blocking case and narrow-band blocking shall be tested separately with a single in-gap interferer at a time.

For a ProSe UE that supports both ProSe Direct Discovery and ProSe Direct Communication, the receiver characteristics specified in clause 7 for ProSe Direct Communication shall apply.

For ProSe Direct Discovery and ProSe Direct Communication on E-UTRA ProSe operating bands that correspond to TDD E-UTRA operating bands as specified in clause 5.2D, the only additional requirement for ProSe specified in clause 7.4.1D is applicable.

For CA tests, Cell ID = 0 applies to P-Cell, and Cell ID = n (where n is 1,2,3..) applies to S-Celln (where n is 1,2,3..), respectively.

Parameters given in table 7.1-1 are used throughout this section for CA, unless otherwise stated by the test case.

**Table 7.1-1: Common Test Parameters**

Parameter	Value	Comments
Cross carrier scheduling	Not configured	

For CA testing, unless otherwise stated, the logical carriers PCC / SCCs are mapped to physical frequencies as defined in Table 7.1-2.

**Table 7.1-2: PCC/SCCs frequency mapping**

CA Configuration	PCC-SCC mapping	Notes
Intra-band contiguous CA	CC1-CC2 (Note 4) or CC2-CC1 (Note 5)	1
Inter-band CA (CA_x-y)	Bx-By and By-Bx	2, 3
Intra-band non-contiguous CA	CC2-CC1 (Note 4) or CC1-CC2 (Note 5)	1
Note 1:	Notation C <i>C</i> <sub>i</sub> -C <i>C</i> <sub>j</sub> means PCC on component carrier C <i>C</i> <sub>i</sub> and SCC on component carrier C <i>C</i> <sub>j</sub> , with C <i>C</i> <sub>i</sub> / <sub>j</sub> frequencies defined in the corresponding intra-band contiguous / non-contiguous CA band in TS36.508 [7].	
Note 2:	Notation B <i>i</i> -B <i>j</i> means PCC on component Band <i>i</i> and SCC on component Band <i>j</i> , with single Band <i>i</i> / <sub>j</sub> frequencies defined in TS36.508 [7].	
Note 3:	Applicable for UE declared capability of UL support (within CA operation) in the individual bands. If UE does not support both PCC-SCC mappings, only the supported mapping is applicable.	
Note 4:	Applicable for TDD CA and FDD CA bands with UL frequency < DL frequency.	
Note 5:	Applicable for FDD CA bands with UL frequency > DL frequency.	

For testing of category 0 HD-FDD UE in FDD operating bands, the SS shall ensure downlink transmission is only configured in downlink subframes and that UL grants are given to ensure UE is transmitting only in uplink subframes throughout the test. The subframes reserved for uplink and downlink respectively are specified in the RMC definition in Annex A.2 for uplink and Annex A.3 for downlink.

For ProSe testing, DRX configuration specified in Table 7.1-3 is used, so that Sidelink traffic takes place only in the DRX off part of the DRX cycle.

**Table 7.1-3: Reference DRX configuration**

Parameter	Value	Comments
onDurationTimer	psf1	
drx-InactivityTimer	psf1	
drx-RetransmissionTimer	psf1	
longDRX-CycleStartOffset	sf2560, 0	
shortDRX	disabled	
NOTE:	For further information see clause 6.3.2 in TS 36.331.	

## 7.2 Diversity characteristics

The requirements in Section 7 assume that the receiver is equipped with two Rx port as a baseline. These requirements apply to all UE categories unless stated otherwise. Additional requirements apply for UE(s) equipped with four Rx ports. With the exception of clause 7.9, all requirements shall be verified by using both (all) antenna ports simultaneously.

NOTE 1: for an operating band in which the UE can operate using up to four Rx ports, it suffices to verify for conformance the additional requirements applicable for four Rx ports [except for REFSSENS].

NOTE 2: Implementation of 4 antenna ports for all operating bands supported by the UE is not mandated. For a category 0 UE the requirements in Section 7 assume that the receiver is equipped with single Rx port.

For a category NB1 UE the requirements in Section 7 assume that the receiver is equipped with single Rx port.

## 7.3 Reference sensitivity level

Editor's note: FDD/TDD aspects missing or not yet determined:

- The Maximum Sensitivity Degradation figures for large transmission configurations are not finalised in the core specification.

Editor's note: This clause is also incomplete for CA\_42A-46A and CA\_7A-8A-20.

- $\Delta R_{IB,c}$  is in square brackets (awaiting for RAN4 decision).

### 7.3.1 Test purpose

To verify the UE's ability to receive data with a given average throughput for a specified reference measurement channel, under conditions of low signal level, ideal propagation and no added noise.

A UE unable to meet the throughput requirement under these conditions will decrease the effective coverage area of an e-NodeB.

### 7.3.2 Test applicability

This test applies to all types of E-UTRA UE release 8 and forward.

### 7.3.3 Minimum conformance requirements

The throughput shall be  $\geq 95\%$  of the maximum throughput of the reference measurement channels as specified in Annexes A.2.2, A.2.3 and A.3.2 (with one sided dynamic OCNG Pattern OP.1 FDD/TDD for the DL-signal as described in Annex A.5.1.1/A.5.2.1) with parameters specified in Table 7.3.3-1 and Table 7.3.3-2.

Table 7.3.3-1: Reference sensitivity QPSK  $P_{\text{REFSENS}}$ 

E-UTRA Band	Channel bandwidth						Duplex Mode
	1.4 MHz (dBm)	3 MHz (dBm)	5 MHz (dBm)	10 MHz (dBm)	15 MHz (dBm)	20 MHz (dBm)

43	-	-	-99	-96	-94.2	-93	TDD
44		[-100.2]	[-98]	[-95]	[-93.2]	[-92]	TDD
45	-	-	-100	-97	-95.2	-94	TDD
...							
65			-99.5	-96.5	-94.7	-93.5	FDD
66	-104.2	-101.2	-99.5	-96.5	-94.7	-93.5	FDD

Note 1: The transmitter shall be set to  $P_{\text{UMAX}}$  as defined in subclause 6.2.5  
Note 2: The Reference measurement channel is A.3.2 with one sided dynamic OCNG Pattern OP.1 FDD/TDD as described in Annex A.5.1.1/A.5.2.1  
Note 3: The signal power is specified per port

Note 4:	For the UE which supports both Band 3 and Band 9 the reference sensitivity level is FFS.
Note 5:	For the UE which supports both Band 11 and Band 21 the reference sensitivity level is FFS.
Note 6:	<sup>6</sup> indicates that the requirement is modified by -0.5 dB when the carrier frequency of the assigned E-UTRA channel bandwidth is within 865-894 MHz.
Note 7:	For a UE that support both Band 18 and Band 26, the reference sensitivity level for Band 26 applies for the applicable channel bandwidths.

For UE(s) equipped with 4 antenna ports the following additional requirements apply. The throughput shall be  $\geq 95\%$  of the maximum throughput of the reference measurement channels as specified in Annexes A.2.2, A.2.3 and A.3.2 (with one sided dynamic OCNG Pattern OP.1 FDD/TDD for the DL-signal as described in Annex A.5.1.1/A.5.2.1) with parameters specified in Table 7.3.3-1a and Table 7.3.3-2.

**Table 7.3.3-1a: Reference sensitivity QPSK  $P_{\text{REFSENS}}$**

E-UTRA Band	Channel bandwidth						Duplex Mode
	1.4 MHz (dBm)	3 MHz (dBm)	5 MHz (dBm)	10 MHz (dBm)	15 MHz (dBm)	20 MHz (dBm)	
1			-102.7	-99.7	-97.9	-96.7	FDD
2	[-105.4]	[-102.4]	[-100.7]	[-97.7]	[-95.9]	[-94.7]	FDD
3	[-104.4]	[-101.4]	[-99.7]	[-96.7]	[-94.9]	[-93.7]	FDD
...							
7			[-100.7]	[-97.7]	[-95.9]	[-94.7]	FDD
...							
20			[-99.7]	[-96.7]	[-93.9]	[-92.7]	FDD
...							
39			[-102.7]	[-99.7]	[-97.9]	[-96.7]	TDD
...							
41			[-100.7]	[-97.7]	[-95.9]	[-94.7]	TDD
42			[-101.2]	[-98.2]	[-96.4]	[-95.2]	TDD
NOTE 1: The transmitter shall be set to $P_{\text{UMAX}}$ as defined in subclause 6.2.5							
NOTE 2: Reference measurement channel is A.3.2 with one sided dynamic OCNG Pattern OP.1 FDD/TDD as described in Annex A.5.1.1/A.5.2.1							
NOTE 3: The signal power is specified per port.							

The reference receive sensitivity (REFSENS) requirement specified in Table 7.3.3-1 (two antenna ports) and Table 7.3.3-1a (four antenna ports) shall be met for an uplink transmission bandwidth less than or equal to that specified in Table 7.3.3-2.

NOTE: Table 7.3.3-2 is intended for conformance tests and does not necessarily reflect the operational conditions of the network, where the number of uplink and downlink allocated resource blocks will be practically constrained by other factors. Typical receiver sensitivity performance with HARQ retransmission enabled and using a residual BLER metric relevant for e.g. Speech Services is given in the Annex G of TS 36.101 [2] (informative).

For the UE which supports inter-band carrier aggregation configuration with the uplink in one or two E-UTRA bands, the minimum requirement for reference sensitivity in Table 7.3.3-1 and Table 7.3.3-1a shall be increased by the amount given in  $\Delta R_{\text{IB,c}}$  in Table 7.3.3-1A, Table 7.3.3-1B and Table 7.3.3-1C for the applicable E-UTRA bands.

Table 7.3.3-1A:  $\Delta R_{IB,c}$  (two bands)

NOTE 1: The above additional tolerances are only applicable for the E-UTRA operating bands that belong to the supported inter-band carrier aggregation configurations.		
NOTE 2: The above additional tolerances also apply in intra-band and non-aggregated operation for the supported E-UTRA operating bands that belong to the supported inter-band carrier aggregation configurations.		
NOTE 3: Tolerances for a UE supporting multiple 4DL inter-band CA configurations are FFS.		
NOTE 4: The above additional tolerances applicable for the E-UTRA operating bands that belong to the supported highest order inter-band carrier		

aggregation configuration, also applies to the same E-UTRA operating bands that belong to a supported lower order CA configuration.

NOTE: The above additional tolerances do not apply to supported UTRA operating bands with frequency range below 1 GHz that correspond to the E-UTRA operating bands that belong to the supported inter-band carrier aggregation configurations when such bands are belonging only to band combination(s) where one band is <1GHz and other bands are >1.7GHz and there is no harmonic relationship between the low band UL and high band DL. Otherwise the above additional tolerances also apply to supported UTRA operating bands that correspond to the E-UTRA operating bands that belong to the supported inter-band carrier aggregation configurations.

Note 1: refers to the UL resource blocks shall be located as close as possible to the downlink operating band but confined within the transmission bandwidth configuration for the channel bandwidth (Table 5.4.2-1).

Note 2:	For the UE which supports both Band 11 and Band 21 the uplink configuration for reference sensitivity is FFS.
Note 3:	refer to Band 20; in the case of 15MHz channel bandwidth, the UL resource blocks shall be located at $RB_{start}=11$ and in the case of 20MHz channel bandwidth, the UL resource blocks shall be located at $RB_{start}=16$ .
Note 4:	refers to Band 31; in the case of 3 MHz channel bandwidth, the UL resource blocks shall be located at $RB_{start}=9$ and in the case of 5 MHz channel bandwidth, the UL resource blocks shall be located at $RB_{start}=10$ .

Unless given by Table 7.3.3-3, the minimum requirements specified in Tables 7.3.3-1 and 7.3.3-2 shall be verified with the network signalling value NS\_01 (Table 6.2.4.3-1) configured.

**Table 7.3.3-3: Network Signalling Value for reference sensitivity**

13	NS_06
14	NS_06
17	NS_06
19	NS_08
21	NS_09
23	NS_03
30	NS_21
66	NS_03

The normative reference for this requirement is TS 36.101 [2] clause 7.3.1.

## 7.3.4 Test description

### 7.3.4.1 Initial conditions

Initial conditions are a set of test configurations the UE needs to be tested in and the steps for the SS to take with the UE to reach the correct measurement state.

The initial test configurations consist of environmental conditions, test frequencies, and channel bandwidths based on E-UTRA bands specified in table 5.4.2.1-1. All of these configurations shall be tested with applicable test parameters for each channel bandwidth, and are shown in table 7.3.4.1-1. The details of the downlink and uplink reference measurement channels (RMCs) are specified in Annexes A.2 and A.3. The details of the OCNG patterns used are specified in Annex A.5. Configurations of PDSCH and PDCCH before measurement are specified in Annex C.2.

**Table 7.3.4.1-1: Test Configuration Table**

Initial Conditions						
Test Environment as specified in TS 36.508[7] subclause 4.1			NC, TL/VL, TL/VH, TH/VL, TH/VH			
Test Frequencies as specified in TS36.508 [7] subclause 4.3.1			Low range, Mid range, High range			
Test Channel Bandwidths as specified in TS 36.508 [7] subclause 4.3.1			Lowest, 5MHz, Highest			
Test Parameters for Channel Bandwidths						
Ch BW	Downlink Configuration			Uplink Configuration		
	Mod'n	RB allocation		Mod'n	RB allocation	
		FDD	TDD		FDD	TDD
1.4MHz	QPSK	6	6	QPSK	6	6
3MHz	QPSK	15	15	QPSK	15	15
5MHz	QPSK	25	25	QPSK	25	25
5MHz	QPSK	25	N/A	QPSK	20	N/A
5MHz	QPSK	25	N/A	QPSK	15	N/A
5MHz	QPSK	25	N/A	QPSK	5 <sup>4</sup>	N/A
10MHz	QPSK	50	50	QPSK	50	50

15MHz	QPSK	75	N/A	QPSK	20	N/A
20MHz	QPSK	100	100	QPSK	100	100
20MHz	QPSK	100	N/A	QPSK	75	N/A
20MHz	QPSK	100	N/A	QPSK	50	N/A
20MHz	QPSK	100	N/A	QPSK	25	N/A
20MHz	QPSK	100	N/A	QPSK	20	N/A
Note 1:	Test Channel Bandwidths are checked separately for each E-UTRA band, which applicable channel bandwidths are specified in Table 5.4.2.1-1.					
Note 2:	Depending on E-UTRA band, only the appropriate Uplink RB allocation value according to table 7.3.3-2 is tested per Test Channel Bandwidth. The allocation shall be located as close as possible to the downlink operating band but confined within the transmission bandwidth configuration for the channel bandwidth (Table 5.4.2-1).					
Note 3:	For the DL signal one sided dynamic OCN Pattern OP.1 FDD/TDD is used.					
Note 4:	Applicable only to E-UTRA FDD Band 31. The UL resource blocks shall be located at RBstart 10 (according to Table 7.3.3-2).					

1. Connect the SS to the UE antenna connectors as shown in TS 36.508 [7] Annex A, Figure A.3.
2. The parameter settings for the cell are set up according to TS 36.508 [7] subclause 4.4.3.
3. Downlink signals are initially set up according to Annex C0, C.1 and C.3.1, and uplink signals according to Annex H.1 and H.3.1.
4. The UL and DL Reference Measurement channels are set according to Table 7.3.4.1-1.
5. Propagation conditions are set according to Annex B.0.
6. Ensure the UE is in State 3A-RF according to TS 36.508 [7] clause 5.2A.2. Message contents are defined in clause 7.3.4.3.

### 7.3.4.2 Test procedure

1. SS transmits PDSCH via PDCCH DCI format 1A for C\_RNTI to transmit the DL RMC according to Table 7.3.4.1-1. The SS sends downlink MAC padding bits on the DL RMC.
2. SS sends uplink scheduling information for each UL HARQ process via PDCCH DCI format 0 for C\_RNTI to schedule the UL RMC according to Table 7.3.4.1-1. Since the UE has no payload data to send, the UE transmits uplink MAC padding bits on the UL RMC.

3. Set the Downlink signal level to the appropriate REFSENS value defined in Table 7.3.5-1. Send continuously uplink power control "up" commands in the uplink scheduling information to the UE to ensure the UE transmits  $P_{UMAX}$  level for at least the duration of the Throughput measurement.
4. Measure the average throughput for a duration sufficient to achieve statistical significance according to Annex G.2.

### 7.3.4.3 Message contents

Message contents are according to TS 36.508 [7] subclause 4.6 with the following exceptions.

#### 7.3.4.3.1 Message contents exceptions (network signalled value "NS\_01")

Message contents according to TS 36.508 [7] subclause 4.6 can be used without exceptions.

#### 7.3.4.3.2 Message contents exceptions (network signalled value "NS\_03")

1. Information element `additionalSpectrumEmission` is set to NS\_03. This can be set in the *SystemInformationBlockType2* as part of the cell broadcast message. This exception indicates that the UE shall meet the additional spurious emission requirement for a specific deployment scenario.

**Table 7.3.4.3.2-1: SystemInformationBlockType2: Additional spurious emissions test requirement for "NS\_03"**

Derivation Path: TS 36.508 [7] clause 4.4.3.3, Table 4.4.3.3-1			
Information Element	Value/remark	Comment	Condition
<code>additionalSpectrumEmission</code>	3 (NS_03)		

#### 7.3.4.3.3 Message contents exceptions (network signalled value "NS\_06")

1. Information element `additionalSpectrumEmission` is set to NS\_06. This can be set in the *SystemInformationBlockType2* as part of the cell broadcast message. This exception indicates that the UE shall meet the additional spurious emission requirement for a specific deployment scenario.

**Table 7.3.4.3.3-1: SystemInformationBlockType2: Additional spurious emissions test requirement for "NS\_06"**

Derivation Path: TS 36.508 [7] clause 4.4.3.3, Table 4.4.3.3-1			
Information Element	Value/remark	Comment	Condition
<code>additionalSpectrumEmission</code>	6 (NS_06)		

#### 7.3.4.3.4 Message contents exceptions (network signalled value "NS\_09")

1. Information element `additionalSpectrumEmission` is set to NS\_09. This can be set in the *SystemInformationBlockType2* as part of the cell broadcast message. This exception indicates that the UE shall meet the additional spurious emission requirement for a specific deployment scenario.

**Table 7.3.4.3.4-1: SystemInformationBlockType2: Additional spurious emissions test requirement for "NS\_09"**

Derivation Path: TS 36.508 [7] clause 4.4.3.3, Table 4.4.3.3-1			
Information Element	Value/remark	Comment	Condition
<code>additionalSpectrumEmission</code>	9 (NS_09)		

#### 7.3.4.3.5 Message contents exceptions (network signalled value "NS\_08")

1. Information element `additionalSpectrumEmission` is set to NS\_08. This can be set in the *SystemInformationBlockType2* as part of the cell broadcast message. This exception indicates that the UE shall meet the additional spurious emission requirement for a specific deployment scenario.

**Table 7.3.4.3.5-1: SystemInformationBlockType2: Additional spurious emissions test requirement for "NS\_08"**

Derivation Path: TS 36.508 [7] clause 4.4.3.3, Table 4.4.3.3-1			
Information Element	Value/remark	Comment	Condition
additionalSpectrumEmission	8 (NS_08)		

#### 7.3.4.3.6 Message contents exceptions (network signalled value "NS\_21")

1. Information element additionalSpectrumEmission is set to NS\_21. This can be set in the *SystemInformationblockType2* as part of the cell broadcast message. This exception indicates that the UE shall meet the additional spurious emission requirement for a specific deployment scenario.

**Table 7.3.4.3.6-1: SystemInformationBlockType2: Additional spurious emissions test requirement for "NS\_21"**

Derivation Path: TS 36.508 [7] clause 4.4.3.3, Table 4.4.3.3-1			
Information Element	Value/remark	Comment	Condition
additionalSpectrumEmission	21 (NS_21)		

### 7.3.5 Test requirement

The throughput shall be  $\geq 95\%$  of the maximum throughput of the reference measurement channels as specified in Annex A.3.2 with parameters specified in Tables 7.3.5-1 and Table 7.3.5-2.

Table 7.3.5-1: Reference sensitivity QPSK  $P_{\text{REFSENS}}$ 

E-UTRA Band	Channel bandwidth						Duplex Mode
	1.4 MHz (dBm)	3 MHz (dBm)	5 MHz (dBm)	10 MHz (dBm)	15 MHz (dBm)	20 MHz (dBm)	
1	-	-	-99.3	-96.3	-94.5	-93.3	FDD
2	-102.0	-99.0	-97.3	-94.3	-92.5	-91.3	FDD

35	-105.5	-101.5	-99.3	-96.3	-94.5	-93.3	TDD
36	-105.5	-101.5	-99.3	-96.3	-94.5	-93.3	TDD
37	-	-	-99.3	-96.3	-94.5	-93.3	TDD
38	-	-	-99.3	-96.3	-94.5	-93.3	TDD
39	-	-	-99.3	-96.3	-94.5	-93.3	TDD
40	-	-	-99.3	-96.3	-94.5	-93.3	TDD
41	-	-	-97.3	-94.3	-92.5	-91.3	TDD
42	-	-	-98.0	-95.0	-93.2	-92.0	TDD
43	-	-	-98.0	-95.0	-93.2	-92.0	TDD
44		[-99.5]	[-97.3]	[-94.3]	[-92.5]	[-91.3]	TDD
45	-	-	-99.3	-96.3	-94.5	-93.3	TDD
...							
65			-99.5	-96.5	-94	-92.8	FDD
66	-103.5	-100.5	-98.8	-95.8	-94	-92.8	FDD

Note 1: The transmitter shall be set to maximum output power level (Table 7.3.5-2)  
Note 2: The reference measurement channel is specified in A.3.2 with one sided dynamic OCNG Pattern OP.1 FDD/TDD as described in Annex A.5.1.1/A.5.2.1  
Note 3: The signal power is specified per port

Note 4:	For the UE which supports both Band 3 and Band 9 the reference sensitivity level is FFS.
Note 5:	For the UE which supports both Band 11 and Band 21 the reference sensitivity level is FFS.
Note 6:	<sup>6</sup> indicates that the requirement is modified by -0.5 dB when the carrier frequency of the assigned E-UTRA channel bandwidth is within 865-894 MHz.
Note 7:	For a UE that support both Band 18 and Band 26, the reference sensitivity level for Band 26 applies for the applicable channel bandwidths.

For the UE which supports inter-band carrier aggregation configurations the  $\Delta R_{IB,c}$  in Tables 7.3.3-1A, 7.3.3-1B and 7.3.3-1C shall be applied for applicable bands.

In case the UE supports more than one of the inter-band carrier aggregation configurations and a E-UTRA operating band belongs to more than one inter-band carrier aggregation configurations then:

- When the E-UTRA operating band frequency range is  $\leq 1$ GHz, the applicable additional tolerance shall be the average of the tolerances in Table 7.3.3-1A, truncated to one decimal place that would apply for that operating band among the supported CA configurations. In case there is a harmonic relation between low band UL and high band DL (i.e. bands listed in Table 7.3A.0-1), then the maximum tolerance among the different supported carrier aggregation configurations involving such band shall be applied
- When the E-UTRA operating band frequency range is  $>1$ GHz, the applicable additional tolerance shall be the maximum tolerance in Table 7.3.3-1A that would apply for that operating band among the supported CA configurations

NOTE 1: The relation to the received PSD is  $\langle \text{REF} \hat{I}_{or} \rangle = P_{REFSENS} (N_{sc}^{RB} N_{RB} \Delta f)^{-1}$  with  $N_{RB}$  is the transmission bandwidth configuration according to Table 5.4.2-1.

The reference receive sensitivity (REFSENS) requirement specified in Table 7.3.5-1 shall be met for an uplink transmission bandwidth less than or equal to that specified in Table 7.3.5-2.

NOTE 2: Table 7.3.5-2 does not necessarily reflect the operational conditions of the network, where the number of uplink and downlink allocated resource blocks will be practically constrained by other factors.

Table 7.3.5-2: Uplink configuration for reference sensitivity,  $L_{CRB}$  @  $RB_{start}$  format

E-UTRA Band	E-UTRA Band / Channel bandwidth / $N_{RB}$ / Duplex mode						Duplex Mode

## 7.3\_1 Reference sensitivity level with 4 Rx antenna ports

Editor's notes: This clause is incomplete. The following aspects are either missing or not yet determined:

- Minimum requirements and Test requirement are still with square brackets.

### 7.3\_1.1 Test purpose

To verify the ability of UE that supports 4 Rx antenna ports to receive data with a given average throughput for a specified reference measurement channel, under conditions of low signal level, ideal propagation and no added noise.

A UE unable to meet the throughput requirement under these conditions will decrease the effective coverage area of an e-NodeB.

### 7.3\_1.2 Test applicability

This test applies to all types of E-UTRA UE release 10 and forward that supports 4 Rx antenna ports.

### 7.3\_1.3 Minimum conformance requirements

The minimum conformance requirements are defined in clause 7.3.3.

### 7.3\_1.4 Test description

#### 7.3\_1.4.1 Initial conditions

Same as in clause 7.3.4.1 with following exceptions:

- Instead of Table 7.3.4.1-1 → use Table 7.3\_1.4.1-1.
- Instead of Figure A.3 → use Figure A.69.
- Instead of clause 7.3.4.3 → use clause 7.3\_1.4.3.

**Table 7.3\_1.4.1-1: Test Configuration Table**

Initial Conditions						
Test Environment as specified in TS 36.508[7] subclause 4.1			NC, TL/VL, TL/VH, TH/VL, TH/VH			
Test Frequencies as specified in TS36.508 [7] subclause 4.3.1			Low range, Mid range, High range			
Test Channel Bandwidths as specified in TS 36.508 [7] subclause 4.3.1			Lowest, 5MHz, Highest			
Test Parameters for Channel Bandwidths						
Ch BW	Downlink Configuration			Uplink Configuration		
	Mod'n	RB allocation		Mod'n	RB allocation	
		FDD	TDD		FDD	TDD
1.4MHz	QPSK	6	N/A	QPSK	6	N/A
3MHz	QPSK	15	N/A	QPSK	15	N/A
5MHz	QPSK	25	N/A	QPSK	25	N/A
10MHz	QPSK	50	N/A	QPSK	50	N/A
10MHz	QPSK	50	N/A	QPSK	20	N/A
15MHz	QPSK	75	N/A	QPSK	75	N/A
15MHz	QPSK	75	N/A	QPSK	50	N/A
15MHz	QPSK	75	N/A	QPSK	20	N/A
20MHz	QPSK	100	100	QPSK	100	100
20MHz	QPSK	100	N/A	QPSK	75	N/A
20MHz	QPSK	100	N/A	QPSK	50	N/A
20MHz	QPSK	100	N/A	QPSK	20	N/A
Note 1: Test Channel Bandwidths are checked separately for each E-UTRA band, which applicable channel bandwidths are specified in Table 5.4.2.1-1. Note 2: Depending on E-UTRA band, only the appropriate Uplink RB allocation value according to table 7.3.3-2 is tested per Test Channel Bandwidth. The allocation shall be located as close as possible to the downlink operating band but confined within the transmission bandwidth configuration for the channel bandwidth (Table 5.4.2-1). Note 3: For the DL signal one sided dynamic OCNG Pattern OP.1 FDD/TDD is used.						

### 7.3\_1.4.2 Test procedure

Same as in clause 7.3.4.2 with following exceptions:

- Instead of Table 7.3.4.1-1 → use Table 7.3\_1.4.1-1.
- Instead of Table 7.3.5-1 → use Table 7.3\_1.5-1.

### 7.3\_1.4.3 Message contents

Message contents are according to TS 36.508 [7] subclause 4.6 with the following exceptions.

#### 7.3\_1.4.3.1 Message contents exceptions (network signalled value "NS\_01")

Message contents according to TS 36.508 [7] subclause 4.6 can be used without exceptions.

#### 7.3\_1.4.3.2 Message contents exceptions (network signalled value "NS\_03")

1. Information element *additionalSpectrumEmission* is set to NS\_03. This can be set in the *SystemInformationBlockType2* as part of the cell broadcast message. This exception indicates that the UE shall meet the additional spurious emission requirement for a specific deployment scenario.

**Table 7.3\_1.4.3.2-1: SystemInformationBlockType2: Additional spurious emissions test requirement for "NS\_03"**

Derivation Path: TS 36.508 [7] clause 4.4.3.3, Table 4.4.3.3-1			
Information Element	Value/remark	Comment	Condition
<i>additionalSpectrumEmission</i>	3 (NS_03)		

## 7.3\_1.5 Test requirement

Same as in clause 7.3.5 with the following exceptions:

- Instead of Table 7.3.5-1 → use Table 7.3\_1.5-1.

**Table 7.3\_1.5-1: Reference sensitivity QPSK  $P_{\text{REFSENS}}$**

E-UTRA Band	Channel bandwidth						Duplex Mode
	1.4 MHz (dBm)	3 MHz (dBm)	5 MHz (dBm)	10 MHz (dBm)	15 MHz (dBm)	20 MHz (dBm)	
2	[-104.7]	[-101.7]	[-100.0]	[-97.0]	[-95.2]	[-94.0]	FDD
3	[-103.7]	[-100.7]	[-99.0]	[-96.0]	[-94.2]	[-93.0]	FDD
...							
7			[-100.0]	[-97.0]	[-95.2]	[-94.0]	FDD
...							
20			[-99.0]	[-96.0]	[-93.2]	[-92.0]	FDD
...							
39			[-102.0]	[-99.0]	[-97.2]	[-96.0]	TDD
...							
42			[-100.2]	[-97.2]	[-95.4]	[-94.2]	TDD

NOTE 1: The transmitter shall be set to  $P_{\text{UMAX}}$  as defined in subclause 6.2.5  
 NOTE 2: Reference measurement channel is A.3.2 with one sided dynamic OCNG Pattern OP.1 FDD/TDD as described in Annex A.5.1.1/A.5.2.1  
 NOTE 3: The signal power is specified per port.

## 7.3A Reference sensitivity level for CA

**Editor's note: The Test Requirements for CA\_2A-30A are missing.**

### 7.3A.0 Minimum conformance requirements

For inter-band carrier aggregation with one component carrier per operating band and the uplink assigned to one E-UTRA band the throughput shall be  $\geq 95\%$  of the maximum throughput of the reference measurement channels as specified in Annexes A.2.2, A.2.3 and A.3.2 (with one sided dynamic OCNG Pattern OP.1 FDD/TDD for the DL-signal as described in Annex A.5.1.1/A.5.2.1) with parameters specified in Table 7.3.3-1, Table 7.3.3-1a and Table 7.3.3-2. The reference sensitivity is defined to be met with all downlink component carriers active and one of the uplink carriers active. The uplink resource blocks shall be located as close as possible to the primary downlink operating band but confined within the transmission bandwidth configuration for the channel bandwidth (Table 5.4.2-1). The primary downlink operating band is the downlink band of the active uplink operating band. The UE shall meet the requirements specified in subclause 7.3.3 with the following exceptions.

For the UE that supports any of the E-UTRA CA configurations given in Table 7.3A.0-1, exceptions to the aforementioned requirements are allowed when the uplink active in a lower-frequency band and is within a specified frequency range such that transmitter harmonics fall within the downlink transmission bandwidth assigned in a higher band as noted in Table 7.3A.0-1. For these exceptions, the UE shall meet the requirements specified in Table 7.3A.0-1 and Table 7.3A.0-1a.

Table 7.3A.0-1: Reference sensitivity for carrier aggregation QPSK  $P_{\text{REFSENS, CA}}$  (exceptions)

EUTRA CA Configuration	Channel bandwidth							Duplex mode
	EUTRA band	1.4 MHz (dBm)	3 MHz (dBm)	5 MHz (dBm)	10 MHz (dBm)	15 MHz (dBm)	20 MHz (dBm)

	42			-85.7	-85.4	-85.1	-84.9	TDD

Note 1: The transmitter shall be set to  $P_{UMAX}$  as defined in subclause 6.2.5A.

Note 2: Reference measurement channel is A.3.2 with one sided dynamic OCNG Pattern OP.1 FDD/TDD as described in Annex A.5.1.1/A.5.2.1

Note 3: The signal power is specified per port

Note 4: No requirements apply when there is at least one individual RE within the uplink transmission bandwidth of the low band for which the 2nd transmitter harmonic is within the downlink transmission bandwidth of the

high band. The reference sensitivity is only verified when this is not the case (the requirements specified in clause 7.3.3 apply).

Note 5: These requirements apply when there is at least one individual RE within the uplink transmission bandwidth of a low band for which the 3rd transmitter harmonic is within the uplink transmission bandwidth of a high band.

Note 6: The requirements should be verified for UL EARFCN of a low band (superscript LB) such that  $f_{UL}^{LB} = \lfloor f_{DL}^{HB} / 0.3 \rfloor 0.1$  in MHz and  $F_{UL\_low}^{LB} + BW_{Channel}^{LB} / 2 < f_{UL}^{LB} < F_{UL\_high}^{LB} - BW_{Channel}^{LB} / 2$  with  $f_{DL}^{HB}$  the carrier frequency of a high band in MHz and  $BW_{Channel}^{LB}$  the channel bandwidth configured in the low band.

NOTE 7: Void.

NOTE 8: No requirements apply when there is at least one individual RE within the uplink transmission bandwidth of the low band for which the 3rd transmitter harmonic is within the downlink transmission bandwidth of the high band. The reference sensitivity is only verified when this is not the case (the requirements specified in clause 7.3.3 apply).

NOTE 9: These requirements apply when there is at least one individual RE within the uplink transmission bandwidth of the aggressor (lower) band for which the 2nd transmitter harmonic is within the downlink transmission bandwidth of a victim (higher) band and a range  $\Delta F_{HD}$  above and below the edge of this downlink transmission bandwidth. The value  $\Delta F_{HD}$  depends on the E-UTRA configuration:  $\Delta F_{HD} = 10$  MHz for CA\_3A-42A, CA\_3A-42C, CA\_1A-3A-42A, CA\_1A-3A-42C, CA\_3A-19A-42A, CA\_3A-19A-42C, CA\_1A-3A-19A-42A and CA\_1A-3A-19A-42C.

NOTE 10: The requirements should be verified for UL EARFCN of the aggressor (lower) band (superscript LB) such that  $f_{UL}^{LB} = \lfloor f_{DL}^{HB} / 0.2 \rfloor 0.1$  in MHz and  $F_{UL\_low}^{LB} + BW_{Channel}^{LB} / 2 < f_{UL}^{LB} < F_{UL\_high}^{LB} - BW_{Channel}^{LB} / 2$  with  $f_{DL}^{HB}$  carrier frequency in the victim (higher) band in MHz and  $BW_{Channel}^{LB}$  the channel bandwidth configured in the lower band.

NOTE 11: The requirements are only applicable to channel bandwidths with a carrier frequency at  $\pm (20 + BW_{Channel}^{HB} / 2)$  MHz offset from  $2 f_{UL}^{LB}$  in the victim (higher band) with  $F_{UL\_low}^{LB} + BW_{Channel}^{LB} / 2 < f_{UL}^{LB} < F_{UL\_high}^{LB} - BW_{Channel}^{LB} / 2$ , where  $BW_{Channel}^{LB}$  and  $BW_{Channel}^{HB}$  are the channel bandwidths configured in the aggressor (lower) and victim (higher) bands in MHz, respectively.

NOTE 12: These requirements apply when there is at least one individual RE within the uplink transmission bandwidth of a low band for which the 4<sup>th</sup> transmitter harmonic is within the downlink transmission bandwidth of a high band.

NOTE 13: The requirements should be verified for UL EARFCN of a low band (superscript LB) such that

$f_{UL}^{LB} = \lfloor f_{DL}^{HB} / 0.4 \rfloor 0.1$  in MHz and  $F_{UL\_low}^{LB} + BW_{Channel}^{LB} / 2 < f_{UL}^{LB} < F_{UL\_high}^{LB} - BW_{Channel}^{LB} / 2$  with  $f_{DL}^{HB}$  the carrier frequency of a high band in MHz and  $BW_{Channel}^{LB}$  the channel bandwidth configured in the low band.

NOTE 14: For the UE that supports CA\_1A-19A-28A, no requirements apply when there is at least one individual RE within the uplink transmission bandwidth of the low band for which the 3rd transmitter harmonic is within the downlink transmission bandwidth of the high band. The reference sensitivity should only be verified when this is not the case (the requirements specified in clause 7.3 apply).

NOTE 15: These requirements apply when there is at least one individual RE within the downlink transmission bandwidth of the victim (lower) band for which the 3<sup>rd</sup> harmonic is within the uplink transmission bandwidth or the uplink adjacent channel's transmission bandwidth of an aggressor (higher) band.

NOTE 16: The requirements should be verified for UL EARFCN of the aggressor (higher) band (superscript HB) such that  $f_{DL}^{LB} = \lfloor f_{UL}^{HB} / 0.3 \rfloor 0.1$  in MHz and  $F_{UL\_low}^{HB} + BW_{Channel}^{HB} / 2 < f_{UL}^{HB} < F_{UL\_high}^{HB} - BW_{Channel}^{HB} / 2$  with  $f_{DL}^{LB}$  the carrier frequency in the victim (lower) band and  $BW_{Channel}^{HB}$  the channel bandwidth configured in the higher band.

NOTE 17: These requirements apply when there is at least one individual RE within the uplink transmission bandwidth of a low band for which the 5<sup>th</sup> transmitter harmonic is within the downlink transmission bandwidth of a high band.

NOTE 18: The requirements should be verified for UL EARFCN of a low band (superscript LB) such that

$f_{UL}^{LB} = \lfloor f_{DL}^{HB} / 0.5 \rfloor 0.1$  in MHz and  $F_{UL\_low}^{LB} + BW_{Channel}^{LB} / 2 < f_{UL}^{LB} < F_{UL\_high}^{LB} - BW_{Channel}^{LB} / 2$  with  $f_{DL}^{HB}$  the carrier frequency of a high band in MHz and  $BW_{Channel}^{LB}$  the channel bandwidth configured in the low band.

NOTE 19: No requirements apply for the case that there is at least one individual RE within the uplink transmission bandwidth of the relative higher band and when the frequency range of relative higher band's uplink channel bandwidth or uplink 1<sup>st</sup> adjacent channel bandwidth is fully or partially overlapped with the 3 times of the frequency range of the relative lower band's downlink channel bandwidth. The reference sensitivity is only verified when this is not the case (the requirements specified in clause 7.3.1 apply).

NOTE 20: Applicable only if operation with 4 antenna ports is supported in the band with carrier aggregation configured.

Table 7.3A.0-1a: Uplink configuration for the low band (exceptions)

E-UTRA Band / Channel bandwidth of the high band / NRB / Duplex mode

CA_28A-40C	40			25	50	75	100	TDD
Note 1: refers to the UL resource blocks, which shall be centred within the transmission bandwidth configuration for the channel bandwidth								
Note 2: the UL configuration applies regardless of the channel bandwidth of the low band unless the UL resource blocks exceed that specified in Table 7.3.3-2 for the uplink bandwidth in which case the allocation according to Table 7.3.3-2 applies.								
Note 3: refers to the UL resource blocks shall be located between 2373-2400MHz.								

For the UE that supports any of the E-UTRA CA configurations given in Table 7.3A.0-1b, exceptions are allowed when the uplink is active within a specified frequency range as noted in Table 7.3A.0-1b. For these exceptions, the UE shall meet the requirements specified in Table 7.3A.0-1b and Table 7.3A.0-1c.

**Table 7.3A.0-1b: Reference sensitivity for carrier aggregation QPSK  $P_{REFSENS, CA}$  (exceptions for two bands)**

Channel bandwidth								
EUTRA CA Configuration	EUTRA band	1.4 MHz (dBm)	3 MHz (dBm)	5 MHz (dBm)	10 MHz (dBm)	15 MHz (dBm)	20 MHz (dBm)	Duplex mode
CA_1A-3A <sup>4</sup>	1			-100	-97	-95.2	-94	FDD

	3			-97	-94	-92.2	-91	
CA_1A-3C <sup>4</sup>	1			-100	-97	-95.2	-94	FDD
	3			-94	-91.5	-90	-89	
CA_1A-3C <sup>5</sup>	1			-100	-97	-95.2	-94	FDD
	3			-97	-94	-92.2	-91	
CA_18A-28A <sup>6</sup>	18			-100	-97	-95.2		FDD
	28			-94	-92.5			
CA_19A-28A <sup>7</sup>	19			-100	-97	-95.2		FDD
	28			-94	-92			

NOTE 1: The transmitter shall be set to  $P_{UMAX}$  as defined in subclause 6.2.5A.  
 NOTE 2: Reference measurement channel is A.3.2 with one sided dynamic OCNG Pattern OP.1 FDD/TDD as described in Annex A.5.1.1/A.5.2.1  
 NOTE 3: The signal power is specified per port  
 NOTE 4: These requirements apply when the uplink is active in Band 1 and the separation between the lower edge of the uplink channel in Band 1 and the upper edge of the downlink channel in Band 3 is < 60 MHz. For each channel bandwidth in Band 3, the requirement applies regardless of channel bandwidth in Band 1.  
 NOTE 5: These requirements apply when the uplink is active in Band 1 and the separation between the lower edge of the uplink channel in Band 1 and the upper edge of the downlink channel in Band 3 is  $\geq$  60 MHz. For each channel bandwidth in Band 3, the requirement applies regardless of channel bandwidth in Band 1.  
 NOTE 6: These requirements apply when the uplink is active in Band 18 and the downlink channels in Band 28 are confined within the restricted frequency range specified for this CA configuration (Table 5.2A-2). For each channel bandwidth in Band 28, the requirement applies regardless of channel bandwidth in Band 18.  
 NOTE 7: These requirements apply when the uplink is active in Band 19 and the downlink channels in Band 28 are allocated at the middle of the restricted frequency range specified for this CA configuration (Table 5.2A-2). For each channel bandwidth in Band 28, the requirement applies regardless of channel bandwidth in Band 19.  
 NOTE 8: Applicable only if operation with 4 antenna ports is supported in the band with carrier aggregation configured.

CA_1A-3C <sup>1,3</sup>	1			25	45	45	45	FDD
CA_18A-28A <sup>4</sup>	18			25	25	25		FDD
CA_19A-28A <sup>4</sup>	19			18	18	18		FDD
NOTE 1: refers to the UL resource blocks shall be located as close as possible to the downlink channel in Band 3 but confined within the transmission bandwidth configuration for the channel bandwidth (Table 5.6-1) in the uplink channel in Band 1.								
NOTE 2: UL allocation when the separation between the lower edge of the uplink channel in Band 1 and the upper edge of the downlink channel in Band 3 is < 60 MHz								
NOTE 3: UL allocation when the separation between the lower edge of the uplink channel in Band 1 and the upper edge of the downlink channel in Band 3 is ≥ 60 MHz.								
NOTE 4: refers to the UL resource blocks shall be located as close as possible to the downlink channel in Band 28 but confined within the transmission bandwidth configuration for the channel bandwidth (Table 5.4.2-1).								

For the UE that supports any of the E-UTRA CA configurations given in Table 7.3A.0-1cA, exceptions are allowed when the uplink is active within a specified frequency range as noted in Table 7.3A.0-1cA. For these exceptions, the UE shall meet the requirements specified in Table 7.3A.0-1cA and Table 7.3A.0-1cB.

CA_28A-40D	28			-96.8	-94.1	-92.5	-89.8	FDD	40
	40			-100	-97	-95.2	-94		

- NOTE 1: The transmitter shall be set to  $P_{UMAX}$  as defined in subclause 6.2.5A.
- NOTE 2: Reference measurement channel is A.3.2 with one sided dynamic OCNG Pattern OP.1 FDD/TDD as described in Annex A.5.1.1/A.5.2.1.
- NOTE 3: The signal power is specified per port.
- NOTE 4: These requirements apply regardless of the channel bandwidth and the location of UL band.
- NOTE 5: The B41 requirements are modified by -0.5dB when carrier frequency of the assigned E-UTRA channel bandwidth is within 2545-2690 MHz.
- NOTE 6: The antenna isolation for MSD calculation is assumed as 10 dB. For conducted mode REFSENS test such antenna isolation is not observed as the antennas are disconnected. Additionally antenna isolation assumption is under discussion depending on the frequency range.
- NOTE 7: These requirements apply when there is at least one individual RE within the uplink transmission bandwidth of the aggressor (lower) band for which the 2nd transmitter harmonic is within the downlink transmission bandwidth of a victim (higher) band and a range  $\Delta F_{HD}$  above and below the edge of this downlink transmission bandwidth. The value  $\Delta F_{HD}$  depends on the E-UTRA configuration:  $\Delta F_{HD} = 10$  MHz for CA\_3A-42A, CA\_3A-42C, CA\_1A-3A-42A, CA\_1A-3A-42C, CA\_3A-19A-42A, CA\_3A-19A-42C and CA\_1A-3A-19A-42A, CA 3A-41A-42A.
- NOTE 8: The requirements should be verified for UL EARFCN of the aggressor (lower) band (superscript LB) such that  $f_{UL}^{LB} = \lfloor f_{DL}^{HB} / 0.2 \rfloor_0.1$  in MHz and  $F_{UL\_low}^{LB} + BW_{Channel}^{LB} / 2 < f_{UL}^{LB} < F_{UL\_high}^{LB} - BW_{Channel}^{LB} / 2$  with  $f_{DL}^{HB}$  carrier frequency in the victim (higher) band in MHz and  $BW_{Channel}^{LB}$  the channel bandwidth configured in the lower band.
- NOTE 9: The requirements are only applicable to channel bandwidths with a carrier frequency at  $\pm (20 + BW_{Channel}^{HB} / 2)$  MHz offset from  $2f_{UL}^{LB}$  in the victim (higher band) with  $F_{UL\_low}^{LB} + BW_{Channel}^{LB} / 2 < f_{UL}^{LB} < F_{UL\_high}^{LB} - BW_{Channel}^{LB} / 2$ , where  $BW_{Channel}^{LB}$  and  $BW_{Channel}^{HB}$  are the channel bandwidths configured in the aggressor (lower) and victim (higher) bands in MHz, respectively.
- NOTE 10: Only applicable for UE supporting inter-band carrier aggregation with uplink in one E-UTRA band and without simultaneous Rx/Tx.
- NOTE 11: Applicable only if operation with 4 antenna ports is supported in the band with carrier aggregation configured.

NOTE 1: <sup>1</sup> refers to the UL resource blocks shall be located as close as possible to the downlink operating band but confined within the transmission bandwidth configuration for the channel bandwidth (Table 5.6-1).

NOTE 2: the UL configuration applies regardless of the channel bandwidth of the low band unless the UL resource blocks exceed that specified in Table 7.3.1-2 for the uplink bandwidth in which case the allocation according to Table 7.3.1-2 applies.

For band combinations including operating bands without uplink band (as noted in Table 5.2-1), the requirements are specified in Table 7.3A.0-1d and Table 7.3A.0-1e.

NOTE 1: refers to the UL resource blocks shall be located as close as possible to the downlink operating band but confined within the transmission bandwidth configuration for the channel bandwidth

(Table 5.4.2-1).  
 NOTE 2: refers to Band 20; in the case of 15MHz channel bandwidth, the UL resource blocks shall be located at RB<sub>start</sub> 11 and in the case of 20MHz channel bandwidth, the UL resource blocks shall be located at RB<sub>start</sub> 16.

For band combinations including operating band 46 (Table 5.2-1), the requirements are specified in Table 7.3A.0-1eA and Table 7.3A.0-1eB.

**Table 7.3A.0-1eA: Reference sensitivity QPSK  $P_{\text{REFSENS}}$**

Channel bandwidth								
EUTRA CA Configuration	EUTRA band	1.4 MHz (dBm)	3 MHz (dBm)	5 MHz (dBm)	10 MHz (dBm)	15 MHz (dBm)	20 MHz (dBm)	Duplex mode
CA_1A-46A	1			-100	-97	-95.2	-94	FDD
	46						-90	TDD

	46						FFS	TDD

NOTE 1: The transmitter shall be set to  $P_{\text{UMAX}}$  as defined in subclause 6.2.5A.  
 NOTE 2: Reference measurement channel is A.3.2 with one sided dynamic OCNG Pattern OP.1 FDD/TDD as described in Annex A.5.1.1/A.5.2.1.  
 NOTE 3: The signal power is specified per port.  
 NOTE 4: Applicable only if operation with 4 antenna ports is supported in the band with carrier aggregation configured.  
 NOTE 5: The requirements do not apply when there is at least one individual RE within the uplink transmission bandwidth of the lower band for which the transmitter harmonic is within the downlink transmission bandwidth of the higher band and a range  $\Delta F_{\text{HD}}$  above and below the edge of this downlink transmission bandwidth. The value  $\Delta F_{\text{HD}}$  depends on the E-UTRA configuration:  $\Delta F_{\text{HD}} = [15]$  MHz for CA\_xA-46A (x=1, 2, 3 and 4) for 3rd harmonic. FFS MHz for the other configurations listed.

**Table 7.3A.0-1eB: Uplink configuration for reference sensitivity**

E-UTRA Band / Channel bandwidth / N <sub>RB</sub> / Duplex mode								
EUTRA CA Configuration	EUTRA band	1.4 MHz (dBm)	3 MHz (dBm)	5 MHz (dBm)	10 MHz (dBm)	15 MHz (dBm)	20 MHz (dBm)	Duplex mode
CA_1A-46A	1			25	50	75	100	FDD
CA_2A-46A	2			25	50	50 <sup>1</sup>	50 <sup>1</sup>	FDD
CA_3A-46A	3			25	50	50 <sup>1</sup>	50 <sup>1</sup>	FDD
CA_4A-46A	4			25	50	75	100	FDD
CA_7A-46A	7			25	50	75	75 <sup>1</sup>	FDD
CA_41A-46A	41			25	50	75	100	TDD
CA_41A-46A	42			25	50	75	100	TDD

NOTE 1: refers to the UL resource blocks shall be located as close as possible to the downlink operating band but confined within the transmission bandwidth configuration for the channel bandwidth (Table 5.6-1).

In all cases for single uplink inter-band CA, unless given by Table 7.3.3-3 for the band with the active uplink carrier, the applicable reference sensitivity requirements shall be verified with the network signalling value NS\_01 (Table 6.2.4.3-1) configured.

For inter-band carrier aggregation with one component carrier per operating band and the uplink assigned to two E-UTRA bands the throughput shall be  $\geq 95\%$  of the maximum throughput of the reference measurement channels as specified in Annexes A.2.2, A.2.3 and A.3.2 (with one sided dynamic OCN Pattern OP.1 FDD/TDD for the DL-signal as described in Annex A.5.1.1/A.5.2.1) with parameters specified in Table 7.3.3-1 and Table 7.3.3-2. The reference sensitivity is defined to be met with all downlink component carriers active and both of the uplink carriers active.

For E-UTRA CA configurations with uplink and downlink assigned to two E-UTRA bands given in Table 7.3A.0-1f the reference sensitivity is defined only for the specific uplink and downlink test points which are specified in Table 7.3A.0-1f. For E-UTRA CA configurations with uplink assigned to two E-UTRA bands and downlink assigned to three E-UTRA bands given in Table 7.3.1A-0g the reference sensitivity is defined only for the specific uplink and downlink test points which are specified in Table 7.3.1A-0g. For these test points the reference sensitivity requirement specified in Table 7.3.3-1 is relaxed by the amount of parameter MSD given in Table 7.3A.0-1f.

The allowed exceptions defined in Table 7.3A.0-1 and Table 7.3A.0-1a for inter-band carrier aggregation with a single active uplink are also applicable for dual uplink operation.

For intra-band contiguous carrier aggregation the throughput of each component carrier shall be  $\geq 95\%$  of the maximum throughput of the reference measurement channels as specified in Annexes A.2.2, A.2.3 and A.3.2 (with one sided dynamic OCNG Pattern OP.1 FDD/TDD for the DL-signal as described in Annex A.5.1.1/A.5.2.1) with parameters specified in Table 7.3.3-1, Table 7.3.3-1a, Table 7.3.3-1A, Table 7.3.3-1B, Table 7.3.3-1C, Table 7.3A.0-1h and table 7.3A.0-2. For operating bands with an unpaired DL part (as noted in Table 5.2-1), the power levels in Table 7.3.1-1 and Table 7.3.3-1a also apply for an SCC assigned in the unpaired part. The requirement is verified using an uplink CA configuration with the largest number of carriers supported by the UE. Table 7.3A.0-2 specifies the maximum number of allocated uplink resource blocks for which the intra-band contiguous carrier aggregation reference sensitivity requirement shall be met. The PCC and SCC allocations as defined in Table 7.3.3-2 and form a contiguous allocation where TX–RX frequency separations of the component carriers are as defined in Table 5.3-1. In case downlink CA configuration has additional SCC(s) compared to uplink CA configuration those are configured further away from uplink band. For UE(s) supporting one uplink carrier, the uplink configuration of the PCC shall be in accordance with Table 7.3.3-2 and the downlink PCC carrier center frequency shall be configured closer to uplink operating band than any of the downlink SCC center frequency. Unless given by Table 7.3.3-3, the reference sensitivity requirements shall be verified with the network signalling value NS\_01 (Table 6.2.4.3-1) configured.

**Table 7.3A.0-1h: Intra-band contiguous CA uplink configuration for reference sensitivity for Bandwidth Class B**

CA configuration / CC combination / N <sub>RB_agg</sub> / Duplex mode					
Uplink CA configuration	50RB+25RB		50RB+50RB		Duplex Mode
	PCC	SCC	PCC	SCC	
CA_8B	25	0	25	0	FDD
NOTE 1: The carrier centre frequency of SCC in the UL operating band is configured closer to the DL operating band.					
NOTE 2: The transmitted power over both PCC and SCC shall be set to P <sub>UMAX</sub> as defined in subclause 6.2.5A.					
NOTE 3: The UL resource blocks in both PCC and SCC shall be confined within the transmission bandwidth configuration for the channel bandwidth (Table 5.6-1).					
NOTE 4: The UL resource blocks in PCC shall be located as close as possible to the downlink operating band, while the UL resource blocks in SCC shall be located as far as possible from the downlink operating band.					
NOTE 5: In case a CA configuration consists of CC channel bandwidths which are unequal in bandwidth the PCC channel bandwidth shall be the larger one for reference sensitivity test.

NOTE 1: The carrier centre frequency of SCC in the UL operating band is configured closer to the DL operating band.													
NOTE 2: The transmitted power over both PCC and SCC shall be set to P <sub>UMAX</sub> as defined in subclause 6.2.5A.													
NOTE 3: The UL resource blocks in both PCC and SCC shall be confined within the transmission bandwidth configuration for the channel bandwidth (Table 5.6-1).													
NOTE 4: The UL resource blocks in PCC shall be located as close as possible to the downlink operating band, while the UL resource blocks in SCC shall be located as far as possible from the downlink operating band.													
NOTE 5: In case a CA configuration consists of CC channel bandwidths which are unequal in bandwidth the PCC channel bandwidth shall be the larger one for reference sensitivity test.													
NOTE 6: Void.													
NOTE 7: the PCC is contained within 1710-1780 MHz.													

For intra-band non-contiguous carrier aggregation with one uplink carrier and two downlink sub-blocks, the throughput of each downlink component carrier shall be  $\geq 95\%$  of the maximum throughput of the reference measurement channels as specified in Annexes A.2.2, A.2.3 and A.3.2 (with one sided dynamic OCNG Pattern OP.1 FDD/TDD for the DL-signal as described in Annex A.5.1.1/A.5.2.1) and parameters specified in Table 7.3.3-1, Table 7.3.3-1a, Table 7.3.3-1A, Table 7.3.3-1B, Table 7.3.3-1C and Table 7.3A.0-3 with reference sensitivity the power level increased by  $\Delta R_{IBNC}$  given in Table 7.3A.0-3 for the SCC(s). The requirements apply with all downlink carriers active. Unless given by Table 7.3.3-3, the reference sensitivity requirements shall be verified with the network signalling value NS\_01 (Table 6.2.4.3-1) configured.

Table 7.3A.0-3: Intra-band non-contiguous CA with one uplink configuration for reference sensitivity

NOTE 1:	refers to the UL resource blocks shall be located as close as possible to the downlink operating band but confined within the transmission.
NOTE 2:	$W_{\text{gap}}$ is the sub-block gap between the two sub-blocks.
NOTE 3:	The carrier center frequency of PCC in the UL operating band is configured closer to the DL operating band.
NOTE 4:	refers to the UL resource blocks shall be located at $RB_{\text{start}}=33$ .
NOTE 5:	For the TDD intra-band non-contiguous CA configurations, the minimum requirements apply only in synchronized operation between all component carriers.
NOTE 6:	All combinations of channel bandwidths defined in Table 5.4.2A.1-3.
NOTE 7:	All applicable sub-block gap sizes.
NOTE 8:	The PCC allocation is same as Transmission bandwidth configuration $N_{\text{RB}}$ as defined in Table 5.4.2-1. In case of uplink sub-block is TDD intra-band contiguous CA then the uplink PCC and SCC allocations are the same as $N_{\text{RB\_agg}}$ defined in Table 7.3A.0-2.
NOTE 9:	refers to the UL resource blocks shall be located at $RB_{\text{start}}=25$ .
NOTE 10:	refers to the UL resource blocks shall be located at $RB_{\text{start}}=35$ .
NOTE 11:	refers to the UL resource blocks shall be located at $RB_{\text{start}}=50$ .
NOTE 12:	refers to the UL resource blocks shall be located at $RB_{\text{start}}=39$ .
NOTE 13:	refers to the UL resource blocks shall be located at $RB_{\text{start}}=57$ .
NOTE 14:	refers to the UL resource blocks shall be located at $RB_{\text{start}}=44$ .
NOTE 15:	refers to the UL resource blocks shall be located at $RB_{\text{start}}=62$ .
NOTE 16:	The carrier center frequency of PCC in the DL operating band is configured closer to the UL operating band.
NOTE 17:	Applicable only if operation with 4 antenna ports is supported in the band with carrier aggregation configured.

For intra-band non-contiguous carrier aggregation with two uplink and downlink carriers the reference sensitivity is defined to be met with both downlink and uplink carriers activated. The downlink PCC and SCC minimum requirements for reference sensitivity as specified in Table 7.3.3-1 are increased by amount of  $\Delta R_{2\text{UL\_PCC}}$  and  $\Delta R_{2\text{UL\_SCC}}$  which are defined in Table 7.3A.0-4 when uplink PCC and SCC allocations are according to the Table 7.3A.0-4.

**Table 7.3A.0-4: Intra-band non-contiguous CA with two uplinks configuration for reference sensitivity**

CA configuration	Aggregated channel bandwidth (PCC+SCC)	$W_{\text{gap}}$ / [MHz]	UL PCC allocation	UL SCC allocation	$\Delta R_{2\text{UL\_PCC}}$ (dB)	$\Delta R_{2\text{UL\_SCC}}$ (dB)	Duplex mode
CA_4A-4A	NOTE 2	NOTE 3	NOTE 4	NOTE 5	0.0	0.0	FDD
NOTE 1: The transmitter shall be set to $P_{\text{UMAX}}$ as defined in subclause 6.2.5A.							
NOTE 2: All combinations of channel bandwidths defined in Table 5.4.2A.1-3.							
NOTE 3: All applicable sub-block gap sizes.							
NOTE 4: The PCC allocation is same as Transmission bandwidth configuration $N_{\text{RB}}$ as defined in Table 5.4.2-1.							
NOTE 5: The SCC allocation is same as Transmission bandwidth configuration $N_{\text{RB}}$ as defined in Table 5.4.2-1.							

For combinations of intra-band and inter-band carrier aggregation with up to five downlink carriers (up to two non-contiguous sub-blocks per band and up to four contiguously aggregated carriers per band) and up to three uplink carriers (up to two contiguously aggregated carriers per band), the requirement is defined with an uplink configuration in accordance with Table 7.3A.0-3 when the uplink is active in a band supporting two non-contiguous component carriers, Table 7.3A.0-2 when the uplink (up to two contiguously aggregated uplink carriers) is active in a band supporting two contiguous component carriers and in accordance with Table 7.3.3-2 when an uplink is active in a band supporting one carrier per band. The downlink PCC shall be configured closer to the uplink operating band than the downlink SCC(s) when the uplink is active in band(s) supporting contiguous aggregation of up to four component carriers. The carrier center frequency of PCC in the UL operating band is configured closer to the DL operating band when the uplink is active in band(s) supporting non-contiguous aggregation of up to two sub-blocks. For these uplink configurations, the UE shall meet the reference sensitivity requirements for intra-band non-contiguous carrier aggregation of two sub-blocks, the requirements for intra-band contiguous carrier aggregation for the contiguously aggregated downlink carriers and for any remaining component carrier(s) the requirements specified in subclause 7.3.3. For the two component carriers within the same band,  $\Delta R_{\text{IBNC}} = 0$  dB for all sub-block gaps (Table 7.3A.0-3) when the uplink is active in another band. All downlink carriers shall be active throughout the tests and the requirements for the downlinks shall be met with all uplink carriers active in each band capable of UL operation. For contiguously aggregated component carriers configured in Band 46, the said requirements for intra-band contiguous carrier aggregation of downlink carriers are replaced by the requirements in Table 7.3A.0-1eA and Table 7.3A.0-1eB. Unless given by Table 7.3.3-3, the reference sensitivity requirements shall be verified with the network signalling value  $NS_{01}$  (Table 6.2.4.3-1) configured.

For the UE that supports any of combinations of intra-band and inter-band carrier aggregation given in Table 7.3A.0-5, exceptions to the aforementioned requirements are allowed when the uplink is active in a lower-frequency band and within a specified frequency range such that transmitter harmonics fall within the downlink transmission bandwidth assigned in a higher band as noted in Table 7.3A.0-5. For these exceptions, the UE shall meet the requirements specified in Table 7.3A.0-5 and Table 7.3A.0-6.

**Table 7.3A.0-5: Reference sensitivity for carrier aggregation QPSK  $P_{\text{REFSENS, CA}}$  (exceptions)**

CA_26A-41C <sup>7</sup>	26			N/A	N/A	N/A		FDD
	41			N/A	N/A	N/A	N/A	TDD

NOTE 1: The transmitter shall be set to  $P_{UMAX}$  as defined in subclause 6.2.5A.

NOTE 2: Reference measurement channel is A.3.2 with one sided dynamic OCNG Pattern OP.1 FDD/TDD as described in Annex A.5.1.1/A.5.2.1

NOTE 3: The signal power is specified per port

NOTE 4: No requirements apply when there is at least one individual RE within the uplink transmission bandwidth of the low band for which the 2nd transmitter harmonic is within the downlink transmission bandwidth of the high band. The reference sensitivity is only verified when this is not the case (the requirements specified in clause 7.3.3 apply).

NOTE 5: These requirements apply when there is at least one individual RE within the uplink transmission bandwidth of a low band for which the 3rd transmitter harmonic is within the downlink transmission bandwidth of a high band.

NOTE 6: The requirements should be verified for UL EARFCN of a low band (superscript LB) such that  $f_{UL}^{LB} = \lfloor f_{DL}^{HB} / 0.3 \rfloor 0.1$  in MHz and  $F_{UL\_low}^{LB} + BW_{Channel}^{LB} / 2 < f_{UL}^{LB} < F_{UL\_high}^{LB} - BW_{Channel}^{LB} / 2$  with  $f_{DL}^{HB}$  the carrier frequency of a high band in MHz and  $BW_{Channel}^{LB}$  the channel bandwidth configured in the low band.

NOTE 7: No requirements apply when there is at least one individual RE within the uplink transmission bandwidth of the low band for which the 3rd transmitter harmonic is within the downlink transmission bandwidth of the high band. The reference sensitivity is only verified when this is not the case (the requirements specified in clause 7.3.3 apply).

NOTE 8: These requirements apply when there is at least one individual RE within the uplink transmission bandwidth of the aggressor (lower) band for which the 2nd transmitter harmonic is within the downlink transmission bandwidth of a victim (higher) band and a range  $\Delta F_{HD}$  above and below the edge of this downlink transmission bandwidth. The value  $\Delta F_{HD}$  depends on the E-UTRA configuration:  $\Delta F_{HD} = 10$  MHz for CA\_3A-42C, CA\_1A-3A-42C and CA\_3A-19A-42C.

NOTE 9: The requirements should be verified for UL EARFCN of the aggressor (lower) band (superscript LB) such that  $f_{UL}^{LB} = \lfloor f_{DL}^{HB} / 0.2 \rfloor 0.1$  in MHz and  $F_{UL\_low}^{LB} + BW_{Channel}^{LB} / 2 < f_{UL}^{LB} < F_{UL\_high}^{LB} - BW_{Channel}^{LB} / 2$  with  $f_{DL}^{HB}$  carrier frequency in the victim (higher) band in MHz and  $BW_{Channel}^{LB}$  the channel bandwidth configured in the lower band.

NOTE 10: The requirements are only applicable to channel bandwidths with a carrier frequency at  $\pm (20 + BW_{Channel}^{HB} / 2)$  MHz offset from  $2f_{UL}^{LB}$  in the victim (higher) band) with  $F_{UL\_low}^{LB} + BW_{Channel}^{LB} / 2 < f_{UL}^{LB} < F_{UL\_high}^{LB} - BW_{Channel}^{LB} / 2$ , where  $BW_{Channel}^{LB}$  and  $BW_{Channel}^{HB}$  are the channel bandwidths configured in the aggressor (lower) and victim (higher) bands in MHz, respectively.

NOTE 11: Applicable only if operation with 4 antenna ports is supported in the band with carrier aggregation configured.

**Table 7.3A.0-6: Uplink configuration for the low band (exceptions)**

E-UTRA Band / Channel bandwidth of the high band / $N_{RB}$ / Duplex mode								
EUTRA CA Configuration	UL band	1.4 MHz	3 MHz	5 MHz	10 MHz	15 MHz	20 MHz	Duplex mode
CA_1A-3A-7C-28A	28				16	25	25	FDD
CA_1A-3A-42C	3			12	25	36	50	FDD
CA_1A-7C-28A	28				16	25	25	FDD
CA_2A-2A-4A-12A	12			8	16	20	20	FDD
CA_2A-4A-4A-12A	12			8	16	20	20	FDD
CA_3A-19A-42C	3			12	25	36	50	FDD
CA_3A-42C	3			12	25	36	50	FDD
CA_4A-4A-12A	12			8	16	20	20	FDD
CA_4A-12B	12			8	16	20	20	FDD
NOTE 1: refers to the UL resource blocks, which shall be centred within the transmission bandwidth configuration for the channel bandwidth.								
NOTE 2: the UL configuration applies regardless of the channel bandwidth of the low band unless the UL resource blocks exceed that specified in Table 7.3.3-2 for the uplink bandwidth in which case the allocation according to Table 7.3.3-2 applies.								

The normative reference for this requirement is TS 36.101[2] clause 7.3.1 and 7.3.1A.

## 7.3A.1 Reference sensitivity level for CA (intra-band contiguous DL CA and UL CA)

### 7.3A.1.1 Test purpose

To verify the ability of UE that support CA to receive data with a given average throughput for a specified reference measurement channel, under conditions of low signal level, ideal propagation and no added noise.

A UE unable to meet the throughput requirement under these conditions will decrease the effective coverage area of an e-NodeB.

### 7.3A.1.2 Test applicability

This test case applies to all types of E-UTRA UE release 10 and forward that support intra-band contiguous DL CA and UL CA.

### 7.3A.1.3 Minimum conformance requirements

The minimum conformance requirements are defined in clause 7.3A.0.

### 7.3A.1.4 Test description

#### 7.3A.1.4.1 Initial conditions

Initial conditions are a set of test configurations the UE needs to be tested in and the steps for the SS to take with the UE to reach the correct measurement state.

The initial test configurations consist of environmental conditions, test frequencies, and channel bandwidths based on E-UTRA CA configurations specified in table 5.4.2A.1-1. All of these configurations shall be tested with applicable test parameters for each channel bandwidth, and are shown in table 7.3A.1.4.1-1. The details of the uplink reference measurement channels (RMCs) are specified in Annex A.2. Configurations of PDSCH and PDCCH before measurement are specified in Annex C.2.

Table 7.3A.1.4.1-1: Test Configuration Table

Initial Conditions									
Test Environment as specified in TS 36.508[7] subclause 4.1			NC, TL/VL, TL/VH, TH/VL, TH/VH						
Test Frequencies as specified in TS36.508 [7] subclause 4.3.1 for different CA bandwidth classes, and PCC and SCCs are mapped onto physical frequencies according to Table 7.1-2			C: Low range, High range						
Test CC Combination setting ( $N_{RB\_agg}$ ) as specified in subclause 5.4.2A.1 for the CA Configuration across bandwidth combination sets supported by the UE.			Lowest $N_{RB\_agg}$ , Highest $N_{RB\_agg}$ (Note 3)						
Test Parameters for CA Configurations

100	100	QPSK	100+100	QPSK	50	P_50@50	S_0@0	-	-
100	100	QPSK	100+100	QPSK	75	P_75@50	S_0@0	-	-
100	100	QPSK	100+100	QPSK	130	P_100@0	S_30@0	-	-
100	100	QPSK	100+100	QPSK	200	P_100@0	S_100@0	-	-
Note 1: CA Configuration Test CC Combination settings are checked separately for each CA Configuration, which applicable aggregated channel bandwidths are specified in Table 5.4.2A.1-1.									
Note 2: Depending on CA configurations, only the appropriate Uplink RB allocation value according to table 7.3A.0-2 for UE supporting two uplink carriers is tested per Test CA configuration.									
Note 3: If in the CA Configuration UE supports multiple CC Combinations with the same $N_{RB\_agg}$ , only the first of those is tested, according to the order on the Test Configuration Table list.									

1. Connect the SS to the UE antenna connectors as shown in TS 36.508[7] Annex A Figure group A.32 as appropriate.
2. The parameter settings for the cell are set up according to TS 36.508 [7] subclause 4.4.3.
3. Downlink signals for PCC are initially set up according to Annex C.0, C.1, and C.3.1, and uplink signals according to Annex H.1 and H.3.0.
4. The UL and DL Reference Measurement channels are set according to Table 7.3A.1.4.1-1.
5. Propagation conditions are set according to Annex B.0.
6. Ensure the UE is in State 3A-RF according to TS 36.508 [7] clause 5.2A.2. Message contents are defined in clause 7.3A.1.4.3.

#### 7.3A.1.4.2 Test procedure

1. Configure SCC according to Annex C.0, C.1 and Annex C.3.1 for all downlink physical channels.
2. The SS shall configure SCC as per TS 36.508 [7] clause 5.2A.4. Message contents are defined in clause 7.3A.1.4.3
3. SS activates SCC by sending the activation MAC-CE (Refer TS 36.321 [13], clauses 5.13, 6.1.3.8). Wait for at least 2 seconds (Refer TS 36.133, clauses 8.3.3.2).
4. SS transmits PDSCH via PDCCH DCI format 1A for  $C\_RNTI$  to transmit the DL RMC according to Tables 7.3A.1.4.1-1 on both PCC and SCC. The SS sends downlink MAC padding bits on the DL RMC.

5. SS sends uplink scheduling information for each UL HARQ process via PDCCH DCI format 0 for C\_RNTI to schedule the UL RMC according to Table 7.3A.1.4.1-1 on both PCC and SCC. Since the UE has no payload and no loopback data to send the UE sends uplink MAC padding bits on the UL RMC.
6. Set the Downlink signal level for PCC and SCC to the appropriate REFSENS value defined in Table 7.3A.1.5-1. Send continuously uplink power control "up" commands in every uplink scheduling information to the UE to ensure the UE transmits  $P_{UMAX}$  level for at least the duration of the Throughput measurement.
7. Measure the average throughput for each component carrier for a duration sufficient to achieve statistical significance according to Annex G.2A.

### 7.3A.1.4.3 Message contents

Message contents are according to TS 36.508 [7] subclause 4.6. In test procedure step 2, for SCC configuration there are no additional message contents.

### 7.3A.1.5 Test requirement

For intra-band contiguous carrier aggregation the throughput of each component carrier shall be  $\geq 95\%$  of the maximum throughput of the reference measurement channels as specified in Annexes A.2.2, A.2.3 and A.3.2 (with one sided dynamic OCNG Pattern OP.1 FDD/TDD for the DL-signal as described in Annex A.5.1.1/A.5.2.1) with parameters specified in Table 7.3A.1.5-1 and table 7.3A.1.5-2.

**Table 7.3A.1.5-1: Reference sensitivity QPSK  $P_{REFSENS}$  for intra-band**

CA Configuration	100RB+25RB		100RB+50RB		75RB+75RB		100RB+75RB		100RB+100RB		Duplex Mode
	100RB	25RB	100RB	50RB	75RB	75RB	100RB	75RB	100RB	100RB	
CA_1C	-	-	-	-	-94.5	-94.5	-	-	-93.3	-93.3	FDD
CA_3C	-90.3	-96.3	-90.3	-93.3	-	-	-90.3	-91.5	-90.3	-90.3	FDD
CA_7C	-	-	-	-	-92.5	-92.5	-	-	-91.3	-91.3	FDD
CA_38C	-	-	-	-	-94.5	-94.5	-	-	-93.3	-93.3	TDD
CA_39C	-93.3	-99.3	-93.3	-96.3	-	-	-93.3	-94.5	-	-	TDD
CA_40C	-	-	-93.3	-96.3	-94.5	-94.5	-	-	-93.3	-93.3	TDD
CA_41C	-	-	-91.3	-94.3	-92.5	-92.5	-91.3	-92.5	-91.3	-91.3	TDD
CA_42C	-92	-98	-92	-95	-	-	-92	-93.2	-92	-92	TDD
Note 1:	The transmitter shall be set to $P_{UMAX}$ as defined in subclause 6.2.5 for one uplink carrier and in subclause 6.2.5A for two uplink carriers.										
Note 2:	The reference measurement channel is specified in A.3.2 with one sided dynamic OCNG Pattern OP.1 FDD/TDD as described in Annex A.5.1.1/A.5.2.1										
Note 3:	The signal power is specified per port										

For the UE which supports inter-band carrier aggregation configurations the  $\Delta R_{IB,c}$  in Tables 7.3.3-1A, 7.3.3-1B and 7.3.3-1C shall be applied for applicable bands.

In case the UE supports more than one of the inter-band carrier aggregation configurations and a E-UTRA operating band belongs to more than one inter-band carrier aggregation configurations then:

- When the E-UTRA operating band frequency range is  $\leq 1$ GHz, the applicable additional tolerance shall be the average of the tolerances in Table 7.3.3-1A, truncated to one decimal place that would apply for that operating band among the supported CA configurations. In case there is a harmonic relation between low band UL and high band DL (i.e. bands listed in Table 7.3A.0-1), then the maximum tolerance among the different supported carrier aggregation configurations involving such band shall be applied
- When the E-UTRA operating band frequency range is  $>1$ GHz, the applicable additional tolerance shall be the maximum tolerance in Table 7.3.3-1A that would apply for that operating band among the supported CA configurations

The reference receive sensitivity (REFSENS) requirement for intra-band specified in Table 7.3A.1.5-1 shall be met for each uplink CA configurations less than or equal to that specified in Table 7.3A.1.5-2.

NOTE: Table 7.3A.1.5-2 does not necessarily reflect the operational conditions of the network, where the number of uplink and downlink allocated resource blocks will be practically constrained by other factors.

**Table 7.3A.1.5-2: Intra-band CA uplink configuration for reference sensitivity**

CA configuration / CC combination / NRB_agg / Duplex mode											
CA configuration	100RB+25RB		100RB+50RB		75RB+75RB		100RB+75RB		100RB+100RB		Duplex Mode
	PCC	SCC	PCC	SCC	PCC	SCC	PCC	SCC	PCC	SCC	
CA_1C			N/A	N/A	75	54	N/A	N/A	100	30	FDD
CA_3C	50	0	50	0	N/A	N/A	50	0	50	0	FDD
CA_7C			N/A	N/A	75	0	N/A	N/A	75	0	FDD
CA_38C					75	75			100	100	TDD
CA_39C	100	25	100	50	N/A	N/A	100	75	N/A	N/A	TDD
CA_40C			100	50	75	75	N/A	N/A	100	100	TDD
CA_41C			100	50	75	75	100	75	100	100	TDD
CA_42C	100	25	100	50	N/A	N/A	100	75	100	100	TDD

Note 1: The carrier centre frequency of SCC in the UL operating band is configured closer to the DL operating band.  
Note 2: The transmitted power over both PCC and SCC shall be set to  $P_{UMAX}$  as defined in subclause 6.2.5 for one uplink carrier and in subclause 6.2.5A for two uplink carriers.  
Note 3: The UL resource blocks in both PCC and SCC shall be confined within the transmission bandwidth configuration for the channel bandwidth (Table 5.4.2A-1).  
Note 4: The UL resource blocks in PCC shall be located as close as possible to the downlink operating band, while the UL resource blocks in SCC shall be located as far as possible from the downlink operating band.  
Note 5: In case a CA configuration consists of CC channel bandwidths which are unequal in bandwidth the PCC channel bandwidth shall be the larger one for reference sensitivity test.

## 7.3A.2 Reference sensitivity level for CA (intra-band contiguous DL CA without UL CA)

### 7.3A.2.1 Test purpose

Same as in clause 7.3A.1.1.

### 7.3A.2.2 Test applicability

This test case applies to all types of E-UTRA UE release 10 and forward that support intra-band contiguous DL CA. This test case applies only for CA Configurations that do not support UL CA.

### 7.3A.2.3 Minimum conformance requirements

The minimum conformance requirements are defined in clause 7.3A.0.

### 7.3A.2.4 Test description

#### 7.3A.2.4.1 Initial conditions

Same as in clause 7.3A.1.4.1 with the following exceptions:

- Instead of Table 7.3A.1.4.1-1 → use Table 7.3A.2.4.1-1.

Table 7.3A.2.4.1-1: Test Configuration Table

100	100	QPSK	100+100	QPSK	50	P_50@50	-	-	-
Note 1: CA Configuration Test CC Combination settings are checked separately for each CA Configuration, which applicable aggregated channel bandwidths are specified in Table 5.4.2A.1-1.									
Note 2: Depending on CA configurations, only the appropriate Uplink RB allocation value according to table 7.3.3-2 for UE supporting one uplink carrier is tested per Test CA configuration.									
Note 3: If in the CA Configuration UE supports multiple CC Combinations with the same $N_{RB\_agg}$ , only the first of those is tested, according to the order on the Test Configuration Table list.									

### 7.3A.2.4.2 Test procedure

1. Configure SCC according to Annex C.0, C.1 and Annex C.3.1 for all downlink physical channels.
2. The SS shall configure SCC as per TS 36.508 [7] clause 5.2A.4. Message contents are defined in clause 7.3A.1.4.3
3. SS activates SCC by sending the activation MAC-CE (Refer TS 36.321 [13], clauses 5.13, 6.1.3.8). Wait for at least 2 seconds (Refer TS 36.133, clauses 8.3.3.2).
4. SS transmits PDSCH via PDCCH DCI format 1A for C\_RNTI to transmit the DL RMC according to Tables 7.3A.2.4.1-1 on both PCC and SCC. The SS sends downlink MAC padding bits on the DL RMC.
5. SS sends uplink scheduling information for each UL HARQ process via PDCCH DCI format 0 for C\_RNTI to schedule the UL RMC according to Table 7.3A.2.4.1-1 on PCC. Since the UE has no payload and no loopback data to send the UE sends uplink MAC padding bits on the UL RMC.
6. Set the Downlink signal level for PCC and SCC to the appropriate REFSENS value defined in Table 7.3A.1.5-1. Send continuously uplink power control "up" commands in every uplink scheduling information to the UE to ensure the UE transmits  $P_{UMAX}$  level for at least the duration of the Throughput measurement.
7. Measure the average throughput for each component carrier for a duration sufficient to achieve statistical significance according to Annex G.2A.

## 7.3A.2.4.3 Message contents

Same as in clause 7.3A.1.4.3.

## 7.3A.2.5 Test requirement

Same as in clause 7.3A.1.5 with the following test requirement defined in Table 7.3A.2.5-1 additions.

**Table 7.3A.2.5-1: Reference sensitivity QPSK  $P_{\text{REFSENS}}$  for intra-band contiguous DL CA without UL CA**

CA Configuration	25RB+6RB		25RB+15RB		25RB+25RB		50RB+6RB		50RB+15RB		Duplex Mode

CA_66B (NOTE 7)	75	N/A	50	N/A	50	N/A	25	N/A	FDD
NOTE 1: The carrier centre frequency of SCC in the UL operating band is configured closer to the DL operating band.									
NOTE 2: The transmitted power over both PCC and SCC shall be set to $P_{\text{UMAX}}$ as defined in subclause 6.2.5A.									
NOTE 3: The UL resource blocks in both PCC and SCC shall be confined within the transmission bandwidth configuration for the channel bandwidth (Table 5.6-1).									
NOTE 4: The UL resource blocks in PCC shall be located as close as possible to the downlink operating band, while the UL resource blocks in SCC shall be located as far as possible from the downlink operating band.									
NOTE 5: In case a CA configuration consists of CC channel bandwidths which are unequal in bandwidth the PCC channel bandwidth shall be the larger one for reference sensitivity test.									
NOTE 6: Void.									
NOTE 7: The PCC is contained within 1710-1780 MHz.									

### 7.3A.3 Reference sensitivity level for CA (inter-band DL CA without UL CA)

#### 7.3A.3.1 Test purpose

Same as in clause 7.3A.1.1.

#### 7.3A.3.2 Test applicability

This test case applies to all types of E-UTRA UE release 10 and forward that support inter-band DL CA.

This test case also applies to all types of E-UTRA UE release 12 and forward that support 2DL CA with FDD-TDD inter-band CA.

#### 7.3A.3.3 Minimum conformance requirements

The minimum conformance requirements are defined in clause 7.3A.0.

#### 7.3A.3.4 Test description

##### 7.3A.3.4.1 Initial conditions

Same as in clause 7.3A.1.4.1 with the following exceptions:

- Instead of Table 7.3A.1.4.1-1 → use Table 7.3A.3.4.1-1.
- Instead of clause 7.3A.1.4.3 use clause 7.3A.3.4.3.

Table 7.3A.3.4.1-1: Test Configuration Table

Initial Conditions						
Test Environment as specified in TS 36.508[7] subclause 4.1				NC, TL/VL, TL/VH, TH/VL, TH/VH		
Test Frequencies as specified in TS36.508 [7] subclause 4.3.1 for different CA bandwidth classes, and PCC and SCCs are mapped onto physical frequencies according to Table 7.1-2.				A: Mid range for PCC and SCC, unless otherwise specified in the Tables 7.3A.3.4.1-2 to 7.3A.3.4.1-21		
Test CC Combination setting ( $N_{RB\_agg}$ ) as specified in subclause 5.4.2A.1 for the CA Configuration across bandwidth combination sets supported by the UE.				Highest $N_{RB\_agg}$ , unless otherwise specified in the Tables 7.3A.3.4.1-2 to 7.3A.3.4.1-21		
Network signalling value				NS_01  Unless given by Table 7.3.3.-3 for the band with active uplink carrier		
Test Parameters for CA Configurations

	20MHz	Mid range	X	X

**Table 7.3A.3.4.1-22: Test frequencies and Test CC combinations for CA\_28A-41A**

CBW			Band 41		
			20MHz		
			Low range	Mid range	High range
Band 28	10MHz	Low range	X	-	-
		Mid range	-	X	-
		High range	-	X	X

**Table 7.3A.3.4.1-23: Test frequencies and Test CC combinations for CA\_28A-42A**

CBW			Band 42			
			5MHz		20MHz	
			Mid range	High range	Low range	High range
Band 28 as PCC	5MHz	Low range	X <sup>1,3</sup>	-	-	-
		Mid range	-	X <sup>1,2</sup>	-	-
	20MHz	Low range	-	-	X	-
		High range	-	-	-	X
Band 28 as SCC	20MHz	Low range	-	-	X	-
		High range	-	-	-	X

Note 1: For Band 28 as PCC the exceptions described in Table 7.3A.0-1 are tested. For this purpose the test frequencies are selected to fulfil the equation in Table 7.3A.0-1 Note 16.  
 Note 2: Band 28:  $f_{UL} = 719.5 \text{ MHz}$  ( $N_{UL} = 27375$ ),  $f_{DL} = 774.5 \text{ MHz}$  ( $N_{DL} = 9375$ ).  
 Note 3: Band 42:  $f_{UL/DL} = 3527.5 \text{ MHz}$  ( $N_{UL/DL} = 42865$ ).

**7.3A.3.4.2 Test procedure**

1. Configure SCC according to Annex C.0, C.1 and Annex C.3.1 for all downlink physical channels.
2. The SS shall configure SCC as per TS 36.508 [7] clause 5.2A.4. Message contents are defined in clause 7.3A3.4.3
3. SS activates SCC by sending the activation MAC-CE (Refer TS 36.321 [13], clauses 5.13, 6.1.3.8). Wait for at least 2 seconds (Refer TS 36.133, clauses 8.3.3.2).

4. SS transmits PDSCH via PDCCH DCI format 1A for C\_RNTI to transmit the DL RMC according to Tables 7.3A.3.4.1-1 on both PCC and SCC. The SS sends downlink MAC padding bits on the DL RMC.
5. SS sends uplink scheduling information for each UL HARQ process via PDCCH DCI format 0 for C\_RNTI to schedule the UL RMC according to Table 7.3A.3.4.1-1 on PCC. Since the UE has no payload and no loopback data to send the UE sends uplink MAC padding bits on the UL RMC.
6. Set the Downlink signal level for PCC and SCC to the appropriate REFSENS value defined in Table 7.3A.3.5-1. Send continuously uplink power control "up" commands in the uplink scheduling information to the UE to ensure the UE transmits  $P_{UMAX}$  level for at least the duration of the Throughput measurement.
7. Measure the average throughput for each component carrier for a duration sufficient to achieve statistical significance according to Annex G.2A.

#### 7.3A.3.4.3 Message contents

Message contents are according to TS 36.508 [7] subclause 4.6 with the following exceptions.

##### 7.3A.3.4.3.1 Message contents exceptions (network signalled value "NS\_01")

Message contents according to TS 36.508 [7] subclause 4.6 can be used without exceptions.

##### 7.3A.3.4.3.2 Message contents exceptions (network signalled value "NS\_06")

1. Information element `additionalSpectrumEmission` is set to NS\_06. This can be set in the `SystemInformationBlockType2` as part of the cell broadcast message. This exception indicates that the UE shall meet the additional spurious emission requirement for a specific deployment scenario.

**Table 7.3A.3.4.3.2-1: SystemInformationBlockType2: Additional spurious emissions test requirement for "NS\_06"**

Derivation Path: TS 36.508 [7] clause 4.4.3.3, Table 4.4.3.3-1			
Information Element	Value/remark	Comment	Condition
<code>additionalSpectrumEmission</code>	6 (NS_06)		

#### 7.3A.3.5 Test requirement

For inter-band carrier aggregation with uplink assigned to one E-UTRA band the throughput shall be  $\geq 95\%$  of the maximum throughput of the reference measurement channels as specified in Annex A.3.2 with parameters specified in Tables 7.3A.3.5-1 and Table 7.3A.3.5-2 (originated from single carrier Tables 7.3.5-1 and 7.3.5-2). The reference sensitivity is defined to be met with both downlink component carriers active and either of the uplink component carriers active.

**Table 7.3A.3.5-1: Reference sensitivity QPSK  $P_{REFSENS}$  for inter-band**

CA Configuration	E-UTRA Band	Channel bandwidth						Duplex Mode
		1.4 MHz (dBm)	3 MHz (dBm)	5 MHz (dBm)	10 MHz (dBm)	15 MHz (dBm)	20 MHz (dBm)

	41	-	-	-97.3	-94.3	-92.5	-91.3	
CA_41A-42A	41	-	-	-	-93.9	-92.1	-90.9	TDD
	42	-	-	-	-94.8	-93.0	-91.8	

Note 1: The transmitter shall be set to maximum output power level (Table 7.3A.3.5-2)

Note 2: The reference measurement channel is specified in A.3.2 with one sided dynamic OCN Pattern OP.1 FDD/TDD as described in Annex A.5.1.1/A.5.2.1

Note 3: The signal power is specified per port

Note 4: Reference sensitivity for the high band for which the 3rd harmonic of the low band is within transmission bandwidth, as specified Note 5 in Table 7.3A.0-1.

Note 5: <sup>5</sup> indicates that the requirement is modified by -0.5 dB when the carrier frequency of the assigned E-UTRA channel bandwidth is within 865-894 MHz.

Note 6: Reference sensitivity for the case that the uplink is active in Band 1 and the separation between the lower edge of the uplink channel in Band 1 and the upper edge of the downlink channel in Band 3 is < 60 MHz

Note 7: Reference sensitivity for the high band for which the 2nd harmonic of the low band is within transmission bandwidth, as specified Note 9 and 10 in Table 7.3A.0-1.

Note 8: Reference sensitivity for the high band for which the 2nd harmonic of the low band is within transmission bandwidth, as specified Note 11 in Table 7.3A.0-1.

Note 9: These requirements apply when the uplink is active in Band 19 and the downlink channels in Band 28 are allocated at the middle of the restricted frequency range specified for this CA configuration (Table 5.2A-2). For each channel bandwidth in Band 28, the requirement applies regardless of channel bandwidth in Band 19.

Note 10: The B41 requirements are modified by -0.5dB when carrier frequency of the assigned E-UTRA channel bandwidth is within 2545-2690 MHz.

Note 11: These requirements apply when the uplink is active in Band 41.

Note 12: These requirements apply when the uplink is active in Band 3.

Note 13: Reference sensitivity for the high band for which the 5th harmonic of the low band is within transmission bandwidth, as specified Note 15 and 16 in Table 7.3A.0-1.

Note 14: These requirements apply when the uplink is active in Band 1.

Note 15: These requirements apply when the uplink is active in Band 40.

Note 16: Reference sensitivity for the high band for which the 4th harmonic of the low band is within transmission bandwidth, as specified Note 12 and 13 in Table 7.3A.0-1.

For the UE which supports inter-band carrier aggregation configurations the  $\Delta R_{IB,c}$  in Tables 7.3.3-1A, 7.3.3-1B and 7.3.3-1C shall be applied for applicable bands.

In case the UE supports more than one of the inter-band carrier aggregation configurations and a E-UTRA operating band belongs to more than one inter-band carrier aggregation configurations then:

- When the E-UTRA operating band frequency range is  $\leq 1$ GHz, the applicable additional tolerance shall be the average of the tolerances in Table 7.3.3-1A, truncated to one decimal place that would apply for that operating band among the supported CA configurations. In case there is a harmonic relation between low band UL and high band DL (i.e. bands listed in Table 7.3A.0-1), then the maximum tolerance among the different supported carrier aggregation configurations involving such band shall be applied
- When the E-UTRA operating band frequency range is  $>1$ GHz, the applicable additional tolerance shall be the maximum tolerance in Table 7.3.3-1A that would apply for that operating band among the supported CA configurations

The reference receive sensitivity (REFSENS) requirement for inter-band specified in Table 7.3A.3.5-1 shall be met for an uplink CA configurations than or equal to that specified in Table 7.3A.3.5-2.

NOTE: Table 7.3A.3.5-2 does not necessarily reflect the operational conditions of the network, where the number of uplink and downlink allocated resource blocks will be practically constrained by other factors.

**Table 7.3A.3.5-2: Inter-band CA uplink configuration for reference sensitivity, L<sub>CRB</sub> @ RB<sub>start</sub> format**

 Note 6: UL allocation when the separation between the lower edge of the uplink channel in Band 1 and the upper edge of the downlink channel in Band 3 is ≥ 60 MHz.  
 Note 7: Void  
 Note 8: Void  
 Note 9: Configuration for the low band for which the 2nd harmonic is within transmission bandwidth of the high band, as specified in Table 7.3A.0-1 Note 9 or Note 11.

## 7.3A.4 Reference sensitivity level for CA (intra-band non-contiguous DL CA without UL CA)

### 7.3A.4.1 Test purpose

Same as in clause 7.3A.1.1.

### 7.3A.4.2 Test applicability

This test case applies to all types of E-UTRA UE release 11 and forward that support intra-band non-contiguous DL CA but no UL CA.

### 7.3A.4.3 Minimum conformance requirements

The minimum conformance requirements are defined in clause 7.3A.0.

### 7.3A.4.4 Test description

#### 7.3A.4.4.1 Initial conditions

Same as in clause 7.3A.1.4.1 with the following exceptions:

- Instead of Table 7.3A.1.4.1-1 → use Table 7.3A.4.4.1-1.
- Instead of clause 7.3A.1.4.3 use clause 7.3A.3.4.3.

Table 7.3A.4.4.1-1: Test Configuration Table

Initial Conditions							
Test Environment as specified in TS 36.508[7] subclause 4.1				NC, TL/VL, TL/VH, TH/VL, TH/VH			
Test Frequencies as specified in TS36.508 [7] subclause 4.3.1 for different CA bandwidth classes, and PCC and SCCs are mapped onto physical frequencies according to Table 7.1-2.				A: N/A (Range is not relevant)			
Test CC Combination setting ( $N_{RB\_agg}$ ) as specified in subclause 5.4.2A.1 for the CA Configuration.				Refer to test point			
Test Parameters for CA Configurations							
ID	CA Configuration / $N_{RB\_agg}$		$W_{gap}$ [MHz]	DL Allocation		UL Allocation	
	PCC $N_{RB}$	SCCs $N_{RB}$		CC MOD	PCC & SCC RB allocation	CC MOD	PCC RB allocation ( $L_{CRB}$ @ $RB_{start}$ )

29	100	100	50	QPSK	100+100	QPSK	P_100@0
Note 1:	CA Configuration Test CC Combination settings are checked separately for each CA Configuration, which applicable aggregated channel bandwidths are specified in Table 5.4.2A.1-3.						
Note 2:	The carrier centre frequency of PCC in the UL operating band is configured closer to the DL operating band.						
Note 3:	Applicable if only Bandwidth Combination Set 0 is supported by the UE for the CA Configuration.						
Note 4:	Not applicable if only Bandwidth Combination Set 0 is supported by the UE for the CA Configuration.						

#### 7.3A.4.4.2 Test procedure

1. Configure SCC according to Annex C.0, C.1 and Annex C.3.1 for all downlink physical channels.
2. The SS shall configure SCC as per TS 36.508 [7] clause 5.2A.4. Message contents are defined in clause 7.3A.4.4.3
3. SS activates SCC by sending the activation MAC-CE (Refer TS 36.321 [13], clauses 5.13, 6.1.3.8). Wait for at least 2 seconds (Refer TS 36.133, clauses 8.3.3.2).
4. SS transmits PDSCH via PDCCH DCI format 1A for C\_RNTI to transmit the DL RMC according to Tables 7.3A.4.4.1-1 on both PCC and SCC. The SS sends downlink MAC padding bits on the DL RMC.
5. SS sends uplink scheduling information for each UL HARQ process via PDCCH DCI format 0 for C\_RNTI to schedule the UL RMC according to Table 7.3A.4.4.1-1 on PCC. Since the UE has no payload and no loopback data to send the UE sends uplink MAC padding bits on the UL RMC.
6. Set the Downlink signal level for PCC and SCC to the appropriate REFSENS value defined in Table 7.3A.4.5-1. Send continuously uplink power control "up" commands in the uplink scheduling information to the UE to ensure the UE transmits  $P_{UMAX}$  level for at least the duration of the Throughput measurement.
7. Measure the average throughput for each component carrier for a duration sufficient to achieve statistical significance according to Annex G.2A.

#### 7.3A.4.4.3 Message contents

Message contents are according to TS 36.508 [7] subclause 4.6 with the following exceptions.

##### 7.3A.4.4.3.1 Message contents exceptions (network signalled value "NS\_01")

Message contents according to TS 36.508 [7] subclause 4.6 can be used without exceptions.

##### 7.3A.4.4.3.2 Message contents exceptions (network signalled value "NS\_03")

1. Information element `additionalSpectrumEmission` is set to NS\_03. This can be set in the `SystemInformationBlockType2` as part of the cell broadcast message. This exception indicates that the UE shall meet the additional spurious emission requirement for a specific deployment scenario.

**Table 7.3A.4.4.3.2-1: SystemInformationBlockType2: Additional spurious emissions test requirement for "NS\_03"**

Derivation Path: TS 36.508 [7] clause 4.4.3.3, Table 4.4.3.3-1			
Information Element	Value/remark	Comment	Condition
<code>additionalSpectrumEmission</code>	3 (NS_03)		

### 7.3A.4.5 Test requirement

For intra-band non-contiguous carrier aggregation with one uplink carrier on the PCC, the throughput of each downlink component carrier shall be  $\geq 95\%$  of the maximum throughput of the reference measurement channels as specified in Annexes A.3.2 with parameters specified in Table 7.3A.4.5-1.

**Table 7.3A.4.5-1: Reference sensitivity QPSK  $P_{\text{REFSENS}}$  for intra-band Non-contiguous**

ID/ CA configuration / $P_{\text{REFSENS}}$			
ID	CA configuration	PCC (dBm)	SCC (dBm)
1	CA_2A-2A	-91.3	-90.1
2		-91.3	-86.7
3	CA_3A-3A	-90.3	-89.8
4		-90.3	-96.3
5		-90.3	-86.2
6	CA_4A-4A	-96.3	-99.3
7		-96.3	-96.3
8		-93.3	-99.3
9		-93.3	-93.3
10	CA_5A-5A	-94.3	-91.4
11		-94.3	-89.7
12	CA_7A-7A	-91.3	-92.5
13		-91.3	-92.5
14		-91.3	-91.3
15		-91.3	-91.3
16	CA_23A-23A	-96.3	-99.3
17	CA_25A-25A	-92.8	-90.3
18		-92.8	-95.8
19		-92.8	-87.8

21		-89.8	-87.8
22		-89.8	-84.1
23	CA_41A-41A	-91.3	-97.3
24		-91.3	-94.3
25		-91.3	-91.3
26	CA_42A-42A	-92	-98
27		-92	-92
28	CA_66A-66A	-92.8	-98.8
29		-92.8	-92.8
Note 1: The transmitter shall be set to maximum output power level. Note 2: The reference measurement channel is specified in A.3.2 with one sided dynamic OCNG Pattern OP.1 FDD/TDD as described in Annex A.5.1.1/A.5.2.1. Note 3: The signal power is specified per port.			

For the UE which supports inter-band carrier aggregation configurations the  $\Delta R_{\text{IB,c}}$  in Tables 7.3.3-1A, 7.3.3-1B and 7.3.3-1C shall be applied for applicable bands.

In case the UE supports more than one of the inter-band carrier aggregation configurations and a E-UTRA operating band belongs to more than one inter-band carrier aggregation configurations then:

- When the E-UTRA operating band frequency range is  $\leq 1\text{GHz}$ , the applicable additional tolerance shall be the average of the tolerances in Table 7.3.3-1A, truncated to one decimal place that would apply for that operating

band among the supported CA configurations. In case there is a harmonic relation between low band UL and high band DL (i.e. bands listed in Table 7.3A.0-1), then the maximum tolerance among the different supported carrier aggregation configurations involving such band shall be applied

- When the E-UTRA operating band frequency range is >1GHz, the applicable additional tolerance shall be the maximum tolerance in Table 7.3.3-1A that would apply for that operating band among the supported CA configurations

The reference receive sensitivity (REFSENS) requirement for intra-band non-contiguous specified in Table 7.3A.4.5-1 shall be met for an uplink CA configurations equal to that specified in Table 7.3A.4.4.1-1.

NOTE: Table 7.3A.4.4.1-1 does not necessarily reflect the operational conditions of the network, where the number of uplink and downlink allocated resource blocks will be practically constrained by other factors.

#### Table 7.3A.4.5-2: Void

## 7.3A.5 Reference sensitivity level for 3DL CA

### 7.3A.5.1 Test purpose

Same as in clause 7.3A.1.1.

### 7.3A.5.2 Test applicability

This test case applies to all types of E-UTRA UE release 10 and forward that support 3DL with Intra-band contiguous CA, or 3DL with Inter-band CA, or 3DL with Intra-band contiguous and Inter-band CA.

This test case also applies to all types of E-UTRA UE release 11 and forward that support 3DL with Intra-band non-contiguous and Inter-band CA, or 3DL with Intra-band non-contiguous and Intra-band contiguous CA.

This test case also applies to all types of E-UTRA UE release 12 and forward that support 3DL with FDD-TDD CA.

### 7.3A.5.3 Minimum conformance requirements

The minimum conformance requirements are defined in clause 7.3A.0.

### 7.3A.5.4 Test description

#### 7.3A.5.4.1 Initial conditions

Initial conditions are a set of test configurations the UE needs to be tested in and the steps for the SS to take with the UE to reach the correct measurement state.

The initial test configurations consist of environmental conditions, test frequencies, and channel bandwidths based on E-UTRA CA configurations specified in table 5.4.2A.1-1 through table 5.4.2A.1-2a. All of these configurations shall be tested with applicable test parameters for each channel bandwidth, and are shown in table 7.3A.5.4.1-1 through table 7.3A.5.4.1-5 as appropriate. The details of the uplink reference measurement channels (RMCs) are specified in Annex A.2 and A.3. Configurations of PDSCH and PDCCH before measurement are specified in Annex C.2.

**Table 7.3A.5.4.1-1: Test Configuration Table (Intra-band contiguous)**

Initial Conditions											
Test Environment as specified in TS 36.508[7] subclause 4.1							NC, TL/VL, TL/VH, TH/VL, TH/VH				
Test Frequencies as specified in TS36.508 [7] subclause 4.3.1 for different CA bandwidth classes.							For test frequencies refer to "Range" columns. For mapping within Band refer to "CC" columns				
Test CC Combination setting ( $N_{RB\_agg}$ ) as specified in subclause 5.4.2A.1 for the CA Configuration across bandwidth combination sets supported by the UE.							Refer to "PCC $N_{RB}$ " and "SCCs $N_{RB}$ " columns				
Network signalling value							NS_01 by default, exceptions listed in Table 7.3.3-3, dependent on PCC Band				
Test Parameters for CA Configurations											
ID	CA Configuration / $N_{RB\_agg}$						DL Allocation			UL Allocation (Note 2,3)	
	CA Configuration					PCC $N_{RB}$	SCCs $N_{RB}$		PCC & SCCs RB allocation	CC MOD	PCC $L_{CRB}$ @ $RB_{start}$
	Band	Range	PCC CC	SCC1 CC	SCC2 CC		SCC1	SCC2			
Default Test Settings for a CA_XD Configuration											
1	X	Low	CC1	CC2	CC3	Highest $N_{RB\_agg}$	QPSK	All RBs	QPSK	REFSENS	
2	X	Low	CC1	CC2	CC3	Lowest $N_{RB\_agg}$	QPSK	All RBs	QPSK	REFSENS	
3	X	High	CC1	CC2	CC3	Highest $N_{RB\_agg}$	QPSK	All RBs	QPSK	REFSENS	
4	X	High	CC1	CC2	CC3	Lowest $N_{RB\_agg}$	QPSK	All RBs	QPSK	REFSENS	
Note 1:	CA Configuration Test CC Combination test settings are checked separately for each CA Configuration.										
Note 2:	Use CA Configuration – specific test points if present in the table, otherwise use Default Test Settings test points.										
Note 3:	X corresponds to the band of the CA Configuration. E.g. for CA_41D, X=41										
Note 4:	REFSENS refers to the PCC band's and PCC $N_{RB}$ 's single carrier Uplink RB allocation for reference sensitivity according to table 7.3.5-2.										
Note 5:	If in the CA Configuration UE supports multiple CC Combinations with the same $N_{RB\_agg}$ , choose for testing the Combination with maximum $N_{RB\_PCC}$ and then select maximum $N_{RB\_SCC1}$ for the chosen $N_{RB\_PCC}$										

Table 7.3A.5.4.1-2: Test Configuration Table (Inter-band)

Initial Conditions															
Test Environment as specified in TS 36.508[7] subclause 4.1										NC, TL/VL, TL/VH, TH/VL, TH/VH					
Test Frequencies as specified in TS36.508 [7] subclause 4.3.1 for different CA bandwidth classes.										For test frequencies refer to "Range" columns. For mapping within Band refer to "CC" columns					
Test CC Combination setting ( $N_{RB\_agg}$ ) as specified in subclause 5.4.2A.1 for the CA Configuration across bandwidth combination sets supported by the UE.										Refer to "PCC $N_{RB}$ " and "SCCs $N_{RB}$ " columns					
Network signalling value										NS_01 by default, exceptions listed in Table 7.3.3-3, dependent on PCC Band					
Test Parameters for CA Configurations															
ID	CA Configuration / $N_{RB\_agg}$							DL Allocation			UL Allocation (Note 2,3)				
	CA Configuration						PCC $N_{RB}$	SCCs $N_{RB}$		CC MOD	PCC & SCCs RB allocation			CC MOD	PCC $L_{CRB}$ @ $RB_{start}$
	PCC		SCC1		SCC2			SCC1	SCC2		PCC	SCC1	SCC2		
	Band	Range	Band	Range	Band	Range									
Default Test Settings for a CA_XA-YA-ZA Configuration															
1	X	Mid	Y	Mid	Z	Mid	Highest $N_{RB}$	Highest $N_{RB}$	Highest $N_{RB}$	QPSK	All RBs	QPSK	REFSENS

- Note 1: CA Configuration Test CC Combination test settings are checked separately for each CA Configuration.
- Note 2: Use CA Configuration – specific test points if present in the table, Otherwise use test points from matching Group Test Settings, if present in the table. Otherwise use the Default Test Settings test points.
- Note 3: If, according to the UE declared capability, UE does not support UL in an individual band within the CA Configuration, test points with that individual band as PCC are not applicable.
- Note 4: X,Y,Z correspond to the different bands in the CA Configuration. E.g. for CA\_1A-3A-19A,X=1,Y=3,Z=19
- Note 5: REFSSENS refers to the PCC band's and PCC  $N_{RB}$  's single carrier Uplink RB allocation for reference sensitivity according to table 7.3.5-2.
- Note 6: Band 12:  $f_{UL} = 706.7$  MHz ( $N_{UL} = 23087$ ),  $f_{DL} = 736.7$  MHz ( $N_{DL} = 5087$ )  
Band 4:  $f_{DL} = 2120.1$  MHz ( $N_{DL} = 2051$ )
- Note 7: Band 12:  $f_{UL} = 710.9$  MHz ( $N_{UL} = 23129$ ),  $f_{DL} = 740.9$  MHz ( $N_{DL} = 5129$ )  
Band 4:  $f_{DL} = 2132.7$  MHz ( $N_{DL} = 2177$ )
- Note 8: CA\_1A-28A test shall not be skipped due to CA\_1A\_18A\_28A test being conducted.
- Note 9: Test points that fulfil criteria of Note 4 in Table 7.3A.5.5-3
- Note 10: Only Band 1 and Band 42 need to be tested and Band 3 does not need to be tested
- Note 11: Only Band 1 and Band 3 need to be tested and Band 42 does not need to be tested
- Note 12: Band 3:  $f_{UL} = 1720$ MHz ( $N_{UL} = 19300$ ),  $f_{DL} = 1815$ MHz ( $N_{DL} = 1300$ )  
Band 42:  $f_{UL/DL} = 3440$ MHz ( $N_{UL/DL} = 41990$ )
- Note 13: Band 3:  $f_{UL} = 1775$ MHz ( $N_{UL} = 19850$ ),  $f_{DL} = 1870$ MHz ( $N_{DL} = 1850$ )  
Band 42:  $f_{UL/DL} = 3520$ MHz ( $N_{DL} = 42790$ )
- Note 14: CA\_1A-28A test shall not be skipped due to different frequency band definition of Band 28 between CA\_1A-28A and CA\_1A-19A-28A.
- Note 15: Only Band 1 and Band 19 need to be tested and Band 28 does not need to be tested

**Table 7.3A.5.4.1-3: Test Configuration Table (Intra-band contiguous + Inter-band)**

Initial Conditions															
Test Environment as specified in TS 36.508[7] subclause 4.1										NC, TL/VL, TL/VH, TH/VL, TH/VH					
Test Frequencies as specified in TS36.508 [7] subclause 4.3.1 for different CA bandwidth classes.										For test frequencies refer to “Range” columns. For mapping within Band refer to “CC” columns					
Test CC Combination setting (N <sub>RB_agg</sub> ) as specified in subclause 5.4.2A.1 for the CA Configuration across bandwidth combination sets supported by the UE.										Refer to “PCC N <sub>RB</sub> ” and “SCCs N <sub>RB</sub> ” columns					
Network signalling value										NS_01 by default, exceptions listed in Table 7.3.3-3, dependent on PCC Band					
Test Parameters for CA Configurations															
ID	CA Configuration / N <sub>RB_agg</sub>							DL Allocation			UL Allocation (Note 2,3)				
	CA Configuration						PCC N <sub>RB</sub>	SCCs N <sub>RB</sub>		CC MOD	PCC & SCCs RB allocation			CC MOD	PCC L <sub>CRB</sub> @ RB <sub>start</sub>
	PCC		SCC1		SCC2			SCC1	SCC2		PCC	SCC1	SCC2		
	Band	Range /CC	Band	Range /CC	Band	Range /CC									
Default Test Settings for a CA_XC-YA and CA_XB-YA Configurations															
1	X	Low /CC1	X	Low /CC2	Y	Mid	Highest N <sub>RB_agg</sub>	Highest N <sub>RB</sub>	QPSK	All RBs	QPSK	REFSENS			
2	X	Low /CC1	X	Low /CC2	Y	Mid	Lowest N <sub>RB_agg</sub>	Highest N <sub>RB</sub>	QPSK	All RBs	QPSK	REFSENS			
3	X	High /CC1	X	High /CC2	Y	Mid	Highest N <sub>RB_agg</sub>	Highest N <sub>RB</sub>	QPSK	All RBs	QPSK	REFSENS

Note 1:	CA Configuration Test CC Combination test settings are checked separately for each CA Configuration.																
Note 2:	Use CA Configuration – specific test points if present in the table. Otherwise use test points from matching Group Test Settings, if present in the table. Otherwise use Default Test Settings test points.																
Note 3:	If, according to the UE declared capability, UE does not support UL in an individual band within the CA Configuration, test points with that individual band as PCC are not applicable.																
Note 4:	X and Y correspond to the different bands in the CA Configuration. E.g. for CA_2A-2A-5A, X=2, Y=5 or Y=5, X=2																
Note 5:	REFSENS refers to the PCC band's and PCC N <sub>RB</sub> 's single carrier Uplink RB allocation for reference sensitivity according to table 7.3.5-2.																
Note 6:	Configuration for the low band for which the 3rd harmonic is within transmission bandwidth of the high band, as specified in Table 7.3A.0-1 Note 5.																

**Table 7.3A.5.4.1-5: Test Configuration Table (Intra-band non-contiguous + Intra-band contiguous)**

Initial Conditions															
Test Environment as specified in TS 36.508[7] subclause 4.1										NC, TL/VL, TL/VH, TH/VL, TH/VH					
Test Frequencies as specified in TS36.508 [7] subclause 4.3.1 for different CA bandwidth classes.										For test frequencies refer to “Range” columns. For mapping within band refer to “CC” columns					
Test CC Combination setting ( $N_{RB\_agg}$ ) as specified in subclause 5.4.2A.1 for the CA Configuration across bandwidth combination sets supported by the UE.										Refer to “PCC $N_{RB}$ ” and “SCCs $N_{RB}$ ” columns					
Network signalling value										NS_01 by default, exceptions listed in Table 7.3.3-3, dependent on PCC Band					
Test Parameters for CA Configurations															
ID	CA Configuration / $N_{RB\_agg}$								DL Allocation			UL Allocation (Note 2,3)			
	CA Configuration						PC C $N_{RB}$	SCCs $N_{RB}$		CC MOD	PCC & SCCs RB allocation			CC MOD	PCC $L_{CRB}$ @ $RB_{start}$
	Band	PC C	$W_{gap}$ [MHz]	SCC 1	$W_{gap}$ [MHz]	SCC 2		SCC 1	SCC 2		PCC	SCC1	SCC2		
		CC		CC		CC									
Test Settings for a CA_41C-41A Configuration															
1	41	CC3	149	CC2	-	CC1	100	100	25	QPS K	All RBs	QPS K	100@0		
2	41	CC3	134.2	CC2	-	CC1	100	100	100	QPS K	All RBs	QPS K	100@0		
Test Settings for a CA_41A-41C Configuration															
1	41	CC3	-	CC2	149.2	CC1	100	100	25	QPS K	All RBs	QPS K	100@0		
2	41	CC3	-	CC2	134.2	CC1	100	100	100	QPS K	All RBs	QPS K	100@0		
Note 1: CA Configuration Test CC Combination test settings are checked separately for each CA Configuration. Note 2: Use CA Configuration – specific test points if present in the table, otherwise use Default Test Settings test points. Note 3: If, according to the UE declared capability, UE does not support UL in an individual band within the CA Configuration, test points with that individual band as PCC are not applicable. Note 4: X corresponds to the band of the CA Configuration. E.g. for CA_41C-41A, X=41. Note 5: REFSENS refers to the PCC band's and PCC $N_{RB}$ 's single carrier Uplink RB allocation for reference sensitivity according to table 7.3.5-2. Note 6: If in the CA Configuration UE supports multiple CC Combinations with the same $N_{RB\_agg}$ , choose the Combination with $N_{RB\_CC1} = N_{RB\_CC2}$ for testing. If no such combination is supported, choose Combination with maximum $N_{RB\_CC1}$ for testing.															

1. Connect the SS to the UE antenna connectors as shown in TS 36.508[7] Annex A Figure A.55.
2. The parameter settings for the cell are set up according to TS 36.508 [7] subclause 4.4.3.
3. Downlink signals for PCC are initially set up according to Annex C.0, C.1, and C.3.1, and uplink signals according to Annex H.1 and H.3.0.
4. The UL and DL Reference Measurement channels are set according to Table 7.3A.5.4.1-1 through Table 7.3A.5.4.1-5 as appropriate.
5. Propagation conditions are set according to Annex B.0.
6. Ensure the UE is in State 3A-RF according to TS 36.508 [7] clause 5.2A.2. Message contents are defined in clause 7.3A.5.4.3.

### 7.3A.5.4.2 Test procedure

1. Configure SCCs according to Annex C.0, C.1 and Annex C.3.1 for all downlink physical channels.
2. The SS shall configure SCCs as per TS 36.508 [7] clause 5.2A.4. Message contents are defined in clause 7.3A.5.4.3
3. SS activates SCCs by sending the activation MAC-CE (Refer TS 36.321 [13], clauses 5.13, 6.1.3.8). Wait for at least 2 seconds (Refer TS 36.133, clauses 8.3.3.2).
4. SS transmits PDSCH via PDCCH DCI format 1A for C\_RNTI to transmit the DL RMC according to Table 7.3A.5.4.1-1 through Table 7.3A.5.4.1-5 as appropriate on PCC and SCCs. The SS sends downlink MAC padding bits on the DL RMC.
5. SS sends uplink scheduling information for each UL HARQ process via PDCCH DCI format 0 for C\_RNTI to schedule the UL RMC according to Table 7.3A.5.4.1-1 through Table 7.3A.5.4.1-5 as appropriate on PCC and SCCs. Since the UE has no payload and no loopback data to send the UE sends uplink MAC padding bits on the UL RMC.
6. Set the Downlink signal level for PCC and SCCs to the appropriate REFSENS value defined in Table 7.3A.5.5-1 through Table 7.3A.5.5-7. Send continuously uplink power control "up" commands in every uplink scheduling information to the UE to ensure the UE transmits  $P_{UMAX}$  level for at least the duration of the Throughput measurement.
7. Measure the average throughput for each component carrier for a duration sufficient to achieve statistical significance according to Annex G.2A.

### 7.3A.5.4.3 Message contents

Message contents are according to TS 36.508 [7] subclause 4.6. In test procedure step 2, for SCCs configuration there are no additional message contents.

### 7.3A.5.5 Test requirement

For intra-band contiguous carrier aggregation the throughput of each component carrier shall be  $\geq 95\%$  of the maximum throughput of the reference measurement channels as specified in Annexes A.2.2, A.2.3 and A.3.2 (with one sided dynamic OCNG Pattern OP.1 FDD/TDD for the DL-signal as described in Annex A.5.1.1/A.5.2.1) with parameters specified in Table 7.3A.5.5-1. The reference sensitivity is defined to be met with all downlink component carriers active and one of the uplink carriers active.

**Table 7.3A.5.5-1: Reference sensitivity QPSK  $P_{REFSENS}$  for Intra-band contiguous**

CA Configuration	E-UTRA Band	Channel bandwidth						Duplex Mode
		1.4 MHz (dBm)	3 MHz (dBm)	5 MHz (dBm)	10 MHz (dBm)	15 MHz (dBm)	20 MHz (dBm)	
CA_40D	40	-	-	-	-96.3	-94.5	-93.3	TDD
CA_41D	41	-	-	-	-94.3	-92.5	-91.3	TDD
Note 1:	The transmitter shall be set to maximum output power level (Table 7.3A.5.5-2)							
Note 2:	The reference measurement channel is specified in A.3.2 with one sided dynamic OCNG Pattern OP.1 FDD/TDD as described in Annex A.5.1.1/A.5.2.1							
Note 3:	The signal power is specified per port							

**Table 7.3A.5.5-2: Void**

For inter-band carrier aggregation with one component carrier per operating band and the uplink assigned to one E-UTRA band the throughput shall be  $\geq 95\%$  of the maximum throughput of the reference measurement channels as specified in Annexes A.2.2, A.2.3 and A.3.2 (with one sided dynamic OCNG Pattern OP.1 FDD/TDD for the DL-signal as described in Annex A.5.1.1/A.5.2.1) with parameters specified in Table 7.3A.5.5-3 (originated from single carrier Tables 7.3.5-1). The reference sensitivity is defined to be met with all downlink component carriers active and one of the uplink carriers active.

Table 7.3A.5.5-3: Reference sensitivity QPSK  $P_{\text{REFSENS}}$  for inter-band

CA Configuration	Channel bandwidth							Duplex Mode

CA_19A-21A-42A	19	-	-	-99.3	-96.3	-94.5	-	FDD
	21	-	-	-99.3	-96.3	-94.5	-	
	42	-	-	-98.0	-95.0	-93.2	-92.0	

- Note 1: The transmitter shall be set to maximum output power level (Table 7.3A.5.5-4)
- Note 2: The reference measurement channel is specified in A.3.2 with one sided dynamic OCNG Pattern OP.1 FDD/TDD as described in Annex A.5.1.1/A.5.2.1
- Note 3: The signal power is specified per port
- Note 4: Reference sensitivity for the case that the uplink is active in Band 1 and the separation between the lower edge of the uplink channel in Band 1 and the upper edge of the downlink channel in Band 3 is < 60 MHz.
- Note 5: Reference sensitivity for the case that the uplink is active in Band 1 and the separation between the lower edge of the uplink channel in Band 1 and the upper edge of the downlink channel in Band 3 is  $\geq$  60 MHz.
- Note 6: <sup>6</sup> indicates that the requirement is modified by -0.5 dB when the carrier frequency of the assigned E-UTRA channel bandwidth is within 865-894 MHz.
- Note 7: These requirements apply when the uplink is active in Band 18 and the downlink channels in Band 28 are confined within the restricted frequency range specified for this CA configuration (Table 5.2A-2).
- Note 8: Reference sensitivity for the high band for which the 3rd harmonic of the low band is within transmission bandwidth, as specified Note 5 and 6 in Table 7.3A.0-1.
- Note 9: Reference sensitivity for the high band for which the 2nd harmonic of the low band is within transmission bandwidth, as specified Note 9 and 10 in Table 7.3A.0-1.
- Note 10: Reference sensitivity for the high band for which the 2nd harmonic of the low band is within transmission bandwidth, as specified Note 11 in Table 7.3A.0-1.
- Note 11: These requirements apply when the uplink is active in Band 19 and the downlink channels in Band 28 are allocated at the middle of the restricted frequency range specified for this CA configuration (Table 5.2A-2). For each channel bandwidth in Band 28, the requirement applies regardless of channel bandwidth in Band 19.

For the UE which supports inter-band carrier aggregation configurations the  $\Delta R_{IB,c}$  in Tables 7.3.3-1A, 7.3.3-1B and 7.3.3-1C shall be applied for applicable bands.

Unless otherwise specified, in case the UE supports more than one of the above 3DL inter-band carrier aggregation configurations and a E-UTRA operating band belongs to more than one 3DL inter-band carrier aggregation configurations then:

- When the E-UTRA operating band frequency range is  $\leq$  1GHz and the tolerances are the same, the value applies to the band. If the tolerances are different, the applicable additional 3DL tolerance is FFS. In case there is a harmonic relation between low band UL and high band DL, then the maximum tolerance among the different supported 3DL carrier aggregation configurations involving such band shall be applied
- When the E-UTRA operating band frequency range is >1GHz, the applicable additional 3DL tolerance shall be the maximum tolerance above that applies for that operating band among the supported 3DL CA configurations

The above additional tolerances applicable for the E-UTRA operating bands that belong to the supported highest order inter-band carrier aggregation configuration, also applies to the same E-UTRA operating bands that belong to a supported lower order CA configuration.

The reference receive sensitivity (REFSENS) requirement for inter-band specified in Table 7.3A.5.5-3 shall be met for an uplink CA configurations than or equal to that specified in Table 7.3.5-2.

NOTE: Table 7.3A.5.5-4 does not necessarily reflect the operational conditions of the network, where the number of uplink and downlink allocated resource blocks will be practically constrained by other factors.

**Table 7.3A.5.5-4: Void**

For combinations of intra-band contiguous and inter-band carrier aggregation with three downlink carriers and one uplink carrier assigned to one E-UTRA band the throughput of each component carrier shall be  $\geq 95\%$  of the maximum throughput of the reference measurement channels as specified in Annexes A.2.2, A.2.3 and A.3.2 (with one sided dynamic OCNG Pattern OP.1 FDD/TDD for the DL-signal as described in Annex A.5.1.1/A.5.2.1) with parameters specified in Table 7.3A.5.5-5. The reference sensitivity is defined to be met with all downlink component carriers active and one of the uplink carriers active.

**Table 7.3A.5.5-5: Reference sensitivity QPSK  $P_{\text{REFSENS}}$  for intra-band contiguous + inter-band**

Note 1:	The transmitter shall be set to maximum output power level (Table 7.3A.5.5-4)							
Note 2:	The reference measurement channel is specified in A.3.2 with one sided dynamic OCNG Pattern OP.1 FDD/TDD as described in Annex A.5.1.1/A.5.2.1							
Note 3:	The signal power is specified per port							
Note 4:	Reference sensitivity for the high band for which the 2nd harmonic of the low band is within transmission bandwidth, as specified Note 9 and 10 in Table 7.3A.0-1.							
Note 5:	Reference sensitivity for the high band for which the 2nd harmonic of the low band is within transmission bandwidth, as specified Note 11 in Table 7.3A.0-1.							
Note 6:	<sup>6</sup> indicates that the requirement is modified by -0.5 dB when the carrier frequency of the assigned E-UTRA channel bandwidth is within 865-894 MHz.							
Note 7:	Reference sensitivity for the high band for which the 5th harmonic of the low band is within transmission bandwidth, as specified Note 15 and 16 in Table 7.3A.0-1.							
Note 8:	Reference sensitivity for the high band for which the 4th harmonic of the low band is within transmission bandwidth, as specified Note 12 and 13 in Table 7.3A.0-1.							
Note 9:	These requirements apply when the uplink is active in Band 1 and the separation between the lower edge of the uplink channel in Band 1 and the upper edge of the downlink channel in Band 3 is < 60 MHz. For each channel bandwidth in Band 3, the requirement applies regardless of channel bandwidth in Band 1.							
Note 10:	These requirements apply when the uplink is active in Band 1 and the separation between the lower edge of the uplink channel in Band 1 and the upper edge of the downlink channel in Band 3 is ≥ 60 MHz. For each channel bandwidth in Band 3, the requirement applies regardless of channel bandwidth in Band 1.							

For combinations of intra-band non-contiguous and inter-band carrier aggregation with three downlink carriers and one uplink carrier assigned to one E-UTRA band the throughput of each component carrier shall be  $\geq 95\%$  of the maximum throughput of the reference measurement channels as specified in Annexes A.2.2, A.2.3 and A.3.2 (with one sided dynamic OCNG Pattern OP.1 FDD/TDD for the DL-signal as described in Annex A.5.1.1/A.5.2.1) with parameters specified in Table 7.3A.5.5-6. The reference sensitivity is defined to be met with all downlink component carriers active and one of the uplink carriers active.

Table 7.3A.5.5-6: Reference sensitivity QPSK  $P_{\text{REFSENS}}$  for intra-band non-contiguous + inter-band

	4	4	50	-96.3	4	100	-93.3	13	50	-93.3

Note 1: Requirements with additional relaxation ( $\Delta R_{\text{IBNC}}$ ) as per Table 7.3A.0-3.  
Note 2: "Testpoint ID" refers to IDs in Table 7.3A.5.4.1-4.  
Note 3: The reference measurement channel is specified in A.3.2 with one sided dynamic OCNG Pattern OP.1 FDD/TDD as described in Annex A.5.1.1/A.5.2.1.  
Note 4: The signal power is specified per port.  
Note 5:  $P_{\text{REFSENS}}$  refers to the PCC band's single carrier reference sensitivity according to table 7.3.5-1.  
Note 6: Void  
Note 7: Reference sensitivity for the high band for which the 3rd harmonic of the low band is within transmission bandwidth, as specified Note 5 in Table 7.3A.0-1.

For combinations of intra-band non-contiguous and intra-band contiguous carrier aggregation with three downlink carriers and one uplink carrier assigned to one E-UTRA band the throughput of each component carrier shall be  $\geq 95\%$  of the maximum throughput of the reference measurement channels as specified in Annexes A.2.2, A.2.3 and A.3.2 (with one sided dynamic OCNG Pattern OP.1 FDD/TDD for the DL-signal as described in Annex A.5.1.1/A.5.2.1) with parameters specified in Table 7.3A.5.5-7. The reference sensitivity is defined to be met with all downlink component carriers active and one of the uplink carriers active.

**Table 7.3A.5-7: Reference sensitivity QPSK  $P_{\text{REFSENS}}$  for intra-band non-contiguous + intra-band contiguous**

CA Configuration	Testpoint ID	PCC		SCC1		SCC2	
		$N_{\text{RB}}$	Requirement (dBm)	$N_{\text{RB}}$	Requirement (dBm)	$N_{\text{RB}}$	Requirement (dBm)

Note 1: Requirements with additional relaxation ( $\Delta R_{\text{IBNC}}$ ) as per Table 7.3A.0-3. Note 2: "Testpoint ID" refers to IDs in Table 7.3A.5.4.1-5. Note 3: The reference measurement channel is specified in A.3.2 with one sided dynamic OCNG Pattern OP.1 FDD/TDD as described in Annex A.5.1.1/A.5.2.1. Note 4: The signal power is specified per port. Note 5: $P_{\text{REFSENS}}$ refers to the PCC band's single carrier reference sensitivity according to table 7.3.5-1.							

## 7.3A.6 Reference sensitivity level for CA (inter-band DL CA and UL CA)

### 7.3A.6.1 Test purpose

Same as in clause 7.3A.1.1.

### 7.3A.6.2 Test applicability

This test case applies to all types of E-UTRA UE release 11 and forward that support inter-band DL CA and UL CA.

### 7.3A.6.3 Minimum conformance requirements

The minimum conformance requirements are defined in clause 7.3A.0.

### 7.3A.6.4 Test description

#### 7.3A.6.4.1 Initial conditions

Same as in clause 7.3A.1.4.1 with the following exceptions:

- Instead of Table 7.3A.1.4.1-1 → use Table 7.3A.6.4.1-1.
- Instead of clause 7.3A.1.4.3 use clause 7.3A.6.4.3.

Table 7.3A.6.4.1-1: Test Configuration Table

Initial Conditions											
Test Environment as specified in TS 36.508[7] subclause 4.1						NC, TL/VL, TL/VH, TH/VL, TH/VH					
Test Frequencies as specified in TS36.508 [7] subclause 4.3.1 for different CA bandwidth classes.						For test frequencies refer to "Range" columns.					
Test CC Combination setting ( $N_{RB\_agg}$ ) as specified in subclause 5.4.2A.1 for the CA Configuration across bandwidth combination sets supported by the UE.						Refer to "PCC $N_{RB}$ " and "SCC $N_{RB}$ " columns					
Network signalling value						NS_01 Unless given by Table 7.3.3.-3 for the band with active uplink carrier					
Test Parameters for CA Configurations											
ID	CA Configuration / $N_{RB\_agg}$					DL Allocation			UL Allocation (Note 2,3)

Test Settings for CA_5A-7A Configuration											
1	7	Note 5	20	Note 5	50	25	QPSK	All RBs	QPSK	50@0	25@0
Note 1:	CA Configuration Test CC Combination test settings are checked separately for each CA Configuration.										
Note 2:	Use CA Configuration – specific test points if present in the table, Otherwise use test points from matching Group Test Settings, if present in the table. Otherwise use the Default Test Settings test points.										
Note 3:	X,Y correspond to the different bands in the CA Configuration. E.g. for CA_1A-3A,X=1,Y=3.										
Note 4:	REFSENS refers to the PCC band's and PCC N <sub>RB</sub> 's single carrier Uplink RB allocation for reference sensitivity according to table 7.3.5-2.										
Note 5:	Test frequency for each CA configuration shall follow Table 7.3A.0-1f. If test configurations of each ID in a CA configuration are same, test frequency shall follow the order of Table 7.3A.0-1f.										

### 7.3A.6.4.2 Test procedure

1. Configure SCC according to Annex C.0, C.1 and Annex C.3.1 for all downlink physical channels.
2. The SS shall configure SCC as per TS 36.508 [7] clause 5.2A.4. Message contents are defined in clause 7.3A.1.4.3
3. SS activates SCC by sending the activation MAC-CE (Refer TS 36.321 [13], clauses 5.13, 6.1.3.8). Wait for at least 2 seconds (Refer TS 36.133, clauses 8.3.3.2).
4. SS transmits PDSCH via PDCCH DCI format 1A for C\_RNTI to transmit the DL RMC according to Tables 7.3A.6.4.1-1 on both PCC and SCC. The SS sends downlink MAC padding bits on the DL RMC.
5. SS sends uplink scheduling information for each UL HARQ process via PDCCH DCI format 0 for C\_RNTI to schedule the UL RMC according to Table 7.3A.6.4.1-1 on both PCC and SCC. Since the UE has no payload and no loopback data to send the UE sends uplink MAC padding bits on the UL RMC.
6. Set the Downlink signal level for PCC and SCC to the appropriate REFSENS value defined in Table 7.3A.6.5-1. Send continuously uplink power control "up" commands in every uplink scheduling information to the UE to ensure the UE transmits P<sub>UMAX</sub> level for at least the duration of the Throughput measurement.
7. Measure the average throughput for each component carrier for a duration sufficient to achieve statistical significance according to Annex G.2A.

### 7.3A.6.4.3 Message contents

Message contents are according to TS 36.508 [7] subclause 4.6. In test procedure step 2, for SCC configuration there are no additional message contents.

### 7.3A.6.5 Test requirement

For inter-band carrier aggregation with uplink assigned to two E-UTRA bands the throughput shall be  $\geq 95\%$  of the maximum throughput of the reference measurement channels as specified in Annex A.3.2 with parameters specified in Tables 7.3A.6.5-1 (originated from single carrier Tables 7.3.5-1). The reference sensitivity is defined to be met with both downlink component carriers active and both of the uplink component carriers active.

**Table 7.3A.6.5-1: Reference sensitivity QPSK PREFSENS**

CA Configuration	Channel bandwidth							Duplex Mode
	E-UTRA Band	1.4 MHz (dBm)	3 MHz (dBm)	5 MHz (dBm)	10 MHz (dBm)	15 MHz (dBm)	20 MHz (dBm)

CA_39A-41A	39	-	-	-99.3	-96.3	-94.5	-93.3	TDD
	41	-	-	-97.3	-94.3	-92.5	-91.3	

Note 1: Both of the transmitters shall be set min(+20 dBm, P<sub>C<sub>MAX</sub>L,c</sub>) as defined in subclause 6.2.5A

Note 2: The reference measurement channel is specified in A.3.2 with one sided dynamic OCNG Pattern OP.1 FDD/TDD as described in Annex A.5.1.1/A.5.2.1

Note 3: The signal power is specified per port

Note 4: Reference sensitivity for the high band for which the 3rd harmonic of the low band is within transmission bandwidth, as specified Note 5 in Table 7.3A.0-1.

Note 5: <sup>5</sup> indicates that the requirement is modified by -0.5 dB when the carrier frequency of the assigned E-UTRA channel bandwidth is within 865-894 MHz.

## 7.3A.7 Reference sensitivity level for CA (intra-band non-contiguous DL CA and UL CA)

### 7.3A.7.1 Test purpose

Same as in clause 7.3A.1.1.

### 7.3A.7.2 Test applicability

This test case applies to all types of E-UTRA UE release 11 and forward that support intra-band non-contiguous DL CA and UL CA.

### 7.3A.7.3 Minimum conformance requirements

The minimum conformance requirements are defined in clause 7.3A.0.

### 7.3A.7.4 Test description

#### 7.3A.7.4.1 Initial conditions

Same as in clause 7.3A.1.4.1 with the following exceptions:

- Instead of Table 7.3A.1.4.1-1 → use Table 7.3A.7.4.1-1.
- Instead of clause 7.3A.1.4.3 use clause 7.3A.7.4.3.

**Table 7.3A.7.4.1-1: Test Configuration Table**

Initial Conditions									
Test Environment as specified in TS 36.508[7] subclause 4.1				NC, TL/VL, TL/VH, TH/VL, TH/VH					
Test Frequencies as specified in TS36.508 [7] subclause 4.3.1 for different CA bandwidth classes, and PCC and SCCs are mapped onto physical frequencies according to Table 7.1-2.				A: N/A (Range is not relevant)					
Test CC Combination setting ( $N_{RB\_agg}$ ) as specified in subclause 5.4.2A.1 for the CA Configuration.				Refer to test point					
Test Parameters for CA Configurations									
ID	CA Configuration / $N_{RB\_agg}$		$W_{gap}$ [MHz]	DL Allocation		UL Allocation			
	PCC $N_{RB}$	SCCs $N_{RB}$		CC MOD	PCC & SCC RB allocation	CC MOD	PCC $N_{RB\_alloc}$ ( $L_{CRB}$ @ $RB_{start}$ )	CC MOD	SCC $N_{RB\_alloc}$ ( $L_{CRB}$ @ $RB_{start}$ )
Test Parameters for CA_4A-4A Configurations									
1	100	25	35	QPSK	100+25	QPSK	100@0	QPSK	25@0
2	100	100	20	QPSK	100+100	QPSK	100@0	QPSK	100@0
Note 1:	CA Configuration Test CC Combination settings are checked separately for each CA Configuration, which applicable aggregated channel bandwidths are specified in Table 5.4.2A.1-3.								
Note 2:	The carrier centre frequency of PCC in the UL operating band is configured closer to the DL operating band.								

#### 7.3A.7.4.2 Test procedure

1. Configure SCC according to Annex C.0, C.1 and Annex C.3.1 for all downlink physical channels.
2. The SS shall configure SCC as per TS 36.508 [7] clause 5.2A.4. Message contents are defined in clause 7.3A.7.4.3

3. SS activates SCC by sending the activation MAC-CE (Refer TS 36.321 [13], clauses 5.13, 6.1.3.8). Wait for at least 2 seconds (Refer TS 36.133, clauses 8.3.3.2).
4. SS transmits PDSCH via PDCCH DCI format 1A for C\_RNTI to transmit the DL RMC according to Tables 7.3A.7.4.1-1 on both PCC and SCC. The SS sends downlink MAC padding bits on the DL RMC.
5. SS sends uplink scheduling information for each UL HARQ process via PDCCH DCI format 0 for C\_RNTI to schedule the UL RMC according to Table 7.3A.7.4.1-1 on both PCC and SCC. Since the UE has no payload and no loopback data to send the UE sends uplink MAC padding bits on the UL RMC.
6. Set the Downlink signal level for PCC and SCC to the appropriate REFSENS value defined in Table 7.3A.7.5-1. Send continuously uplink power control "up" commands in the uplink scheduling information to the UE to ensure the UE transmits  $P_{UMAX}$  level for at least the duration of the Throughput measurement.
7. Measure the average throughput for each component carrier for a duration sufficient to achieve statistical significance according to Annex G.2A.

### 7.3A.7.4.3 Message contents

Same as in clause 7.3A.4.4.3.

### 7.3A.7.5 Test requirement

For intra-band non-contiguous carrier aggregation with two uplink carriers, the throughput of each downlink component carrier shall be  $\geq 95\%$  of the maximum throughput of the reference measurement channels as specified in Annexes A.3.2 with parameters specified in Table 7.3A.7.5-1.

**Table 7.3A.7.5-1: Reference sensitivity QPSK  $P_{REFSENS}$  for intra-band Non-contiguous**

ID/ CA configuration / $P_{REFSENS}$			
ID	CA configuration	PCC measurement (dBm)	SCC measurement (dBm)
1	CA_4A-4A	-93.3	-99.3
2		-93.3	-93.3
Note 1: The transmitter shall be set to maximum output power level Note 2: The reference measurement channel is specified in A.3.2 with one sided dynamic OCNG Pattern OP.1 FDD/TDD as described in Annex A.5.1.1/A.5.2.1 Note 3: The signal power is specified per port			

For the UE which supports inter-band carrier aggregation configurations the  $\Delta R_{IB,c}$  in Tables 7.3.3-1A, 7.3.3-1B and 7.3.3-1C shall be applied for applicable bands.

In case the UE supports more than one of the inter-band carrier aggregation configurations and a E-UTRA operating band belongs to more than one inter-band carrier aggregation configurations then:

- When the E-UTRA operating band frequency range is  $\leq 1$ GHz, the applicable additional tolerance shall be the average of the tolerances in Table 7.3.3-1A, truncated to one decimal place that would apply for that operating band among the supported CA configurations. In case there is a harmonic relation between low band UL and high band DL (i.e. bands listed in Table 7.3A.0-1), then the maximum tolerance among the different supported carrier aggregation configurations involving such band shall be applied.
- When the E-UTRA operating band frequency range is  $>1$ GHz, the applicable additional tolerance shall be the maximum tolerance in Table 7.3.3-1A that would apply for that operating band among the supported CA configurations.

## 7.3A.8

### 7.3A.9 Reference sensitivity level for 4DL CA

**Editor's note: Following aspects missing or not yet determined:**

- There is no upgrading of 4CA definition in clause 7.3A.0.
- There is no intra-band non-contiguous + inter-band and intra-band non-contiguous + intra-band contiguous definition of CA configuration and Reference sensitivity QPSK  $P_{REFSENS}$ .
- The test applicability needs to be added to TS36.521-2
- The test case needs to be added to Annex G
- Test configuration tables format are under investigation and may change in RAN5.

#### 7.3A.9.1 Test purpose

Same as in clause 7.3A.1.1.

#### 7.3A.9.2 Test applicability

This test case applies to all types of E-UTRA UE release 11 and forward that support 4DL with Intra-band contiguous CA, or 4DL with Inter-band CA, or 4DL with Intra-band contiguous and Inter-band CA.

This test case also applies to all types of E-UTRA UE release 12 and forward that support 4DL with Intra-band non-contiguous and Inter-band CA, or 4DL with Intra-band non-contiguous and Intra-band contiguous CA.

This test case also applies to all types of E-UTRA UE release 12 and forward that support 4DL CA with FDD-TDD CA.

#### 7.3A.9.3 Minimum conformance requirements

The minimum conformance requirements are defined in clause 7.3A.0.

#### 7.3A.9.4 Test description

##### 7.3A.9.4.1 Initial conditions

Initial conditions are a set of test configurations the UE needs to be tested in and the steps for the SS to take with the UE to reach the correct measurement state.

The initial test configurations consist of environmental conditions, test frequencies, and channel bandwidths based on E-UTRA CA configurations specified in table 5.4.2A.1-1 through table 5.4.2A.1-2a. All of these configurations shall be tested with applicable test parameters for each channel bandwidth, and are shown in table 7.3A.9.4.1-1 through table 7.3A.9.4.1-6 as appropriate. The details of the uplink reference measurement channels (RMCs) are specified in Annex A.2 and A.3. Configurations of PDSCH and PDCCH before measurement are specified in Annex C.2.

Table 7.3A.9.4.1-1: Test Configuration Table (Intra-band contiguous)

Initial Conditions																	
Test Environment as specified in TS 36.508 [7] subclause 4.1								NC, TL/VL, TL/VH, TH/VL, TH/VH									
Test Frequencies as specified in TS36.508 [7] subclause 4.3.1 for different CA bandwidth classes.								For test frequencies refer to “Range” columns. For mapping within Band refer to “CC” columns									
Test CC Combination setting ( $N_{RB\_agg}$ ) as specified in subclause 5.4.2A.1 for the CA Configuration across bandwidth combination sets supported by the UE.								Refer to “PCC $N_{RB}$ ” and “SCCs $N_{RB}$ ” columns									
Network signalling value								NS_01 by default, exceptions listed in Table 7.3.3-3, dependent on PCC Band									
Test Parameters for CA Configurations																	
ID	CA Configuration / $N_{RB\_agg}$							DL Allocation				UL Allocation (Note 2,3)					
	CA Configuration						PCC $N_{RB}$	SCCs $N_{RB}$			CC MOD	PCC & SCCs RB allocation				CC MOD	PCC $L_{CRB}$ @ $RB_{start}$
	Band	Range	PCC CC	SCC1 CC	SCC2 CC	SCC3 CC		SCC1	SCC2	SCC3		PCC	SCC1	SCC2	SCC3		
Default Test Settings for a CA_XE Configuration																	
1	X	Low	CC1	CC2	CC3	CC4	Lowest $N_{RB\_agg}$			QPSK	All RBs				QPSK	REFSENS	
2	X	Low	CC1	CC2	CC3	CC4	Highest $N_{RB\_agg}$			QPSK	All RBs				QPSK	REFSENS	
3	X	High	CC1	CC2	CC3	CC4	Lowest $N_{RB\_agg}$			QPSK	All RBs				QPSK	REFSENS	
4	X	High	CC1	CC2	CC3	CC4	Highest $N_{RB\_agg}$			QPSK	All RBs				QPSK	REFSENS	
Note 1: CA Configuration Test CC Combination test settings are checked separately for each CA Configuration. Note 2: Use CA Configuration – specific test points if present in the table, otherwise use Default Test Settings test points. Note 3: X corresponds to the band of the CA Configuration. E.g. for CA_41E, X=41. Note 4: REFSENS refers to the PCC band's and PCC $N_{RB}$ 's single carrier Uplink RB allocation for reference sensitivity according to table 7.3.5-2. Note 5: If in the CA Configuration UE supports multiple CC Combinations with the same $N_{RB\_agg}$ , choose for testing the Combination with maximum $N_{RB\_PCC}$ and then select maximum $N_{RB\_SCC1}$ for the chosen $N_{RB\_PCC}$ .																	

Table 7.3A.9.4.1-2: Test Configuration Table (Inter-band)

Initial Conditions																			
Test Environment as specified in TS 36.508[7] subclause 4.1														NC					
Test Frequencies as specified in TS36.508 [7] subclause 4.3.1 for different CA bandwidth classes.														For test frequencies refer to "Range" columns. For mapping within Band refer to "CC" columns					
Test CC Combination setting ( $N_{RB\_agg}$ ) as specified in subclause 5.4.2A.1 for the CA Configuration across bandwidth combination sets supported by the UE.														Refer to "PCC $N_{RB}$ " and "SCCs $N_{RB}$ " columns					
Network signalling value														NS_01 by default, exceptions listed in Table 7.3.3-3, dependent on PCC Band					
Test Parameters for CA Configurations

8	30	Mid	2	Mid	4	Mid	5	Mid	50	100	100	50	QPSK	All RBs	QPSK	25@25

- Note 1: CA Configuration Test CC Combination test settings are checked separately for each CA Configuration.
- Note 2: Use CA Configuration – specific test points if present in the table, Otherwise use test points from matching Group Test Settings, if present in the table. Otherwise use the Default Test Settings test points.
- Note 3: If, according to the UE declared capability, UE does not support UL in an individual band within the CA Configuration, test points with that individual band as PCC are not applicable.
- Note 4: X,Y,Z,R correspond to the different bands in the CA Configuration. E.g. for CA\_1A-3A-7A-8A,X=1,Y=3,Z=7,R=8.
- Note 5: REFSSENS refers to the PCC band's and PCC  $N_{RB}$  's single carrier Uplink RB allocation for reference sensitivity according to table 7.3.5-2.
- Note 6: Test points that fulfil criteria of Note 4 in Table 7.3A.5.5-3.
- Note 7: Only Band 1 and Band 42 need to be tested and Band 3 does not need to be tested.
- Note 8: Band 3: fUL = 1720MHz (NUL = 19300), fDL = 1815MHz (NDL = 1300)  
Band 42: fUL/DL = 3440MHz (NUL/DL = 41990)
- Note 9: Only Band 1 and Band 3 need to be tested and Band 42 does not need to be tested.
- Note 10: Band 3: fUL = 1775MHz (NUL = 19850), fDL = 1870MHz (NDL = 1850)  
Band 42: fUL/DL = 3520MHz (NDL = 42790)

Note 1: CA Configuration Test CC Combination test settings are checked separately for each CA Configuration.

Note 2: Use CA Configuration – specific test points if present in the table. Otherwise use the Default Test Settings test points.

Note 3: If, according to the UE declared capability, UE does not support UL in an individual band within the CA Configuration, test points with that individual band as PCC are not applicable.

Note 4: X,Y,Z correspond to the different bands in the CA Configuration. E.g. for CA\_3C-7A-28A, X=3,Y=7 and Z=28.

Note 5: REFSENS refers to the PCC band's and PCC  $N_{RB}$  's single carrier Uplink RB allocation for reference sensitivity according to table 7.3.5-2.

Note 6: If in the CA Configuration UE supports multiple CC Combinations with the same  $N_{RB\_agg}$ , choose the Combination with  $N_{RB\_PCC} = N_{RB\_SCC1}$  for testing. If no such combination is supported, choose Combination with maximum  $N_{RB\_PCC}$  for testing.

Note 7: Only Band 1 and Band 42 need to be tested and Band 3 does not need to be tested.

Note 8: Only Band 1 and Band 3 need to be tested and Band 42 does not need to be tested.

Note 9: Band 3: fUL = 1720MHz (NUL = 19300), fDL = 1815MHz (NDL = 1300)

Band 42: fUL/DL = 3440MHz (NUL/DL = 41990)

Note 10: Band 3: fUL = 1775MHz (NUL = 19850), fDL = 1870MHz (NDL = 1850)

Band 42: fUL/DL = 3520MHz (NDL = 42790)

Note 11: Band 42: fUL/DL for SCC1 = 3430.2MHz (NUL/DL = 41892), fUL/DL for SCC2 = 3450MHz (NUL/DL = 42090)

Note 12: Band 42: fUL/DL for SCC1 = 3500.2MHz (NUL/DL = 42592), fUL/DL for SCC2 = 3520MHz (NUL/DL = 42790)

Table 7.3A.9.4.1-4: Test Configuration Table (Intra-band non-contiguous + Inter-band)

Initial Conditions																	
Test Environment as specified in											NC						
TS 36.508[7] subclause 4.1																	
Test Frequencies as specified in TS36.508 [7] subclause 4.3.1 for different CA bandwidth classes.											For test frequencies refer to “Range” columns. For mapping within Band refer to “CC” columns						
Test CC Combination setting ( $N_{RB\_agg}$ ) as specified in subclause 5.4.2A.1 for the CA Configuration across bandwidth combination sets supported by the UE.											Highest $N_{RB}$						
Network signalling value											NS_01 by default, exceptions listed in Table 7.3.3-3, dependent on PCC Band						
Test Parameters for CA Configurations																	
ID	CA Configuration / $N_{RB\_agg}$										DL Allocation				UL Allocation (Note 2,3)		
	CA Configuration										CC MOD	PCC & SCCs				CC MOD	PCC LCRB @ RB <sub>start</sub>
	PCC		$W_{gap}$ [MHz]	SCC1		$W_{gap}$ [MHz]	SCC2		SCC3			RB allocation					
	Band	Range		Band	Range		Band	Range	Band	Range		PCC	SCC1	SCC2	SCC3		
		/CC		/CC		/CC		/CC		/CC							
Default Test Settings for CA_XA-XA-YA-ZA Configurations																	
1	X	CC2	Max	X	CC1	-	Y	Mid	Z	Mid	QPSK	All RBs				QPSK	REFSENS_CA
2	Y	Mid	-	X	CC2	Max	X	CC1	Z	Mid	QPSK	All RBs				QPSK	REFSENS
3	Z	Mid	-	X	CC2	Max	X	CC1	Y	Mid	QPSK	All RBs				QPSK	REFSENS
Default Test Settings for CA_XA-ZA-YA-YA Configurations																	
1	Y	CC2	Max	Y	CC1	-	X	Mid	Z	Mid	QPSK	All RBs				QPSK	REFSENS_CA
2	X	Mid	-	Y	CC2	Max	Y	CC1	Z	Mid	QPSK	All RBs				QPSK	REFSENS
3	Z	Mid	-	Y	CC2	Max	Y	CC1	X	Mid	QPSK	All RBs				QPSK	REFSENS

- Note 1: CA Configuration Test CC Combination test settings are checked separately for each CA Configuration.
- Note 2: Use CA Configuration – specific test points if present in the table. Otherwise use test points from matching Group Test Settings, if present in the table. Otherwise use Default Test Settings test points.
- Note 3: If, according to the UE declared capability, UE does not support UL in an individual band within the CA Configuration, test points with that individual band as PCC are not applicable.
- Note 4: X, Y, Z correspond to the different bands in the CA Configuration. E.g. for CA\_2A-2A-4A-12A, X=2, Y=4, Z=12.
- Note 5: REFSSENS refers to the PCC band's and PCC  $N_{RB}$  's single carrier Uplink RB allocation for reference sensitivity according to table 7.3.5-2. REFSSENS\_CA refers to the PCC band's and PCC  $N_{RB}$  's single carrier Uplink RB allocation for reference sensitivity according to table 7.3.4.5-2 (selecting RB allocation for SCC measurement).

Table 7.3A.9.4.1-5: Test Configuration Table (Intra-band non-contiguous + Intra-band contiguous)

Initial Conditions																		
Test Environment as specified in TS 36.508[7] subclause 4.1												NC						
Test Frequencies as specified in TS36.508 [7] subclause 4.3.1 for different CA bandwidth classes.												For test frequencies refer to “Range” columns. For mapping within band refer to “CC” columns						
Test CC Combination setting ( $N_{RB\_agg}$ ) as specified in subclause 5.4.2A.1 for the CA Configuration across bandwidth combination sets supported by the UE.												Refer to “PCC $N_{RB}$ ” and “SCCs $N_{RB}$ ” columns						
Network signalling value												NS_01 by default, exceptions listed in Table 7.3.3-3, dependent on PCC Band						
Test Parameters for CA Configurations																		
ID	CA Configuration / $N_{RB\_agg}$								DL Allocation				UL Allocation (Note 2,3)

6	4	CC4	Max	4	CC3	2	CC2	Max	2	CC1	100	25	100	100	QPSK	All RBs		QPSK	100@0		
Note 1: CA Configuration Test CC Combination test settings are checked separately for each CA Configuration. Note 2: Use CA Configuration – specific test points if present in the table, otherwise use Default Test Settings test points. Note 3: If, according to the UE declared capability, UE does not support UL in an individual band within the CA Configuration, test points with that individual band as PCC																					

are not applicable.

Note 4: X,Y correspond to the different bands in the CA Configuration. E.g. for CA\_2A-2A-4A-4A,X=2,Y=4.

Note 5: REFSENS refers to the PCC band's and PCC  $N_{RB}$  's single carrier Uplink RB allocation for reference sensitivity according to table 7.3.5-2.

1. Connect the SS to the UE antenna connectors as shown in TS 36.508[7] Annex A Figure A.55.
2. The parameter settings for the cell are set up according to TS 36.508 [7] subclause 4.4.3.
3. Downlink signals for PCC are initially set up according to Annex C.0, C.1, and C.3.1, and uplink signals according to Annex H.1 and H.3.0.
4. The UL and DL Reference Measurement channels are set according to Table 7.3A.9.4.1-1 through Table 7.3A.9.4.1-6 as appropriate.
5. Propagation conditions are set according to Annex B.0.
6. Ensure the UE is in State 3A-RF according to TS 36.508 [7] clause 5.2A.2. Message contents are defined in clause 7.3A.9.4.3.

#### 7.3A.9.4.2 Test procedure

1. Configure SCCs according to Annex C.0, C.1 and Annex C.3.1 for all downlink physical channels.
2. The SS shall configure SCCs as per TS 36.508 [7] clause 5.2A.4. Message contents are defined in clause 7.3A.9.4.3.
3. SS activates SCCs by sending the activation MAC-CE (Refer TS 36.321 [13], clauses 5.13, 6.1.3.8). Wait for at least 2 seconds (Refer TS 36.133, clauses 8.3.3.2).
4. SS transmits PDSCH via PDCCH DCI format 1A for C\_RNTI to transmit the DL RMC according to Table 7.3A.9.4.1-1 through Table 7.3A.9.4.1-6 as appropriate on PCC and SCCs. The SS sends downlink MAC padding bits on the DL RMC.
5. SS sends uplink scheduling information for each UL HARQ process via PDCCH DCI format 0 for C\_RNTI to schedule the UL RMC according to Table 7.3A.9.4.1-1 through Table 7.3A.9.4.1-6 as appropriate on PCC and SCCs. Since the UE has no payload and no loopback data to send the UE sends uplink MAC padding bits on the UL RMC.
6. Set the Downlink signal level for PCC and SCCs to the appropriate REFSENS value defined in Table 7.3A.9.5-1 through Table 7.3A.9.5-7. Send continuously uplink power control "up" commands in every uplink scheduling information to the UE to ensure the UE transmits  $P_{UMAX}$  level for at least the duration of the Throughput measurement.
7. Measure the average throughput for each component carrier for a duration sufficient to achieve statistical significance according to Annex G.2A.

#### 7.3A.9.4.3 Message contents

Message contents are according to TS 36.508 [7] subclause 4.6. In test procedure step 2, for SCCs configuration there are no additional message contents.

#### 7.3A.9.5 Test requirement

For intra-band contiguous carrier aggregation the throughput of each component carrier shall be  $\geq 95\%$  of the maximum throughput of the reference measurement channels as specified in Annexes A.2.2, A.2.3 and A.3.2 (with one sided dynamic OCNG Pattern OP.1 FDD/TDD for the DL-signal as described in Annex A.5.1.1/A.5.2.1) with parameters specified in Table 7.3A.9.5-1. The reference sensitivity is defined to be met with all downlink component carriers active and one of the uplink carriers active.

**Table 7.3A.9.5-1: Reference sensitivity QPSK  $P_{REFSENS}$  for Intra-band contiguous**

[FFS]

**Table 7.3A.9.5-2: FFS**

For inter-band carrier aggregation with one component carrier per operating band and the uplink assigned to one E-UTRA band the throughput shall be  $\geq 95\%$  of the maximum throughput of the reference measurement channels as specified in Annexes A.2.2, A.2.3 and A.3.2 (with one sided dynamic OCNG Pattern OP.1 FDD/TDD for the DL-signal as described in Annex A.5.1.1/A.5.2.1) with parameters specified in Table 7.3A.9.5-3 (originated from single carrier

Tables 7.3.5-1). The reference sensitivity is defined to be met with all downlink component carriers active and one of the uplink carriers active.

Table 7.3A.9.5-3: Reference sensitivity QPSK  $P_{REFSENS}$  for inter-band

EUTRA CA Configuration	Channel bandwidth							Duplex mode
	EUTRA band	1.4 MHz (dBm)	3 MHz (dBm)	5 MHz (dBm)	10 MHz (dBm)	15 MHz (dBm)	20 MHz (dBm)

				[-100.3] <sub>4</sub>	[-97.3] <sup>4</sup>	[-95.5] <sup>4</sup>	[-94.3] <sup>4</sup>	
	4			-99.6	-96.6	-94.8	-93.6	
	29			-97	-94			
	30			-98.5	-95.5			

NOTE 1: The transmitter shall be set to  $P_{UMAX}$  as defined in subclause 6.2.5A.  
 NOTE 2: Reference measurement channel is A.3.2 with one sided dynamic OCNG Pattern OP.1 FDD/TDD as described in Annex A.5.1.1/A.5.2.1.  
 NOTE 3: The signal power is specified per port.  
 NOTE 4: Applicable only if operation with 4 antenna ports is supported in the band with carrier aggregation configured.  
 NOTE 5: These requirements apply when there is at least one individual RE within the uplink transmission bandwidth of the aggressor (lower) band for which the 2nd transmitter harmonic is within the downlink transmission bandwidth of a victim (higher) band and a range  $\Delta F_{HD}$  above and below the edge of this downlink transmission bandwidth. The value  $\Delta F_{HD}$  depends on the E-UTRA configuration:  $\Delta F_{HD} = 10$  MHz for CA\_3A-42A, CA\_3A-42C, CA\_1A-3A-42A, CA\_1A-3A-42C, CA\_3A-19A-42A, CA\_3A-19A-42C, CA\_1A-3A-19A-42A and CA\_1A-3A-19A-42C.  
 NOTE 6: The requirements should be verified for UL EARFCN of the aggressor (lower) band (superscript LB)

such that  $f_{UL}^{LB} = \lfloor f_{DL}^{HB} / 0.2 \rfloor 0.1$  in MHz and  $F_{UL\_low}^{LB} + BW_{Channel}^{LB} / 2 < f_{UL}^{LB} < F_{UL\_high}^{LB} - BW_{Channel}^{LB} / 2$  with  $f_{DL}^{HB}$  carrier frequency in the victim (higher) band in MHz and  $BW_{Channel}^{LB}$  the channel bandwidth configured in the lower band.

NOTE 7: The requirements are only applicable to channel bandwidths with a carrier frequency at  $\pm (20 + BW_{Channel}^{HB} / 2)$  MHz offset from  $2f_{UL}^{LB}$  in the victim (higher) band) with

$F_{UL\_low}^{LB} + BW_{Channel}^{LB} / 2 < f_{UL}^{LB} < F_{UL\_high}^{LB} - BW_{Channel}^{LB} / 2$ , where  $BW_{Channel}^{LB}$  and  $BW_{Channel}^{HB}$  are the channel bandwidths configured in the aggressor (lower) and victim (higher) bands in MHz, respectively.

NOTE 8: These requirements apply when the uplink is active in Band 1 and the separation between the lower edge of the uplink channel in Band 1 and the upper edge of the downlink channel in Band 3 is  $< 60$  MHz. For each channel bandwidth in the bands other than Band 1, the requirement applies regardless of channel bandwidth in Band 1.

NOTE 9: These requirements apply when the uplink is active in Band 1 and the separation between the lower edge of the uplink channel in Band 1 and the upper edge of the downlink channel in Band 3 is  $\geq 60$  MHz. For each channel bandwidth in the bands other than Band 1, the requirement applies regardless of channel bandwidth in Band 1.

For the UE which supports inter-band carrier aggregation configurations the  $\Delta R_{IB,c}$  in Tables 7.3.3-1A, 7.3.3-1B and 7.3.3-1C shall be applied for applicable bands.

Unless otherwise specified, in case the UE supports more than one of the above 4DL inter-band carrier aggregation configurations and a E-UTRA operating band belongs to more than one 4DL inter-band carrier aggregation configurations then:

- When the E-UTRA operating band frequency range is  $\leq 1$ GHz and the tolerances are the same, the value applies to the band. If the tolerances are different, the applicable additional 4DL tolerance is FFS. In case there is a harmonic relation between low band UL and high band DL, then the maximum tolerance among the different supported 4DL carrier aggregation configurations involving such band shall be applied
- When the E-UTRA operating band frequency range is  $> 1$ GHz, the applicable additional 4DL tolerance shall be the maximum tolerance above that applies for that operating band among the supported 4DL CA configurations

The above additional tolerances applicable for the E-UTRA operating bands that belong to the supported highest order inter-band carrier aggregation configuration, also applies to the same E-UTRA operating bands that belong to a supported lower order CA configuration.

The reference receive sensitivity (REFSENS) requirement for inter-band specified in Table 7.3A.9.5-3 shall be met for an uplink CA configurations than or equal to that specified in Table 7.3.5-2.

NOTE: Table 7.3A.9.5-4 does not necessarily reflect the operational conditions of the network, where the number of uplink and downlink allocated resource blocks will be practically constrained by other factors.

#### Table 7.3A.9.5-4: Void

For combinations of intra-band contiguous and inter-band carrier aggregation with three downlink carriers and one uplink carrier assigned to one E-UTRA band the throughput of each component carrier shall be  $\geq 95\%$  of the maximum throughput of the reference measurement channels as specified in Annexes A.2.2, A.2.3 and A.3.2 (with one sided dynamic OCNG Pattern OP.1 FDD/TDD for the DL-signal as described in Annex A.5.1.1/A.5.2.1) with parameters specified in Table 7.3A.9.5-5. The reference sensitivity is defined to be met with all downlink component carriers active and one of the uplink carriers active.

	42			-98	-95	-93.2	-92	TDD

NOTE 1: The transmitter shall be set to  $P_{\text{UMAX}}$  as defined in subclause 6.2.5A.

NOTE 2: Reference measurement channel is A.3.2 with one sided dynamic OCNG Pattern OP.1 FDD/TDD as described in Annex A.5.1.1/A.5.2.1

NOTE 3: The signal power is specified per port.

NOTE 4: Applicable only if operation with 4 antenna ports is supported in the band with carrier aggregation configured.

NOTE 5: These requirements apply when the uplink is active in Band 1 and the separation between the lower

	edge of the uplink channel in Band 1 and the upper edge of the downlink channel in Band 3 is < 60 MHz. For each channel bandwidth in Band 3 and Band 5 or Band 8 or Band 19 or Band 20 or Band 26 or Band 28 or Band 42, the requirement applies regardless of channel bandwidth in Band 1.
NOTE 6:	These requirements apply when the uplink is active in Band 1 and the separation between the lower edge of the uplink channel in Band 1 and the upper edge of the downlink channel in Band 3 is $\geq 60$ MHz. For each channel bandwidth in Band 3 and Band 5 or Band 8 or Band 19 or Band 20 or Band 26 or Band 28 or Band 42, the requirement applies regardless of channel bandwidth in Band 1.
NOTE 7:	These requirements apply when there is at least one individual RE within the uplink transmission bandwidth of the aggressor (lower) band for which the 2nd transmitter harmonic is within the downlink transmission bandwidth of a victim (higher) band and a range $\Delta F_{HD}$ above and below the edge of this downlink transmission bandwidth. The value $\Delta F_{HD}$ depends on the E-UTRA configuration: $\Delta F_{HD} = 10$ MHz for CA_3A-42C, CA_1A-3A-42C and CA_3A-19A-42C.
NOTE 8:	The requirements should be verified for UL EARFCN of the aggressor (lower) band (superscript LB) such that $f_{UL}^{LB} = \lfloor f_{DL}^{HB} / 0.2 \rfloor \cdot 0.1$ in MHz and $F_{UL\_low}^{LB} + BW_{Channel}^{LB} / 2 < f_{UL}^{LB} < F_{UL\_high}^{LB} - BW_{Channel}^{LB} / 2$ with $f_{DL}^{HB}$ carrier frequency in the victim (higher) band in MHz and $BW_{Channel}^{LB}$ the channel bandwidth configured in the lower band.
NOTE 9:	The requirements are only applicable to channel bandwidths with a carrier frequency at $\pm (20 + BW_{Channel}^{HB} / 2)$ MHz offset from $2f_{UL}^{LB}$ in the victim (higher) band) with $F_{UL\_low}^{LB} + BW_{Channel}^{LB} / 2 < f_{UL}^{LB} < F_{UL\_high}^{LB} - BW_{Channel}^{LB} / 2$ , where $BW_{Channel}^{LB}$ and $BW_{Channel}^{HB}$ are the channel bandwidths configured in the aggressor (lower) and victim (higher) bands in MHz, respectively.

For combinations of intra-band non-contiguous and inter-band carrier aggregation with three downlink carriers and one uplink carrier assigned to one E-UTRA band the throughput of each component carrier shall be  $\geq 95\%$  of the maximum throughput of the reference measurement channels as specified in Annexes A.2.2, A.2.3 and A.3.2 (with one sided dynamic OCNG Pattern OP.1 FDD/TDD for the DL-signal as described in Annex A.5.1.1/A.5.2.1) with parameters specified in Table 7.3A.9.5-6. The reference sensitivity is defined to be met with all downlink component carriers active and one of the uplink carriers active.

**Table 7.3A.9.5-6: Reference sensitivity QPSK  $P_{REFSENS}$  for intra-band non-contiguous + inter-band**

TBD

For combinations of intra-band non-contiguous and intra-band contiguous carrier aggregation with three downlink carriers and one uplink carrier assigned to one E-UTRA band the throughput of each component carrier shall be  $\geq 95\%$  of the maximum throughput of the reference measurement channels as specified in Annexes A.2.2, A.2.3 and A.3.2 (with one sided dynamic OCNG Pattern OP.1 FDD/TDD for the DL-signal as described in Annex A.5.1.1/A.5.2.1) with parameters specified in Table 7.3A.9.5-7. The reference sensitivity is defined to be met with all downlink component carriers active and one of the uplink carriers active.

**Table 7.3A.9.5-7: Reference sensitivity QPSK  $P_{REFSENS}$  for intra-band non-contiguous + intra-band contiguous**

TBD

For combinations of intra-band non-contiguous and intra-band non-contiguous carrier aggregation with four downlink carriers and one uplink carrier assigned to one E-UTRA band the throughput of each component carrier shall be  $\geq 95\%$  of the maximum throughput of the reference measurement channels as specified in Annexes A.2.2, A.2.3 and A.3.2 (with one sided dynamic OCNG Pattern OP.1 FDD/TDD for the DL-signal as described in Annex A.5.1.1/A.5.2.1) with parameters specified in Table 7.3A.9.5-8. The reference sensitivity is defined to be met with all downlink component carriers active and one of the uplink carriers active.

**Table 7.3A.9.5-8: Reference sensitivity QPSK  $P_{\text{REFSENS}}$  for intra-band non-contiguous + intra-band non-contiguous**

CA Configuration	ID	PCC			SCC1			SCC2			SCC3

Note 1: Requirements with additional relaxation ( $\Delta R_{\text{IBNC}}$ ) as per Table 7.3A.0-3.  
Note 2: "ID" refers to IDs in Table 7.3A.9.4.1-6.  
Note 3: The reference measurement channel is specified in A.3.2 with one sided dynamic OCNG Pattern OP.1 FDD/TDD as described in Annex A.5.1.1/A.5.2.1.  
Note 4: The signal power is specified per port.

## 7.3B Reference sensitivity level for UL-MIMO

### 7.3B.1 Test purpose

To verify the ability of UE that support UL-MIMO to receive data with a given average throughput for a specified reference measurement channel, under conditions of low signal level, ideal propagation and no added noise.

A UE unable to meet the throughput requirement under these conditions will decrease the effective coverage area of an e-NodeB.

### 7.3B.2 Test applicability

This test applies to all types of E-UTRA UE release 10 and forward that support UL-MIMO.

### 7.3B.3 Minimum conformance requirements

For UE with two transmitter antenna connectors in closed-loop spatial multiplexing scheme, the minimum requirements in Clause 7.3.3 shall be met with the UL-MIMO configurations specified in Table 6.2.2B.3-2. For UL-MIMO, the parameter  $P_{\text{UMAX}}$  is the total transmitter power over the two transmit antenna connectors.

The normative reference for this requirement is TS 36.101 [2] clause 7.3.1B.

### 7.3B.4 Test description

#### 7.3B.4.1 Initial conditions

Initial conditions are a set of test configurations the UE needs to be tested in and the steps for the SS to take with the UE to reach the correct measurement state.

The initial test configurations consist of environmental conditions, test frequencies, and channel bandwidths based on E-UTRA bands specified in table 5.4.2.1-1. All of these configurations shall be tested with applicable test parameters for each channel bandwidth, and are shown in table 7.3B.4.1-1. The details of the downlink and uplink reference measurement channels (RMCs) are specified in Annexes A.2 and A.3. The details of the OCNG patterns used are specified in Annex A.5. Configurations of PDSCH and PDCCH before measurement are specified in Annex C.2.

Table 7.3B.4.1-1: Test Configuration Table

Initial Conditions						
Test Environment as specified in TS 36.508[7] subclause 4.1			NC, TL/VL, TL/VH, TH/VL, TH/VH			
Test Frequencies as specified in TS36.508 [7] subclause 4.3.1			Low range, Mid range, High range			
Test Channel Bandwidths as specified in TS 36.508 [7] subclause 4.3.1			Lowest, 5MHz, Highest			
Test Parameters for Channel Bandwidths						
Ch BW	Downlink Configuration			Uplink Configuration		
	Mod'n	RB allocation		Mod'n	RB allocation	
		FDD	TDD		FDD	TDD
1.4MHz	QPSK	6	6	QPSK	6	6
3MHz	QPSK	15	15	QPSK	15	15
5MHz	QPSK	25	25	QPSK	25	25
5MHz	QPSK	25	N/A	QPSK	20	N/A
5MHz	QPSK	25	N/A	QPSK	15	N/A

15MHz	QPSK	75	N/A	QPSK	50	N/A
15MHz	QPSK	75	N/A	QPSK	25	N/A
15MHz	QPSK	75	N/A	QPSK	20	N/A
20MHz	QPSK	100	100	QPSK	100	100
20MHz	QPSK	100	N/A	QPSK	75	N/A
20MHz	QPSK	100	N/A	QPSK	50	N/A
20MHz	QPSK	100	N/A	QPSK	25	N/A
20MHz	QPSK	100	N/A	QPSK	20	N/A
Note 1: Test Channel Bandwidths are checked separately for each E-UTRA band, which applicable channel bandwidths are specified in Table 5.4.2.1-1. Note 2: Depending on E-UTRA band, only the appropriate Uplink RB allocation value according to table 7.3.3-2 is tested per Test Channel Bandwidth. Note 3: For the DL signal one sided dynamic OCNB Pattern OP.1 FDD/TDD is used. Note 4: Applicable only to E-UTRA FDD Band 31. The UL resource blocks shall be located at RBstart 10 (according to Table 7.3.3-2).						

1. Connect the SS to the UE antenna connectors as shown in TS 36.508 [7] Annex A, Figure A.28.
2. The parameter settings for the cell are set up according to TS 36.508 [7] subclause 4.4.3.
3. Downlink signals are initially set up according to Annex C0, C.1 and C.3.1, and uplink signals according to Annex H.1 and H.3.1.
4. The UL and DL Reference Measurement channels are set according to Table 7.3B.4.1-1.
5. Propagation conditions are set according to Annex B.0.
6. Ensure the UE is in State 3A-RF according to TS 36.508 [7] clause 5.2A.2. Message contents are defined in clause 7.3B.4.3.

### 7.3B.4.2 Test procedure

1. SS transmits PDSCH via PDCCH DCI format 1A for C\_RNTI to transmit the DL RMC according to Table 7.3B.4.1-1. The SS sends downlink MAC padding bits on the DL RMC.
2. SS sends uplink scheduling information for each UL HARQ process via PDCCH DCI format 4 for C\_RNTI to schedule the UL RMC according to Table 7.3B.4.1-1. Since the UE has no payload data to send, the UE transmits uplink MAC padding bits on the UL RMC.

3. Set the Downlink signal level to the appropriate REFSENS value defined in Table 7.3B.5-1. Send continuously uplink power control "up" commands in the uplink scheduling information to the UE to ensure the UE transmits  $P_{UMAX}$  level for at least the duration of the throughput measurement.
4. Measure the average throughput for a duration sufficient to achieve statistical significance according to Annex G.2.

### 7.3B.4.3 Message contents

Message contents are according to TS 36.508 [7] clause 4.6 with the following exceptions.

#### 7.3B.4.3.1 Message contents exceptions (network signalled value "NS\_01")

Message contents according to TS 36.508 [7] clause 4.6 can be used without exceptions.

#### 7.3B.4.3.2 Message contents exceptions (network signalled value "NS\_03")

1. Information element additionalSpectrumEmission is set to NS\_03. This can be set in the SystemInformationblockType2 as part of the cell broadcast message. This exception indicates that the UE shall meet the additional spurious emission requirement for a specific deployment scenario.

**Table 7.3B.4.3.2-1: SystemInformationBlockType2: Additional spurious emissions test requirement for "NS\_03"**

Derivation Path: TS 36.508 [7] clause 4.4.3.3, Table 4.4.3.3-1			
Information Element	Value/remark	Comment	Condition
additionalSpectrumEmission	3 (NS_03)		

#### 7.3B.4.3.3 Message contents exceptions (network signalled value "NS\_06")

1. Information element additionalSpectrumEmission is set to NS\_06. This can be set in the SystemInformationblockType2 as part of the cell broadcast message. This exception indicates that the UE shall meet the additional spurious emission requirement for a specific deployment scenario.

**Table 7.3B.4.3.3-1: SystemInformationBlockType2: Additional spurious emissions test requirement for "NS\_06"**

Derivation Path: TS 36.508 [7] clause 4.4.3.3, Table 4.4.3.3-1			
Information Element	Value/remark	Comment	Condition
additionalSpectrumEmission	6 (NS_06)		

#### 7.3B.4.3.4 Message contents exceptions (network signalled value "NS\_[09]")

1. Information element additionalSpectrumEmission is set to NS\_[09]. This can be set in the SystemInformationblockType2 as part of the cell broadcast message. This exception indicates that the UE shall meet the additional spurious emission requirement for a specific deployment scenario.

**Table 7.3B.4.3.4-1: SystemInformationBlockType2: Additional spurious emissions test requirement for "NS\_[09]"**

Derivation Path: TS 36.508 [7] clause 4.4.3.3, Table 4.4.3.3-1			
Information Element	Value/remark	Comment	Condition
additionalSpectrumEmission	TBD		

### 7.3B.5 Test requirement

The throughput shall be  $\geq 95\%$  of the maximum throughput of the reference measurement channels as specified in Annex A.3.2 with parameters specified in Tables 7.3B.5-1 and Table 7.3B.5-2.

Table 7.3B.5-1: Reference sensitivity QPSK  $P_{\text{REFSENS}}$ 

E-UTRA Band	Channel bandwidth						Duplex Mode
	1.4 MHz (dBm)	3 MHz (dBm)	5 MHz (dBm)	10 MHz (dBm)	15 MHz (dBm)	20 MHz (dBm)	
1	-	-	-99.3	-96.3	-94.5	-93.3	FDD
2	-102.0	-99.0	-97.3	-94.3	-92.5	-91.3	FDD

65			-99.5	-96.5	-94	-92.8	FDD
66	-	-	-98.8	-95.8	-94	-92.8	FDD

Note 1: The transmitter shall be set to  $P_{\text{UMAX}}$  as defined in clause 6.2.5  
Note 2: The reference measurement channel is specified in A.3.2 with one sided dynamic OCNG Pattern OP.1 FDD/TDD as described in Annex A.5.1.1/A.5.2.1  
Note 3: The signal power is specified per port  
Note 4: For the UE which supports both Band 3 and Band 9 the reference sensitivity

	level is FFS.
Note 5:	For the UE which supports both Band 11 and Band 21 the reference sensitivity level is FFS.
Note 6:	<sup>6</sup> indicates that the requirement is modified by -0.5 dB when the carrier frequency of the assigned E-UTRA channel bandwidth is within 865-894 MHz.

For the UE which supports inter-band carrier aggregation configurations the  $\Delta R_{IB,c}$  in Tables 7.3.3-1A, 7.3.3-1B and 7.3.3-1C shall be applied for applicable bands.

In case the UE supports more than one of the inter-band carrier aggregation configurations and a E-UTRA operating band belongs to more than one inter-band carrier aggregation configurations then:

- When the E-UTRA operating band frequency range is  $\leq 1$ GHz, the applicable additional tolerance shall be the average of the tolerances in Table 7.3.3-1A, truncated to one decimal place that would apply for that operating band among the supported CA configurations. In case there is a harmonic relation between low band UL and high band DL (i.e. bands listed in Table 7.3A.0-1), then the maximum tolerance among the different supported carrier aggregation configurations involving such band shall be applied
- When the E-UTRA operating band frequency range is  $>1$ GHz, the applicable additional tolerance shall be the maximum tolerance in Table 7.3.3-1A that would apply for that operating band among the supported CA configurations

NOTE 1: The relation to the received PSD is  $\langle \text{REF} \hat{I}_{or} \rangle = P_{REFSENS} (N_{sc}^{RB} N_{RB} \Delta f)^{-1}$  with  $N_{RB}$  is the transmission bandwidth configuration according to Table 5.4.2-1.

The reference receive sensitivity (REFSENS) requirement specified in Table 7.3B.5-1 shall be met for an uplink transmission bandwidth less than or equal to that specified in Table 7.3B.5-2.

NOTE 2: Table 7.3B.5-2 does not necessarily reflect the operational conditions of the network, where the number of uplink and downlink allocated resource blocks will be practically constrained by other factors.

Table 7.3B.5-2: Uplink configuration for reference sensitivity

E-UTRA Band	E-UTRA Band / Channel bandwidth / $N_{RB}$ / Duplex mode						Duplex Mode

40			25	50	75	100	TDD
41			25	50	75	100	TDD
42			25	50	75	100	TDD
43			25	50	75	100	TDD
45			25	50	75	100	TDD
...							
65	-	-	25	50	75	100	FDD
66	-	-	25	50	75	100	FDD
Note 1:	The UL resource blocks shall be located as close as possible to the downlink operating band but confined within the transmission bandwidth configuration for the channel bandwidth (Table 5.4.2-1).						
Note 2:	For the UE which supports both Band 11 and Band 21 the uplink configuration for reference sensitivity is FFS.						

Note 3:	For Band 20; in the case of 15MHz channel bandwidth, the UL resource blocks shall be located at $RB_{start}=11$ and in the case of 20MHz channel bandwidth, the UL resource blocks shall be located at $RB_{start}=16$ .
Note 4:	<sup>4</sup> refers to Band 31; in the case of 3 MHz channel bandwidth, the UL resource blocks shall be located at $RB_{start}$ 9 and in the case of 5 MHz channel bandwidth, the UL resource blocks shall be located at $RB_{start}$ 10.

## 7.3C

### 7.3D Reference sensitivity level for ProSe

#### 7.3D.0 Minimum requirements (QPSK) for ProSe

The throughput shall be  $\geq 95\%$  of the maximum throughput of the reference measurement channels as specified in Annexes A.6.2 with parameters specified in Table 7.3D.0-1 and Table 7.3D.0-2.

**Table 7.3D.0-1: Reference sensitivity for ProSe Direct Discovery QPSK PREFSENS**

E-UTRA ProSe Band	Channel bandwidth						Duplex Mode
	1.4 MHz (dBm)	3 MHz (dBm)	5 MHz (dBm)	10 MHz (dBm)	15 MHz (dBm)	20 MHz (dBm)	
2			-104.1	-104.1	-104.1	-104.1	HD
3			-103.1	-103.1	-103.1	-103.1	HD
4			-106.1	-106.1	-106.1	-106.1	HD
7			-103.8	-103.8	-103.8	-103.8	HD
14			-103.1	-103.1			HD
20			-103.2	-103.2	-102.2	-102.2	HD
26			-103.5 <sup>5</sup>	-103.5 <sup>5</sup>	-103.5 <sup>5</sup>		HD
28			-104.4	-104.4	-104.4	-102.9	HD
31			-99.5				HD

NOTE 1: Reference measurement channel is A.6.2.  
NOTE 2: The signal power is specified per port.  
NOTE 3: For the UE which supports both Band 3 and Band 9 the reference sensitivity level is FFS.  
NOTE 4: For the UE which supports both Band 11 and Band 21 the reference sensitivity level is FFS.  
NOTE 5: <sup>5</sup> indicates that the requirement is modified by -0.5 dB when the carrier frequency of the assigned E-UTRA channel bandwidth is within 865-894 MHz.  
NOTE 6: For a UE that support both Band 18 and Band 26, the reference sensitivity level for Band 26 applies for the applicable channel bandwidths.

**Table 7.3D.0-2: Reference sensitivity for ProSe Direct Communication QPSK PREFSENS**

E-UTRA ProSe Band	Channel bandwidth						Duplex Mode
	1.4 MHz (dBm)	3 MHz (dBm)	5 MHz (dBm)	10 MHz (dBm)	15 MHz (dBm)	20 MHz (dBm)	
3				-97.6			HD
7				-98.3			HD
14				-97.6			HD
20				-97.7			HD
26				-98.0 <sup>5</sup>			HD
28				-98.9			HD
31			-96.7				HD
NOTE 1: Reference measurement channel is A.6.2. NOTE 2: The signal power is specified per port. NOTE 3: For the UE which supports both Band 3 and Band 9 the reference sensitivity level is FFS. NOTE 4: For the UE which supports both Band 11 and Band 21 the reference sensitivity level is FFS. NOTE 5: <sup>5</sup> indicates that the requirement is modified by -0.5 dB when the carrier frequency of the assigned E-UTRA channel bandwidth is within 865-894 MHz. NOTE 6: For a UE that support both Band 18 and Band 26, the reference sensitivity level for Band 26 applies for the applicable channel bandwidths.							

NOTE: Table 7.3D.0-1/ Table 7.3D.0-2 is intended for conformance tests and does not necessarily reflect the operational conditions of the network, where the number of allocated resource blocks will be practically constrained by other factors.

For the UE which supports ProSe in an operating band as specified in Clause 5.2D and is configured with (and can transmit on) only PCell, and the UE also supports a E-UTRA downlink inter-band carrier aggregation configuration in Table 7.3.3-1A or Table 7.3.3-1B, the minimum requirement for reference sensitivity in Table 7.3D.0-1 and Table 7.3D.0-2 shall be increased by the amount given in  $\Delta_{RIB,c}$  in Table 7.3.3-1A or Table 7.3.3-1B for the corresponding E-UTRA ProSe band.

## 7.3D.1 Reference sensitivity level for ProSe Direct Discovery

**Editor's note:** This test case is not complete. Following aspects are either missing or not yet determined:

- ProSe UE authentication is not handled in the test case and is still under investigation.
- Use of OCNB for Downlink has not been considered and is still FFS.
- Message exceptions content needs further investigation (some values still TBD).
- Test time is FFS.
- Test system uncertainties and test tolerances.

### 7.3D.1.1 Test purpose

Verify that UE receives ProSe Discovery physical channels data with a given average throughput under conditions of low signal level and ideal propagation.

### 7.3D.1.2 Test applicability

This test case applies to all types of E-UTRA UE release 12 and forward which support ProSe Direct Discovery, but not ProSe Direct Communication.

### 7.3D.1.3 Minimum conformance requirements

The minimum conformance requirements are defined in clause 7.3D.0.

## 7.3D.1.4 Test description

### 7.3D.1.4.1 Initial conditions

Initial conditions are a set of test configurations the UE needs to be tested in and the steps for the SS to take with the UE to reach the correct measurement state.

The initial test configurations consist of environmental conditions, test frequencies, and channel bandwidths based on E-UTRA ProSe bands specified in table 5.4.2D.1-1. All of these configurations shall be tested with applicable test parameters for each channel bandwidth, and are shown in table 7.3D.1.4.1-1. The details of the downlink, uplink and sidelink reference measurement channels (RMCs) are specified in Annexes A.2, A.3 and A.6.

**Table 7.3D.1.4.1-1: Test Configuration Table**

Initial Conditions						
Test Environment as specified in TS 36.508 [7] subclause 4.1			NC, TL/VL, TL/VH, TH/VL, TH/VH			
Test Frequencies as specified in TS36.508 [7] subclause 4.3.1			Low range, Mid range, High range (Note 4)			
Test Channel Bandwidths as specified in TS 36.508 [7] subclause 4.3.1			5MHz, Highest			
	Downlink Configuration (Note 2)		Uplink Configuration (Note 2)		Sidelink Configuration (Reception) (Note 3)	
Ch BW	Mod'n	RB allocation	Mod'n	RB allocation	Mod'n	RB allocation
5MHz	QPSK	8	QPSK	8	QPSK	2
10MHz	QPSK	16	QPSK	16	QPSK	2
15MHz	QPSK	25	QPSK	25	QPSK	2
20MHz	QPSK	30	QPSK	30	QPSK	2
Note 1: Test Channel Bandwidths are checked separately for each E-UTRA ProSe and Operating band, according to the applicability specified respectively in Table 5.4.2D.1-1 and Table 5.4.2.1-1. Note 2: After DRX configuration, DL-RMC (PDSCH) and DCI-0 for scheduling UL-RMC (PUSCH) are applied only in the DRX On subframes. Note 3: The RB start for the transmission of Sidelink RMC is RB#0. Note 4: Sidelink uses the frequencies defined for Uplink.						

1. Connect the SS to the UE antenna connectors as shown in TS 36.508 [7] Annex A, Figure A.67.
2. The parameter settings for the cell are set up according to TS 36.508 [7] clause 4.4.3.
3. Downlink signals are initially set up according to Annex C.0, C.1 and C.3.1, and uplink signals according to Annex H.1 and H.3.1.
4. The UL and DL Reference Measurement channels are set according to Table 7.3D.1.4.1-1.
5. Propagation conditions are set according to Annex B.0.
6. Ensure the UE is in State 2A-RF according to TS 36.508 [7] clause 5.2A.1A. Message contents exceptions are defined in clause 7.3D.1.4.3.
7. SS continues with the generic procedures described in TS 36.508 [7] clause 4.5.3A.3 and 4.5.4.3 and ensures the UE is in State 4 according to TS 36.508 [7] clause 4.5.4 and the UE test loop Mode D is activated.

### 7.3D.1.4.2 Test procedure

1. SS shall transmit an RRCConnectionReconfiguration message to configure DRX. Message contents exceptions (only those marked with "...Step 1..." ) are defined in clause 7.3D.1.4.3.
2. The UE shall transmit RRCConnectionReconfigurationComplete message.
3. Initialise the variables Ptot and Pok as 0.
4. SS transmits PDSCH via PDCCH DCI format 1A for C\_RNTI to transmit the DL RMC according to Table 7.3D.1.4.1-1. The SS sends downlink MAC padding bits on the DL RMC.

5. SS sends uplink scheduling information via PDCCH DCI format 0 for C\_RNTI to schedule the UL RMC according to Table 7.3D.1.4.1-1. When the UE has no payload data to send, it transmits uplink MAC padding bits on the UL RMC.
6. SS transmits PSDCH to transmit the SL RMC according to Table 7.3D.1.4.1-1. Set the Sidelink signal level to the appropriate REFSSENS value defined in Table 7.3D.1.5-1.
7. SS shall send SL Discovery Packets (MAC padding bits) on the SL RMC for the test time [FFS]. SS stores the number of the transmitted Discovery Packets in the current test iteration in the variable Ptot.
8. SS shall send (on the available PDSCH) a "UE TEST LOOP PROSE MODE D SIDELINK DIRECT DISCOVERY PACKET COUNTER REQUEST" message and wait for the UE to respond (on the available PUSCH) with a "UE TEST LOOP PROSE MODE D SIDELINK DIRECT DISCOVERY PACKET COUNTER RESPONSE".
9. SS calculates the variable Pok as (current counter value - counter value at last test iteration).
10. SS shall compute the throughput as following:

$$TP = Pok / Ptot * 100\%$$

### 7.3D.1.4.3 Message contents

Message contents are according to TS 36.508 [7] clauses TBD with following exceptions:

- Table A.7.1.1-1 for FDD
- Table A.7.1.2-1 for TDD

### 7.3D.1.5 Test requirements

The throughput shall be  $\geq 95\%$  of the maximum throughput of the reference measurement channels as specified in Annexes A.6.2 with parameters specified in Table 7.3D.1.5-1.

**Table 7.3D.1.5-1: Reference sensitivity for ProSe Direct Discovery QPSK PREFSENS**

E-UTRA ProSe Band	Channel bandwidth						Duplex Mode
	1.4 MHz (dBm)	3 MHz (dBm)	5 MHz (dBm)	10 MHz (dBm)	15 MHz (dBm)	20 MHz (dBm)	
2			-104.1 +TT	-104.1 +TT	-104.1 +TT	-104.1 +TT	HD
3			-103.1 +TT	-103.1 +TT	-103.1 +TT	-103.1 +TT	HD
4			-106.1 +TT	-106.1 +TT	-106.1 +TT	-106.1 +TT	HD
7			-103.8 +TT	-103.8 +TT	-103.8 +TT	-103.8 +TT	HD
14			-103.1 +TT	-103.1 +TT			HD
20			-103.2 +TT	-103.2 +TT	-102.2 +TT	-102.2 +TT	HD
26			-103.5 <sup>5</sup> +TT	-103.5 <sup>5</sup> +TT	-103.5 <sup>5</sup> +TT		HD
28			-104.4 +TT	-104.4 +TT	-104.4 +TT	-102.9 +TT	HD
31			-99.5 +TT				HD
NOTE 1: Reference measurement channel is A.6.2 NOTE 2: The signal power is specified per port NOTE 3: For the UE which supports both Band 3 and Band 9 the reference sensitivity level is FFS. NOTE 4: For the UE which supports both Band 11 and Band 21 the reference sensitivity level is FFS. NOTE 5: <sup>5</sup> indicates that the requirement is modified by -0.5 dB when the carrier frequency of the assigned E-UTRA channel bandwidth is within 865-894 MHz. NOTE 6: For a UE that support both Band 18 and Band 26, the reference sensitivity level for Band 26 applies for the applicable channel bandwidths.							

NOTE: Table 7.3D.1.5-1 is intended for conformance tests and does not necessarily reflect the operational conditions of the network, where the number of allocated resource blocks will be practically constrained by other factors.

For the UE which supports ProSe in an operating band as specified in Clause 5.2D and is configured with (and can transmit on) only PCell, and the UE also supports a E-UTRA downlink inter-band carrier aggregation configuration in Tables 7.3.3-1A, 7.3.3-1B and 7.3.3-1C, the test requirement for reference sensitivity in Table 7.3D.1.5-1 shall be increased by the amount given in  $\Delta_{RIB,c}$  in Tables 7.3.3-1A, 7.3.3-1B and 7.3.3-1C for the corresponding E-UTRA ProSe band.

### 7.3D.2 Reference sensitivity level for ProSe Direct Communication

**Editor's note: This test case is not complete. Following aspects are either missing or not yet determined:**

- Many clauses are TBD

#### 7.3D.2.1 Test purpose

Verify that UE receives ProSe Communication physical channels data with a given average throughput under conditions of low signal level and ideal propagation.

#### 7.3D.2.2 Test applicability

This test case applies to all types of E-UTRA UE release 12 and forward which support ProSe Direct Communication.

### 7.3D.2.3 Minimum conformance requirements

The minimum conformance requirements are defined in clause 7.3D.0.

### 7.3D.2.4 Test description

TBD

#### 7.3D.2.4.1 Initial conditions

TBD

#### 7.3D.2.4.2 Test procedure

TBD

#### 7.3D.2.4.3 Message contents

TBD

### 7.3D.2.5 Test requirements

TBD

## 7.3E Reference sensitivity level for UE category 0

### 7.3E.1 Test purpose

Same test purpose as in clause 7.3.1

### 7.3E.2 Test applicability

This test applies to all types of E-UTRA UE release 12 and forward of UE category 0.

### 7.3E.3 Minimum conformance requirements

The throughput shall be  $\geq 95\%$  of the maximum throughput of the reference measurement channels as specified in Annexes A.2.2, A.2.3 and A.3.2 (with one sided dynamic OCNG Pattern OP.1 FDD/TDD for the DL-signal as described in Annex A.5.1.1/A.5.2.1) with parameters specified in Table 7.3E.3-1/Table 7.3E.3-2 and Table 7.3E.3-3.

**Table 7.3E.3-1: Reference sensitivity for FDD and TDD UE category 0 QPSK  $P_{\text{REFSENS}}$**

E-UTRA Band	Channel bandwidth						Duplex Mode
	1.4 MHz (dBm)	3 MHz (dBm)	5 MHz (dBm)	10 MHz (dBm)	15 MHz (dBm)	20 MHz (dBm)	
2	-100.2	-97.2	-95.5	-92.5	-90.7	-89.5	FDD
3	-99.2	-96.2	-94.5	-91.5	-89.7	-88.5	FDD
4	-102.2	-99.2	-97.5	-94.5	-92.7	-91.5	FDD
5	-100.7	-97.7	-95.5	-92.5			FDD
8	-99.7	-96.7	-94.5	-91.5			FDD
13			-94	-91			FDD
20			-94.5	-91.5	-88.2	-87	FDD

41			-95.5	-92.5	-90.7	-89.5	TDD

NOTE 1: The transmitter shall be set to  $P_{\text{UMAX}}$  as defined in subclause 6.2.5  
NOTE 2: Reference measurement channel is A.3.2 with one sided dynamic OCNG Pattern OP.1 FDD/TDD as described in Annex A.5.1.1/A.5.2.1

**Table 7.3E.3-2: Reference sensitivity for HD-FDD UE category 0 QPSK  $P_{\text{REFSENS}}$** 

Channel bandwidth							
E-UTRA Band	1.4 MHz (dBm)	3 MHz (dBm)	5 MHz (dBm)	10 MHz (dBm)	15 MHz (dBm)	20 MHz (dBm)	Duplex Mode
2	-101	-98	-96.3	-93.3	-91.5	-90.3	HD-FDD
3	-100	-97	-95.3	-92.3	-90.5	-89.3	HD-FDD
4	-103	-100	-98.3	-95.3	-93.5	-92.3	HD-FDD
5	-101.5	-98.5	-96.3	-93.3			HD-FDD
8	-100.5	-97.5	-95.3	-92.3			HD-FDD
13			-95.3	-92.3			HD-FDD
20			-95.3	-92.3	-89.5	-88.3	HD-FDD

NOTE 1: The transmitter shall be set to  $P_{\text{UMAX}}$  as defined in subclause 6.2.5  
NOTE 2: Reference measurement channel is A.3.2 with one sided dynamic OCNG Pattern OP.1 FDD/TDD as described in Annex A.5.1.1/A.5.2.1

The reference receive sensitivity (REFSENS) requirement specified in Table 7.3E.3-1/Table 7.3E.3-2 shall be met for an uplink transmission bandwidth less than or equal to that specified in Table 7.3E.3-3.

NOTE: Table 7.3E.3-3 is intended for conformance tests and does not necessarily reflect the operational conditions of the network, where the number of uplink and downlink allocated resource blocks will be practically constrained by other factors.

**Table 7.3E.3-3: FDD and TDD UE category 0 Uplink configuration for reference sensitivity**

E-UTRA Band / Channel bandwidth / $N_{\text{RB}}$ / Duplex mode							
E-UTRA Band	1.4 MHz	3 MHz	5 MHz	10 MHz	15 MHz	20 MHz	Duplex Mode
2	6	15	25	36 <sup>1</sup>	36 <sup>1</sup>	36 <sup>1</sup>	FDD and HD-FDD
3	6	15	25	36 <sup>1</sup>	36 <sup>1</sup>	36 <sup>1</sup>	FDD and HD-FDD
4	6	15	25	36 <sup>1</sup>	36 <sup>1</sup>	36 <sup>1</sup>	FDD and HD-FDD
5	6	15	25	25 <sup>1</sup>			FDD and HD-FDD
8	6	15	25	25 <sup>1</sup>			FDD and HD-FDD
13			20 <sup>1</sup>	20 <sup>1</sup>			FDD and HD-FDD
20			25	20 <sup>1</sup>	20 <sup>2</sup>	20 <sup>2</sup>	FDD and HD-FDD
39			25	36 <sup>1</sup>	36 <sup>1</sup>	36 <sup>1</sup>	TDD
41			25	36 <sup>1</sup>	36 <sup>1</sup>	36 <sup>1</sup>	TDD

NOTE 1: <sup>1</sup> refers to the UL resource blocks shall be located as close as possible to the downlink operating band but confined within the transmission bandwidth configuration for the channel bandwidth (Table 5.6-1).  
NOTE 2: <sup>2</sup> refers to Band 20; in the case of 15MHz channel bandwidth, the UL resource blocks shall be located at  $\text{RB}_{\text{start}}$  11 and in the case of 20MHz channel bandwidth, the UL resource blocks shall be located at  $\text{RB}_{\text{start}}$  16.

The normative reference for this requirement is TS 36.101 [2] clause 7.3.1E.

## 7.3E.4 Test description

### 7.3E.4.1 Initial conditions

Same initial conditions as in clause 7.3.4.1 with the following exceptions:

- Instead of Table 7.3.4.1-1 → use Table 7.3E.4.1-1.
- Connect the SS to the UE antenna connectors as shown in TS 36.508[7] Annex A Figure A.3 using only main UE Tx/Rx antenna.

Table 7.3E.4.1-1: Test Configuration Table

Initial Conditions						
Test Environment as specified in TS 36.508[7] subclause 4.1		NC, TL/VL, TL/VH, TH/VL, TH/VH				
Test Frequencies as specified in TS36.508 [7] subclause 4.3.1		Low range, Mid range, High range				
Test Channel Bandwidths as specified in TS 36.508 [7] subclause 4.3.1		Lowest, 5MHz, Highest				
Test Parameters for Channel Bandwidths						
Ch BW	Downlink Configuration			Uplink Configuration		
	Mod'n	RB allocation		Mod'n	RB allocation	
		FDD	TDD		FDD and HD-FDD	TDD
1.4MHz	QPSK	6	6	QPSK	6	6
3MHz	QPSK	14	14	QPSK	15	15
5MHz	QPSK	14	14	QPSK	25	25
5MHz	QPSK	14	N/A	QPSK	20	N/A
10MHz	QPSK	14	14	QPSK	36	36
10MHz	QPSK	14	N/A	QPSK	25	N/A
10MHz	QPSK	14	N/A	QPSK	20	N/A
15MHz	QPSK	14	14	QPSK	36	36
15MHz	QPSK	14	N/A	QPSK	20	N/A
20MHz	QPSK	14	14	QPSK	36	36
20MHz	QPSK	14	N/A	QPSK	20	N/A
Note 1:	Test Channel Bandwidths are checked separately for each E-UTRA band, which applicable channel bandwidths are specified in Table 5.4.2.1-1.					
Note 2:	Depending on E-UTRA band, only the appropriate Uplink RB allocation value according to table 7.3E.3-3 is tested per Test Channel Bandwidth. The allocation shall be located as close as possible to the downlink operating band but confined within the transmission bandwidth configuration for the channel bandwidth (Table 5.4.2-1).					
Note 3:	For the DL signal one sided dynamic OCNG Pattern OP.1 FDD/TDD is used.					
Note 4:	Downlink RB position shall be $RB_{start} = 0$					

### 7.3E.4.2 Test procedure

Same test procedure as in clause 7.3.4.2.

### 7.3E.4.3 Message contents

Same message contents as in clause 7.3.4.3

### 7.3E.5 Test requirement

The throughput shall be  $\geq 95\%$  of the maximum throughput of the reference measurement channels as specified in Annexes A.2.2, A.2.3 and A.3.2 (with one sided dynamic OCNG Pattern OP.1 FDD/TDD for the DL-signal as described in Annex A.5.1.1/A.5.2.1) with parameters specified in Table 7.3E.5-1 and Table 7.3E.5-2.

**Table 7.3E.5-1: Reference sensitivity for FDD and TDD UE category 0 QPSK  $P_{\text{REFSENS}}$** 

Channel bandwidth

20			-94.6	-91.6	-88.8	-87.6	HD-FDD

NOTE 1: The transmitter shall be set to  $P_{\text{UMAX}}$  as defined in subclause 6.2.5  
NOTE 2: Reference measurement channel is A.3.2 with one sided dynamic OCNG Pattern OP.1 FDD/TDD as described in Annex A.5.1.1/A.5.2.1

## 7.3EA Reference sensitivity level for UE category M1

Editor's note: Following aspects missing or not yet determined:

- Minimum requirements and test requirements within brackets

### 7.3EA.1 Test purpose

To verify the category M1 UE's ability to receive data with a given average throughput for a specified reference measurement channel, under conditions of low signal level, ideal propagation and no added noise.

A UE unable to meet the throughput requirement under these conditions will decrease the effective coverage area of an e-NodeB.

### 7.3EA.2 Test applicability

This test applies to all types of E-UTRA UE release 13 and forward of UE category M1.

### 7.3EA.3 Minimum conformance requirements

The throughput shall be  $\geq 95\%$  of the maximum throughput of the reference measurement channels as specified in Annexes A.2.2, A.2.3 and A.3.2 (with one sided dynamic OCNG Pattern OP.1 FDD/TDD for the DL-signal as described in Annex A.5.1.1/A.5.2.1) with parameters specified in Table 7.3EA.3-1 and Table 7.3EA.3-2.

Table 7.3EA-1: Reference sensitivity for FDD and TDD UE category M1 QPSK  $P_{\text{REFSENS}}$ 

E-UTRA Band	REFSENS (dBm)	Duplex Mode
1	-102.2	FDD
2	-100.2	FDD
3	-99.2	FDD
4	-102.2	FDD
5	-100.7	FDD
7	[-100.2]	FDD
8	-99.7	FDD
11	[-102.2 <sup>3</sup> ]	FDD
12	-99.2	FDD
13	[-98.7]	FDD
18	[-102.2 <sup>4</sup> ]	FDD
19	[-102.2]	FDD
20	[-99.7]	FDD
21	[-102.2 <sup>3</sup> ]	FDD
26	-100.2	FDD
27	-100.7	FDD
28	[-100.7]	FDD
31	-96.5	FDD
...		
39	[-103.7]	TDD
41	[-101.7]	TDD

NOTE 1: The transmitter shall be set to  $P_{\text{UMAX}}$  as defined in subclause 6.2.5

NOTE 2: Reference measurement channel is A.3.2 with one sided dynamic OCNG Pattern OP.1 FDD/TDD as described in Annex A.5.1.1/A.5.2.1

NOTE 3: For the UE which supports both Band 11 and Band 21 the reference sensitivity level is FFS.

NOTE 4: For a UE that support both Band 18 and Band 26, the reference sensitivity level for Band 26 applies for the applicable channel bandwidths.

NOTE 5: For cat [M1] the same RF bandwidth applies for all applicable channel bandwidths as specified in Table 5.4.2.1-1.

NOTE 6: The reference receive sensitivity shall be met for an uplink transmission bandwidth less than or equal to [6] RB except for band 31. For band 31; in the case of 3 MHz channel bandwidth [5] RB applies and the UL resource blocks shall be located at  $\text{RB}_{\text{start}} 9$ . In case of 5 MHz channel bandwidth [5] RB applies and the UL resource blocks shall be located at  $\text{RB}_{\text{start}} 10$ .

NOTE 7: The UL resource blocks shall be located as close as possible to the downlink operating band but confined within the transmission bandwidth configuration for the channel bandwidth.

**Table 7.3EA-2: Reference sensitivity for HD-FDD UE category M1 QPSK  $P_{\text{REFSENS}}$** 

E-UTRA Band	REFSENS (dBm)	Duplex Mode
1	[-103]	HD-FDD
2	-101	HD-FDD
3	-100	HD-FDD
4	-103	HD-FDD
5	-101.5	HD-FDD
7	[-101]	HD-FDD
8	-100.5	HD-FDD

18	[-103 <sup>4</sup> ]	HD-FDD
19	[-103]	HD-FDD
20	[-100.5]	HD-FDD
21	[-103 <sup>3</sup> ]	HD-FDD
26	-101	HD-FDD
27	-101.5	HD-FDD
28	[-101.5]	HD-FDD
31	[-97.3]	HD-FDD
NOTE 1: The transmitter shall be set to $P_{\text{UMAX}}$ as defined in subclause 6.2.5 NOTE 2: Reference measurement channel is A.3.2 with one sided dynamic OCNG Pattern OP.1 FDD/TDD as described in Annex A.5.1.1/A.5.2.1 NOTE 3: For the UE which supports both Band 11 and Band 21 the reference sensitivity level is FFS. NOTE 4: For a UE that support both Band 18 and Band 26, the reference sensitivity level for Band 26 applies for the applicable channel bandwidths. NOTE 5: For cat [M1] the same RF bandwidth applies for all applicable channel bandwidths as specified in Table 5.4.2-1.		

The reference receive sensitivity (REFSENS) requirement specified in Table 7.3EA-1/Table 7.3EA-2 shall be met for an uplink transmission bandwidth less than or equal to that specified in Table 7.3EA-3.

NOTE: Table 7.3EA-3 is intended for conformance tests and does not necessarily reflect the operational conditions of the network, where the number of uplink and downlink allocated resource blocks will be practically constrained by other factors. Typical receiver sensitivity performance with HARQ retransmission enabled and using a residual BLER metric relevant for e.g. Speech Services is given in the Annex G (informative).

**Table 7.3EA-3: FDD and TDD UE category M1 Uplink configuration for reference sensitivity**

E-UTRA Band	$N_{RB}$	Duplex Mode
1	$6^1$	FDD and HD-FDD
2	$6^1$	FDD and HD-FDD
3	$6^1$	FDD and HD-FDD
4	$6^1$	FDD and HD-FDD
5	$6^1$	FDD and HD-FDD
7	$6^1$	FDD and HD-FDD

The normative reference for this requirement is TS 36.101 [2] clauses 7.3.1 and 7.3.1E.

## 7.3EA.4 Test description

### 7.3EA.4.1 Initial conditions

Initial conditions are a set of test configurations the UE needs to be tested in and the steps for the SS to take with the UE to reach the correct measurement state.

The initial test configurations consist of environmental conditions and test frequencies based on the subset of E-UTRA operating bands defined for CAT M1 in clause 5.2E. All of these configurations shall be tested with applicable test parameters for each channel bandwidth, and are shown in table 7.3EA.4.1-1. The details of the downlink and uplink reference measurement channels (RMCs) are specified in Annexes A.2 and A.3. The details of the OCNG patterns used are specified in Annex A.5. Configurations of PDSCH and MPDCCH before measurement are specified in Annex C.2.

**Table 7.3EA.4.1-1: Test Configuration Table**

Initial Conditions						
Test Environment as specified in TS 36.508[7] subclause 4.1			NC, TL/VL, TL/VH, TH/VL, TH/VH			
Test Frequencies as specified in TS36.508 [7] subclause 4.3.1			Low range, Mid range, High range			
Test Channel Bandwidths as specified in TS 36.508 [7] subclause 4.3.1			5MHz			
Test Parameters for Channel Bandwidths and Narrowband positions						
Ch BW	Downlink Configuration			Uplink Configuration		
	Mod'n	RB allocation		Mod'n	RB allocation	
		FDD	TDD		FDD and HD-FDD	TDD
5MHz	QPSK	4	4	QPSK	6	6
Note 1: Downlink RB position shall be $RB_{start} = 0$ within the narrowband						
Note 2: The Narrowband index (TS36.211, 5.2.4) shall be set to 0 for all testpoints.						

1. Connect the SS to the UE antenna connectors as shown in TS 36.508[7] Annex A Figure A.3 using only main UE Tx/Rx antenna.
2. The parameter settings for the cell are set up according to TS 36.508 [7] subclause 4.4.3.
3. Downlink signals are initially set up according to Annex C0, C.1 and C.3.1, and uplink signals according to Annex H.1 and H.3.1.
4. The UL and DL Reference Measurement channels are set according to Table 7.3EA.4.1-1.
5. Propagation conditions are set according to Annex B.0.
6. Ensure the UE is in State 3A-RF-CE according to TS 36.508 [7] clause 5.2A.2AA. Message contents are defined in clause 7.3EA.4.3.

### 7.3EA.4.2 Test procedure

1. SS transmits PDSCH via M-PDCCH DCI format 6-1A for C\_RNTI to transmit the DL RMC according to Table 7.3EA.4.1-1. The SS sends downlink MAC padding bits on the DL RMC. The SS sends one sided dynamic OCNG Pattern OP.1 FDD/TDD for the DL-signal as described in Annex A.5.1.1/A.5.2.1.
2. SS sends uplink scheduling information for each UL HARQ process via MPDCCH DCI format 6-0A for C\_RNTI to schedule the UL RMC according to Table 7.3EA.4.1-1. Since the UE has no payload data to send, the UE transmits uplink MAC padding bits on the UL RMC.
3. Set the Downlink signal level to the appropriate REFSSENS value defined in Table 7.3EA.5-1 for FDD and TDD and in Table 7.3EA.5-2 for HD-FDD. Send continuously uplink power control "up" commands in the uplink scheduling information to the UE to ensure the UE transmits  $P_{UMAX}$  level for at least the duration of the Throughput measurement.
4. Measure the average throughput for duration sufficient to achieve statistical significance according to Annex G.2.

### 7.3EA.4.3 Message contents

Message contents are according to TS 36.508 [7] subclause 4.6 with the following exceptions.

#### 7.3EA.4.3.1 Message contents exceptions (network signalled value "NS\_01")

Message contents according to TS 36.508 [7] subclause 4.6 can be used without exceptions.

#### 7.3EA.4.3.2 Message contents exceptions (network signalled value "NS\_03")

1. Information element `additionalSpectrumEmission` is set to NS\_03. This can be set in the *SystemInformationBlockType2* as part of the cell broadcast message. This exception indicates that the UE shall meet the additional spurious emission requirement for a specific deployment scenario.

**Table 7.3EA.4.3.2-1: SystemInformationBlockType2: Additional spurious emissions test requirement for "NS\_03"**

Derivation Path: TS 36.508 [7] clause 4.4.3.3, Table 4.4.3.3-1			
Information Element	Value/remark	Comment	Condition
<code>additionalSpectrumEmission</code>	3 (NS_03)		

#### 7.3EA.4.3.3 Message contents exceptions (network signalled value "NS\_06")

1. Information element `additionalSpectrumEmission` is set to NS\_06. This can be set in the *SystemInformationBlockType2* as part of the cell broadcast message. This exception indicates that the UE shall meet the additional spurious emission requirement for a specific deployment scenario.

**Table 7.3EA.4.3.3-1: SystemInformationBlockType2: Additional spurious emissions test requirement for "NS\_06"**

Derivation Path: TS 36.508 [7] clause 4.4.3.3, Table 4.4.3.3-1			
Information Element	Value/remark	Comment	Condition
<code>additionalSpectrumEmission</code>	6 (NS_06)		

#### 7.3EA.4.3.4 Message contents exceptions (network signalled value "NS\_09")

1. Information element `additionalSpectrumEmission` is set to NS\_09. This can be set in the *SystemInformationBlockType2* as part of the cell broadcast message. This exception indicates that the UE shall meet the additional spurious emission requirement for a specific deployment scenario.

**Table 7.3EA.4.3.4-1: SystemInformationBlockType2: Additional spurious emissions test requirement for "NS\_09"**

Derivation Path: TS 36.508 [7] clause 4.4.3.3, Table 4.4.3.3-1			
Information Element	Value/remark	Comment	Condition
<code>additionalSpectrumEmission</code>	9 (NS_09)		

#### 7.3EA.4.3.5 Message contents exceptions (network signalled value "NS\_08")

1. Information element `additionalSpectrumEmission` is set to NS\_08. This can be set in the *SystemInformationBlockType2* as part of the cell broadcast message. This exception indicates that the UE shall meet the additional spurious emission requirement for a specific deployment scenario.

**Table 7.3EA.4.3.5-1: SystemInformationBlockType2: Additional spurious emissions test requirement for "NS\_08"**

Derivation Path: TS 36.508 [7] clause 4.4.3.3, Table 4.4.3.3-1			
Information Element	Value/remark	Comment	Condition
<code>additionalSpectrumEmission</code>	8 (NS_08)		

## 7.3EA.5 Test requirement

The throughput shall be  $\geq 95\%$  of the maximum throughput of the reference measurement channels as specified in Annexes A.2.2, A.2.3 and A.3.2 with parameters specified in Table 7.3EA.5-1 and Table 7.3EA.5-2.

**Table 7.3EA.5-1: Reference sensitivity for FDD and TDD UE category M1 QPSK  $P_{\text{REFSENS}}$**

39	[-103.0]	TDD
41	[-101.0]	TDD

NOTE 1: The transmitter shall be set to  $P_{\text{UMAX}}$  as defined in subclause 6.2.5  
NOTE 2: Reference measurement channel is A.3.2 with one sided dynamic OCNG Pattern OP.1 FDD/TDD as described in Annex A.5.1.1/A.5.2.1  
NOTE 3: For the UE which supports both Band 11 and Band 21 the reference sensitivity level is FFS.  
NOTE 4: For a UE that support both Band 18 and Band 26, the reference sensitivity level for Band 26 applies for the applicable channel bandwidths.  
NOTE 5: For cat [M1] the same RF bandwidth applies for all applicable channel bandwidths as specified in Table 5.6.1-1  
NOTE 6: The reference receive sensitivity shall be met for an uplink transmission bandwidth less than or equal to [6] RB except for band 31. For band 31; in the case of 3 MHz channel bandwidth [5] RB applies and the UL resource blocks shall be located at  $\text{RB}_{\text{start}}$  9. In case of 5 MHz channel bandwidth [5] RB applies and the UL resource blocks shall be located at  $\text{RB}_{\text{start}}$  10.  
NOTE 7: The UL resource blocks shall be located as close as possible to the downlink operating band but confined within the transmission bandwidth configuration for the channel bandwidth.

**Table 7.3EA.5-2: Reference sensitivity for HD-FDD UE category M1 QPSK  $P_{\text{REFSENS}}$** 

E-UTRA Band	REFSENS (dBm)	Duplex Mode
1	[-102.7]	HD-FDD
2	-100.3	HD-FDD
3	-99.3	HD-FDD
4	-102.3	HD-FDD
5	-100.8	HD-FDD
7	[-100.3]	HD-FDD
8	-99.8	HD-FDD

12	-99.3	HD-FDD
13	[-99.3]	HD-FDD
18	[-102.3 <sup>4</sup> ]	HD-FDD
19	[-102.3]	HD-FDD
20	[-99.8]	HD-FDD
21	[-102.3 <sup>3</sup> ]	HD-FDD
26	-100.3	HD-FDD
27	-100.8	HD-FDD
28	[-100.8]	HD-FDD
31	[-96.4]	HD-FDD
NOTE 1: The transmitter shall be set to $P_{\text{UMAX}}$ as defined in subclause 6.2.5		
NOTE 2: Reference measurement channel is A.3.2 with one sided dynamic OCNG Pattern OP.1 FDD/TDD as described in Annex A.5.1.1/A.5.2.1		
NOTE 3: For the UE which supports both Band 11 and Band 21 the reference sensitivity level is FFS.		
NOTE 4: For a UE that support both Band 18 and Band 26, the reference sensitivity level for Band 26 applies for the applicable channel bandwidths.		
NOTE 5: For cat [M1] the same RF bandwidth applies for all applicable channel bandwidths as specified in Table 5.4.2-1		

## 7.3F Reference sensitivity level for UE category NB1

### 7.3F.1 Reference sensitivity level without repetitions for UE category NB1

Editor's note: This clause is incomplete, the following items are TBD

- NPDSCH and NPDCCH before measurement need to be defined in Annex C.
- Parameter settings for the cell set up need to be introduced in TS 36.508
- Downlink signals and uplink signals need to be introduced in Annex
- NB-IoT UE Test State TBC.
- Parameters ensuring UE is transmitting NPUSCH with maximum power are TBC. (Proposed values: p-Max = Not present, p0-NominalNPUSCH-r13 = -85 dBm, p0-UE-NPUSCH-r13 = 0 dBm, nrs-Power-r13 = 44 dBm).
- Applicability of Annex G.2 TBC

#### 7.3F.1.1 Test purpose

To verify the UE's ability to receive data with a given average throughput for a specified reference measurement channel, under conditions of low signal level, ideal propagation and no added noise.

A UE unable to meet the throughput requirement under these conditions will decrease the effective coverage area of an e-NodeB.

#### 7.3F.1.2 Test applicability

This test applies to all types of UE release 13 and forward of UE category NB1.

### 7.3F.1.3 Minimum conformance requirements

The category NB1 UE throughput shall be  $\geq 95\%$  of the maximum throughput of the reference measurement channels as specified in Annex A.3.2 with received signal level as specified in Table 7.3F.1.3-1. Requirement in Table 7.3F.1.3-1 applies for any uplink configuration.

**Table 7.3F.1.3-1: Reference sensitivity for UE category NB1**

Operating band	REFSENS [dBm]
1, 2, 3, 5, 8, 12, 13, 17, 18, 19, 20, 26, 28, 66	- 108.2

The normative reference for this requirement is TS 36.101 clause 7.3.1F.1.

### 7.3F.1.4 Test description

#### 7.3F.1.4.1 Initial conditions

Initial conditions are a set of test configurations the UE needs to be tested in and the steps for the SS to take with the UE to reach the correct measurement state.

The initial test configurations consist of environmental conditions and test frequencies based on the subset of E-UTRA operating bands defined for NB-IoT in clause 5.2F. All of these configurations shall be tested with applicable test parameters, and are shown in table 7.3F.1.4.1-1. The details of the downlink reference measurement channel (RMC) are specified in Annex A.3. Configurations of NPDSCH and NPDCCH before measurement are specified in Annex C.2.

**Table 7.3F.1.4.1-1: Test Configuration Table**

Initial Conditions					
Test Environment as specified in TS 36.508 [7] clause [X.4.1]			NC, TL/VL, TL/VH, TH/VL, TH/VH		
Test Frequencies as specified in TS36.508 [7] clause [X.3.1]			FFS		
Configuration ID	Downlink Configuration		Uplink Configuration		
	Modulation	Subcarriers	Modulation	N <sub>tones</sub>	Subcarrier spacing
1	QPSK	12	BPSK	1@0	15kHz

1. Connect the SS to the UE antenna connectors as shown in TS 36.508[7] Annex A Figure A.3 using only the main UE Tx/Rx antenna.
2. The parameter settings for the cell are set up according to TS 36.508 [7] subclause [FFS].
3. Downlink signals are initially set up according to Annex [C0, C1 and C.3.0], and NPUSCH Format 2 is used to carry ACK/NACK on the uplink..
4. The DL Reference Measurement channels are set according to Table 7.3F.1.4.1-1.
5. Propagation conditions are set according to Annex B.0.
6. Ensure the UE is in State [FFS] according to TS 36.508 [7] clause [X.5]. Message contents are defined in clause 7.3F.1.4.3.

#### 7.3F.1.4.2 Test Procedure

1. SS transmits NPDSCH via NPDCCH DCI format N1 for C\_RNTI to transmit the DL RMC according to Table 7.3F.1.4.1-1. The SS sends downlink MAC padding bits on the DL RMC. The UE will send the HARQ feedback based on information contain in DCI format N1.
2. Set the Downlink signal level to the REFSENS value defined in Table 7.3F.1.5-1.

3. Measure the average throughput for a duration sufficient to achieve statistical significance according to [Annex G2].

#### 7.3F.1.4.3 Message contents

Message contents are according to TS 36.508 [7] clause [X.6].

#### 7.3F.1.5 Test requirement

The throughput shall be  $\geq 95\%$  of the maximum throughput of the reference measurement channels as specified in Annex A.3.2 with parameters specified in Table 7.3F.1.5-1.

**Table 7.3F.1.5-1: Reference sensitivity for UE category NB1**

Operating band	REFSENS [dBm]
1, 2, 3, 5, 8, 12, 13, 17, 18, 19, 20, 26, 28, 66	- 107.5

## 7.4 Maximum input level

### 7.4.1 Test purpose

Maximum input level tests the UE's ability to receive data with a given average throughput for a specified reference measurement channel, under conditions of high signal level, ideal propagation and no added noise.

A UE unable to meet the throughput requirement under these conditions will decrease the coverage area near to an e-NodeB.

### 7.4.2 Test applicability

This test applies to all types of E-UTRA UE release 8 and forward.

### 7.4.3 Minimum conformance requirements

Maximum input level is defined as the maximum mean power received at the UE antenna port, at which the specified relative throughput shall meet or exceed the minimum requirements for the specified reference measurement channel.

The throughput shall be  $\geq 95\%$  of the maximum throughput of the reference measurement channels as specified in Annexes A.2.2, A.2.3 and A.3.2 (with one sided dynamic OCNG Pattern OP.1 FDD/TDD as described in Annex A.5.1.1/A.5.2.1) with parameters specified in Table 7.4.3-1. For operating bands with an unpaired DL part (as noted in Table 5.2-1), the requirements only apply for carriers assigned in the paired part.

**Table 7.4.3-1: Maximum input level**

Rx Parameter	Units	Channel bandwidth					
		1.4 MHz	3 MHz	5 MHz	10 MHz	15 MHz	20 MHz
Power in Transmission Bandwidth Configuration	dBm	-25 <sup>2</sup>					
		-27 <sup>3</sup>					
NOTE 1: The transmitter shall be set to 4dB below P <sub>CMAX,L</sub> at the minimum uplink configuration specified in Table 7.3.1-2 with P <sub>CMAX,L</sub> as defined in subclause 6.2.5.							
NOTE 2: Reference measurement channel is Annex A.3.2: 64QAM, R=3/4 variant with one sided dynamic OCNG Pattern OP.1 FDD/TDD as described in Annex A.5.1.1/A.5.2.1.							
NOTE 3: Reference measurement channel is Annex A.3.2: 256QAM, R=4/5 variant with one sided dynamic OCNG Pattern OP.1 FDD/TDD as described in Annex A.5.1.1/A.5.2.1.							

The normative reference for this requirement is TS 36.101 [2] clause 7.4.1.

## 7.4.4 Test description

### 7.4.4.1 Initial conditions

Initial conditions are a set of test configurations the UE needs to be tested in and the steps for the SS to take with the UE to reach the correct measurement state.

The initial test configurations consist of environmental conditions, test frequencies, and channel bandwidths based on E-UTRA bands specified in table 5.4.2.1-1. All of these configurations shall be tested with applicable test parameters for each channel bandwidth, and are shown in table 7.4.4.1-1. The details of the uplink and downlink reference measurement channels (RMCs) are specified in Annexes A.2 and A.3 respectively. The details of the OCNG patterns used are specified in Annex A.5. Configurations of PDSCH and PDCCH before measurement are specified in Annex C.2.

**Table 7.4.4.1-1: Test Configuration Table**

Initial Conditions							
Test Environment as specified in TS 36.508[7] clause 4.1				NC			
Test Frequencies as specified in TS36.508 [7] clause 4.3.1				Mid range			
Test Channel Bandwidths as specified in TS 36.508 [7] clause 4.3.1				Lowest, 5MHz, Highest			
Test Parameters for Channel Bandwidths							
Ch BW	Downlink Configuration			Uplink Configuration			UE Category

20MHz	64-QAM	17	N/A	QPSK	75	N/A	1
20MHz	64-QAM	17	N/A	QPSK	50	N/A	1
20MHz	64-QAM	17	N/A	QPSK	25	N/A	1
20MHz	64-QAM	17	N/A	QPSK	20	N/A	1

Note 1: Test Channel Bandwidths are checked separately for each E-UTRA band. The applicable channel bandwidths are specified in Table 5.4.2.1-1.

Note 2: Depending on E-UTRA band, only the appropriate Uplink RB allocation value according to table 7.3.3-2 is tested per Test Channel Bandwidth. The allocation shall be located as close as possible to the downlink operating band but confined within the transmission bandwidth configuration for the channel bandwidth (Table 5.4.2-1).

Note 3: For the DL signal one sided dynamic OCNG Pattern OP.1 FDD/TDD is used.

Note 4: Applicable only to E-UTRA FDD Band 31. The UL resource blocks shall be located at RBstart 10 (according to Table 7.3.3-2).

1. Connect the SS to the UE antenna connectors as shown in TS 36.508 [7] Figure A.3.

Power in Transmission Bandwidth Configuration	dBm	For carrier frequency $f \leq 3.0\text{GHz}$ : -25.7 For carrier frequency $3.0\text{GHz} < f \leq 4.2\text{GHz}$ : -26.0
Note 1:	The transmitter shall be set to 4dB below $P_{\text{CMAX}_L}$ with $P_{\text{CMAX}_L}$ as defined in clause 6.2.5.	
Note 2:	Reference measurement channel is Annex A.3.2 64QAM R=3/4 variant with one sided dynamic OCNG Pattern OP.1 FDD/TDD as described in Annex A.5.1.1/A.5.2.1.	

## 7.4\_1 Maximum input level with 4 Rx antenna ports

### 7.4\_1.1 Test purpose

Same test purpose as in clause 7.4.1.

### 7.4\_1.2 Test applicability

This test applies to all types of E-UTRA UE release 10 and forward that supports 4 Rx antenna ports but not 256QAM in DL.

### 7.4\_1.3 Minimum conformance requirements

Same minimum conformance requirements as in clause 7.4.3.

### 7.4\_1.4 Test description

#### 7.4\_1.4.1 Initial conditions

Same as in clause 7.4.4.1 with following exceptions:

- Instead of Table 7.4.4.1-1 → use Table 7.4\_1.4.1-1.
- Instead of Figure A.3 → use Figure A.69.

Table 7.4\_1.4.1-1: Test Configuration Table

Initial Conditions						
Test Environment as specified in TS 36.508[7] subclause 4.1			NC			
Test Frequencies as specified in TS36.508 [7] subclause 4.3.1			Mid range			
Test Channel Bandwidths as specified in TS 36.508 [7] subclause 4.3.1			Lowest, 5MHz, Highest			
Test Parameters for Channel Bandwidths						
Ch BW	Downlink Configuration			Uplink Configuration		
	Mod'n	RB allocation		Mod'n	RB allocation	
		FDD	TDD		FDD	TDD
1.4MHz	64QAM	6	N/A	QPSK	6	N/A

5MHz	64QAM	25	N/A	QPSK	25	N/A
10MHz	64QAM	50	N/A	QPSK	50	N/A
10MHz	64QAM	50	N/A	QPSK	20	N/A
15MHz	64QAM	75	N/A	QPSK	75	N/A
15MHz	64QAM	75	N/A	QPSK	50	N/A
15MHz	64QAM	75	N/A	QPSK	20	N/A
20MHz	64QAM	100	100	QPSK	100	100
20MHz	64QAM	100	N/A	QPSK	75	N/A
20MHz	64QAM	100	N/A	QPSK	50	N/A
20MHz	64QAM	100	N/A	QPSK	20	N/A
Note 1: Test Channel Bandwidths are checked separately for each E-UTRA band, which applicable channel bandwidths are specified in Table 5.4.2.1-1.						
Note 2: Depending on E-UTRA band, only the appropriate Uplink RB allocation value according to table 7.3.3-2 is tested per Test Channel Bandwidth. The allocation shall be located as close as possible to the downlink operating band but confined within the transmission bandwidth configuration for the channel bandwidth (Table 5.4.2-1).						
Note 3: For the DL signal one sided dynamic OCNG Pattern OP.1 FDD/TDD is used.						

### 7.4\_1.4.2 Test procedure

Same as in clause 7.4.4.2 with following exceptions:

- Instead of Table 7.4.4.1-1 → use Table 7.4\_1.4.1-1.

### 7.4\_1.4.3 Message contents

Same as in clause 7.4.4.3.

### 7.4\_1.5 Test requirement

The throughput shall be  $\geq 95\%$  of the maximum throughput of the reference measurement channels as specified in Annex A.3.2 with parameters specified in Table 7.4\_1.5-1.

Table 7.4\_1.5-1: Maximum input level

Rx Parameter	Units	Channel bandwidth					
		1.4 MHz	3 MHz	5 MHz	10 MHz	15 MHz	20 MHz
Power in Transmission Bandwidth Configuration	dBm	For carrier frequency $f \leq 3.0\text{GHz}$ : -25.7 For carrier frequency $3.0\text{GHz} < f \leq 4.2\text{GHz}$ : -26.0					
Note 1: The transmitter shall be set to 4dB below $P_{\text{CMAX,L}}$ with $P_{\text{CMAX,L}}$ as defined in clause 6.2.5.							
Note 2: Reference measurement channel is Annex A.3.2 64QAM R=3/4 variant with one sided dynamic OCNG Pattern OP.1 FDD/TDD as described in Annex A.5.1.1/A.5.2.1.							

## 7.4\_H Maximum input level for 256QAM in DL

### 7.4\_H.1 Test purpose

Same test purpose as in clause 7.4.1.

### 7.4\_H.2 Test applicability

This test applies to all types of E-UTRA UEs release 12 and forward that support 256QAM in DL.

### 7.4\_H.3 Minimum conformance requirements

The minimum conformance requirements are defined in clause 7.4.3.

### 7.4\_H.4 Test description

#### 7.4\_H.4.1 Initial conditions

Same initial conditions as in clause 7.4.4.1 with the following exceptions:

- Instead of Table 7.4.4.1-1, use Table 7.4\_H.4.1-1.

**Table 7.4\_H.4.1-1: Test Configuration Table**

Initial Conditions						
Test Environment as specified in TS 36.508[7] clause 4.1			NC			
Test Frequencies as specified in TS36.508 [7] clause 4.3.1			Mid range			
Test Channel Bandwidths as specified in TS 36.508 [7] clause 4.3.1			Lowest, 5MHz, Highest			
Test Parameters for Channel Bandwidths						
Ch BW	Downlink Configuration			Uplink Configuration

20MHz	256-QAM	100	N/A	QPSK	25	N/A
20MHz	256-QAM	100	N/A	QPSK	20	N/A

Note 1: Test Channel Bandwidths are checked separately for each E-UTRA band. The applicable channel bandwidths are specified in Table 5.4.2.1-1.

Note 2: Depending on E-UTRA band, only the appropriate Uplink RB allocation value according to table 7.3.3-2 is tested per Test Channel Bandwidth. The allocation shall be located as close as possible to the downlink operating band but confined within the transmission bandwidth configuration for the channel bandwidth (Table 5.4.2-1).

Note 3: For the DL signal one sided dynamic OCNG Pattern OP.1 FDD/TDD is used.

Note 4: Applicable only to E-UTRA FDD Band 31. The UL resource blocks shall be located at RBstart 10 (according to Table 7.3.3-2).

## 7.4\_H.4.2 Test procedure

Same test procedure as in clause 7.4.4.2 with the following exceptions:

- Instead of Table 7.4.4.1-1, use Table 7.4\_H.4.1-1.
- Instead of Table 7.4.5-1, use Table 7.4\_H.5-1.
- Instead of DCI format 1A use DCI format 1.

## 7.4\_H.4.3 Message contents

Same message contents as defined in clause 7.4.4.3.

## 7.4\_H.5 Test requirement

The throughput shall be  $\geq 95\%$  of the maximum throughput of the reference measurement channels as specified in Annex A.3.2 with parameters specified in Table 7.4\_H.5-1.

**Table 7.4\_H.5-1: Maximum input level**

Rx Parameter	Units	Channel bandwidth					
		1.4 MHz	3 MHz	5 MHz	10 MHz	15 MHz	20 MHz
Power in Transmission Bandwidth Configuration	dBm	For carrier frequency $f \leq 3.0\text{GHz}$ : -27.7 For carrier frequency $3.0\text{GHz} < f \leq 4.2\text{GHz}$ : -28.0					
Note 1:	The transmitter shall be set to 4dB below $P_{\text{CMAX\_L}}$ with $P_{\text{CMAX\_L}}$ as defined in clause 6.2.5.						
Note 2:	Reference measurement channel is Annex A.3.2: 256QAM, R=4/5 variant with one sided dynamic OCNG Pattern OP.1 FDD/TDD as described in Annex A.5.1.1/A.5.2.1.						

## 7.4A Maximum input level for CA

### 7.4A.0 Minimum conformance requirements

For inter-band carrier aggregation with one component carrier per operating band and the uplink assigned to one E-UTRA band the maximum input level is defined with the uplink active on the band(s) other than the band whose downlink is being tested. For E-UTRA CA configurations including an operating band without uplink band or an operating band with an unpaired DL part, the requirements for all downlinks shall be met with the single uplink carrier active in each band capable of UL operation. The UE shall meet the requirements specified in subclause 7.4.3 for each component carrier while all downlink carriers are active.

For intra-band contiguous carrier aggregation maximum input level is defined as the powers received at the UE antenna port over the Transmission bandwidth configuration of each CC, at which the specified relative throughput shall meet or exceed the minimum requirements for the specified reference measurement channel over each component carrier.

The downlink SCC shall be configured at nominal channel spacing to the PCC. For FDD the PCC shall be configured closest to the uplink band. All downlink carriers shall be active throughout the test. The uplink output power shall be set as specified in Table 7.4A.0-1 with the uplink configuration set according to Table 7.3A.0-2 for the applicable carrier aggregation configuration. For UE(s) supporting one uplink carrier, the uplink configuration of the PCC shall be in accordance with Table 7.3.3-1.

The throughput shall be  $\geq 95\%$  of the maximum throughput of the reference measurement channels over each component carrier as specified in Annexes A.2.2, A.2.3 and A.3.2 (with one sided dynamic OCNG Pattern OP.1 FDD/TDD as described in Annex A.5.1.1/A.5.2.1) with parameters specified in Table 7.4A.0-1. For operating bands with an unpaired DL part (as noted in Table 5.2-1), the requirements also apply for an SCC assigned in the unpaired part with parameters specified in Table 7.4A.0-1.

For intra-band non-contiguous carrier aggregation with one uplink carrier and two downlink sub-blocks, each larger than or equal to 5 MHz, the maximum input level requirements are defined with the uplink configuration in accordance with Table 7.3A.0-3. For this uplink configuration, the UE shall meet the requirements for each sub-block as specified in Table 7.4.3-1 and Table 7.4A.0-1 for one component carrier and two component carriers per sub-block, respectively. The throughput of each downlink component carrier shall be  $\geq 95\%$  of the maximum throughput of the specified

reference measurement channel as specified in Annexes A.2.2, A.2.3 and A.3.2 (with one sided dynamic OCNG Pattern OP.1 FDD/TDD as described in Annex A.5.1.1/A.5.2.1). The requirements apply with all downlink carriers active.

**Table 7.4A.0-1: Maximum input level for intra-band contiguous CA**

Rx Parameter	Units	CA Bandwidth Class					
		A	B	C	D	E	F
Power in largest Transmission Bandwidth Configuration CC	dBm		-28	-25	-25	-26	
Power in each other CC	dBm		$-28 + 10\log(N_{RB,c} / N_{RB,largest\ BW})$	$-25 + 10\log(N_{RB,c} / N_{RB,largest\ BW})$	$-25 + 10\log(N_{RB,c} / N_{RB,largest\ BW})$	$-26 + 10\log(N_{RB,c} / N_{RB,largest\ BW})$	
Note 1:	The transmitter shall be set to 4dB below $P_{CMAX,L}$ or $P_{CMAX,L,CA}$ as defined in clause 6.2.5A.						
Note 2:	Reference measurement channel is Annex A.3.2: 64QAM, R=3/4 variant with one sided dynamic OCNG Pattern OP.1 FDD/TDD as described in Annex A.5.1.1/A.5.2.1.						

For combinations of intra-band and inter-band carrier aggregation with up to five downlink carriers (up to two non-contiguous sub-blocks per band and up to four contiguously aggregated carriers per band) and one uplink assigned to one E-UTRA band, the requirement is defined with the uplink active in a band other than that supporting the downlink(s) under test. The uplink configuration shall be in accordance with Table 7.3A.0-3 when the uplink is active in the band supporting two non-contiguous component carriers, Table 7.3A.0-2 when the uplink is active in a band supporting two contiguous component carriers and in accordance with Table 7.3.3-2 when the uplink is active in a band supporting one carrier per band. The downlink PCC shall be configured closer to the uplink operating band than the downlink SCC(s) when the uplink is active in band(s) supporting contiguous aggregation of up to four component carriers. For these uplink configurations, the UE shall meet the maximum input-level requirements for intra-band non-contiguous carrier aggregation of two downlink sub-blocks, the requirements for intra-band contiguous carrier aggregation for the contiguously aggregated downlink carriers and for any remaining component carrier(s) the requirements specified in subclause 7.4.3. All downlink carriers shall be active throughout the tests and the requirements for the downlinks shall be met with the single uplink carrier active in each band capable of UL operation.

The normative references for this requirement are TS 36.101 [2] clauses 7.4.1A and 7.4.1.

## 7.4A.1 Maximum input level for CA (intra-band contiguous DL CA and UL CA)

**Editor's note:**

- Any restriction of the applicability of test points due to the supported UE category is under investigation

### 7.4A.1.1 Test purpose

Maximum input level for CA test verifies the UE's ability to receive data with a given average throughput for a specified reference measurement channel, under conditions of high signal level, ideal propagation and no added noise.

A UE unable to meet the throughput requirement under these conditions will decrease the coverage area near to an e-NodeB.

### 7.4A.1.2 Test applicability

This test applies to all types of E-UTRA UE release 10 and forward that support intra-band contiguous DL CA and UL CA.

### 7.4A.1.3 Minimum conformance requirements

The minimum conformance requirements are defined in clause 7.4A.0.

## 7.4A.1.4 Test description

### 7.4A.1.4.1 Initial conditions

Initial conditions are a set of test configurations the UE needs to be tested in and the steps for the SS to take with the UE to reach the correct measurement state.

The initial test configurations consist of environmental conditions, test frequencies, and channel bandwidths based on E-UTRA CA configurations specified in table 5.4.2A.1-1. All of these configurations shall be tested with applicable test parameters for each CA Configuration, and are shown in table 7.4A.1.4.1-1. The details of the uplink and downlink reference measurement channels (RMCs) are specified in Annexes A.2 and A.3 respectively. The details of the OCNG patterns used are specified in Annex A.5. Configurations of PDSCH and PDCCH before measurement are specified in Annex C.2.

**Table 7.4A.1.4.1-1: Test Configuration Table**

Initial Conditions							
Test Environment as specified in TS 36.508[7] clause 4.1					NC		
Test Frequencies as specified in TS36.508 [7] clause 4.3.1 for different CA bandwidth classes, and PCC and SCCs are mapped onto physical frequencies according to Table 7.1-2					C: Mid range		
Test CC Combination setting ( $N_{RB\_agg}$ ) as specified in clause 5.4.2A.1 for the CA Configuration across bandwidth combination sets supported by the UE.					Lowest $N_{RB\_agg}$ Highest $N_{RB\_agg}$ (Note 3)		
Test Parameters for CA Configurations							
CA Configuration / $N_{RB\_agg}$		DL Allocation			UL Allocation		
PCC $N_{RB}$	SCC $N_{RB}$	CC MOD	PCC & SCC RB allocation	CC MOD	$N_{RB\_alloc}$	PCC & SCC RB allocations ( $L_{CRB}$ @ $RB_{start}$ )	
75	75	64-QAM	75+75	QPSK	75	P_75@0	S_0@0
75	75	64-QAM	75+75	QPSK	129	P_75@0	S_54@0
75	75	64-QAM	75+75	QPSK	150	P_75@0	S_75@0
100	25	64QAM	100+25	QPSK	50	P_50@0	S_0@0
100	25	64-QAM	100+25	QPSK	125	P_100@0	S_25@0
100	50	64-QAM	100+50	QPSK	50	P_50@50	S_0@0
100	50	64-QAM	100+50	QPSK	75	P_75@25	S_0@0
100	50	64-QAM	100+50	QPSK	150	P_100@0	S_50@0

100	100	64-QAM	100+100	QPSK	50	P_50@50	S_0@0
100	100	64-QAM	100+100	QPSK	75	P_75@25	S_0@0
100	100	64-QAM	100+100	QPSK	130	P_100@0	S_30@0
100	100	64-QAM	100+100	QPSK	200	P_100@0	S_100@0
Note 1: CA Configuration Test CC Combination settings are checked separately for each CA Configuration, which applicable aggregated channel bandwidths are specified in Table 5.4.2A.1-1. Note 2: Depending on CA Configuration only the appropriate Uplink RB allocation value according to table 7.3A.0-2 is tested per CA Configuration Test CC combination. Note 3: If in the CA Configuration UE supports multiple CC Combinations with the same $N_{RB\_agg}$ , only the first of those is tested, according to the order on the Test Configuration Table list.							

Connect the SS to the UE antenna connectors as shown in TS 36.508 [7] Annex A, Figure group A.32 as appropriate  
The parameter settings for the cell are set up according to TS 36.508 [7] clause 4.4.3.

3. Downlink signals for PCC are initially set up according to Annex C.0, C.1 and C.3.1, and uplink signals according to Annex H.1 and H.3.1
4. The UL and DL Reference Measurement channels are set according to Table 7.4A.1.4.1-1.
5. Propagation conditions are set according to Annex B.0.
6. Ensure the UE is in State 3A-RF according to TS 36.508 [7] clause 5.2A.2. Message contents are defined in clause 7.4A.1.4.3.

#### 7.4A.1.4.2 Test procedure

1. Configure SCC according to Annex C.0, C.1 and Annex C.3.1 for all downlink physical channels.
2. The SS shall configure SCC as per TS 36.508 [7] clause 5.2A.4. Message contents are defined in clause 7.4A.1.4.3
3. SS activates SCC by sending the activation MAC-CE (Refer TS 36.321 [13], clauses 5.13, 6.1.3.8). Wait for at least 2 seconds (Refer TS 36.133, clauses 8.3.3.2).
4. SS transmits PDSCH via PDCCH DCI format 1A for C\_RNTI to transmit the DL RMC according to Table 7.4A.1.4.1-1 on both PCC and SCC. The SS sends downlink MAC padding bits on the DL RMC.
5. SS sends uplink scheduling information for each UL HARQ process via PDCCH DCI format 0 for C\_RNTI to schedule the UL RMC according to Table 7.4A.1.4.1-1 on both PCC and SCC. Since the UE has no payload data to send, the UE sends uplink MAC padding bits on the UL RMC.
6. Set the Downlink signal level for PCC and SCC to the value defined in Table 7.4A.1.5-1. Send Uplink power control commands to the UE (less or equal to 1dB step size should be used), to ensure that for at least the duration of the Throughput measurement:  
The PCC output power is within (+0dB, -3.4 dB) of (target level in Table 7.4A.1.5-1 +  $10\log(P_{L_{CRB}}/N_{RB\_alloc})$ ), for carrier frequency  $f \leq 3.0\text{GHz}$ ,  
or within (+0dB, -4 dB) of (target level in Table 7.4A.1.5-1 +  $10\log(P_{L_{CRB}}/N_{RB\_alloc})$ ) for carrier frequency  $3.0\text{GHz} < f \leq 4.2\text{GHz}$ .  
The SCC output power is within (+0dB, -3.4 dB) of (target level in Table 7.4A.1.5-1 +  $10\log(S_{L_{CRB}}/N_{RB\_alloc})$ ), for carrier frequency  $f \leq 3.0\text{GHz}$ ,  
or within (+0dB, -4 dB) of (target level in Table 7.4A.1.5-1 +  $10\log(S_{L_{CRB}}/N_{RB\_alloc})$ ) for carrier frequency  $3.0\text{GHz} < f \leq 4.2\text{GHz}$ .
7. Measure the average throughput for each component carrier for duration sufficient to achieve statistical significance according to Annex G.2A.

#### 7.4A.1.4.3 Message contents

Message contents are according to TS 36.508 [7] subclause 4.6 with the following exception.

Power in largest Transmission Bandwidth Configuration CC	dBm			For carrier frequency $f \leq 3.0\text{GHz}$ : -25.7 For carrier frequency $3.0\text{GHz} < f \leq 4.2\text{GHz}$ : -26.0			
Power in each other CC	dBm			For carrier frequency $f \leq 3.0\text{GHz}$ : $-25.7 + 10\log(N_{RB,c} / N_{RB,largest\ BW})$ For carrier frequency $3.0\text{GHz} < f \leq 4.2\text{GHz}$ : $-26.0 + 10\log(N_{RB,c} / N_{RB,largest\ BW})$			
Note 1: The transmitter shall be set to 4dB below $P_{CMAX,L}$ or $P_{CMAX,L,CA}$ as defined in subclause 6.2.5 for one uplink carrier and in subclause 6.2.5A for two uplink carriers.							
Note 2: Reference measurement channel is Annex A.3.2: 64QAM, R=3/4 variant with one sided dynamic OCNG Pattern OP.1 FDD/TDD as described in Annex A.5.1.1/A.5.2.1.							

## 7.4A.1\_H Maximum input level for CA (intra-band contiguous DL CA and UL CA) for 256QAM in DL

### 7.4A.1\_H.1 Test purpose

Same test purpose as in clause 7.4A.1.

### 7.4A.1\_H.2 Test applicability

This test applies to all types of E-UTRA UE release 12 and forward that support intra-band contiguous DL CA and UL CA and 256QAM in DL.

### 7.4A.1\_H.3 Minimum conformance requirements

The minimum conformance requirements are defined in clause 7.4A.0 with the following exceptions:

- Instead of Table 7.4A.0-1, use Table 7.4A.1\_H.3-1.

**Table 7.4A.1\_H.3-1: Maximum input level for intra-band contiguous CA**

Rx Parameter	Units	CA Bandwidth Class					
		A	B	C	D	E	F
Power in largest Transmission Bandwidth Configuration CC	dBm		-28 <sup>2</sup>	-25 <sup>2</sup>	-25 <sup>2</sup>		
			-30 <sup>3</sup>	-27 <sup>3</sup>	-27 <sup>3</sup>		
Power in each other CC	dBm		-28+ $10\log(N_{RB,c} / N_{RB,largest\ BW})^2$	-25+ $10\log(N_{RB,c} / N_{RB,largest\ BW})^2$	-25+ $10\log(N_{RB,c} / N_{RB,largest\ BW})^2$		
			-30+ $10\log(N_{RB,c} / N_{RB,largest\ BW})^3$	-27+ $10\log(N_{RB,c} / N_{RB,largest\ BW})^3$	-27+ $10\log(N_{RB,c} / N_{RB,largest\ BW})^3$		
NOTE 1: The transmitter shall be set to 4dB below $P_{CMAX,L,c}$ or $P_{CMAX,L}$ as defined in subclause 6.2.5A.							
NOTE 2: Reference measurement channel is Annex A.3.2: 64QAM, R=3/4 variant with one sided dynamic OCNG Pattern OP.1 FDD/TDD as described in Annex A.5.1.1/A.5.2.1.							
NOTE 3: Reference measurement channel is Annex A.3.2: 256QAM, R=4/5 variant with one sided dynamic OCNG Pattern OP.1 FDD/TDD as described in Annex A.5.1.1/A.5.2.1.							

### 7.4A.1\_H.4 Test description

#### 7.4A.1\_H.4.1 Initial conditions

Same initial conditions as in clause 7.4A.1.4.1 with the following exceptions:

- Instead of Table 7.4A.1.4.1-1, use Table 7.4A.1\_H.4.1-1.

Table 7.4A.1\_H.4.1-1: Test Configuration Table

Initial Conditions							
Test Environment as specified in TS 36.508[7] clause 4.1					NC		
Test Frequencies as specified in TS36.508 [7] clause 4.3.1 for different CA bandwidth classes, and PCC and SCCs are mapped onto physical frequencies according to Table 7.1-2					C: Mid range		
Test CC Combination setting ( $N_{RB\_agg}$ ) as specified in clause 5.4.2A.1 for the CA Configuration across bandwidth combination sets supported by the UE.					Lowest $N_{RB\_agg}$ Highest $N_{RB\_agg}$ (Note 3)		
Test Parameters for CA Configurations

100	100	256-QAM	100+100	QPSK	130	P_100@0	S_30@0
100	100	256-QAM	100+100	QPSK	200	P_100@0	S_100@0
Note 1: CA Configuration Test CC Combination settings are checked separately for each CA Configuration, which applicable aggregated channel bandwidths are specified in Table 5.4.2A.1-1.							
Note 2: Depending on CA Configuration only the appropriate Uplink RB allocation value according to table 7.3A.0-2 is tested per CA Configuration Test CC combination.							
Note 3: If in the CA Configuration UE supports multiple CC Combinations with the same $N_{RB\_agg}$ , only the first of those is tested, according to the order on the Test Configuration Table list.							

#### 7.4A.1\_H.4.2 Test procedure

Same test procedure as in clause 7.4A.1.4.2 with the following exceptions:

- Instead of Table 7.4A.1.4.1-1, use Table 7.4A.1\_H.4.1-1.
- Instead of Table 7.4A.1.5-1, use 7.4A.1\_H.5-1.
- Instead of DCI format 1A use DCI format 1.

#### 7.4A.1\_H.4.3 Message contents

Same message contents as defined in clause 7.4A.1.4.3.

#### 7.4A.1\_H.5 Test requirement

The throughput measurement of each carrier derived in test procedure shall be  $\geq 95\%$  of the maximum throughput of the reference measurement channels as specified in Annex A.3.2 with parameters specified in Table 7.4A.1\_H.5-1.

**Table 7.4A.1\_H.5-1: Maximum input level for intra-band contiguous CA**

Rx Parameter	Units	CA Bandwidth Class					
		A	B	C	D	E	F
Power in largest Transmission Bandwidth Configuration CC	dBm			For carrier frequency $f \leq 3.0\text{GHz}$ : -27.7 For carrier frequency $3.0\text{GHz} < f \leq 4.2\text{GHz}$ : -28.0			
Power in each other CC	dBm			For carrier frequency $f \leq 3.0\text{GHz}$ : $-27.7 + 10\log(N_{RB,c} / N_{RB,largest\ BW})$ For carrier frequency $3.0\text{GHz} < f \leq 4.2\text{GHz}$ : $-28.0 + 10\log(N_{RB,c} / N_{RB,largest\ BW})$			
Note 1:	The transmitter shall be set to 4dB below $P_{CMAX,L}$ or $P_{CMAX,L,CA}$ as defined in subclause 6.2.5 for one uplink carrier and in subclause 6.2.5A for two uplink carriers.						
Note 2:	Reference measurement channel is Annex A.3.2: 256QAM, R=4/5 variant with one sided dynamic OCNG Pattern OP.1 FDD/TDD as described in Annex A.5.1.1/A.5.2.1.						

## 7.4A.2 Maximum input level for CA (intra-band contiguous DL CA without UL CA)

Editor's note:

- Any restriction of the applicability of test points due to the supported UE category is under investigation

### 7.4A.2.1 Test purpose

Same test purpose as in clause 7.4A.1.1.

### 7.4A.2.2 Test applicability

This test applies to all types of E-UTRA UE release 10 and forward that support intra-band contiguous DL CA. This test case applies only for CA Configurations that do not support UL CA.

### 7.4A.2.3 Minimum conformance requirements

The minimum conformance requirements are defined in clause 7.4A.0.

### 7.4A.2.4 Test description

#### 7.4A.2.4.1 Initial conditions

Same initial conditions as in clause 7.4A.1.4.1 with the following exceptions:

- Instead of Table 7.4A.1.4.1-1 → use Table 7.4A.2.4.1-1.
- Instead of clause 7.4A.1.4.3 → use clause 7.4A.2.4.3.

Table 7.4A.2.4.1-1: Test Configuration Table

Initial Conditions							
Test Environment as specified in TS 36.508[7] clause 4.1					NC		
Test Frequencies as specified in TS36.508 [7] clause 4.3.1 for different CA bandwidth classes, and PCC and SCCs are mapped onto physical frequencies according to Table 7.1-2					B: Mid range C: Mid range		
Test CC Combination setting ( $N_{RB\_agg}$ ) as specified in clause 5.4.2A.1 for the CA Configuration across bandwidth combination sets supported by the UE.					Lowest $N_{RB\_agg}$ Highest $N_{RB\_agg}$ (Note 3)		
Test Parameters for CA Configurations

100	100	64-QAM	100+100	QPSK	50	P_50@50	NA

Note 1: CA Configuration Test CC Combination settings are checked separately for each CA Configuration, which applicable aggregated channel bandwidths are specified in Table 5.4.2A.1-1.

Note 2: Depending on CA Configuration only the appropriate Uplink RB allocation value according to table 7.3.3-2 is tested per CA Configuration Test CC combination.

Note 3: If in the CA Configuration UE supports multiple CC Combinations with the same  $N_{RB\_agg}$ , only the first of those is tested, according to the order on the Test Configuration Table list.

#### 7.4A.2.4.2 Test procedure

1. Configure SCC according to Annex C.0, C.1 and Annex C.3.1 for all downlink physical channels.
2. The SS shall configure SCC as per TS 36.508 [7] clause 5.2A.4.
3. SS activates SCC by sending the activation MAC-CE (Refer TS 36.321 [13], clauses 5.13, 6.1.3.8). Wait for at least 2 seconds (Refer TS 36.133, clauses 8.3.3.2).
4. SS transmits PDSCH via PDCCH DCI format 1A for C\_RNTI to transmit the DL RMC according to Table 7.4A.2.4.1-1 on both PCC and SCC. The SS sends downlink MAC padding bits on the DL RMC.
5. SS sends uplink scheduling information for each UL HARQ process via PDCCH DCI format 0 for C\_RNTI to schedule the UL RMC according to Table 7.4A.2.4.1-1 on PCC. Since the UE has no payload data to send, the UE sends uplink MAC padding bits on the UL RMC.
6. Set the Downlink signal level for PCC and SCC to the value defined in Table 7.4A.1.5-1. Send Uplink power control commands to the UE (less or equal to 1dB step size should be used), to ensure that the UE output power is within +0, - 3.4 dB of the target level in Table 7.4A.1.5-1 for carrier frequency  $f \leq 3.0\text{GHz}$  or within +0, -4.0 dB of the target level for carrier frequency  $3.0\text{GHz} < f \leq 4.2\text{GHz}$ , for at least the duration of the Throughput measurement.
7. Measure the average throughput for each component carrier for duration sufficient to achieve statistical significance according to Annex G.2A.

#### 7.4A.2.4.3 Message contents

Same message contents as in clause 7.4.4.3.

#### 7.4A.2.5 Test requirement

Same test requirements as in clause 7.4A.1.5 with the following exceptions:

- Instead of Table 7.4A.1.5-1 → use Table 7.4A.2.5-1.

**Table 7.4A.2.5-1: Maximum input level for intra-band contiguous CA**

Rx Parameter	Units	CA Bandwidth Class					
		A	B	C	D	E	F
Power in largest Transmission Bandwidth Configuration CC	dBm		For carrier frequency $f \leq 3.0\text{GHz}$ : -28.7 For carrier frequency $3.0\text{GHz} < f \leq 4.2\text{GHz}$ : -29.0	For carrier frequency $f \leq 3.0\text{GHz}$ : -25.7 For carrier frequency $3.0\text{GHz} < f \leq 4.2\text{GHz}$ : -26.0			
Power in each other CC	dBm		For carrier frequency $f \leq 3.0\text{GHz}$ : $-28.7 + 10\log(N_{RB,c} / N_{RB,largest\ BW})$ For carrier frequency $3.0\text{GHz} < f \leq 4.2\text{GHz}$ : $-29.0 + 10\log(N_{RB,c} / N_{RB,largest\ BW})$	For carrier frequency $f \leq 3.0\text{GHz}$ : $-25.7 + 10\log(N_{RB,c} / N_{RB,largest\ BW})$ For carrier frequency $3.0\text{GHz} < f \leq 4.2\text{GHz}$ : $-26.0 + 10\log(N_{RB,c} / N_{RB,largest\ BW})$			
Note 1:	The transmitter shall be set to 4dB below $PC_{MAX,L}$ as defined in clause 6.2.5.						
Note 2:	Reference measurement channel is Annex A.3.2: 64QAM, R=3/4 variant with one sided dynamic OCNG Pattern OP.1 FDD/TDD as described in Annex A.5.1.1/A.5.2.1.						

## 7.4A.2\_H Maximum input level for CA (intra-band contiguous DL CA without UL CA) for 256QAM in DL

### 7.4A.2\_H.1 Test purpose

Same test purpose as in clause 7.4A.2.1.

### 7.4A.2\_H.2 Test applicability

This test applies to all types of E-UTRA UE release 12 and forward that support intra-band contiguous DL CA and 256QAM in DL. This test case applies only for CA Configurations that do not support UL CA.

### 7.4A.2\_H.3 Minimum conformance requirements

The minimum conformance requirements are defined in clause 7.4A.1\_H.3.

### 7.4A.2\_H.4 Test description

#### 7.4A.2\_H.4.1 Initial conditions

Same initial conditions as in clause 7.4A.2.4.1 with the following exceptions:

- Instead of Table 7.4A.2.4.1-1, use Table 7.4A.2\_H.4.1-1.
- Instead of clause 7.4A.2.4.3, use clause 7.4A.2\_H.4.3.

Table 7.4A.2\_H.4.1-1: Test Configuration Table

Initial Conditions							
Test Environment as specified in TS 36.508[7] clause 4.1					NC		
Test Frequencies as specified in TS36.508 [7] clause 4.3.1 for different CA bandwidth classes, and PCC and SCCs are mapped onto physical frequencies according to Table 7.1-2					B: Mid range C: Mid range		
Test CC Combination setting ( $N_{RB\_agg}$ ) as specified in clause 5.4.2A.1 for the CA Configuration across bandwidth combination sets supported by the UE.					Lowest $N_{RB\_agg}$ Highest $N_{RB\_agg}$ (Note 3)		
Test Parameters for CA Configurations

100	25	256-QAM	100+25	QPSK	50	P_50@50	NA
100	50	256-QAM	100+50	QPSK	100	P_100@0	NA
100	50	256-QAM	100+50	QPSK	75	P_75@25	NA
100	50	256-QAM	100+50	QPSK	50	P_50@50	NA
100	75	256-QAM	100+75	QPSK	100	P_100@0	NA
100	100	256-QAM	100+100	QPSK	100	P_100@0	NA
100	100	256-QAM	100+100	QPSK	75	P_75@25	NA
100	100	256-QAM	100+100	QPSK	50	P_50@50	NA
Note 1: CA Configuration Test CC Combination settings are checked separately for each CA Configuration, which applicable aggregated channel bandwidths are specified in Table 5.4.2A.1-1.							
Note 2: Depending on CA Configuration only the appropriate Uplink RB allocation value according to table 7.3.3-2 is tested per CA Configuration Test CC combination.							
Note 3: If in the CA Configuration UE supports multiple CC Combinations with the same $N_{RB\_agg}$ , only the first of those is tested, according to the order on the Test Configuration Table list.							

#### 7.4A.2\_H.4.2 Test procedure

Same test procedure as defined in clause 7.4A.2.4.2 with the following exceptions:

- Instead of Table 7.4A.2.4.1-1, use Table 7.4A.2\_H.4.1-1.
- Instead of Table 7.4A.1.5-1, use Table 7.4A.2\_H.5-1.
- Instead of DCI format 1A use DCI format 1.

### 7.4A.2\_H.4.3 Message contents

Same message contents as defined in clause 7.4A.2.4.3.

### 7.4A.2\_H.5 Test requirement

Same test requirements as in clause 7.4A.1.5 with the following exceptions:

- Instead of Table 7.4A.1.5-1, use Table 7.4A.2\_H.5-1.

**Table 7.4A.2\_H.5-1: Maximum input level for intra-band contiguous CA**

Rx Parameter	Units	CA Bandwidth Class					
		A	B	C	D	E	F
Power in largest Transmission Bandwidth Configuration CC	dBm		For carrier frequency $f \leq 3.0\text{GHz}$ : -30.7 For carrier frequency $3.0\text{GHz} < f \leq 4.2\text{GHz}$ : -31.0	For carrier frequency $f \leq 3.0\text{GHz}$ : -27.7 For carrier frequency $3.0\text{GHz} < f \leq 4.2\text{GHz}$ : -28.0			
Power in each other CC	dBm		For carrier frequency $f \leq 3.0\text{GHz}$ : $-30.7 + 10\log(N_{RB,c} / N_{RB,largest\ BW})$ For carrier frequency $3.0\text{GHz} < f \leq 4.2\text{GHz}$ : $-31.0 + 10\log(N_{RB,c} / N_{RB,largest\ BW})$	For carrier frequency $f \leq 3.0\text{GHz}$ : $-27.7 + 10\log(N_{RB,c} / N_{RB,largest\ BW})$ For carrier frequency $3.0\text{GHz} < f \leq 4.2\text{GHz}$ : $-28.0 + 10\log(N_{RB,c} / N_{RB,largest\ BW})$			
Note 1: The transmitter shall be set to 4dB below $PC_{MAX\_L}$ as defined in clause 6.2.5. Note 2: Reference measurement channel is Annex A.3.2: 256QAM, R=4/5 variant with one sided dynamic OCNG Pattern OP.1 FDD/TDD as described in Annex A.5.1.1/A.5.2.1.							

## 7.4A.3 Maximum input level for CA (inter-band DL CA without UL CA)

**Editor's note:**

- Any restriction of the applicability of test points due to the supported UE category is under investigation

### 7.4A.3.1 Test purpose

Same test purpose as in clause 7.4A.1.1

### 7.4A.3.2 Test applicability

This test applies to all types of E-UTRA UE release 10 and forward that support inter-band DL CA.

This test case also applies to all types of E-UTRA UE release 12 and forward that support 2DL CA with FDD-TDD inter-band CA.

### 7.4A.3.3 Minimum conformance requirements

The minimum conformance requirements are defined in clause 7.4A.0.

### 7.4A.3.4 Test description

#### 7.4A.3.4.1 Initial conditions

Same initial conditions as in clause 7.4A.1.4.1 with the following exceptions:

- Instead of Table 7.4A.1.4.1-1 → use Table 7.4A.3.4.1-1.
- Instead of clause 7.4A.1.4.3 → use clause 7.4A.3.4.3.

Table 7.4A.3.4.1-1: Test Configuration Table

Initial Conditions						
Test Environment as specified in TS 36.508[7] subclause 4.1			NC			
Test Frequencies as specified in TS36.508 [7] subclause 4.3.1 for different CA bandwidth classes, and PCC and SCCs are mapped onto physical frequencies according to Table 7.1-2			A: Mid range for PCC and SCC			
Test CC Combination setting ( $N_{RB\_agg}$ ) as specified in subclause 5.4.2A.1 for the CA Configuration across bandwidth combination sets supported by the UE			Highest $N_{RB\_agg}$ for PCC and SCC

100	100	64-QAM	100	100	QPSK	20
<p>Note 1: CA Configuration Test CC Combination settings are checked separately for each CA Configuration, which applicable aggregated channel bandwidths are specified in Table 5.4.2A.1-2.</p> <p>Note 2: Depending on CA configurations, only the appropriate Uplink RB allocation value according to table 7.3A.3.5-2 for UE supporting one uplink carrier is tested per Test CA configuration.</p> <p>Note 3: The UL resource blocks shall be located as close as possible to the downlink PCC but confined within the transmission bandwidth configuration for the channel bandwidth (Table 5.4.2-1).</p> <p>Note 4: The frequencies of PCC and SCC shall be switched and tested in each configuration, according to the UE declared capability for UL support (within CA operation) in the individual bands.</p>						

#### 7.4A.3.4.2 Test procedure

1. Configure SCC according to Annex C.0, C.1 and Annex C.3.1 for all downlink physical channels.
2. The SS shall configure SCC as per TS 36.508 [7] clause 5.2A.4.
3. SS activates SCC by sending the activation MAC-CE (Refer TS 36.321 [13], clauses 5.13, 6.1.3.8). Wait for at least 2 seconds (Refer TS 36.133, clauses 8.3.3.2).
4. SS transmits PDSCH via PDCCH DCI format 1A for C\_RNTI to transmit the DL RMC according to Tables 7.4A.3.4.1-1 on both PCC and SCC. The SS sends downlink MAC padding bits on the DL RMC.
5. SS sends uplink scheduling information for each UL HARQ process via PDCCH DCI format 0 for C\_RNTI to schedule the UL RMC according to Table 7.4A.3.4.1-1 on PCC. Since the UE has no payload and no loopback data to send the UE sends uplink MAC padding bits on the UL RMC.
6. Set the Downlink signal level to the value as defined in Table 7.4A.3.5-1. Send Uplink power control commands to the UE (less or equal to 1dB step size should be used), to ensure that the UE output power is within +0, - 3.4 dB of the target level in Table 7.4A.3.5-1 for carrier frequency  $f \leq 3.0\text{GHz}$  or within +0, -4.0 dB of the target level for carrier frequency  $3.0\text{GHz} < f \leq 4.2\text{GHz}$ , for at least the duration of the Throughput measurement.
7. Measure the average throughput of SCC for a duration sufficient to achieve statistical significance according to Annex G.2.

#### 7.4A.3.4.3 Message contents

Same message contents as in clause 7.4.4.3.

#### 7.4A.3.5 Test requirement

For inter-band carrier aggregation with uplink assigned to one E-UTRA band the maximum input level is defined with the uplink active on the band other than the band whose downlink is being tested, i.e. the requirements are tested only for the SCell downlink. The UE shall meet the requirement for each component carrier, when operated as SCell, while both downlink carriers are active.

The throughput measured during the test procedure for each component carrier, when operated as SCell, shall be  $\geq 95\%$  of the maximum throughput of the reference measurement channels as specified in Annex A.3.2 with parameters specified in Table 7.4A.3.5-1 (originated from the single carrier Table 7.4.5-1).

**Table 7.4A.3.5-1: Maximum input level for inter-band DL CA without UL CA**

Rx Parameter	Units	Channel bandwidth					
		1.4 MHz	3 MHz	5 MHz	10 MHz	15 MHz	20 MHz
Power in Transmission Bandwidth Configuration for each CC	dBm	For carrier frequency $f \leq 3.0\text{GHz}$ : -25.7 For carrier frequency $3.0\text{GHz} < f \leq 4.2\text{GHz}$ : -26.0					
Note 1:	The transmitter shall be set to 4dB below $P_{\text{CMAX,L}}$ with $P_{\text{CMAX,L}}$ as defined in clause 6.2.5.						
Note 2:	Reference measurement channel is Annex A.3.2 64QAM R=3/4 variant with one sided dynamic OCNG Pattern OP.1 FDD/TDD as described in Annex A.5.1.1/A.5.2.1.						

### 7.4A.3\_H Maximum input level for CA (inter-band DL CA without UL CA) for 256QAM in DL

#### 7.4A.3\_H.1 Test purpose

Same test purpose as in clause 7.4A.3.

### 7.4A.3\_H.2 Test applicability

This test applies to all types of E-UTRA UE release 12 and forward that support inter-band DL CA without UL CA and 256QAM in DL.

### 7.4A.3\_H.3 Minimum conformance requirements

The minimum conformance requirements are defined in clause 7.4A.1\_H.3.

### 7.4A.3\_H.4 Test description

#### 7.4A.3\_H.4.1 Initial conditions

Same initial conditions as in clause 7.4A.1.4.1 with the following exceptions:

- Instead of Table 7.4A.1.4.1-1 → use Table 7.4A.3\_H.4.1-1.
- Instead of clause 7.4A.1.4.3 → use clause 7.4A.3\_H.4.3.

Table 7.4A.3\_H.4.1-1: Test Configuration Table

### 7.4A.3\_H.4.2 Test procedure

Same test procedure as in clause 7.4A.3.4.2 with the following exceptions:

- Instead of Table 7.4A.3.4.1-1 → use Table 7.4A.3\_H.4.1-1.
- Instead of Table 7.4A.3.5-1 → use 7.4A.3\_H.5-1.
- Instead of DCI format 1A use DCI format 1.

### 7.4A.3\_H.4.3 Message contents

Same message contents as defined in clause 7.4A.3.4.3.

### 7.4A.3\_H.5 Test requirement

Same test requirement as defined in clause 7.4A.3.5 with the following exceptions:

- Instead of Table 7.4A.3.5-1 → use 7.4A.3\_H.5-1.

**Table 7.4A.3\_H.5-1: Maximum input level for inter-band CA**

Rx Parameter	Units	Channel bandwidth					
		1.4 MHz	3 MHz	5 MHz	10 MHz	15 MHz	20 MHz
Power in Transmission Bandwidth Configuration	dBm	For carrier frequency $f \leq 3.0\text{GHz}$ : -27.7 For carrier frequency $3.0\text{GHz} < f \leq 4.2\text{GHz}$ : -28.0					
Note 1:	The transmitter shall be set to 4dB below $P_{\text{CMAX}_L}$ with $P_{\text{CMAX}_L}$ as defined in clause 6.2.5.						
Note 2:	Reference measurement channel is Annex A.3.2: 256QAM, R=4/5 variant with one sided dynamic OCNG Pattern OP.1 FDD/TDD as described in Annex A.5.1.1/A.5.2.1..						

## 7.4A.4 Maximum input level for CA (intra band non-contiguous DL CA without UL CA)

### 7.4A.4.1 Test purpose

Same as in clause 7.4A.1.1.

### 7.4A.4.2 Test applicability

This test case applies to all types of E-UTRA UE release 11 and forward that support intra-band non-contiguous DL CA but no UL CA.

### 7.4A.4.3 Minimum conformance requirements

The minimum conformance requirements are defined in clause 7.4A.0.

### 7.4A.4.4 Test description

#### 7.4A.4.4.1 Initial conditions

Same initial conditions as in clause 7.4A.1.4.1 with the following exceptions:

- Instead of Table 7.4A.1.4.1-1 → use Tables 7.4A.4.4.1-1.
- Instead of clause 7.4A.1.4.3 → use clause 7.4A.3.4.3.

Note 1:	CA Configuration Test CC Combination settings are checked separately for each CA Configuration, which applicable aggregated channel bandwidths are specified in Table 5.4.2A.1-3.						
Note 2:	The carrier centre frequency of PCC in the UL operating band is configured closer to the DL operating band.						
Note 3:	Applicable if only Bandwidth Combination Set 0 is supported by the UE for the CA Configuration						
Note 4:	Not applicable if only Bandwidth Combination Set 0 is supported by the UE for the CA Configuration						

#### 7.4A.4.4.2 Test procedure

1. Configure SCC according to Annex C.0, C.1 and Annex C.3.1 for all downlink physical channels.
2. The SS shall configure SCC as per TS 36.508 [7] clause 5.2A.4. Message contents are defined in clause 7.4A.4.4.3
3. SS activates SCC by sending the activation MAC-CE (Refer TS 36.321 [13], clauses 5.13, 6.1.3.8). Wait for at least 2 seconds (Refer TS 36.133, clauses 8.3.3.2).
4. SS transmits PDSCH via PDCCH DCI format 1A for C\_RNTI to transmit the DL RMC according to Table 7.4A.4.4.1-1 on both PCC and SCC. The SS sends downlink MAC padding bits on the DL RMC.
5. SS sends uplink scheduling information for each UL HARQ process via PDCCH DCI format 0 for C\_RNTI to schedule the UL RMC according to Table 7.4A.4.4.1-1 on PCC. Since the UE has no payload data to send, the UE sends uplink MAC padding bits on the UL RMC.
6. Set the Downlink signal level for PCC and SCC to the value defined in Table 7.4A.4.5-1. Send Uplink power control commands to the UE (less or equal to 1dB step size should be used), to ensure that the UE output power is within +0, - 3.4 dB of the target level in Table 7.4A.4.5-1 for carrier frequency  $f \leq 3.0\text{GHz}$  or within +0, -4.0 dB of the target level for carrier frequency  $3.0\text{GHz} < f \leq 4.2\text{GHz}$ , for at least the duration of the Throughput measurement.
7. Measure the average throughput for each component carrier for duration sufficient to achieve statistical significance according to Annex G.2A.

#### 7.4A.4.4.3 Message contents

Same message contents as in clause 7.4.4.3.

#### 7.4A.4.5 Test requirement

The throughput measurement of each carrier derived in test procedure shall be  $\geq 95\%$  of the maximum throughput of the reference measurement channels as specified in Annex A.3.2 with parameters specified in Table 7.4A.4.5-1 (originated from the single carrier Table 7.4.5-1).

**Table 7.4A.4.5-1: Maximum input level for intra band non-contiguous DL CA without UL CA**

Rx Parameter	Units	Channel bandwidth					
		1.4 MHz	3 MHz	5 MHz	10 MHz	15 MHz	20 MHz
Power in Transmission Bandwidth Configuration for each CC	dBm	For carrier frequency $f \leq 3.0\text{GHz}$ : -25.7 For carrier frequency $3.0\text{GHz} < f \leq 4.2\text{GHz}$ : -26.0					
Note 1:	The transmitter shall be set to 4dB below $P_{\text{CMAX}_L}$ with $P_{\text{CMAX}_L}$ as defined in clause 6.2.5.						
Note 2:	Reference measurement channel is Annex A.3.2 64QAM R=3/4variant with one sided dynamic OCNG Pattern OP.1 FDD/TDD as described in Annex A.5.1.1/A.5.2.1.						

### 7.4A.4\_H Maximum input level for CA (intra band non-contiguous DL CA without UL CA) for 256QAM in DL

#### 7.4A.4\_H.1 Test purpose

Same as in clause 7.4A.1.1.

#### 7.4A.4\_H.2 Test applicability

This test case applies to all types of E-UTRA UE release 12 and forward that support intra-band non-contiguous DL CA but no UL CA and 256QAM in DL.

#### 7.4A.4\_H.3 Minimum conformance requirements

The minimum conformance requirements are defined in clause 7.4A.1\_H.3

## 7.4A.4\_H.4 Test description

## 7.4A.4\_H.4.1 Initial conditions

Same initial conditions as defined in clause 7.4A.1.4.1 with the following exceptions:

- Instead of Table 7.4A.1.4.1-1 → use Tables 7.4A.4\_H.4.1-1.
- Instead of clause 7.4A.1.4.3 → use clause 7.4A.3.4.3.

**Table 7.4A.4\_H.4.1-1: Test Configuration Table**

Initial Conditions							
Test Environment as specified in TS 36.508[7] subclause 4.1				NC			
Test Frequencies as specified in TS36.508 [7] subclause 4.3.1 for different CA bandwidth classes, and PCC and SCCs are mapped onto physical frequencies according to Table 7.1-2				A: N/A (Range is not relevant)			
Test CC Combination setting ( $N_{RB\_agg}$ ) as specified in subclause 5.4.2A.1 for the CA Configuration.				Refer to test point

24	100	25	65	256QAM	100+25	QPSK	P_100@0
25	100	100	50	256QAM	100+100	QPSK	P_100@0
Note 1:	CA Configuration Test CC Combination settings are checked separately for each CA Configuration, which applicable aggregated channel bandwidths are specified in Table 5.4.2A.1-3.						
Note 2:	The carrier centre frequency of PCC in the UL operating band is configured closer to the DL operating band.						
Note 3:	Applicable if only Bandwidth Combination Set 0 is supported by the UE for the CA Configuration						
Note 4:	Not applicable if only Bandwidth Combination Set 0 is supported by the UE for the CA Configuration						

#### 7.4A.4\_H.4.2 Test procedure

1. Configure SCC according to Annex C.0, C.1 and Annex C.3.1 for all downlink physical channels.
2. The SS shall configure SCC as per TS 36.508 [7] clause 5.2A.4. Message contents are defined in clause 7.4A.4\_H.4.3

3. SS activates SCC by sending the activation MAC-CE (Refer 3GPP TS 36.321 [13], clauses 5.13, 6.1.3.8). Wait for at least 2 seconds (Refer 3GPP TS 36.133, clauses 8.3.3.2).
4. SS transmits PDSCH via PDCCH DCI format 1 for C\_RNTI to transmit the DL RMC according to Table 7.4A.4\_H.4.1-1 on both PCC and SCC. The SS sends downlink MAC padding bits on the DL RMC.
5. SS sends uplink scheduling information for each UL HARQ process via PDCCH DCI format 0 for C\_RNTI to schedule the UL RMC according to Table 7.4A.4\_H.4.1-1 on PCC. Since the UE has no payload data to send, the UE sends uplink MAC padding bits on the UL RMC.
6. Set the Downlink signal level for PCC and SCC to the value defined in Table 7.4A.4\_H.5-1. Send Uplink power control commands to the UE (less or equal to 1dB step size should be used), to ensure that for at least the duration of the Throughput measurement:  
The PCC output power is within (+0dB, -3.4 dB) of (target level in Table 7.4A.4\_H.5-1), for carrier frequency  $f \leq 3.0\text{GHz}$ ,  
or within (+0dB, -4 dB) of (target level in Table 7.4A.4\_H.5-1) for carrier frequency  $3.0\text{GHz} < f \leq 4.2\text{GHz}$ .
7. Measure the average throughput for each component carrier for duration sufficient to achieve statistical significance according to Annex G.2A.

#### 7.4A.4\_H.4.3 Message contents

Same message contents as defined in clause 7.4.4.3.

#### 7.4A.4\_H.5 Test requirement

The throughput measurement of each carrier derived in test procedure shall be  $\geq 95\%$  of the maximum throughput of the reference measurement channels as specified in Annex A.3.2 with parameters specified in Table 7.4A.4\_H.5-1 (originated from the single carrier Table 7.4.5-1).

**Table 7.4A.4\_H.5-1: Maximum input level for intra band non-contiguous DL CA without UL CA**

Rx Parameter	Units	Channel bandwidth					
		1.4 MHz	3 MHz	5 MHz	10 MHz	15 MHz	20 MHz
Power in Transmission Bandwidth Configuration for each CC	dBm	For carrier frequency $f \leq 3.0\text{GHz}$ : -27.7 For carrier frequency $3.0\text{GHz} < f \leq 4.2\text{GHz}$ : -28.0					
Note 1:	The transmitter shall be set to 4dB below $P_{\text{CMAX,L}}$ at the minimum uplink configuration specified in Table 7.3.1-2 with $P_{\text{CMAX,L}}$ as defined in subclause 6.2.5.						
Note 2:	Reference measurement channel is Annex A.3.2: 256QAM, R=4/5 variant with one sided dynamic OCNG Pattern OP.1 FDD/TDD as described in Annex A.5.1.1/A.5.2.1.						

### 7.4A.5 Maximum input level for 3DL CA

#### 7.4A.5.1 Test purpose

Maximum input level for CA test verifies the UE's ability to receive data with a given average throughput for a specified reference measurement channel, under conditions of high signal level, ideal propagation and no added noise.

A UE unable to meet the throughput requirement under these conditions will decrease the coverage area near to an e-NodeB.

#### 7.4A.5.2 Test applicability

This test case applies to all types of E-UTRA UE release 10 and forward that support 3DL with Intra-band contiguous CA or 3DL with Inter-band CA or 3DL with Intra-band contiguous and Inter-band CA.

This test case also applies to all types of E-UTRA UE release 11 and forward that support 3DL with Intra-band non-contiguous and Inter-band CA or 3DL with Intra-band non-contiguous and Intra-band contiguous CA.

This test case also applies to all types of E-UTRA UE release 12 and forward that support 3DL with FDD-TDD CA.

### 7.4A.5.3 Minimum conformance requirements

The Minimum conformance requirements are defined in clause 7.4A.0.

### 7.4A.5.4 Test description

#### 7.4A.5.4.1 Initial conditions

Initial conditions are a set of test configurations the UE needs to be tested in and the steps for the SS to take with the UE to reach the correct measurement state.

The initial test configurations consist of environmental conditions, test frequencies, and channel bandwidths based on E-UTRA CA configurations specified in tables of 5.4.2A.1 as applicable. All of these configurations shall be tested with applicable test parameters for each CA Configuration, and are shown in table 7.4A.5.4.1-1 to 7.4A.5.4.1-5. The details of the uplink and downlink reference measurement channels (RMCs) are specified in Annexes A.2 and A.3 respectively. The details of the OCN patterns used are specified in Annex A.5. Configurations of PDSCH and PDCCH before measurement are specified in Annex C.2.

**Table 7.4A.5.4.1-1: Test Configuration Table (Intra-band contiguous)**

Initial Conditions													
Test Environment as specified in TS 36.508 [7] subclause 4.1							NC						
Test Frequencies as specified in TS36.508 [7] subclause 4.3.1 for different CA bandwidth classes.							For test frequencies refer to "Range" columns. For mapping within Band refer to "CC" columns						
Test CC Combination setting ( $N_{RB\_agg}$ ) as specified in subclause 5.4.2A.1 for the CA Configuration across bandwidth combination sets supported by the UE.							Refer to "PCC $N_{RB}$ " and "SCCs $N_{RB}$ " columns						
Network signalling value							NS_01 by default						
Test Parameters for CA Configurations													
ID	CA Configuration / $N_{RB\_agg}$						DL Allocation			UL Allocation (Note 4)			
	CA Configuration					PCC $N_{RB}$	SCCs $N_{RB}$		CC MOD	PCC & SCCs RB allocation		CC MOD	PCC $L_{CRB}$ @ $RB_{start}$
	Band	Range	PCC CC	SCC1 CC	SCC2 CC		SCC1	SCC2		PCC	SCC1		
Default Test Settings for a CA_XD Configuration													
1	X	Mid	CC1	CC2	CC3	Lowest $N_{RB\_agg}$	64-QAM	All RBs	QPSK	REFSENS			
2	X	Mid	CC1	CC2	CC3	Highest $N_{RB\_agg}$	64-QAM	All RBs	QPSK	REFSENS			
Note 1: CA Configuration Test CC Combination test settings are checked separately for each CA Configuration, The applicable aggregated channel bandwidths are specified in Table 5.4.2A.1-1. Note 2: Use CA Configuration – specific test points if present in the table, otherwise use Default Test Settings test points. Note 3: X corresponds to the band in the CA Configuration. E.g. for CA_41D, X=41 Note 4: REFSENS refers to the PCC band's and PCC $N_{RB}$ 's single carrier Uplink RB allocation for reference sensitivity according to table 7.3.5-2. Note 5: If in the CA Configuration UE supports multiple CC Combinations with the same $N_{RB\_agg}$ , choose for testing the Combination with maximum $N_{RB\_PCC}$ and then select maximum $N_{RB\_SCC1}$ for the chosen $N_{RB\_PCC}$ .													

**Table 7.4A.5.4.1-2: Test Configuration Table (Inter-band)**

Initial Conditions															
Test Environment as specified in TS 36.508 [7] subclause 4.1											NC				
Test Frequencies as specified in TS36.508 [7] subclause 4.3.1 for different CA bandwidth classes.											For test frequencies refer to “Range” columns. For mapping within Band refer to “CC” columns				
Test CC Combination setting ( $N_{RB\_agg}$ ) as specified in subclause 5.4.2A.1 for the CA Configuration across bandwidth combination sets supported by the UE.											Refer to “PCC $N_{RB}$ ” and “SCCs $N_{RB}$ ” columns				
Network signalling value											NS_01 by default				
Test Parameters for CA Configurations															
ID	CA Configuration / $N_{RB\_agg}$							DL Allocation			UL Allocation (Note 5)				
	CA Configuration						PCC $N_{RB}$	SCCs $N_{RB}$		CC MOD	PCC & SCCs RB allocation			CC MOD	PCC $L_{CRB}$ @ $RB_{start}$
	PCC		SCC1		SCC2			SCC1	SCC2		PCC	SCC1	SCC2		
	Band	Range	Band	Range	Band	Range									
Default Test Settings for a CA_XA-YA-ZA Configuration															
1	X	Mid	Y	Mid	Z	Mid	Highest $N_{RB}$	Highest $N_{RB}$	Highest $N_{RB}$	64-QAM	All RBs	QPSK	REFSENS		
2	Y	Mid	X	Mid	Z	Mid	Highest $N_{RB}$	Highest $N_{RB}$	Highest $N_{RB}$	64-QAM	All RBs	QPSK	REFSENS		
3	Z	Mid	X	Mid	Y	Mid	Highest $N_{RB}$	Highest $N_{RB}$	Highest $N_{RB}$	64-QAM	All RBs	QPSK	REFSENS		
Note 1:	CA Configuration Test CC Combination test settings are checked separately for each CA Configuration. The applicable aggregated channel bandwidths are specified in Table 5.4.2A.1-2a.														
Note 2:	Use CA Configuration – specific test points if present in the table, otherwise use Default Test Settings test points.														
Note 3:	If, according to the UE declared capability, UE does not support UL in an individual band within the CA Configuration, test points with that individual band as PCC are not applicable.														
Note 4:	X,Y,Z correspond to the 1 <sup>st</sup> , 2 <sup>nd</sup> and 3 <sup>rd</sup> band in the CA Configuration. E.g. for CA_1A-3A-19A, X=1, Y=3, Z=19														
Note 5:	REFSENS refers to the PCC band's and PCC $N_{RB}$ 's single carrier Uplink RB allocation for reference sensitivity according to table 7.3.5-2.														

Table 7.4A.5.4.1-3: Test Configuration Table (Intra-band contiguous + Inter-band)

Initial Conditions															
Test Environment as specified in TS 36.508 [7] subclause 4.1									NC						
Test Frequencies as specified in TS36.508 [7] subclause 4.3.1 for different CA bandwidth classes.									For test frequencies refer to "Range" columns. For mapping within Band refer to "CC" columns						
Test CC Combination setting ( $N_{RB\_agg}$ ) as specified in subclause 5.4.2A.1 for the CA Configuration across bandwidth combination sets supported by the UE.									Refer to "PCC $N_{RB}$ " and "SCCs $N_{RB}$ " columns						
Network signalling value									NS_01 by default						
Test Parameters for CA Configurations

2	X	Mid	-	Y	CC2	Max	Y	CC1	64-QAM	All RBs			QPSK	REFSENS
Note 1: CA Configuration Test CC Combination test settings are checked separately for each CA Configuration. Note 2: Use CA Configuration – specific test points if present in the table. Otherwise use test points from matching Group Test Settings, if present in the table. Otherwise use Default Test Settings test points. Note 3: If, according to the UE declared capability, UE does not support UL in an individual band within the CA Configuration, test points with that individual band as PCC are not applicable. Note 4: X and Y correspond to the different bands in the CA Configuration. E.g. for CA_2A-2A-5A,X=2,Y=5 Note 5: REFSENS refers to the PCC band's and PCC $N_{RB}$ 's single carrier Uplink RB allocation for reference sensitivity according to table 7.3.5-2. REFSENS_CA refers to the PCC band's and PCC $N_{RB}$ 's single carrier Uplink RB allocation for reference sensitivity according to table 7.3.4.5-2 (selecting RB allocation for SCC measurement).														

**Table 7.4A.5.4.1-5: Test Configuration Table (Intra-band non-contiguous + Intra-band contiguous)**

Initial Conditions															
Test Environment as specified in TS 36.508 [7] subclause 4.1										NC					
Test Frequencies as specified in TS36.508 [7] subclause 4.3.1 for different CA bandwidth classes.										For test frequencies refer to "Range" columns. For mapping within band refer to "CC" columns					
Test CC Combination setting ( $N_{RB\_agg}$ ) as specified in subclause 5.4.2A.1 for the CA Configuration across bandwidth combination sets supported by the UE.										Refer to "PCC $N_{RB}$ " and "SCCs $N_{RB}$ " columns					
Network signalling value										NS_01 by default					
Test Parameters for CA Configurations															
ID	CA Configuration / $N_{RB\_agg}$							DL Allocation			UL Allocation (Note 2,3)				
	CA Configuration						PCC $N_{RB}$	SCCs $N_{RB}$		CC MOD	PCC & SCCs RB allocation			CC MOD	PCC $L_{CRB}$ @ $RB_{start}$

If no such combination is supported, choose Combination with maximum <math>N_{RB\_CC1}</math> for testing.</p>															

1. Connect the SS to the UE antenna connectors as shown in TS 36.508 [7] Annex A, Figure A.55.
2. The parameter settings for the cell are set up according to TS 36.508 [7] clause 4.4.3.
3. Downlink signals for PCC are initially set up according to Annex C.0, C.1 and C.3.1, and uplink signals according to Annex H.1 and H.3.1
4. The UL and DL Reference Measurement channels are set according to Tables 7.4A.5.4.1-1 to 7.4A.5.4.1-5.
5. Propagation conditions are set according to Annex B.0.
6. Ensure the UE is in State 3A-RF according to TS 36.508 [7] clause 5.2A.2. Message contents are defined in clause 7.4A.5.4.3.

#### 7.4A.5.4.2 Test procedure

1. Configure SCCs according to Annex C.0, C.1 and Annex C.3.1 for all downlink physical channels.
2. The SS shall configure SCCs as per TS 36.508 [7] clause 5.2A.4. Message contents are defined in clause 7.4A.5.4.3

3. SS activates SCCs by sending the activation MAC-CE (Refer to TS 36.321 [13] clauses 5.13 and 6.1.3.8). Wait for at least 2 seconds (Refer TS 36.133 [4], clause 8.3.3.2).
4. SS transmits PDSCH via PDCCH DCI format 1A for C\_RNTI to transmit the DL RMC according to Tables 7.4A.5.4.1-1 to 7.4A.5.4.1-5 as appropriate on PCC and SCCs. The SS sends downlink MAC padding bits on the DL RMC.
5. SS sends uplink scheduling information for each UL HARQ process via PDCCH DCI format 0 for C\_RNTI to schedule the UL RMC according to Tables 7.4A.5.4.1-1 to 7.4A.5.4.1-5 as appropriate on PCC. Since the UE has no payload and no loopback data to send, the UE sends uplink MAC padding bits on the UL RMC.
6. Set the Downlink signal level for PCC and SCCs to the value defined in Table 7.4A.5.5-2 or 7.4A.5.5-3 according to the type of CA. Send Uplink power control commands to the UE (less or equal to 1dB step size should be used), to ensure that the PCC output power is within +0dB, -3.4 dB of the target level for carrier frequency  $f \leq 3.0\text{GHz}$  or within +0dB, -4 dB of the target level for carrier frequency  $3.0\text{GHz} < f \leq 4.2\text{GHz}$ , for at least the duration of the Throughput measurement.
7. Measure the average throughput for the carrier(s) indicated in table 7.4A.5.4.2-1 for duration sufficient to achieve statistical significance according to Annex G.2A.
8. Repeat steps 6 to 7 for all component carriers indicated in Table 7.4A.5.4.2-1.

**Table 7.4A.5.4.2-1: Test repetition and measurement configuration**

CA configuration	ID (Note 1)	Throughput measured on (Note 3)	Table with test parameters to select (Note 2)
Intra-band contiguous	1	PCC, SCC1, SCC2	7.4A.5.5-1
	2		
Inter-band	1	SCC1	7.4A.5.5-2
		SCC2	
	2	SCC1	
		SCC2	
	3	SCC1	
		SCC2	
Intra-band contiguous + Inter-band	1	SCC2	7.4A.5.5-2
	2		
	3	SCC1, SCC2	7.4A.5.5-1
	4		
Intra-band non-contiguous + Inter-band	1	SCC2	7.4A.5.5-2
	2	SCC1	
		SCC2	
Intra-band non-contiguous + Intra-band contiguous	1	PCC	7.4A.5.5-2
		SCC1, SCC2	7.4A.5.5-1
	2	PCC, SCC1	7.4A.5.5-1
		SCC2	7.4A.5.5-2
Note 1: Test point ID for the particular CA configuration as defined in section 7.4A.5.4.1. Note 2: The reference for the placement of the interferer signals is the centre frequency of the carrier closest to the interferer among the carriers throughput is measured on. Note 3: Where there are multiple rows for a single Test point ID, the test is repeated for each row.			

#### 7.4A.5.4.3 Message contents

Same message contents as in clause 7.4.4.3.

### 7.4A.5.5 Test requirement

The throughput measurement of each carrier derived in test procedure shall be  $\geq 95\%$  of the maximum throughput of the reference measurement channels as specified in Annex A.3.2 with parameters specified in Tables 7.4A.5.5-1 to 7.4A.5.5-5, as applicable.

**Table 7.4A.5.5-1: Maximum input level for 3DL CA (Intra-band contiguous)**

Rx Parameter	Units	CA Bandwidth Class					
		A	B	C	D	E	F
Power in largest Transmission Bandwidth Configuration CC	dBm		For carrier frequency $f \leq 3.0\text{GHz}$ : -28.7 For carrier frequency $3.0\text{GHz} < f \leq 4.2\text{GHz}$ : -29.0	For carrier frequency $f \leq 3.0\text{GHz}$ : -25.7 For carrier frequency $3.0\text{GHz} < f \leq 4.2\text{GHz}$ : -26.0	For carrier frequency $f \leq 3.0\text{GHz}$ : -25.7 For carrier frequency $3.0\text{GHz} < f \leq 4.2\text{GHz}$ : -26.0		
Power in each other CC			For carrier frequency $f \leq 3.0\text{GHz}$ : -28.7 + $10\log(N_{RB,c}/N_{RB,largest\ BW})$ For carrier frequency $3.0\text{GHz} < f \leq 4.2\text{GHz}$ : -29.0 + $10\log(N_{RB,c}/N_{RB,largest\ BW})$	For carrier frequency $f \leq 3.0\text{GHz}$ : -25.7 + $10\log(N_{RB,c}/N_{RB,largest\ BW})$ For carrier frequency $3.0\text{GHz} < f \leq 4.2\text{GHz}$ : -26.0 + $10\log(N_{RB,c}/N_{RB,largest\ BW})$	For carrier frequency $f \leq 3.0\text{GHz}$ : -25.7 + $10\log(N_{RB,c}/N_{RB,largest\ BW})$ For carrier frequency $3.0\text{GHz} < f \leq 4.2\text{GHz}$ : -26.0 + $10\log(N_{RB,c}/N_{RB,largest\ BW})$		
Note 1: The transmitter shall be set to 4dB below $P_{CMAX\_L}$ or $P_{CMAX\_L\_CA}$ as defined in subclause 6.2.5 for one uplink carrier. Note 2: Reference measurement channel is Annex A.3.2: 64QAM, R=3/4 variant with one sided dynamic OCNG Pattern OP.1 FDD/TDD as described in Annex A.5.1.1/A.5.2.1.							

**Table 7.4A.5.5-2: Maximum input level for 3DL CA (Inter-band), per CC**

Rx Parameter	Units	Channel bandwidth					
		1.4 MHz	3 MHz	5 MHz	10 MHz	15 MHz	20 MHz
Power in Transmission Bandwidth Configuration	dBm	For carrier frequency $f \leq 3.0\text{GHz}$ : -25.7 For carrier frequency $3.0\text{GHz} < f \leq 4.2\text{GHz}$ : -26.0					
Note 1: The transmitter shall be set to 4dB below $P_{CMAX\_L}$ with $P_{CMAX\_L}$ as defined in clause 6.2.5. Note 2: Reference measurement channel is Annex A.3.2 64QAM R=3/4variant with one sided dynamic OCNG Pattern OP.1 FDD/TDD as described in Annex A.5.1.1/A.5.2.1.							

### 7.4A.5\_H Maximum input level for 3DL CA for 256QAM in DL

#### 7.4A.5\_H.1 Test purpose

Same test purpose as in clause 7.4A.5.1.

#### 7.4A.5\_H.2 Test applicability

This test case applies to all types of E-UTRA UE release 12 and forward that support 256QAM in DL and 3DL CA.

#### 7.4A.5\_H.3 Minimum conformance requirements

The minimum conformance requirements are defined in clause 7.4A.1\_H.3.

## 7.4A.5\_H.4 Test description

## 7.4A.5\_H.4.1 Initial conditions

Initial conditions are a set of test configurations the UE needs to be tested in and the steps for the SS to take with the UE to reach the correct measurement state.

The initial test configurations consist of environmental conditions, test frequencies, and channel bandwidths based on E-UTRA CA configurations specified in tables of 5.4.2A.1 as applicable. All of these configurations shall be tested with applicable test parameters for each CA Configuration, and are shown in table 7.4A.5\_H.4.1-1 to 7.4A.5\_H.4.1-5. The details of the uplink and downlink reference measurement channels (RMCs) are specified in clauses A.2 and A.3 respectively. The details of the OCNG patterns used are specified in clause A.5. Configurations of PDSCH and PDCCH before measurement are specified in clause C.2.

**Table 7.4A.5\_H.4.1-1: Test Configuration Table (Intra-band contiguous)**

Initial Conditions													
Test Environment as specified in TS 36.508 [7] subclause 4.1							NC						
Test Frequencies as specified in TS36.508 [7] subclause 4.3.1 for different CA bandwidth classes.							For test frequencies refer to "Range" columns. For mapping within Band refer to "CC" columns						
Test CC Combination setting ( $N_{RB\_agg}$ ) as specified in subclause 5.4.2A.1 for the CA Configuration across bandwidth combination sets supported by the UE.							Refer to "PCC $N_{RB}$ " and "SCCs $N_{RB}$ " columns						
Network signalling value							NS_01 by default						
Test Parameters for CA Configurations													
ID	CA Configuration / $N_{RB\_agg}$						DL Allocation			UL Allocation (Note 4)			
	CA Configuration					PCC $N_{RB}$	SCCs $N_{RB}$		PCC & SCCs RB allocation			CC MOD	PCC $L_{CRB}$ @ $RB_{start}$
	Band	Range	PCC CC	SCC1 CC	SCC2 CC		SCC1	SCC2	PCC	SCC1	SCC2		
Default Test Settings for a CA_XD Configuration													
1	X	Mid	CC1	CC2	CC3	Lowest $N_{RB\_agg}$	256-QAM	All RBs	QPSK	REFSENS			
2	X	Mid	CC1	CC2	CC3	Highest $N_{RB\_agg}$	256-QAM	All RBs	QPSK	REFSENS			
Note 1:	CA Configuration Test CC Combination test settings are checked separately for each CA Configuration, The applicable aggregated channel bandwidths are specified in Table 5.4.2A.1-1.												
Note 2:	Use CA Configuration – specific test points if present in the table, otherwise use Default Test Settings test points.												
Note 3:	X corresponds to the band in the CA Configuration. E.g. for CA_41D, X=41.												
Note 4:	REFSENS refers to the PCC band's and PCC $N_{RB}$ 's single carrier Uplink RB allocation for reference sensitivity according to table 7.3.5-2.												
Note 5:	If in the CA Configuration UE supports multiple CC Combinations with the same $N_{RB\_agg}$ , choose for testing the Combination with maximum $N_{RB\_PCC}$ and then select maximum $N_{RB\_SCC1}$ for the chosen $N_{RB\_PCC}$ .												

**Table 7.4A.5\_H.4.1-2: Test Configuration Table (Inter-band)**

Initial Conditions															
Test Environment as specified in TS 36.508 [7] subclause 4.1											NC				
Test Frequencies as specified in TS36.508 [7] subclause 4.3.1 for different CA bandwidth classes.											For test frequencies refer to “Range” columns. For mapping within Band refer to “CC” columns				
Test CC Combination setting ( $N_{RB\_agg}$ ) as specified in subclause 5.4.2A.1 for the CA Configuration across bandwidth combination sets supported by the UE.											Refer to “PCC $N_{RB}$ ” and “SCCs $N_{RB}$ ” columns				
Network signalling value											NS_01 by default				
Test Parameters for CA Configurations															
ID	CA Configuration / $N_{RB\_agg}$							DL Allocation			UL Allocation (Note 5)				
	CA Configuration						PCC $N_{RB}$	SCCs $N_{RB}$		CC MOD	PCC & SCCs RB allocation			CC MOD	PCC $L_{CRB}$ @ $RB_{start}$
	PCC		SCC1		SCC2			SCC1	SCC2		PCC	SCC1	SCC2		
	Band	Range	Band	Range	Band	Range									
Default Test Settings for a CA_XA-YA-ZA Configuration															
1	X	Mid	Y	Mid	Z	Mid	Highest $N_{RB}$	Highest $N_{RB}$	Highest $N_{RB}$	256-QAM	All RBs	QPSK	REFSENS		
2	Y	Mid	X	Mid	Z	Mid	Highest $N_{RB}$	Highest $N_{RB}$	Highest $N_{RB}$	256-QAM	All RBs	QPSK	REFSENS		
3	Z	Mid	X	Mid	Y	Mid	Highest $N_{RB}$	Highest $N_{RB}$	Highest $N_{RB}$	256-QAM	All RBs	QPSK	REFSENS		
Note 1:	CA Configuration Test CC Combination test settings are checked separately for each CA Configuration. The applicable aggregated channel bandwidths are specified in Table 5.4.2A.1-2a.														
Note 2:	Use CA Configuration – specific test points if present in the table, otherwise use Default Test Settings test points.														
Note 3:	If, according to the UE declared capability, UE does not support UL in an individual band within the CA Configuration, test points with that individual band as PCC are not applicable.														
Note 4:	X,Y,Z correspond to the 1 <sup>st</sup> , 2 <sup>nd</sup> and 3 <sup>rd</sup> band in the CA Configuration. E.g. for CA_1A-3A-19A, X=1, Y=3, Z=19														
Note 5:	REFSENS refers to the PCC band's and PCC $N_{RB}$ 's single carrier Uplink RB allocation for reference sensitivity according to table 7.3.5-2.														

Table 7.4A.5\_H.4.1-3: Test Configuration Table (Intra-band contiguous + Inter-band)

Initial Conditions															
Test Environment as specified in TS 36.508 [7] subclause 4.1									NC						
Test Frequencies as specified in TS36.508 [7] subclause 4.3.1 for different CA bandwidth classes.									For test frequencies refer to "Range" columns. For mapping within Band refer to "CC" columns						
Test CC Combination setting ( $N_{RB\_agg}$ ) as specified in subclause 5.4.2A.1 for the CA Configuration across bandwidth combination sets supported by the UE.									Refer to "PCC $N_{RB}$ " and "SCCs $N_{RB}$ " columns						
Network signalling value									NS_01 by default						
Test Parameters for CA Configurations															
ID	CA Configuration / $N_{RB\_agg}$							DL Allocation			UL Allocation (Note 2,3)

1. Connect the SS to the UE antenna connectors as shown in TS 36.508 [7] Annex A, Figure A.55.
2. The parameter settings for the cell are set up according to TS 36.508 [7] clause 4.4.3.
3. Downlink signals for PCC are initially set up according to clauses C.0, C.1 and C.3.1, and uplink signals according to clauses H.1 and H.3.1
4. The UL and DL Reference Measurement channels are set according to Tables 7.4A.5\_H.4.1-1.
5. Propagation conditions are set according to clause B.0.
6. Ensure the UE is in State 3A-RF according to TS 36.508 [7] clause 5.2A.2. Message contents are defined in clause 7.4A.5\_H.4.3.

#### 7.4A.5\_H.4.2 Test procedure

1. Configure SCCs according to clauses C.0, C.1 and clause C.3.1 for all downlink physical channels.
2. The SS shall configure SCCs as per TS 36.508 [7] clause 5.2A.4. Message contents are defined in clause 7.4A.5\_H.4.3

3. SS activates SCCs by sending the activation MAC-CE (Refer to TS 36.321 [13] clauses 5.13 and 6.1.3.8). Wait for at least 2 seconds (Refer TS 36.133 [4], clause 8.3.3.2).
4. SS transmits PDSCH via PDCCH DCI format 1 for C\_RNTI to transmit the DL RMC according to Table 7.4A.5\_H.4.1-1 to 7.4A.5\_H.4.1-5 as appropriate on PCC and SCCs. The SS sends downlink MAC padding bits on the DL RMC.
5. SS sends uplink scheduling information for each UL HARQ process via PDCCH DCI format 0 for C\_RNTI to schedule the UL RMC according to Tables 7.4A.5\_H.4.1-1 to 7.4A.5\_H.4.1-5 as appropriate on PCC. Since the UE has no payload and no loopback data to send, the UE sends uplink MAC padding bits on the UL RMC.
6. Set the Downlink signal level for PCC and SCCs to the value defined in Table 7.4A.5\_H.5-1 or 7.4A.5\_H.5-2 according to the type of CA. Send Uplink power control commands to the UE (less or equal to 1dB step size should be used), to ensure that the PCC output power is within (+0dB, -3.4dB) of the target level for carrier frequency  $f \leq 3.0\text{GHz}$  or within (+0dB, -4dB) of the target level for carrier frequency  $3.0\text{GHz} < f \leq 4.2\text{GHz}$ , for at least the duration of the Throughput measurement.
7. Measure the average throughput for each component carrier for duration sufficient to achieve statistical significance according to clause G.2A.
8. Repeat steps 6 to 7 for all component carriers indicated in Table 7.4A.5\_H.4.2-1.

**Table 7.4A.5\_H.4.2-1: Test repetition and measurement configuration**

CA configuration	ID (Note 1)	Throughput measured on (Note 3)	Table with test parameters to select (Note 2)

<p>Note 1: Test point ID for the particular CA configuration as defined in section 7.4A.5_H.4.1.</p> <p>Note 2: The reference for the placement of the interferer signals is the centre frequency of the carrier closest to the interferer among the carriers throughput is measured on.</p> <p>Note 3: Where there are multiple rows for a single Test point ID, the test is repeated for each row.</p>			

### 7.4A.5\_H.4.3 Message contents

Same message contents as defined in clause 7.4A.5.4.3.

## 7.4A.5\_H.5 Test requirement

The throughput measurement of each carrier derived in test procedure shall be  $\geq 95\%$  of the maximum throughput of the reference measurement channels as specified in clause A.3.2 with parameters specified in Table 7.4A.5\_H.5-1.

**Table 7.4A.5\_H.5-1: Maximum input level for 3DL CA (Intra-band contiguous)**

Rx Parameter	Units	CA Bandwidth Class					
		A	B	C	D	E	F
Power in largest Transmission Bandwidth Configuration CC	dBm		For carrier frequency $f \leq 3.0\text{GHz}$ : -30.7 For carrier frequency $3.0\text{GHz} < f \leq 4.2\text{GHz}$ : -31.0	For carrier frequency $f \leq 3.0\text{GHz}$ : -27.7 For carrier frequency $3.0\text{GHz} < f \leq 4.2\text{GHz}$ : -28.0	For carrier frequency $f \leq 3.0\text{GHz}$ : -27.7 For carrier frequency $3.0\text{GHz} < f \leq 4.2\text{GHz}$ : -28.0		
Power in each other CC	dBm		For carrier frequency $f \leq 3.0\text{GHz}$ : -30.7 + $10\log(N_{RB,c} / N_{RB,largest\ BW})$ For carrier frequency $3.0\text{GHz} < f \leq 4.2\text{GHz}$ : -31.0 + $10\log(N_{RB,c} / N_{RB,largest\ BW})$	For carrier frequency $f \leq 3.0\text{GHz}$ : -27.7 + $10\log(N_{RB,c} / N_{RB,largest\ BW})$ For carrier frequency $3.0\text{GHz} < f \leq 4.2\text{GHz}$ : -28.0 + $10\log(N_{RB,c} / N_{RB,largest\ BW})$	For carrier frequency $f \leq 3.0\text{GHz}$ : -27.7 + $10\log(N_{RB,c} / N_{RB,largest\ BW})$ For carrier frequency $3.0\text{GHz} < f \leq 4.2\text{GHz}$ : -28.0 + $10\log(N_{RB,c} / N_{RB,largest\ BW})$		
Note 1:	The transmitter shall be set to 4dB below $P_{CMAX\_L}$ or $P_{CMAX\_L\_CA}$ as defined in clause 6.2.5 for one uplink carrier.						
Note 2:	Reference measurement channel is clause A.3.2: 256QAM, R=4/5 variant with one sided dynamic OCNG Pattern OP.1 FDD/TDD as described in clauses A.5.1.1/A.5.2.1.						

**Table 7.4A.5\_H.5-2: Maximum input level for 3DL CA (Inter-band), per CC**

Rx Parameter	Units	Channel bandwidth					
		1.4 MHz	3 MHz	5 MHz	10 MHz	15 MHz	20 MHz
Power in Transmission Bandwidth Configuration	dBm	For carrier frequency $f \leq 3.0\text{GHz}$ : -27.7 For carrier frequency $3.0\text{GHz} < f \leq 4.2\text{GHz}$ : -28.0					
Note 1:	The transmitter shall be set to 4dB below $P_{CMAX\_L}$ at the minimum uplink configuration specified in Table 7.3.3-2 with $P_{CMAX\_L}$ as defined in subclause 6.2.5.						
Note 2:	Reference measurement channel is Annex A.3.2: 256QAM, R=4/5 variant with one sided dynamic OCNG Pattern OP.1 FDD/TDD as described in Annex A.5.1.1/A.5.2.1.						

## 7.4A.6

## 7.4A.7 Maximum input level for 4DL CA

**Editor's note: Following aspects missing or not yet determined:**

- The test applicability needs to be added to TS36.521-2
- The test case needs to be added to Annex G
- Test configuration tables format are under investigation and may change in RAN5.

### 7.4A.7.1 Test purpose

Maximum input level for CA test verifies the UE's ability to receive data with a given average throughput for a specified reference measurement channel, under conditions of high signal level, ideal propagation and no added noise.

A UE unable to meet the throughput requirement under these conditions will decrease the coverage area near to an e-NodeB.

### 7.4A.7.2 Test applicability

This test case applies to all types of E-UTRA UE release 11 and forward that support 4DL with Intra-band contiguous CA or 4DL with Inter-band CA or 4DL with Intra-band contiguous and Inter-band CA.

This test case also applies to all types of E-UTRA UE release 12 and forward that support 4DL with Intra-band non-contiguous and Inter-band CA or 4DL with Intra-band non-contiguous and Intra-band contiguous CA.

This test case also applies to all types of E-UTRA UE release 12 and forward that support 4DL CA with FDD-TDD CA.

### 7.4A.7.3 Minimum conformance requirements

The Minimum conformance requirements are defined in clause 7.4A.0.

### 7.4A.7.4 Test description

#### 7.4A.7.4.1 Initial conditions

Initial conditions are a set of test configurations the UE needs to be tested in and the steps for the SS to take with the UE to reach the correct measurement state.

The initial test configurations consist of environmental conditions, test frequencies, and channel bandwidths based on E-UTRA CA configurations specified in tables of 5.4.2A.1 as applicable. All of these configurations shall be tested with applicable test parameters for each CA Configuration, and are shown in table 7.4A.7.4.1-1 to 7.4A.7.4.1-6. The details of the uplink and downlink reference measurement channels (RMCs) are specified in Annexes A.2 and A.3 respectively. The details of the OCNG patterns used are specified in Annex A.5. Configurations of PDSCH and PDCCH before measurement are specified in Annex C.2.

Table 7.4A.7.4.1-1: Test Configuration Table (Intra-band contiguous)

Initial Conditions																	
Test Environment as specified in TS 36.508 [7] subclause 4.1											NC						
Test Frequencies as specified in TS36.508 [7] subclause 4.3.1 for different CA bandwidth classes.											For test frequencies refer to "Range" columns. For mapping within Band refer to "CC" columns						
Test CC Combination setting ( $N_{RB\_agg}$ ) as specified in subclause 5.4.2A.1 for the CA Configuration across bandwidth combination sets supported by the UE.											Refer to "PCC $N_{RB}$ " and "SCCs $N_{RB}$ " columns						
Network signalling value											NS_01 by default						
Test Parameters for CA Configurations																	
ID	CA Configuration / $N_{RB\_agg}$							DL Allocation				UL Allocation (Note 2,3)					
	CA Configuration						PCC $N_{RB}$	SCCs $N_{RB}$			CC MOD	PCC & SCCs RB allocation				CC MOD	PCC $L_{CRB} @ RB_{start}$
	Band	Range	PCC CC	SCC1 CC	SCC2 CC	SCC3 CC		SCC1	SCC2	SCC3		PCC	SCC1	SCC2	SCC3		
Default Test Settings for a CA_XE Configuration																	
1	X	Mid	CC1	CC2	CC3	CC4	Lowest $N_{RB\_agg}$			64-QAM	All RBs				QPSK	REFSENS	
2	X	Mid	CC1	CC2	CC3	CC4	Highest $N_{RB\_agg}$			64-QAM	All RBs				QPSK	REFSENS	
<p>Note 1: CA Configuration Test CC Combination test settings are checked separately for each CA Configuration.</p> <p>Note 2: Use CA Configuration – specific test points if present in the table, otherwise use Default Test Settings test points.</p> <p>Note 3: X corresponds to the band of the CA Configuration. E.g. for CA_41E, X=41.</p> <p>Note 4: REFSSENS refers to the PCC band's and PCC <math>N_{RB}</math> 's single carrier Uplink RB allocation for reference sensitivity according to table 7.3.5-2.</p> <p>Note 5: If in the CA Configuration UE supports multiple CC Combinations with the same <math>N_{RB\_agg}</math>, choose for testing the Combination with maximum <math>N_{RB\_PCC}</math> and then select maximum <math>N_{RB\_SCC1}</math> for the chosen <math>N_{RB\_PCC}</math>.</p>																	

Table 7.4A.7.4.1-2: Test Configuration Table (Inter-band)

Initial Conditions																			
Test Environment as specified in TS 36.508[7] subclause 4.1													NC						
Test Frequencies as specified in TS36.508 [7] subclause 4.3.1 for different CA bandwidth classes.													For test frequencies refer to “Range” columns. For mapping within Band refer to “CC” columns						
Test CC Combination setting ( $N_{RB\_agg}$ ) as specified in subclause 5.4.2A.1 for the CA Configuration across bandwidth combination sets supported by the UE.													Refer to “PCC $N_{RB}$ ” and “SCCs $N_{RB}$ ” columns						
Network signalling value													NS_01 by default						
Test Parameters for CA Configurations																			
ID	CA Configuration / $N_{RB\_agg}$									DL Allocation				UL Allocation (Note 2,3)					
	CA Configuration								PCC $N_{RB}$	SCCs $N_{RB}$			CC MOD	PCC & SCCs RB allocation				CC MOD	PCC $L_{CRB}$ @ $RB_{start}$
	PCC		SCC1		SCC2		SCC3			SCC1	SCC2	SCC3		PCC	SCC1	SCC2	SCC3		
	Band	Range	Band	Range	Band	Range	Band	Range											
Default Test Settings for a CA_XA-YA-ZA-RA Configuration																			
1	X	Mid	Y	Mid	Z	Mid	R	Mid	Highest $N_{RB}$	Highest $N_{RB}$	Highest $N_{RB}$	Highest $N_{RB}$	64-QAM	All RBs		QPSK	REFSENS		
2	Y	Mid	X	Mid	Z	Mid	R	Mid	Highest $N_{RB}$	Highest $N_{RB}$	Highest $N_{RB}$	Highest $N_{RB}$	64-QAM	All RBs		QPSK	REFSENS		
3	Z	Mid	X	Mid	Y	Mid	R	Mid	Highest $N_{RB}$	Highest $N_{RB}$	Highest $N_{RB}$	Highest $N_{RB}$	64-QAM	All RBs		QPSK	REFSENS		
4	R	Mid	X	Mid	Y	Mid	Z	Mid	Highest $N_{RB}$	Highest $N_{RB}$	Highest $N_{RB}$	Highest $N_{RB}$	64-QAM	All RBs		QPSK	REFSENS		
Note 1:	CA Configuration Test CC Combination test settings are checked separately for each CA Configuration.																		
Note 2:	Use CA Configuration – specific test points if present in the table, Otherwise use test points from matching Group Test Settings, if present in the table. Otherwise use the Default Test Settings test points.																		
Note 3:	If, according to the UE declared capability, UE does not support UL in an individual band within the CA Configuration, test points with that individual band as PCC are not applicable.																		
Note 4:	X,Y,Z,R correspond to the different bands in the CA Configuration. E.g. for CA_1A-3A-7A-8A,X=1,Y=3,Z=7,R=8.																		
Note 5:	REFSENS refers to the PCC band's and PCC $N_{RB}$ 's single carrier Uplink RB allocation for reference sensitivity according to table 7.3.5-2.																		

**Table 7.4A.7.4.1-3: Test Configuration Table (Intra-band contiguous + Inter-band)**

Initial Conditions

1. Connect the SS to the UE antenna connectors as shown in TS 36.508 [7] Annex A, Figure A.55.
2. The parameter settings for the cell are set up according to TS 36.508 [7] clause 4.4.3.
3. Downlink signals for PCC are initially set up according to Annex C.0, C.1 and C.3.1, and uplink signals according to Annex H.1 and H.3.1
4. The UL and DL Reference Measurement channels are set according to Tables 7.4A.7.4.1-1 to 7.4A.7.4.1-6.
5. Propagation conditions are set according to Annex B.0.
6. Ensure the UE is in State 3A-RF according to TS 36.508 [7] clause 5.2A.2. Message contents are defined in clause 7.4A.7.4.3.

#### 7.4A.7.4.2 Test procedure

1. Configure SCCs according to Annex C.0, C.1 and Annex C.3.1 for all downlink physical channels.
2. The SS shall configure SCCs as per TS 36.508 [7] clause 5.2A.4. Message contents are defined in clause 7.4A.7.4.3
3. SS activates SCCs by sending the activation MAC-CE (Refer to TS 36.321 [13] clauses 5.13 and 6.1.3.8). Wait for at least 2 seconds (Refer TS 36.133 [4], clause 8.3.3.2).
4. SS transmits PDSCH via PDCCH DCI format 1A for C\_RNTI to transmit the DL RMC according to Tables 7.4A.7.4.1-1 to 7.4A.7.4.1-6 as appropriate on PCC and SCCs. The SS sends downlink MAC padding bits on the DL RMC.
5. SS sends uplink scheduling information for each UL HARQ process via PDCCH DCI format 0 for C\_RNTI to schedule the UL RMC according to Tables 7.4A.7.4.1-1 to 7.4A.7.4.1-6 as appropriate on PCC. Since the UE has no payload and no loopback data to send, the UE sends uplink MAC padding bits on the UL RMC.
6. Set the Downlink signal level for PCC and SCCs to the value defined in Table 7.4A.7.5-2 or 7.4A.7.5-3 according to the type of CA. Send Uplink power control commands to the UE (less or equal to 1dB step size should be used), to ensure that the PCC output power is within +0dB, -3.4 dB of the target level for carrier frequency  $f \leq 3.0\text{GHz}$  or within +0dB, -4 dB of the target level for carrier frequency  $3.0\text{GHz} < f \leq 4.2\text{GHz}$ , for at least the duration of the Throughput measurement.
7. Measure the average throughput for the carrier(s) indicated in table 7.4A.7.4.2-1 for duration sufficient to achieve statistical significance according to Annex G.2A.
8. Repeat steps 6 to 7 for all component carriers indicated in Table 7.4A.7.4.2-1.

**Table 7.4A.7.4.2-1: Test repetition and measurement configuration**

CA configuration	ID (Note 1)	Throughput measured on (Note 3)	Table with test parameters to select (Note 2)

**7.4A.7.4.3 Message contents**

Same message contents as in clause 7.4A.1.4.3.

## 7.4A.7.5 Test requirement

The throughput measurement of each carrier derived in test procedure shall be  $\geq 95\%$  of the maximum throughput of the reference measurement channels as specified in Annex A.3.2 with parameters specified in Tables 7.4A.7.5-1 to 7.4A.7.5-5, as applicable.

**Table 7.4A.7.5-1: Maximum input level for 4DL CA (Intra-band contiguous)**

Rx Parameter	Units	CA Bandwidth Class					
		A	B	C	D	E	F
Power in largest Transmission Bandwidth Configuration CC	dBm		For carrier frequency $f \leq 3.0\text{GHz}$ : -28.7 For carrier frequency $3.0\text{GHz} < f \leq 4.2\text{GHz}$ : -29.0	For carrier frequency $f \leq 3.0\text{GHz}$ : -25.7 For carrier frequency $3.0\text{GHz} < f \leq 4.2\text{GHz}$ : -26.0	For carrier frequency $f \leq 3.0\text{GHz}$ : -25.7 For carrier frequency $3.0\text{GHz} < f \leq 4.2\text{GHz}$ : -26.0	For carrier frequency $f \leq 3.0\text{GHz}$ : -25.7 For carrier frequency $3.0\text{GHz} < f \leq 4.2\text{GHz}$ : -26.0	For carrier frequency $f \leq 3.0\text{GHz}$ : -26.7 For carrier frequency $3.0\text{GHz} < f \leq 4.2\text{GHz}$ : -27.0

Note 1: The transmitter shall be set to 4dB below $P_{CMAX\_L}$ or $P_{CMAX\_L\_CA}$ as defined in subclause 6.2.5 for one uplink carrier.							
Note 2: Reference measurement channel is Annex A.3.2: 64QAM, R=3/4 variant with one sided dynamic OCNG Pattern OP.1 FDD/TDD as described in Annex A.5.1.1/A.5.2.1.							

**Table 7.4A.7.5-2: Maximum input level for 4DL CA (Inter-band), per CC**

Rx Parameter	Units	Channel bandwidth					
		1.4 MHz	3 MHz	5 MHz	10 MHz	15 MHz	20 MHz
Power in Transmission Bandwidth Configuration	dBm	For carrier frequency $f \leq 3.0\text{GHz}$ : -25.7 For carrier frequency $3.0\text{GHz} < f \leq 4.2\text{GHz}$ : -26.0					
Note 1: The transmitter shall be set to 4dB below $P_{CMAX\_L}$ with $P_{CMAX\_L}$ as defined in clause 6.2.5.							
Note 2: Reference measurement channel is Annex A.3.2 64QAM R=3/4variant with one sided dynamic OCNG Pattern OP.1 FDD/TDD as described in Annex A.5.1.1/A.5.2.1.							

## 7.4B Maximum input level for UL-MIMO

### 7.4B.1 Test purpose

Maximum input level tests the ability of UE that support UL- MIMO to receive data with a given average throughput for a specified reference measurement channel, under conditions of high signal level, ideal propagation and no added noise.

A UE unable to meet the throughput requirement under these conditions will decrease the coverage area near to an e-NodeB.

### 7.4B.2 Test applicability

This test applies to all types of E-UTRA UE release 10 and forward that support UL- MIMO.

### 7.4B.3 Minimum conformance requirements

For UE with two transmitter antenna connectors in closed-loop spatial multiplexing, the minimum requirements in Clause 7.4.3 shall be met with the UL-MIMO configurations specified in Table 6.2.2B.3-2. For UL-MIMO, the parameter  $P_{\text{CMAX}_L}$  is defined as the total transmitter power over the two transmit antenna connectors.

The normative reference for this requirement is TS 36.101 [2] clause 7.4.1B.

### 7.4B.4 Test description

#### 7.4B.4.1 Initial conditions

Initial conditions are a set of test configurations the UE needs to be tested in and the steps for the SS to take with the UE to reach the correct measurement state.

The initial test configurations consist of environmental conditions, test frequencies, and channel bandwidths based on E-UTRA bands specified in table 5.4.2.1-1. All of these configurations shall be tested with applicable test parameters for each channel bandwidth, and are shown in table 7.4B.4.1-1. The details of the uplink and downlink reference measurement channels (RMCs) are specified in Annexes A.2 and A.3 respectively. The details of the OCNG patterns used are specified in Annex A.5. Configurations of PDSCH and PDCCH before measurement are specified in Annex C.2.

**Table 7.4B.4.1-1: Test Configuration Table**

Initial Conditions							
Test Environment as specified in TS 36.508[7] subclause 4.1				NC			
Test Frequencies as specified in TS36.508 [7] subclause 4.3.1				Mid range			
Test Channel Bandwidths as specified in TS 36.508 [7] subclause 4.3.1				Lowest, 5MHz, Highest			
Test Parameters for Channel Bandwidths							
Ch BW	Downlink Configuration			Uplink Configuration			UE Category
	Mod'n	RB allocation		Mod'n	RB allocation		
		FDD	TDD		FDD	TDD	
1.4MHz	64-QAM	6	6	QPSK	5	5	1-5
3MHz	64-QAM	15	15	QPSK	4	4	1-5
5MHz	64-QAM	25	25	QPSK	8	8	2-5
5MHz	64-QAM	25	N/A	QPSK	5 <sup>3</sup>	N/A	2-5
5MHz	64-QAM	18	18	QPSK	8	8	1
5MHz	64-QAM	18	N/A	QPSK	5 <sup>3</sup>	N/A	1
10MHz	64-QAM	50	50	QPSK	12	12	2-5
10MHz	64-QAM	17	17	QPSK	12	12	1
15MHz	64-QAM	75	75	QPSK	16	16	2-5
15MHz	64-QAM	17	17	QPSK	16	16	1
20MHz	64-QAM	100	100	QPSK	18	18	3-5
20MHz	64-QAM	83	83	QPSK	18	18	2
20MHz	64-QAM	17	17	QPSK	18	18	1
Note 1: Test Channel Bandwidths are checked separately for each E-UTRA band. The applicable channel bandwidths are specified in Table 7.3.3-2. Note 2: For the DL signal one sided dynamic OCNG Pattern OP.1 FDD/TDD is used. Note 3: Applicable only to E-UTRA FDD Band 31. The UL resource blocks shall be located at RBstart 10 (according to Table 7.3.3-2).							

1. Connect the SS to the UE antenna connectors as shown in TS 36.508 [7] Figure A.28.
2. The parameter settings for the cell are set up according to TS 36.508 [7] subclause 4.4.3.
3. Downlink signals are initially set up according to Annex C0, C.1 and C.3.1, and uplink signals according to Annex H.1 and H.3.1.
4. The UL and DL Reference Measurement channels are set according to Table 7.4B.4.1-1.
5. Propagation conditions are set according to Annex B.0.

6. Ensure the UE is in State 3A-RF according to TS 36.508 [7] clause 5.2A.2. Message contents are defined in clause 7.4B.4.3.

### 7.4B.4.2 Test procedure

1. SS transmits PDSCH via PDCCH DCI format 1A for C\_RNTI to transmit the DL RMC according to Table 7.4B.4.1-1. The SS sends downlink MAC padding bits on the DL RMC.
2. SS sends uplink scheduling information for each UL HARQ process via PDCCH DCI format 4 for C\_RNTI to schedule the UL RMC according to Table 7.4B.4.1-1. Since the UE has no payload data to send, the UE transmits uplink MAC padding bits on the UL RMC.
3. Set the Downlink signal level to the value defined in Table 7.4B.5-1. Send Uplink power control commands to the UE (less or equal to 1dB step size should be used), to ensure that the UE output power is within +0, - 3.4 dB of the target level in Table 7.4B.5-1 for carrier frequency  $f \leq 3.0\text{GHz}$  or within +0, -4.0 dB of the target level for carrier frequency  $3.0\text{GHz} < f \leq 4.2\text{GHz}$ , for at least the duration of the throughput measurement.
4. Measure the average throughput for a duration sufficient to achieve statistical significance according to Annex G.2.

### 7.4B.4.3 Message contents

Message contents are according to TS 36.508 [7] clause 4.6 with the following exception.

**Table 7.4B.4.3-1: UplinkPowerControlDedicated**

Derivation Path: 36.331 clause 6.3.2			
Information Element	Value/remark	Comment	Condition
UplinkPowerControlDedicated-DEFAULT ::= SEQUENCE {			
p0-UePUSCH	0		
deltaMCS-Enabled	en0		
accumulationEnabled	TRUE		
p0-uePUCCH	0		
pSRS-Offset	3 (-6 dB)		
filterCoefficient	fc8	larger filter length is used to reduce the RSRP measurement variation	
}			

### 7.4B.5 Test requirement

The throughput shall be  $\geq 95\%$  of the maximum throughput of the reference measurement channels as specified in Annex A.3.2 with parameters specified in Table 7.4B.5-1.

**Table 7.4B.5-1: Maximum input level**

Rx Parameter	Units	Channel bandwidth					
		1.4 MHz	3MHz	5MHz	10 MHz	15 MHz	20 MHz
Power in Transmission Bandwidth Configuration	dBm	For carrier frequency $f \leq 3.0\text{GHz}$ : -25.7 For carrier frequency $3.0\text{GHz} < f \leq 4.2\text{GHz}$ : -26.0					
Note 1:	The transmitter shall be set to 4dB below $P_{\text{CMAX\_L}}$ at the minimum uplink configuration specified in Table 7.3.1-2 with $P_{\text{CMAX\_L}}$ as defined in clause 6.2.5.						
Note 2:	Reference measurement channel is Annex A.3.2: 64QAM, R=3/4 variant with one sided dynamic OCNG Pattern OP.1 FDD/TDD as described in Annex A.5.1.1/A.5.2.1.						

## 7.4C

### 7.4D Maximum input level for ProSe

#### 7.4D.0 Minimum conformance requirements

The throughput shall be  $\geq 95\%$  of the maximum throughput of the reference measurement channels as specified in Annex A.6.2 with parameters specified in Table 7.4D.0-1.

**Table 7.4D.0-1: Maximum input level**

Rx Parameter	Units	Channel bandwidth					
		1.4 MHz	3 MHz	5 MHz	10 MHz	15 MHz	20 MHz
Power in Transmission Bandwidth Configuration	dBm	-22					

The normative reference for this requirement is TS 36.101 clause 7.4.1D.

#### 7.4D.1 Maximum input level for ProSe Direct Discovery

**Editor's note: This test case is not complete. Following aspects are either missing or not yet determined:**

- ProSe UE authentication is not handled in the test case and is still under investigation.
- Use of OCNG for Downlink has not been considered and is still FFS.
- Message exceptions content needs further investigation (some values still TBD).
- Test time is FFS.
- Test system uncertainties and test tolerances.

##### 7.4D.1.1 Test purpose

Verify the UE's ability to receive ProSe Discovery data with a given average throughput for a specified reference measurement channel, under conditions of high signal level, ideal propagation and no added noise.

##### 7.4D.1.2 Test applicability

This test case applies to all types of E-UTRA UE release 12 and forward which support ProSe Direct Discovery, but not ProSe Direct Communication.

##### 7.4D.1.3 Minimum conformance requirements

The minimum conformance requirements are defined in clause TS 36.101 [2] 7.4D.0.

##### 7.4D.1.4 Test description

###### 7.4D.1.4.1 Initial conditions

Initial conditions are a set of test configurations the UE needs to be tested in and the steps for the SS to take with the UE to reach the correct measurement state.

The initial test configurations consist of environmental conditions, test frequencies, and channel bandwidths based on E-UTRA ProSe bands specified in table 5.4.2D.1-1. All of these configurations shall be tested with applicable test parameters for each channel bandwidth, and are shown in table 7.4D.1.4.1-1. The details of the downlink, uplink and sidelink reference measurement channels (RMCs) are specified in Annexes A.2, A.3 and A.6.

Table 7.4D.1.4.1-1: Test Configuration Table

Initial Conditions							
Test Environment as specified in TS 36.508[7] subclause 4.1			NC				
Test Frequencies as specified in TS36.508 [7] subclause 4.3.1			Mid range				
Test Channel Bandwidths as specified in TS 36.508 [7] subclause 4.3.1			5MHz, Highest				
		Downlink Configuration (Note 2)		Uplink Configuration (Note 2)		Sidelink Configuration (Reception) (Note 3)	
Ch BW	Mod'n	RB allocation	Mod'n	RB allocation	Mod'n	RB allocation	
5MHz	QPSK	0	QPSK	0	QPSK	2	
10MHz	QPSK	0	QPSK	0	QPSK	2	
15MHz	QPSK	0	QPSK	0	QPSK	2	
20MHz	QPSK	0	QPSK	0	QPSK	2	
Note 1: Test Channel Bandwidths are checked separately for each E-UTRA ProSe and Operating band, according to the applicability specified respectively in Table 5.4.2D.1-1 and Table 5.4.2.1-1.							
Note 2: The RB start for the transmission of Sidelink RMC is RB#0.							

1. Connect the SS to the UE antenna connectors as shown in TS 36.508 [7] Annex A, Figure A.67.
2. The parameter settings for the cell are set up according to TS 36.508 [7] subclause 4.4.3.
3. Downlink signals are initially set up according to Annex C0, C.1 and C.3.1, and uplink signals according to Annex H.1 and H.3.1.
4. The UL and DL Reference Measurement channels are set according to Table 7.4D.1.4.1-1.
5. Propagation conditions are set according to Annex B.0.
6. Ensure the UE is in State 2A-RF according to TS 36.508 [7] clause 5.2A.1A. Message contents exceptions are defined in clause 7.4D.1.4.3.
7. SS continues with the generic procedures described in TS 36.508 [7] clause 4.5.3A.3 and 4.5.4.3 and ensures the UE is in State 4 according to TS 36.508 [7] clause 4.5.4 and the UE test loop Mode D is activated.

#### 7.4D.1.4.2 Test procedure

1. SS shall transmit an RRCConnectionReconfiguration message to configure DRX. Message contents exceptions (only those marked with "...Step 1...") are defined in clause 7.4D.1.4.3.
2. The UE shall transmit RRCConnectionReconfigurationComplete message.
3. Initialise the variables  $P_{tot}$  and  $P_{ok}$  as 0.
4. SS transmits PDSCH via PDCCH DCI format 1A for  $C_{RNTI}$  to transmit the DL RMC according to Table 7.4D.1.4.1-1. The SS sends downlink MAC padding bits on the DL RMC.
5. SS sends uplink scheduling information via PDCCH DCI format 0 for  $C_{RNTI}$  to schedule the UL RMC according to Table 7.4D.1.4.1-1. When the UE has no payload data to send, it transmits uplink MAC padding bits on the UL RMC.
6. SS transmits PSDCH to transmit the SL RMC according to Table 7.4D.1.4.1-1. Set the Sidelink signal level to the value defined in Table 7.4D.1.5-1.
7. SS shall send SL Discovery Packets (MAC padding bits) on the SL RMC for the test time [FFS]. SS stores the number of the transmitted Discovery Packets in the current test iteration in the variable  $P_{tot}$ .
8. SS shall send (on the available PDSCH) a "UE TEST LOOP PROSE MODE D SIDELINK DIRECT DISCOVERY PACKET COUNTER REQUEST" message and wait for the UE to respond (on the available

PUSCH) with a “UE TEST LOOP PROSE MODE D SIDELINK DIRECT DISCOVERY PACKET COUNTER RESPONSE”.

9. SS calculates the variable  $P_{ok}$  as (current counter value - counter value at last test iteration).

10. SS shall compute the throughput as following:

$$TP = P_{ok} / P_{tot} * 100\%$$

#### 7.4D.1.4.3 Message contents

Message contents are according to TS 36.508 [7] clauses TBD with following exceptions:

- Table A.7.1.1-1 for FDD
- Table A.7.1.2-1 for TDD

#### Table 7.4D.1.4.3-1: ACTIVATE TEST MODE: Maximum input level for ProSe Direct Discovery

Derivation Path: 36.508 [7], Table 4.7A-1, condition UE TEST LOOP MODE D

#### Table 7.4D.1.4.3-2: CLOSE UE TEST LOOP: Maximum input level for ProSe Direct Discovery

Derivation Path: 36.508 [7], Table 4.7A-3, condition UE TEST LOOP MODE D

#### Table 7.4D.1.4.3-3: MAC-MainConfig-RBC: Maximum input level for ProSe Direct Discovery (applicable only for Step 1 of Test procedure)

sf2560	0		
}			
shortDRX	Not present		
}			
}			
timeAlignmentTimerDedicated	TBD		
}			

#### 7.4D.1.5 Test requirement

The throughput shall be  $\geq 95\%$  of the maximum throughput of the reference measurement channels as specified in Annexes A.6.2 with parameters specified in Table 7.4D.1.5-1.

#### Table 7.4D.1.5-1: Maximum input level for ProSe Direct Discovery

Rx Parameter	Units	Channel bandwidth					
		1.4 MHz	3 MHz	5 MHz	10 MHz	15 MHz	20 MHz
Power in Transmission Bandwidth Configuration	dBm	-22 – TT					

## 7.4D.2 Maximum input level for ProSe Direct Communication

Editor's note: This test case is not complete. Following aspects are either missing or not yet determined:

- Many clauses are TBD

### 7.4D.2.1 Test purpose

Verify the UE's ability to receive ProSe Communication data with a given average throughput for a specified reference measurement channel, under conditions of high signal level, ideal propagation and no added noise.

### 7.4D.2.2 Test applicability

This test case applies to all types of E-UTRA UE release 12 and forward which support ProSe Direct Communication.

### 7.4D.2.3 Minimum conformance requirements

The minimum conformance requirements are defined in TS 36.101 [2] clause 7.4D.0.

### 7.4D.2.4 Test description

TBD

#### 7.4D.2.4.1 Initial conditions

TBD

#### 7.4D.2.4.2 Test procedure

TBD

#### 7.4D.2.4.3 Message contents

TBD

### 7.4D.2.5 Test requirements

TBD

## 7.4E Maximum input level for UE category 0

### 7.4E.1 Test purpose

Same test purpose as in clause 7.4.1.

### 7.4E.2 Test applicability

This test applies to all types of E-UTRA UE release 12 and forward of UE category 0.

### 7.4E.3 Minimum conformance requirements

Same minimum conformance requirements as in clause 7.4.3.

### 7.4E.4 Test description

#### 7.4E.4.1 Initial conditions

Same initial conditions as in clause 7.4.4.1 with the following exceptions:

- Instead of Table 7.4.4.1-1 → use Table 7.4E.4.1-1.
- Connect the SS to the UE antenna connectors as shown in TS 36.508[7] Annex A Figure A.3 using only main UE Tx/Rx antenna.

Table 7.4E.4.1-1: Test Configuration Table

Initial Conditions							
Test Environment as specified in TS 36.508 [7] clause 4.1				NC			
Test Frequencies as specified in TS 36.508 [7] clause 4.3.1				Mid range			
Test Channel Bandwidths as specified in TS 36.508 [7] clause 4.3.1				Lowest, 5MHz, Highest			
Test Parameters for Channel Bandwidths							
Ch BW	Downlink Configuration			Uplink Configuration			UE Category
	Mod'n	RB allocation		Mod'n	RB allocation		
		FDD and HD-FDD	TDD		FDD and HD-FDD	TDD	
1.4MHz	64QAM	2	2	QPSK	6	6	0
3MHz	64QAM	2	2	QPSK	15	15	0
5MHz	64QAM	2	2	QPSK	25	25	0
5MHz	64QAM	2	N/A	QPSK	20	N/A	0
10MHz	64QAM	2	2	QPSK	36	36	0
10MHz	64QAM	2	N/A	QPSK	25	N/A	0
10MHz	64QAM	2	N/A	QPSK	20	N/A	0
15MHz	64QAM	2	2	QPSK	36	36	0
20MHz	64QAM	2	2	QPSK	36	36	0
Note 1: Test Channel Bandwidths are checked separately for each E-UTRA band. The applicable channel bandwidths are specified in Table 5.4.2.1-1. Note 2: Depending on E-UTRA band, only the appropriate Uplink RB allocation value according to table 7.3E.3-3 is tested per Test Channel Bandwidth. The allocation shall be located as close as possible to the downlink operating band but confined within the transmission bandwidth configuration for the channel bandwidth (Table 5.4.2-1). Note 3: For the DL signal one sided dynamic OCNG Pattern OP.1 FDD/TDD is used. Note 4: Downlink RB position shall be $RB_{start} = 0$							

#### 7.4E.4.2 Test procedure

Same test procedure as in clause 7.4.4.2.

#### 7.4E.4.3 Message contents

Same message contents as in clause 7.4.4.3.7.4E.5 Test requirement

The throughput shall be  $\geq 95\%$  of the maximum throughput of the reference measurement channels as specified in Annex A.3.2 with parameters specified in Table 7.4E.5-1.

Table 7.4E.5-1: Maximum input level

Rx Parameter	Units	Channel bandwidth					
		1.4 MHz	3 MHz	5 MHz	10 MHz	15 MHz	20 MHz
Power in Transmission Bandwidth Configuration	dBm	For carrier frequency $f \leq 3.0\text{GHz}$ : -25.7 For carrier frequency $3.0\text{GHz} < f \leq 4.2\text{GHz}$ : -26.0					
Note 1: The transmitter shall be set to 4dB below $P_{CMAX\_L}$ with $P_{CMAX\_L}$ as defined in clause 6.2.5.							
Note 2: Reference measurement channel is Annex A.3.2 64QAM R=3/4 variant with one sided dynamic OCNG Pattern OP.1 FDD/TDD as described in Annex A.5.1.1/A.5.2.1.							

### 7.4EA Maximum input level for UE category M1

*Editor's note: This clause is incomplete. The following aspects are either missing or not yet determined:*

- *Minimum requirements in TS36.101 are using wrong RMC for Category M1 & 16QAM RMC Table is needed in Section A.3.2.*

## 7.4EA.1 Test purpose

Maximum input level tests the ability of category M1 UE to receive data with a given average throughput for a specified reference measurement channel, under conditions of high signal level, ideal propagation and no added noise.

A UE unable to meet the throughput requirement under these conditions will decrease the coverage area near to an e-NodeB.

## 7.4EA.2 Test applicability

This test applies to all types of E-UTRA UE release 13 and forward of UE category M1.

## 7.4EA.3 Minimum conformance requirements

Maximum input level is defined as the maximum mean power received at the UE antenna port, at which the specified relative throughput shall meet or exceed the minimum requirements for the specified reference measurement channel.

The throughput shall be  $\geq 95\%$  of the maximum throughput of the reference measurement channels as specified in Annexes A.2.2, A.2.3 and A.3.2 (with one sided dynamic OCNG Pattern OP.1 FDD/TDD as described in Annex A.5.1.1/A.5.2.1) with parameters specified in Table 7.4EA.3-1. For operating bands with an unpaired DL part (as noted in Table 5.2-1), the requirements only apply for carriers assigned in the paired part.

**Table 7.4EA.3-1: Maximum input level**

Rx Parameter	Units	Channel bandwidth					
		1.4 MHz	3 MHz	5 MHz	10 MHz	15 MHz	20 MHz
Power in Transmission Bandwidth Configuration	dBm	$-25^2$					
		$-27^3$					
NOTE 1: The transmitter shall be set to 4dB below $P_{\text{CMAX\_L}}$ at the minimum uplink configuration specified in Table 7.3.1-2 with $P_{\text{CMAX\_L}}$ as defined in subclause 6.2.5.							
NOTE 2: Reference measurement channel is Annex A.3.2: 64QAM, R=3/4 variant with one sided dynamic OCNG Pattern OP.1 FDD/TDD as described in Annex A.5.1.1/A.5.2.1.							
NOTE 3: Reference measurement channel is Annex A.3.2: 256QAM, R=4/5 variant with one sided dynamic OCNG Pattern OP.1 FDD/TDD as described in Annex A.5.1.1/A.5.2.1.							

The normative reference for this requirement is TS 36.101 [2] clause 7.4.1.

## 7.4EA.4 Test description

### 7.4EA.4.1 Initial conditions

Initial conditions are a set of test configurations the UE needs to be tested in and the steps for the SS to take with the UE to reach the correct measurement state.

The initial test configurations consist of environmental conditions, test frequencies, and channel bandwidths based on E-UTRA operating bands defined for CAT M1 in clause 5.2E. All of these configurations shall be tested with applicable test parameters for each channel bandwidth, and are shown in table 7.4EA.4.1-1. The details of the uplink and downlink reference measurement channels (RMCs) are specified in Annexes A.2 and A.3 respectively. The details of the OCNG patterns used are specified in Annex A.5. Configurations of PDSCH and MPDCCH before measurement are specified in Annex C.2.

**Table 7.4EA.4.1-1: Test Configuration Table RX test cases UE Cat-M1**

Initial Conditions							
Test Environment as specified in TS 36.508[7] clause 4.1				NC			
Test Frequencies as specified in TS36.508 [7] clause 4.3.1				Mid range			
Test Channel Bandwidths as specified in TS 36.508 [7] clause 4.3.1				5MHz			
Test Parameters for Channel Bandwidths and Narrowband positions							
Downlink Configuration				Uplink Configuration			UE Category
Ch BW	Mod'n	RB allocation		Mod'n	RB allocation		
		FDD and HD-FDD	TDD		FDD and HD-FDD	TDD	
5MHz	16QAM	4	4	QPSK	6	6	M1
Note 1: Downlink RB position shall be $RB_{start} = 0$ within the narrowband							
Note 2: The Narrowband index (TS36.211, 5.2.4) shall be set to 0 for all testpoints.							

1. Connect the SS to the UE antenna connectors as shown in TS 36.508[7] Annex A Figure A.3 using only main UE Tx/Rx antenna.
2. The parameter settings for the cell are set up according to TS 36.508 [7] subclause 4.4.3.
3. Downlink signals are initially set up according to Annex C0, C.1 and C.3.1, and uplink signals according to Annex H.1 and H.3.1.
4. The UL and DL Reference Measurement channels are set according to Table 7.4EA.4.1-1.
5. Propagation conditions are set according to Annex B.0.
6. Ensure the UE is in State 3A-RF-CE according to TS 36.508 [7] clause 5.2A.2AA. Message contents are defined in clause 7.4EA.4.3.

**7.4EA.4.2 Test procedure**

1. SS transmits PDSCH via M-PDCCH DCI format 6-1A for C\_RNTI to transmit the DL RMC according to Table 7.4EA.4.1-1. The SS sends downlink MAC padding bits on the DL RMC.
2. SS sends uplink scheduling information for each UL HARQ process via M-PDCCH DCI format 0 for C\_RNTI to schedule the UL RMC according to Table 7.4EA.4.1-1. Since the UE has no payload data to send, the UE transmits uplink MAC padding bits on the UL RMC.
3. Set the Downlink signal level to the value defined in Table 7.4EA.5-1. Send Uplink power control commands to the UE (less or equal to 1dB step size should be used), to ensure that the UE output power is within +0, - 3.4 dB of the target level in Table 7.4EA.5-1 for carrier frequency  $f \leq 3.0\text{GHz}$  or within +0, -4.0 dB of the target level for carrier frequency  $3.0\text{GHz} < f \leq 4.2\text{GHz}$ , for at least the duration of the Throughput measurement.
4. **Measure the average throughput for a duration sufficient to achieve statistical significance according to Annex G.2.7.4EA.4.3 Message contents**
  - Same message contents as in clause 7.4.4.3.

**7.4EA.5 Test requirement**

The throughput shall be  $\geq 95\%$  of the maximum throughput of the reference measurement channels as specified in Annex A.2.2, A.2.3 and A.3.2 with parameters specified in Table 7.4EA.5-1.

**Table 7.4EA.5-1: Maximum input level**

Rx Parameter	Units	Channel bandwidth
		5 MHz

Power in Transmission Bandwidth Configuration	dBm	For carrier frequency $f \leq 3.0\text{GHz}$ : -25.7 For carrier frequency $3.0\text{GHz} < f \leq 4.2\text{GHz}$ : -26.0
Note 1:	The transmitter shall be set to 4dB below $P_{\text{CMAX\_L}}$ with $P_{\text{CMAX\_L}}$ as defined in clause 6.2.5.	
Note 2:	Reference measurement channel is Annex A.3.2 64QAM R=3/4 variant with one sided dynamic OCNG Pattern OP.1 FDD/TDD as described in Annex A.5.1.1/A.5.2.1.	

## 7.4F Maximum input level for UE category NB1

Editor's note: This clause is incomplete, the following items are TBD

- NPDSCH and NPDCCH before measurement need to be defined in Annex C.
- Parameter settings for the cell set up need to be introduced in TS 36.508
- Downlink signals and uplink signals need to be introduced in Annex
- NB-IoT UE Test State TBC.
- Parameters to configure power for NPUSCH TBC. (Proposed values: p-Max = Not present, p0-NominalNPUSCH-r13 = -85 dBm, p0-UE-NPUSCH-r13 = 0 dBm, nrs-Power-r13 = 44 dBm).
- Applicability of Annex G.2 TBC

### 7.4F.1 Test Purpose

Maximum input level tests the UE's ability to receive data with a given average throughput for a specified reference measurement channel, under conditions of high signal level, ideal propagation and no added noise.

A UE unable to meet the throughput requirement under these conditions will decrease the coverage area near to an e-NodeB.

### 7.4F.2 Test Applicability

This test applies to all types of UE release 13 and forward of UE category NB1.

### 7.4F.3 Minimum Conformance Requirements

Maximum input level is defined as the maximum mean power received at the UE antenna port, at which the specified relative throughput shall meet or exceed the minimum requirements for the specified reference measurement channel.

Category NB1 UE maximum input level requirement is – 25 dBm. For this input level the throughput shall be  $\geq 95\%$  of the maximum throughput of the reference measurement channel as specified in Annex A.3.2.

The normative reference for this requirement is TS 36.101 clause 7.4F.

### 7.4F.4 Test Description

#### 7.4F.4.1 Initial Conditions

Initial conditions are a set of test configurations the UE needs to be tested in and the steps for the SS to take with the UE to reach the correct measurement state.

The initial test configurations consist of environmental conditions and test frequencies based on the set of E-UTRA operating bands defined for NB-IoT in clause 5.2.F. All of these configurations shall be tested with applicable test parameters, and are shown in table 7.4F.4.1-1. The details of the uplink and downlink reference measurement channels (RMCs) are specified in Annexes A.2 and A.3 respectively. Configurations of NPDSCH and NPDCCH before measurement are specified in Annex C.2.

**Table 7.4F.4.1-1: Test Configuration Table**

Initial Conditions					
Test Environment as specified in TS 36.508 [7] clause [X.4.1]			NC		
Test Frequencies as specified in TS36.508 [7] clause [X.3.1]			Mid-range		
Configuration ID	Downlink Configuration		Uplink Configuration		
	Modulation	Subcarriers	Modulation	N <sub>tones</sub>	Subcarrier spacing
1	QPSK	12	BPSK	1@0	15kHz

1. Connect the SS to the UE antenna connectors as shown in TS 36.508[7] Annex A Figure A.3 using only the main UE Tx/Rx antenna.
2. The parameter settings for the cell are set up according to TS 36.508 [7] subclause [FFS].
3. Downlink signals are initially set up according to Annex [C0, C1 and C.3.0], and NPUSCH Format 2 is used to carry ACK/NACK on the uplink..
4. The DL Reference Measurement channels are set according to Table 7.4F.4.1-1.
5. Propagation conditions are set according to Annex B.0.
6. Ensure the UE is in State [3aA-NB] according to TS 36.508 [7] clause [X.5]. Message contents are defined in clause 7.4F.4.3.

#### 7.4F.4.2 Test Procedure

4. SS transmits NPDSCH via NPDCCH DCI format N1 for C\_RNTI to transmit the DL RMC according to Table 7.4F.4.1-1. The SS sends downlink MAC padding bits on the DL RMC. The UE will send the HARQ feedback based on information contain in DCI format N1.
5. Set the Downlink signal level to the value defined in Table 7.4F.5-1.
6. .Measure the average throughput for a duration sufficient to achieve statistical significance according to [Annex G2].

#### 7.4F.4.3 Message Contents

Message contents are according to TS 36.508 [7] clause [X.6].

#### 7.4F.5 Test requirement

The throughput shall be  $\geq 95\%$  of the maximum throughput of the reference measurement channels as specified in Annex A.3.2 with parameters specified in Table 7.4F.5-1.

**Table 7.4F.5-1: Maximum input level for UE category NB1**

Rx Parameter	Units	Maximum input level test requirement
Power in Transmission Bandwidth Configuration	dBm	For carrier frequency $f \leq 3.0\text{GHz}$ : -25.7

## 7.5 Adjacent Channel Selectivity (ACS)

### 7.5.1 Test purpose

Adjacent channel selectivity tests the UE's ability to receive data with a given average throughput for a specified reference measurement channel, in the presence of an adjacent channel signal at a given frequency offset from the centre frequency of the assigned channel, under conditions of ideal propagation and no added noise.

A UE unable to meet the throughput requirement under these conditions will decrease the coverage area when other e-NodeB transmitters exist in the adjacent channel.

## 7.5.2 Test applicability

This test applies to all types of E-UTRA UE release 8 and forward.

## 7.5.3 Minimum conformance requirements

Adjacent Channel Selectivity (ACS) is a measure of a receiver's ability to receive an E-UTRA signal at its assigned channel frequency in the presence of an adjacent channel signal at a given frequency offset from the centre frequency of the assigned channel. ACS is the ratio of the receive filter attenuation on the assigned channel frequency to the receive filter attenuation on the adjacent channel(s).

The UE shall fulfil the minimum requirement specified in Table 7.5.3-1 for all values of an adjacent channel interferer up to  $-25$  dBm. However it is not possible to directly measure the ACS, instead the lower and upper range of test parameters are chosen in Table 7.5.3-2 and Table 7.5.3-3 where the throughput  $R_{av}$  shall be  $\geq 95\%$  of the maximum throughput of the reference measurement channels as specified in Annexes A.2.2, A.2.3 and A.3.2 (with one sided dynamic OCNG Pattern OP.1 FDD/TDD for the DL-signal as described in Annex A.5.1.1/A.5.2.1). For operating bands with an unpaired DL part (as noted in Table 5.2-1), the requirements only apply for carriers assigned in the paired part.

**Table 7.5.3-1: Adjacent channel selectivity**

Rx Parameter	Units	Channel bandwidth					
		1.4 MHz	3 MHz	5 MHz	10 MHz	15 MHz	20 MHz
ACS	dB	33.0	33.0	33.0	33.0	30	27

**Table 7.5.3-2: Test parameters for Adjacent channel selectivity, Case 1**

Rx Parameter	Units	Channel bandwidth					
		1.4 MHz	3 MHz	5 MHz	10 MHz	15 MHz	20 MHz
Power in Transmission Bandwidth Configuration	dBm	REFSENS + 14 dB					
$P_{\text{Interferer}}$	dBm	REFSENS +45.5dB	REFSENS +45.5dB	REFSENS +45.5dB	REFSENS +45.5dB	REFSENS +42.5dB	REFSENS +39.5dB

$F_{\text{Interferer}}$ (offset)	MHz	1.4+0.0025 / -1.4-0.0025	3+0.0075 / -3-0.0075	5+0.0025 / -5-0.0025	7.5+0.0075 / -7.5-0.0075	10+0.0125 / -10-0.0125	12.5+0.0025 / 5 / -12.5-0.0025
Note 1:	The transmitter shall be set to 4dB below $P_{\text{CMAX\_L}}$ at the minimum uplink configuration specified in Table 7.3.3-2 with $P_{\text{CMAX\_L}}$ as defined in clause 6.2.5.						
Note 2:	The interferer consists of the Reference measurement channel specified in Annex A.3.2 with one sided dynamic OCNG Pattern OP.1 FDD/TDD as described in Annex A.5.1.1/A.5.2.1 and set-up according to Annex C.3.1.						
Note 3:	The REFSENS power level is specified in Table 7.3.3-1 and Table 7.3.3-1a for two and four antenna ports, respectively.						

**Table 7.5.3-3: Test parameters for Adjacent channel selectivity, Case 2**

Rx Parameter	Units	Channel bandwidth					
		1.4 MHz	3 MHz	5 MHz	10 MHz	15 MHz	20 MHz

Power in Transmission Bandwidth Configuration	dBm	-56.5	-56.5	-56.5	-56.5	-53.5	-50.5
$P_{\text{Interferer}}$	dBm	-25					
$BW_{\text{Interferer}}$	MHz	1.4	3	5	5	5	5
$F_{\text{Interferer}}$ (offset)	MHz	<b>1.4+0.0025</b> / -1.4- 0.0025	<b>3+0.0075</b> / -3-0.0075	<b>5+0.0025</b> / -5-0.0025	<b>7.5+0.0075</b> / -7.5- 0.0075	<b>10+0.0125</b> / -10-0.0125	<b>12.5+0.0025</b> / -12.5- 0.0025
Note 1:	The transmitter shall be set to 24dB below $P_{\text{CMAX\_L}}$ at the minimum uplink configuration specified in Table 7.3.3-2 with $P_{\text{CMAX\_L}}$ as defined in clause 6.2.5.						
Note 2:	The interferer consists of the Reference measurement channel specified in Annex A.3.2 with one sided dynamic OCNG Pattern OP.1 FDD/TDD as described in Annex A.5.1.1/A.5.2.1 and set-up according to Annex C.3.1.						

The normative reference for this requirement is TS 36.101 [2] clause 7.5.1.

## 7.5.4 Test description

### 7.5.4.1 Initial conditions

Initial conditions are a set of test configurations the UE needs to be tested in and the steps for the SS to take with the UE to reach the correct measurement state.

The initial test configurations consist of environmental conditions, test frequencies, and channel bandwidths based on E-UTRA bands specified in table 5.4.2.1-1. All of these configurations shall be tested with applicable test parameters for each channel bandwidth, and are shown in table 7.5.4.1-1. The details of the uplink and downlink reference measurement channels (RMCs) are specified in Annexes A.2 and A.3 respectively. The details of the OCNG patterns used are specified in Annex A.5. Configurations of PDSCH and PDCCH before measurement are specified in Annex C.2.

Table 7.5.4.1-1: Test Configuration Table

Initial Conditions						
Test Environment as specified in TS 36.508[7] clause 4.1				NC		
Test Frequencies as specified in TS36.508 [7] clause 4.3.1				Mid range		
Test Channel Bandwidths as specified in TS 36.508 [7] clause 4.3.				Lowest, 5MHz, Highest

20MHz	QPSK	100	100	QPSK	100	100
20MHz	QPSK	100	N/A	QPSK	75	N/A
20MHz	QPSK	100	N/A	QPSK	50	N/A
20MHz	QPSK	100	N/A	QPSK	25	N/A
20MHz	QPSK	100	N/A	QPSK	20	N/A
<p>Note 1: Test Channel Bandwidths are checked separately for each E-UTRA band, which applicable channel bandwidths are specified in Table 5.4.2.1-1.</p> <p>Note 2: Depending on E-UTRA band, only the appropriate Uplink RB allocation value according to table 7.3.3-2 is tested per Test Channel Bandwidth. The allocation shall be located as close as possible to the downlink operating band but confined within the transmission bandwidth configuration for the channel bandwidth (Table 5.4.2-1).</p> <p>Note 3: For the DL signal one sided dynamic OCNG Pattern OP.1 FDD/TDD is used.</p> <p>Note 4: Applicable only to E-UTRA FDD Band 31. The UL resource blocks shall be located at RBstart 10 (according to Table 7.3.3-2).</p>						

1. Connect the SS and interfering source to the UE antenna connectors as shown in TS 36.508 [7] Figure A.4.
2. The parameter settings for the cell are set up according to TS 36.508 [7] subclause 4.4.3.
3. Downlink signals are initially set up according to Annex C0, C.1 and C.3.1, and uplink signals according to Annex H.1 and H.3.1.
4. The UL and DL Reference Measurement channels are set according to Table 7.5.4.1-1.
5. Propagation conditions are set according to Annex B.0.
6. Ensure the UE is in State 3A-RF according to TS 36.508 [7] clause 5.2A.2. Message contents are defined in clause 7.5.4.3.

## 7.5.4.2 Test procedure

1. SS transmits PDSCH via PDCCH DCI format 1A for C\_RNTI to transmit the DL RMC according to Table 7.5.4.1-1. The SS sends downlink MAC padding bits on the DL RMC.
2. SS sends uplink scheduling information for each UL HARQ process via PDCCH DCI format 0 for C\_RNTI to schedule the UL RMC according to Table 7.5.4.1-1. Since the UE has no payload data to send, the UE transmits uplink MAC padding bits on the UL RMC.

3. Set the Downlink signal level to the value as defined in Table 7.5.5-2 (Case 1). Send Uplink power control commands to the UE (less or equal to 1dB step size should be used), to ensure that the UE output power is within +0, - 3.4 dB of the target level in Table 7.5.5-2 (Case 1) for carrier frequency  $f \leq 3.0\text{GHz}$  or within +0, -4.0 dB of the target level for carrier frequency  $3.0\text{GHz} < f \leq 4.2\text{GHz}$ , for at least the duration of the Throughput measurement.
4. Set the Interferer signal level to the value as defined in Table 7.5.5-2 (Case 1) and frequency below the wanted signal, using a modulated interferer bandwidth as defined in Annex D of the present document.
5. Measure the average throughput for a duration sufficient to achieve statistical significance according to Annex G.2.
6. Repeat steps from 3 to 5, using an interfering signal above the wanted signal in Case 1 at step 4.
7. Set the Downlink signal level to the value as defined in Table 7.5.5-3 (Case 2). Send Uplink power control commands to the UE (less or equal to 1dB step size should be used), to ensure that the UE output power is within +0, - 3.4 dB of the target level in Table 7.5.5-3 (Case 2) for carrier frequency  $f \leq 3.0\text{GHz}$  or within +0, -4.0 dB of the target level for carrier frequency  $3.0\text{GHz} < f \leq 4.2\text{GHz}$ , for at least the duration of the Throughput measurement.
8. Set the Interferer signal level to the value as defined in Table 7.5.5-3 (Case 2) and frequency below the wanted signal, using a modulated interferer bandwidth as defined in Annex D of the present document.
9. Measure the average throughput for a duration sufficient to achieve statistical significance according to Annex G.2.
10. Repeat steps from 7 to 9, using an interfering signal above the wanted signal in Case 2 at step 8.
11. Repeat for applicable channel bandwidths and operating band combinations in both Case 1 and Case 2.

### 7.5.4.3 Message contents

Message contents are according to TS 36.508 [7] subclause 4.6 with the following exception

$BW_{\text{Interferer}}$	MHz	1.4	3	5	5	5	5
$F_{\text{Interferer}}$ (offset)	MHz	1.4+0.0025 / -1.4- 0.0025	3+0.0075 / -3-0.0075	5+0.0025 / -5-0.0025	7.5+0.0075 / -7.5- 0.0075	10+0.0125 / -10-0.0125	12.5+0.002 5 / -12.5- 0.0025
Note 1: The transmitter shall be set to 24dB below $P_{\text{CMAX\_L}}$ with $P_{\text{CMAX\_L}}$ as defined in clause 6.2.5.							
Note 2: The interferer consists of the Reference measurement channel specified in Annex A.3.2 with one sided dynamic OCNG Pattern OP.1 FDD/TDD as described in Annex A.5.1.1/A.5.2.1 and set-up according to Annex C.3.1.							

## 7.5\_1 Adjacent Channel Selectivity (ACS) with 4 Rx antenna ports

Editor's notes: This clause is incomplete. The following aspects are either missing or not yet determined:

- Connection diagram is not determined (missing in 36.508).

### 7.5\_1.1 Test purpose

Same test purpose as in clause 7.5.1.

### 7.5\_1.2 Test applicability

This test applies to all types of E-UTRA UE release 10 and forward that supports 4 Rx antenna ports.

### 7.5\_1.3 Minimum conformance requirements

Same minimum conformance requirements as in clause 7.5.3.

## 7.5\_1.4 Test description

### 7.5.4\_1.1 Initial conditions

Same as in clause 7.5.4.1 with following exceptions:

- Instead of Table 7.5.4.1-1 → use Table 7.5\_1.4.1-1.
- Instead of Figure A.4 → use Figure TBD.

**Table 7.5\_1.4.1-1: Test Configuration Table**

Initial Conditions						
Test Environment as specified in TS 36.508[7] subclause 4.1				NC		
Test Frequencies as specified in TS36.508 [7] subclause 4.3.1				Mid range		
Test Channel Bandwidths as specified in TS 36.508 [7] subclause 4.3.1				Lowest, 5MHz, Highest		
Test Parameters for Channel Bandwidths						
Ch BW	Downlink Configuration			Uplink Configuration		
	Mod'n	RB allocation		Mod'n	RB allocation	
		FDD	TDD		FDD	TDD
1.4MHz	QPSK	6	N/A	QPSK	6	N/A
3MHz	QPSK	15	N/A	QPSK	15	N/A
5MHz	QPSK	25	N/A	QPSK	25	N/A
10MHz	QPSK	50	N/A	QPSK	50	N/A

20MHz	QPSK	100	N/A	QPSK	50	N/A
20MHz	QPSK	100	N/A	QPSK	20	N/A
Note 1: Test Channel Bandwidths are checked separately for each E-UTRA band, which applicable channel bandwidths are specified in Table 5.4.2.1-1. Note 2: Depending on E-UTRA band, only the appropriate Uplink RB allocation value according to table 7.3.3-2 is tested per Test Channel Bandwidth. The allocation shall be located as close as possible to the downlink operating band but confined within the transmission bandwidth configuration for the channel bandwidth (Table 5.4.2-1). Note 3: For the DL signal one sided dynamic OCNB Pattern OP.1 FDD/TDD is used.						

### 7.5\_1.4.2 Test procedure

Same as in clause 7.5.4.2 with following exceptions:

- Instead of Table 7.5.4.1-1 → use Table 7.5\_1.4.1-1.
- Instead of Table 7.5.5-2 → use Table 7.5\_1.5-2.
- Instead of Table 7.5.5-3 → use Table 7.5\_1.5-3.

### 7.5\_1.4.3 Message contents

Same as in clause 7.5.4.3.

### 7.5\_1.5 Test requirement

The throughput  $R_{av}$  shall be  $\geq 95\%$  of the maximum throughput of the reference measurement channels as specified in Annex A.3.2 under the conditions specified in table 7.5\_1.5-2, and also under the conditions specified in table 7.5\_1.5-3.

## 7.5A Adjacent Channel Selectivity (ACS) for CA

### 7.5A.0 Minimum conformance requirements

For inter-band carrier aggregation with one component carrier per operating band and the uplink assigned to one E-UTRA band, the adjacent channel requirements are defined with the uplink active on the band(s) other than the band whose downlink is being tested. The UE shall meet the requirements specified in subclause 7.5.3 for each component carrier while all downlink carriers are active. For E-UTRA CA configurations including an operating band without uplink operation or an operating band with an unpaired DL part (as noted in Table 5.2-1), the requirements for all downlinks shall be met with the single uplink carrier active in each band capable of UL operation.

For E-UTRA CA configurations listed in Table 7.3A.0-1 under conditions for which reference sensitivity for the operating band being tested is N/A, the adjacent channel requirements of subclause 7.5A.0 do not apply.

For intra-band contiguous carrier aggregation the downlink SCC(s) shall be configured at nominal channel spacing to the PCC. For FDD, the PCC shall be configured closest to the uplink band. All downlink carriers shall be active throughout the test. The uplink output power shall be set as specified in Table 7.5A.0-2 or Table 7.5A.0-3 with the uplink configuration set according to Table 7.3A.0-2 for the applicable carrier aggregation configuration. For UE(s) supporting one uplink carrier, the uplink configuration of the PCC shall be in accordance with Table 7.3.3-2. The UE shall fulfil the minimum requirement specified in Table 7.5A.0-1 for an adjacent channel interferer on either side of the aggregated downlink signal at a specified frequency offset and for an interferer power up to -25 dBm. The throughput of each carrier shall be  $\geq 95\%$  of the maximum throughput of the reference measurement channels as specified in Annexes A.2.2, A.2.3 and A.3.2 (with one sided dynamic OCNG Pattern OP.1 FDD/TDD for the DL-signal as described in Annex A.5.1.1/A.5.2.1) with parameters specified in Tables 7.5A.0-2 and 7.5A.0-3. For operating bands with an unpaired DL part (as noted in Table 5.2-1), the requirements also apply for an SCC assigned in the unpaired part with parameters specified in Tables 7.5A.0-2 and 7.5A.0-3.

For intra-band non-contiguous carrier aggregation with one uplink carrier and two downlink sub-blocks, each larger than or equal to 5 MHz, the adjacent channel selectivity requirements are defined with the uplink configuration in accordance with Table 7.3A.0-3. For this uplink configuration, the UE shall meet the requirements for each sub-block as specified in subclauses 7.5.3 and 7.5A.0 for one component carrier and two component carriers per sub-block, respectively. The UE shall fulfil the minimum requirements all values of a single adjacent channel interferer in-gap and out-of-gap up to a -25 dBm interferer power while all downlink carriers are active. For the lower range of test parameters (Case 1), the interferer power  $P_{\text{interferer}}$  shall be set to the maximum of the levels given by the carriers of the respective sub-blocks as specified in Table 7.5.3-2 and Table 7.5A.0-2 for one component carrier and two component carriers per sub-block, respectively. The wanted signal power levels for the carriers of each sub-block shall then be adjusted relative to  $P_{\text{interferer}}$  in accordance with the ACS requirement for each sub-block (Table 7.5.3-1 and Table 7.5A.0-1). For the upper range of test parameters (Case 2) for which the interferer power  $P_{\text{interferer}}$  is -25 dBm (Table 7.5.3-3 and Table 7.5A.0-3) the wanted signal power levels for the carriers of each sub-block shall be adjusted relative to  $P_{\text{interferer}}$  like for Case 1.

**Table 7.5A.0-1: Adjacent channel selectivity**

Rx Parameter	Units	CA Bandwidth Class				
		B	C	D	E	F
ACS	dB	27	24	22.2	21

$BW_{\text{interferer}}$	MHz	5	5	5	5	
$F_{\text{interferer}}$ (offset)	MHz	$2.5 + F_{\text{offset}}$ / $-2.5 - F_{\text{offset}}$	$2.5 + F_{\text{offset}}$ / $-2.5 - F_{\text{offset}}$	$2.5 + F_{\text{offset}}$ / $-2.5 - F_{\text{offset}}$	$2.5 + F_{\text{offset}}$ / $-2.5 - F_{\text{offset}}$	
NOTE 1: The transmitter shall be set to 4dB below $P_{\text{CMAX,L}}$ or $P_{\text{CMAX,L,CA}}$ as defined in subclause 6.2.5A.						
NOTE 2: The interferer consists of the Reference measurement channel specified in Annex A.3.2 with one sided dynamic OCNG Pattern OP.1 FDD/TDD as described in Annex A.5.1.1/A.5.2.1 and set-up according to Annex C.3.1.						
NOTE 3: The $F_{\text{interferer}}$ (offset) is the frequency separation of the centre frequency of the carrier closest to the interferer and the centre frequency of the adjacent channel interferer and shall be further adjusted to $\lfloor F_{\text{interferer}} / 0.015 + 0.5 \rfloor 0.015 + 0.0075$ MHz to be offset from the sub-carrier raster.						

Table 7.5A.0-3: Test parameters for Adjacent channel selectivity, Case 2

Rx Parameter	Units	CA Bandwidth Class				
		B	C	D	E	F
P <sub>w</sub> in Transmission Bandwidth Configuration, per CC	dBm	-50.5 +10log <sub>10</sub> (N <sub>RB,∅</sub> /N <sub>RB agg</sub> )	-47.5 +10log <sub>10</sub> (N <sub>RB,∅</sub> /N <sub>RB agg</sub> )	-45.743.9 +10log <sub>10</sub> (N <sub>RB,∅</sub> /N <sub>RB agg</sub> )	-44.5 +10log <sub>10</sub> (N <sub>RB,∅</sub> /N <sub>RB agg</sub> ) 5	
P <sub>Interferer</sub>	dBm	-25				
BW <sub>Interferer</sub>	MHz	5	5	5	5	
F <sub>Interferer</sub> (offset)	MHz	2.5+ F <sub>offset</sub> / -2.5- F <sub>offset</sub>	2.5+ F <sub>offset</sub> / -2.5- F <sub>offset</sub>	2.5+ F <sub>offset</sub> / -2.5- F <sub>offset</sub>	2.5+ F <sub>offset</sub> / -2.5- F <sub>offset</sub>	
NOTE 1: The transmitter shall be set to 24dB below P <sub>CMAX_L</sub> or P <sub>CMAX_L_CA</sub> as defined in subclause 6.2.5A.						
NOTE 2: The interferer consists of the Reference measurement channel specified in Annex 3.2 with one sided dynamic OCNG Pattern OP.1 FDD/TDD as described in Annex A.5.1.1/A.5.2.1 and set-up according to Annex C.3.1						
NOTE 3: The F <sub>interferer</sub> (offset) is the frequency separation of the centre frequency of the carrier closest to the interferer and the centre frequency of the adjacent channel interferer and shall be further adjusted to $\lfloor \frac{F_{interferer}}{0.015} + 0.5 \rfloor 0.015 + 0.0075$ MHz to be offset from the sub-carrier raster.						

For combinations of intra-band and inter-band carrier aggregation with up to five downlink carriers (up to four non-contiguously aggregated carriers per band and up to four contiguously aggregated carriers per band) and one uplink carrier assigned to one E-UTRA band, the requirement is defined with the uplink active in each band other than that supporting the downlink(s) under test. The uplink configuration shall be in accordance with Table 7.3A.0-3 when the uplink is active in the band supporting two non-contiguous component carriers, Table 7.3A.0-2 when the uplink is active in a band supporting two contiguous component carriers and in accordance with Table 7.3.3-2 when the uplink is active in a band supporting one carrier per band. The downlink PCC shall be configured closer to the uplink operating band than the downlink SCC(s) when the uplink is active in band(s) supporting contiguous aggregation of up to four component carriers. For these uplink configurations, the UE shall meet the adjacent channel selectivity requirements for intra-band non-contiguous carrier aggregation of two downlink sub-blocks with  $\Delta R_{IBNC} = 0$  dB for all sub-block gaps (Table 7.3A.0-3) for the two non-contiguous downlink sub-blocks, the requirements for intra-band contiguous carrier aggregation for the contiguously aggregated downlink carriers and for any remaining component carrier(s) the requirements specified in subclause 7.5.3. All downlink carriers shall be active throughout the tests and the requirements for downlinks shall be met with the single uplink carrier active in each band capable of UL operation.

The normative references for this requirement are TS 36.101 [2] clauses 7.5.1A and 7.5.1.

## 7.5A.1 Adjacent Channel Selectivity (ACS) for CA (intra-band contiguous DL CA and UL CA)

### 7.5A.1.1 Test purpose

Adjacent channel selectivity for CA test verifies the UE's ability to receive data with a given average throughput for a specified reference measurement channel, in the presence of an adjacent channel signal at a given frequency offset from the centre frequency of the assigned channel, under conditions of ideal propagation and no added noise.

A UE unable to meet the throughput requirement under these conditions will decrease the coverage area when other e-NodeB transmitters exist in the adjacent channel.

### 7.5A.1.2 Test applicability

This test applies to all types of E-UTRA UE release 10 and forward that support intra-band contiguous DL CA and UL CA.

### 7.5A.1.3 Minimum conformance requirements

The minimum conformance requirements are defined in clause 7.5A.0.

## 7.5A.1.4 Test description

### 7.5A.1.4.1 Initial conditions

Initial conditions are a set of test configurations the UE needs to be tested in and the steps for the SS to take with the UE to reach the correct measurement state.

The initial test configurations consist of environmental conditions, test frequencies, and channel bandwidths based on E-UTRA CA configurations specified in table 5.4.2A.1-1. All of these configurations shall be tested with applicable test parameters for each channel bandwidth, and are shown in table 7.5A.1.4.1-1. The details of the uplink and downlink reference measurement channels (RMCs) are specified in Annexes A.2 and A.3 respectively. The details of the OCNG patterns used are specified in Annex A.5. Configurations of PDSCH and PDCCH before measurement are specified in Annex C.2.

**Table 7.5A.1.4.1-1: Test Configuration Table**

Initial Conditions									
Test Environment as specified in TS 36.508[7] clause 4.1					NC				
Test Frequencies as specified in TS36.508 [7] clause 4.3.1 for different CA bandwidth classes, and PCC and SCCs are mapped onto physical frequencies according to Table 7.1-2					C: Mid range				
Test CC Combination setting (NRB_agg) as specified in clause 5.4.2A.1 for the CA Configuration across bandwidth combination sets supported by the UE					Lowest N <sub>RB_agg</sub> Highest N <sub>RB_agg</sub> (Note 3)

100	100	QPSK	100+100	QPSK	200	P_100@0	S_100@0	-	-
Note 1: CA Configuration Test CC Combination settings are checked separately for each CA Configuration, which applicable aggregated channel bandwidths are specified in Table 5.4.2A.1-1.									
Note 2: Depending on CA configurations, only the appropriate Uplink RB allocation value according to table 7.3.3-2 for UE supporting one uplink carrier and to table 7.3A.0-2 for UE supporting two uplink carriers are tested per Test CA configuration.									
Note 3: If in the CA Configuration UE supports multiple CC Combinations with the same N <sub>RB_agg</sub> , only the first of those is tested, according to the order on the Test Configuration Table list.									

1. Connect the SS and interfering source to the UE antenna connectors as shown in TS 36.508 [7] Annex A, Figure group A.34 as appropriate.
2. The parameter settings for the cell are set up according to TS 36.508 [7] clause 4.4.3.

3. Downlink signals for PCC are initially set up according to Annex C.0, C.1 and C.3.0, and uplink signals according to Annex H.1 and H.3.0.
4. The UL and DL Reference Measurement channels are set according to Table 7.5A.1.4.1-1.
5. Propagation conditions are set according to Annex B.0.
6. Ensure the UE is in State 3A-RF according to TS 36.508 [7] clause 5.2A.2. Message contents are defined in clause 7.5A.1.4.3.

#### 7.5A.1.4.2 Test procedure

1. Configure SCC according to Annex C.0, C.1 and Annex C.3.1 for all downlink physical channels.
2. The SS shall configure SCC as per TS 36.508 [7] clause 5.2A.4. Message contents are defined in clause 7.5A.1.4.3.
3. SS activates SCC by sending the activation MAC-CE (Refer TS 36.321 [13], clauses 5.13, 6.1.3.8). Wait for at least 2 seconds (Refer TS 36.133, clauses 8.3.3.2).
4. SS transmits PDSCH via PDCCH DCI format 1A for C\_RNTI to transmit the DL RMC according to Tables 7.5A.1.4.1-1 on both PCC and SCC. The SS sends downlink MAC padding bits on the DL RMC.
5. SS sends uplink scheduling information for each UL HARQ process via PDCCH DCI format 0 for C\_RNTI to schedule the UL RMC according to Table 7.5A.1.4.1-1 on both PCC and SCC. Since the UE has no payload and no loopback data to send the UE sends uplink MAC padding bits on the UL RMC.
6. Set the Downlink signal level for PCC and SCC to the value as defined in Table 7.5A.1.5-2 (Case 1). Send Uplink power control commands to the UE (less or equal to 1dB step size should be used), to ensure that for at least the duration of the Throughput measurement:  
The PCC output power is within (+0dB, -3.4 dB) of (target level in Table 7.5A.1.5-2 (Case 1) +  $10\log(P_{L_{CRB}}/N_{RB\_alloc})$ ), for carrier frequency  $f \leq 3.0\text{GHz}$ ,  
or within (+0dB, -4 dB) of (target level in Table 7.5A.1.5-2 (Case 1) +  $10\log(P_{L_{CRB}}/N_{RB\_alloc})$ ) for carrier frequency  $3.0\text{GHz} < f \leq 4.2\text{GHz}$ .  
The SCC output power is within (+0dB, -3.4 dB) of (target level in Table 7.5A.1.5-2 (Case 1) +  $10\log(S_{L_{CRB}}/N_{RB\_alloc})$ ), for carrier frequency  $f \leq 3.0\text{GHz}$ ,  
or within (+0dB, -4 dB) of (target level in Table 7.5A.1.5-2 (Case 1) +  $10\log(S_{L_{CRB}}/N_{RB\_alloc})$ ) for carrier frequency  $3.0\text{GHz} < f \leq 4.2\text{GHz}$ .
7. Set the Interferer signal level to the value as defined in Table 7.5A.1.5-2 (Case 1) and frequency below the wanted signal, using a modulated interferer bandwidth as defined in Annex D of the present document. The interferer frequencies are adjusted in analogy with table 7.5A.1.4.2-1.
8. Measure the average throughput for each component carrier for a duration sufficient to achieve statistical significance according to Annex G.2A.
9. Repeat steps from 6 to 8, using an interfering signal above the wanted signal in Case 1 at step 7.
10. Set the Downlink signal level for PCC and SCC to the value as defined in Table 7.5A.1.5-3 (Case 2). Send Uplink power control commands to the UE (less or equal to 1dB step size should be used), to ensure that for at least the duration of the Throughput measurement:  
The PCC output power is within (+0dB, -3.4 dB) of (target level in Table 7.5A.1.5-3 (Case 2) +  $10\log(P_{L_{CRB}}/N_{RB\_alloc})$ ), for carrier frequency  $f \leq 3.0\text{GHz}$ ,  
or within (+0dB, -4 dB) of (target level in Table 7.5A.1.5-3 (Case 2) +  $10\log(P_{L_{CRB}}/N_{RB\_alloc})$ ) for carrier frequency  $3.0\text{GHz} < f \leq 4.2\text{GHz}$ .  
The SCC output power is within (+0dB, -3.4 dB) of (target level in Table 7.5A.1.5-3 (Case 2) +  $10\log(S_{L_{CRB}}/N_{RB\_alloc})$ ), for carrier frequency  $f \leq 3.0\text{GHz}$ ,  
or within (+0dB, -4 dB) of (target level in Table 7.5A.1.5-3 (Case 2) +  $10\log(S_{L_{CRB}}/N_{RB\_alloc})$ ) for carrier frequency  $3.0\text{GHz} < f \leq 4.2\text{GHz}$ .
11. Set the Interferer signal level to the value as defined in Table 7.5A.1.5-3 (Case 2) and frequency below the wanted signal, using a modulated interferer bandwidth as defined in Annex D of the present document. The interferer frequencies are adjusted in analogy with table 7.5A.1.4.2-1.

12. Measure the average throughput for each component carrier for a duration sufficient to achieve statistical significance according to Annex G.2A.
13. Repeat steps from 10 to 12, using an interfering signal above the wanted signal in Case 2 at step 11.

**Table 7.5A.1.4.2-1: Example for interferer frequencies**

	<b>Lower frequency</b>	<b>Upper frequency</b>
$F_{DL} = CA\_1C$ Mid range (BW 20MHz + 20MHz)	2130.1 MHz	2149.9 MHz

### 7.5A.1.5 Test Requirements

The throughput of each carrier shall be  $\geq 95\%$  of the maximum throughput of the reference measurement channels as specified in Annex A.3.2 under the conditions specified in table 7.5A.1.5-2, and also under the conditions specified in table 7.5A.1.5-3.

Table 7.5A.1.5-1: Adjacent channel selectivity

Rx Parameter	Units	CA Bandwidth Class				
		B	C	D	E	F
ACS	dB		24			

**Table 7.5A.1.5-2: Test parameters for Adjacent channel selectivity, Case 1**

Rx Parameter	Units	CA Bandwidth Class				
		B	C	D	E	F
Pw in Transmission Bandwidth Configuration, per CC			REFSENS + 14 dB			
$P_{\text{Interferer}}$	dBm		Aggregated power + 22.5 dB			
$BW_{\text{Interferer}}$	MHz		5			
$F_{\text{Interferer (offset)}}$	MHz		$2.5 + F_{\text{offset}}$ / $-2.5 - F_{\text{offset}}$			
Note 1:	The transmitter shall be set to 4dB below $P_{\text{CMAX\_L}}$ or $P_{\text{CMAX\_L\_CA}}$ as defined in subclause 6.2.5 for one uplink carrier and in subclause 6.2.5A for two uplink carriers.					
Note 2:	The interferer consists of the Reference measurement channel specified in Annex A.3.2 with one sided dynamic OCNG Pattern OP.1 FDD/TDD as described in Annex A.5.1.1/A.5.2.1 and set-up according to Annex C.3.1					
Note 3:	The $F_{\text{interferer (offset)}}$ is the frequency separation of the centre frequency of the carrier closest to the interferer and the centre frequency of the adjacent channel interferer and shall be further adjusted to $\lfloor \lfloor F_{\text{interferer (offset)}} / 0.015 + 0.5 \rfloor 0.015 + 0.0075 \text{ MHz}$ to be offset from the sub-carrier raster.					

**Table 7.5A.1.5-3: Test parameters for Adjacent channel selectivity, Case 2**

Rx Parameter	Units	CA Bandwidth Class				
		B	C	D	E	F
Pw in Transmission Bandwidth Configuration, per CC	dBm		$-47.5 + 10\log(N_{\text{RB},c} / N_{\text{RB agg}})$			
$P_{\text{Interferer}}$	dBm			-25		
$BW_{\text{Interferer}}$	MHz		5			
$F_{\text{Interferer (offset)}}$	MHz		$2.5 + F_{\text{offset}}$ / $-2.5 - F_{\text{offset}}$			
Note 1:	The transmitter shall be set to 24dB below $P_{\text{CMAX\_L}}$ or $P_{\text{CMAX\_L\_CA}}$ as defined in subclause 6.2.5 for one uplink carrier and in subclause 6.2.5A for two uplink carriers.					
Note 2:	The interferer consists of the Reference measurement channel specified in Annex 3.2 with one sided dynamic OCNG Pattern OP.1 FDD/TDD as described in Annex A.5.1.1/A.5.2.1 and set-up according to Annex C.3.1					
Note 3:	The $F_{\text{interferer (offset)}}$ is the frequency separation of the centre frequency of the carrier closest to the interferer and the centre frequency of the adjacent channel interferer and shall be further adjusted to $\lfloor \lfloor F_{\text{interferer (offset)}} / 0.015 + 0.5 \rfloor 0.015 + 0.0075 \text{ MHz}$ to be offset from the sub-carrier raster.					

## 7.5A.2 Adjacent Channel Selectivity (ACS) for CA (intra-band contiguous DL CA without UL CA)

### 7.5A.2.1 Test purpose

The test purpose is the same as in clause 7.5A.1.1.

### 7.5A.2.2 Test applicability

This test applies to all types of E-UTRA UE release 10 and forward that support intra-band contiguous DL CA. This test case applies only for CA Configurations that do not support UL CA.

### 7.5A.2.3 Minimum conformance requirements

The minimum conformance requirements are defined in clause 7.5A.0.

## 7.5A.2.4 Test description

## 7.5A.2.4.1 Initial conditions

Same as in clause 7.5A.1.4.1 with the following exceptions:

- Instead of Table 7.5A.1.4.1-1 → use Table 7.5A.2.4.1-1.
- Instead of clause 7.5A.1.4.3 → use clause 7.5A.2.4.3.

**Table 7.5A.2.4.1-1: Test Configuration Table**

Initial Conditions									
Test Environment as specified in TS 36.508[7] clause 4.1					NC				
Test Frequencies as specified in TS36.508 [7] clause 4.3.1 for different CA bandwidth classes, and PCC and SCCs are mapped onto physical frequencies according to Table 7.1-2					B: Mid range C: Mid range				
Test CC Combination setting ( $N_{RB\_agg}$ ) as specified in clause 5.4.2A.1 for the CA Configuration across bandwidth combination sets supported by the UE.					Lowest $N_{RB\_agg}$ Highest $N_{RB\_agg}$ (Note 3)

100	100	QPSK	100+100	QPSK	50	P_50@50	-	-	-

Note 1: CA Configuration Test CC Combination settings are checked separately for each CA Configuration, which applicable aggregated channel bandwidths are specified in Table 5.4.2A.1-1.

Note 2: Depending on CA configurations, only the appropriate Uplink RB allocation value according to table 7.3.3-2 for UE supporting one uplink carrier.

Note 3: If in the CA Configuration UE supports multiple CC Combinations with the same  $N_{RB\_agg}$ , only the first of those is tested, according to the order on the Test Configuration Table list.

#### 7.5A.2.4.2 Test procedure

1. Configure SCC according to Annex C.0, C.1 and Annex C.3.1 for all downlink physical channels.
2. The SS shall configure SCC as per TS 36.508 [7] clause 5.2A.4.
3. SS activates SCC by sending the activation MAC-CE (Refer TS 36.321 [13], clauses 5.13, 6.1.3.8). Wait for at least 2 seconds (Refer TS 36.133, clauses 8.3.3.2).
4. SS transmits PDSCH via PDCCH DCI format 1A for C\_RNTI to transmit the DL RMC according to Tables 7.5A.2.4.1-1 on both PCC and SCC. The SS sends downlink MAC padding bits on the DL RMC.
5. SS sends uplink scheduling information for each UL HARQ process via PDCCH DCI format 0 for C\_RNTI to schedule the UL RMC according to Table 7.5A.2.4.1-1 on PCC. Since the UE has no payload and no loopback data to send the UE sends uplink MAC padding bits on the UL RMC.
6. Set the Downlink signal level for PCC and SCC to the value as defined in Table 7.5A.1.5-2 (Case 1). Send Uplink power control commands to the UE (less or equal to 1dB step size should be used), to ensure that the UE output power is within +0, - 3.4 dB of the target level in Table 7.5A.1.5-2 (Case 1) for carrier frequency  $f \leq 3.0\text{GHz}$  or within +0, -4.0 dB of the target level for carrier frequency  $3.0\text{GHz} < f \leq 4.2\text{GHz}$ , for at least the duration of the Throughput measurement.
7. Set the Interferer signal level to the value as defined in Table 7.5A.1.5-2 (Case 1) and frequency below the aggregated component carriers, using a modulated interferer bandwidth as defined in Annex D of the present document. The interferer frequencies are adjusted in analogy with table 7.5A.1.4.2-1.
8. Measure the average throughput for each component carrier for a duration sufficient to achieve statistical significance according to Annex G.2A.
9. Repeat steps from 6 to 8, using an interfering signal above the aggregated component carriers in Case 1 at step 7.
10. Set the Downlink signal level for PCC and SCC to the value as defined in Table 7.5A.1.5-3 (Case 2). Send Uplink power control commands to the UE (less or equal to 1dB step size should be used), to ensure that the UE output power is within +0, - 3.4 dB of the target level in Table 7.5A.1.5-3 (Case 2) for carrier frequency  $f \leq 3.0\text{GHz}$  or within +0, -4.0 dB of the target level for carrier frequency  $3.0\text{GHz} < f \leq 4.2\text{GHz}$ , for at least the duration of the Throughput measurement.
11. Set the Interferer signal level to the value as defined in Table 7.5A.1.5-3 (Case 2) and frequency below the aggregated component carriers, using a modulated interferer bandwidth as defined in Annex D of the present document. The interferer frequencies are adjusted in analogy with table 7.5A.1.4.2-1.
12. Measure the average throughput for each component carrier for a duration sufficient to achieve statistical significance according to Annex G.2A.
13. Repeat steps from 10 to 12, using an interfering signal above the aggregated component carriers in Case 2 at step 11.

#### 7.5A.2.4.3 Message contents

The message contents are the same as in clause 7.5.4.3.

#### 7.5A.2.5 Test Requirements

The test requirements are the same as in clause 7.5A.1.5 with the following exceptions:

- Instead of Table 7.5A.1.5-1 → use Table 7.5A.2.5-1.
- Instead of Table 7.5A.1.5-2 → use Table 7.5A.2.5-2.
- Instead of Table 7.5A.1.5-3 → use Table 7.5A.2.5-3.

### 7.5A.3 Adjacent Channel Selectivity (ACS) for CA (inter-band DL CA without UL CA)

#### 7.5A.3.1 Test purpose

The test purpose is the same as in clause 7.5A.1.1.

#### 7.5A.3.2 Test applicability

This test applies to all types of E-UTRA UE release 10 and forward that support inter-band DL CA.

This test case also applies to all types of E-UTRA UE release 12 and forward that support 2DL CA with FDD-TDD inter-band CA.

### 7.5A.3.3 Minimum conformance requirements

The minimum conformance requirements are defined in clause 7.5A.0.

### 7.5A.3.4 Test description

#### 7.5A.3.4.1 Initial conditions

Same as in clause 7.5A.1.4.1 with the following exceptions:

- Instead of Table 7.5A.1.4.1-1 → use Table 7.5A.3.4.1-1.
- Instead of clause 7.5A.1.4.3 → use clause 7.5A.3.4.3.

Note 1:	CA Configuration Test CC Combination settings are checked separately for each CA Configuration, which applicable aggregated channel bandwidths are specified in Table 5.4.2A.1-3.						
Note 2:	The carrier centre frequency of PCC in the UL operating band is configured closer to the DL operating band.						
Note 3:	Applicable if only Bandwidth Combination Set 0 is supported by the UE for the CA Configuration						
Note 4:	Not applicable if only Bandwidth Combination Set 0 is supported by the UE for the CA Configuration						

#### 7.5A.4.4.2 Test procedure

1. Configure SCC according to Annex C.0, C.1 and Annex C.3.1 for all downlink physical channels.
2. The SS shall configure SCC as per TS 36.508 [7] clause 5.2A.4. Message contents are defined in clause 7.5A.4.4.3.
3. SS activates SCC by sending the activation MAC-CE (Refer TS 36.321 [13], clauses 5.13, 6.1.3.8). Wait for at least 2 seconds (Refer TS 36.133, clauses 8.3.3.2).
4. SS transmits PDSCH via PDCCH DCI format 1A for C\_RNTI to transmit the DL RMC according to Tables 7.5A.4.4.1-1 on both PCC and SCC. The SS sends downlink MAC padding bits on the DL RMC.
5. SS sends uplink scheduling information for each UL HARQ process via PDCCH DCI format 0 for C\_RNTI to schedule the UL RMC according to Tables 7.5A.4.4.1-1 on PCC. Since the UE has no payload and no loopback data to send the UE sends uplink MAC padding bits on the UL RMC.
6. Set the Downlink signal level for PCC and SCC to the value as defined in Table 7.5A.4.5-2 (Case 1). Send Uplink power control commands to the UE (less or equal to 1dB step size should be used), to ensure that the UE output power is within +0, - 3.4 dB of the target level in Table 7.5A.1.5-2 (Case 1) for carrier frequency  $f \leq 3.0\text{GHz}$  or within +0, -4.0 dB of the target level for carrier frequency  $3.0\text{GHz} < f \leq 4.2\text{GHz}$ , for at least the duration of the Throughput measurement.
7. Set the Interferer signal level to the value as defined in Table 7.5A.4.5-2 (Case 1) and frequency below the wanted signal, using a modulated interferer bandwidth as defined in Annex D of the present document.
8. Measure the average throughput for each component carrier for a duration sufficient to achieve statistical significance according to Annex G.2A.
9. Repeat steps from 6 to 8, using an interfering signal above the wanted signal in Case 1 at step 7.
10. Set the Downlink signal level for PCC and SCC to the value as defined in Table 7.5A.4.5-3 (Case 2). Send Uplink power control commands to the UE (less or equal to 1dB step size should be used), to ensure that the UE output power is within +0, - 3.4 dB of the target level in Table 7.5A.4.5-3 (Case 2) for carrier frequency  $f \leq 3.0\text{GHz}$  or within +0, -4.0 dB of the target level for carrier frequency  $3.0\text{GHz} < f \leq 4.2\text{GHz}$ , for at least the duration of the Throughput measurement.
11. Set the Interferer signal level to the value as defined in Table 7.5A.4.5-3 (Case 2) and frequency below the wanted signal, using a modulated interferer bandwidth as defined in Annex D of the present document.
12. Measure the average throughput for each component carrier for a duration sufficient to achieve statistical significance according to Annex G.2A.
13. Repeat steps from 10 to 12, using an interfering signal above the wanted signal in Case 2 at step 11.

#### 7.5A.4.4.3 Message contents

Message contents are according to TS 36.508 [7] subclause 4.6.

#### 7.5A.4.5 Test requirement

The throughput of each carrier shall be  $\geq 95\%$  of the maximum throughput of the reference measurement channels as specified in Annex A.3.2 under the conditions specified in table 7.5A.4.5-2, and also under the conditions specified in table 7.5A.4.5-3.

**Table 7.5A.4.5-1: Adjacent channel selectivity**

Rx Parameter	Units	Channel bandwidth					
		1.4 MHz	3 MHz	5 MHz	10 MHz	15 MHz	20 MHz
ACS	dB	33.0	33.0	33.0	33.0	30	27

Note 1: The transmitter shall be set to 4dB below P <sub>C<sub>MAX</sub>L</sub> with P <sub>C<sub>MAX</sub>L</sub> as defined in clause 6.2.5.							
Note 2: The interferer consists of the Reference measurement channel specified in Annex A.3.2 with one sided dynamic OCNG Pattern OP.1 FDD/TDD as described in Annex A.5.1.1/A.5.2.1 and set-up according to Annex C.3.1.							

**Table 7.5A.4.5-3: Test parameters for Adjacent channel selectivity, Case 2**

Rx Parameter	Units	Channel bandwidth					
		1.4 MHz	3 MHz	5 MHz	10 MHz	15 MHz	20 MHz
P <sub>w</sub> in Transmission Bandwidth Configuration, per CC	dBm	-56.5	-56.5	-56.5	-56.5	-53.5	-50.5
P <sub>Interferer</sub>	dBm	-25					
BW <sub>Interferer</sub>	MHz	1.4	3	5	5	5	5
F <sub>Interferer</sub> (offset)	MHz	1.4+0.0025 / -1.4-0.0025	3+0.0075 / -3-0.0075	5+0.0025 / -5-0.0025	7.5+0.0075 / -7.5-0.0075	10+0.0125 / -10-0.0125	12.5+0.0025 5 / -12.5-0.0025
Note 1: The transmitter shall be set to 24dB below P <sub>C<sub>MAX</sub>L</sub> with P <sub>C<sub>MAX</sub>L</sub> as defined in clause 6.2.5.							
Note 2: The interferer consists of the Reference measurement channel specified in Annex A.3.2 with one sided dynamic OCNG Pattern OP.1 FDD/TDD as described in Annex A.5.1.1/A.5.2.1 and set-up according to Annex C.3.1.							

## 7.5A.5 Adjacent Channel Selectivity (ACS) for 3DL CA

### 7.5A.5.1 Test purpose

Adjacent channel selectivity for CA test verifies the UE's ability to receive data with a given average throughput for a specified reference measurement channel, in the presence of an adjacent channel signal at a given frequency offset from the centre frequency of the assigned channel, under conditions of ideal propagation and no added noise.

A UE unable to meet the throughput requirement under these conditions will decrease the coverage area when other e-NodeB transmitters exist in the adjacent channel.

### 7.5A.5.2 Test applicability

This test case applies to all types of E-UTRA UE release 10 and forward that support 3DL with Intra-band contiguous CA or 3DL with Inter-band CA or 3DL with Intra-band contiguous Inter-band CA.

This test case also applies to all types of E-UTRA UE release 11 and forward that support 3DL with Intra-band non-contiguous and Inter-band CA, or 3DL with Intra-band non-contiguous and Intra-band contiguous CA.

This test case also applies to all types of E-UTRA UE release 12 and forward that support 3DL with FDD-TDD CA.

7.5A.5.3 Minimum conformance requirements

The Minimum conformance requirements are defined in clause 7.5A.0.

7.5A.5.4 Test description

7.5A.5.4.1 Initial conditions

Initial conditions are a set of test configurations the UE needs to be tested in and the steps for the SS to take with the UE to reach the correct measurement state.

The initial test configurations consist of environmental conditions, test frequencies, and channel bandwidths based on E-UTRA CA configurations specified in tables of 5.4.2A.1 as applicable. All of these configurations shall be tested with applicable test parameters for each CA Configuration, and are shown in tables 7.5A.5.4.1-1 to 7.5A.5.4.1-5. The details of the uplink and downlink reference measurement channels (RMCs) are specified in Annexes A.2 and A.3 respectively. The details of the OCN patterns used are specified in Annex A.5. Configurations of PDSCH and PDCCH before measurement are specified in Annex C.2.

**Table 7.5A.5.4.1-1: Test Configuration Table (Intra-band contiguous)**

Initial Conditions													
Test Environment as specified in TS 36.508 [7] subclause 4.1							NC						
Test Frequencies as specified in TS36.508 [7] subclause 4.3.1 for different CA bandwidth classes.							For test frequencies refer to "Range" columns. For mapping within Band refer to "CC" columns						
Test CC Combination setting ( $N_{RB\_agg}$ ) as specified in subclause 5.4.2A.1 for the CA Configuration across bandwidth combination sets supported by the UE.							Refer to "PCC $N_{RB}$ " and "SCCs $N_{RB}$ " columns						
Network signalling value							NS_01 by default						
Test Parameters for CA Configurations													
ID	CA Configuration / $N_{RB\_agg}$					DL Allocation			UL Allocation (Note 2,3)				
	CA Configuration					PCC $N_{RB}$	SCCs $N_{RB}$		CC MOD	PCC & SCCs RB allocation		CC MOD	PCC $L_{CRB}$ @ $RB_{start}$
	Band	Range	PCC	SCC1	SCC2		SCC1	SCC2		PCC	SCC1		
		CC	CC	CC									
Default Test Settings for a CA_XD Configuration													
1	X	Mid	CC1	CC2	CC3	Lowest $N_{RB\_agg}$	QPSK	All RBs	QPSK	REFSENS			
2	X	Mid	CC1	CC2	CC3	Highest $N_{RB\_agg}$	QPSK	All RBs	QPSK	REFSENS			
Note 1: CA Configuration Test CC Combination test settings are checked separately for each CA Configuration. Note 2: Use CA Configuration – specific test points if present in the table, otherwise use Default Test Settings test points. Note 3: X corresponds to the band of the CA Configuration. E.g. for CA_41D, X=41 Note 4: REFSENS refers to the PCC band's and PCC $N_{RB}$ 's single carrier Uplink RB allocation for reference sensitivity according to table 7.3.5-2. Note 5: If in the CA Configuration UE supports multiple CC Combinations with the same $N_{RB\_agg}$ , choose for testing the Combination with maximum $N_{RB\_PCC}$ and then select maximum $N_{RB\_SCC1}$ for the chosen $N_{RB\_PCC}$													

**Table 7.5A.5.4.1-2: Test Configuration Table (Inter-band)**

Initial Conditions															
Test Environment as specified in TS 36.508 [7] subclause 4.1											NC				
Test Frequencies as specified in TS36.508 [7] subclause 4.3.1 for different CA bandwidth classes.											For test frequencies refer to "Range" columns. For mapping within Band refer to "CC" columns				
Test CC Combination setting ( $N_{RB\_agg}$ ) as specified in subclause 5.4.2A.1 for the CA Configuration across bandwidth combination sets supported by the UE.											Refer to "PCC $N_{RB}$ " and "SCCs $N_{RB}$ " columns				
Network signalling value											NS_01 by default				
Test Parameters for CA Configurations															
ID	CA Configuration / $N_{RB\_agg}$							DL Allocation			UL Allocation (Note 2,3)				
	CA Configuration						PCC $N_{RB}$	SCCs $N_{RB}$		CC MOD	PCC & SCCs RB allocation			CC MOD	PCC $L_{CRB}$ @ $RB_{start}$
	PCC		SCC1		SCC2			SCC1	SCC2		PCC	SCC1	SCC2		
	Band	Range	Band	Range	Band	Range									
Default Test Settings for a CA_XA-YA-ZA Configuration															
1	X	Mid	Y	Mid	Z	Mid	Highest $N_{RB}$	Highest $N_{RB}$	Highest $N_{RB}$	QPSK	All RBs	QPSK	REFSENS		
2	Y	Mid	X	Mid	Z	Mid	Highest $N_{RB}$	Highest $N_{RB}$	Highest $N_{RB}$	QPSK	All RBs	QPSK	REFSENS		
3	Z	Mid	X	Mid	Y	Mid	Highest $N_{RB}$	Highest $N_{RB}$	Highest $N_{RB}$	QPSK	All RBs	QPSK	REFSENS		
Note 1:	CA Configuration Test CC Combination test settings are checked separately for each CA Configuration.														
Note 2:	Use CA Configuration – specific test points if present in the table, Otherwise use test points from matching Group Test Settings, if present in the table. Otherwise use the Default Test Settings test points.														
Note 3:	If, according to the UE declared capability, UE does not support UL in an individual band within the CA Configuration, test points with that individual band as PCC are not applicable.														
Note 4:	X,Y,Z correspond to the different bands in the CA Configuration. E.g. for CA_1A-3A-19A,X=1,Y=3,Z=19														
Note 5:	REFSENS refers to the PCC band's and PCC $N_{RB}$ 's single carrier Uplink RB allocation for reference sensitivity according to table 7.3.5-2.														

**Table 7.5A.5.4.1-3: Test Configuration Table (Intra-band contiguous + Inter-band)**

Initial Conditions															
Test Environment as specified in TS 36.508 [7] subclause 4.1										NC					
Test Frequencies as specified in TS36.508 [7] subclause 4.3.1 for different CA bandwidth classes.										For test frequencies refer to “Range” columns. For mapping within Band refer to “CC” columns

Note 1: CA Configuration Test CC Combination test settings are checked separately for each CA Configuration. Note 2: Use CA Configuration – specific test points if present in the table, otherwise use Default Test Settings test points. Note 3: If, according to the UE declared capability, UE does not support UL in an individual band within the CA Configuration, test points with that individual band as PCC are not applicable. Note 4: X corresponds to the band of the CA Configuration. E.g. for CA_41C-41A, X=41. Note 5: REFSENS refers to the PCC band's and PCC $N_{RB}$ 's single carrier Uplink RB allocation for reference sensitivity according to table 7.3.5-2. Note 6: If in the CA Configuration UE supports multiple CC Combinations with the same $N_{RB\_agg}$ , choose the Combination with $N_{RB\_CC1} = N_{RB\_CC2}$ for testing. If no such combination is supported, choose Combination with maximum $N_{RB\_CC1}$ for testing.															

1. Connect the SS to the UE antenna connectors as shown in TS 36.508 [7] Annex A, Figure A.58.
2. The parameter settings for the cell are set up according to TS 36.508 [7] clause 4.4.3.
3. Downlink signals for PCC are initially set up according to Annex C.0, C.1 and C.3.1, and uplink signals according to Annex H.1 and H.3.1
4. The UL and DL Reference Measurement channels are set according to Tables 7.5A.5.4.1-1 to 7.5A.5.4.1-5.
5. Propagation conditions are set according to Annex B.0.
6. Ensure the UE is in State 3A-RF according to TS 36.508 [7] clause 5.2A.2. Message contents are defined in clause 7.5A.5.4.3.

#### 7.5A.5.4.2 Test procedure

1. Configure SCCs according to Annex C.0, C.1 and Annex C.3.1 for all downlink physical channels.
2. The SS shall configure SCCs as per TS 36.508 [7] clause 5.2A.4. Message contents are defined in clause 7.5A.5.4.3
3. SS activates SCCs by sending the activation MAC-CE (Refer to TS 36.321 [13] clauses 5.13 and 6.1.3.8). Wait for at least 2 seconds (Refer to TS 36.133 [4], clause 8.3.3.2).

4. SS transmits PDSCH via PDCCH DCI format 1A for C\_RNTI to transmit the DL RMC according to Tables 7.5A.5.4.1-1 to 7.5A.5.4.1-5 as appropriate on PCC and SCCs. The SS sends downlink MAC padding bits on the DL RMC.
5. SS sends uplink scheduling information for each UL HARQ process via PDCCH DCI format 0 for C\_RNTI to schedule the UL RMC according to Tables 7.5A.5.4.1-1 to 7.5A.5.4.1-5 as appropriate on PCC. Since the UE has no payload and no loopback data to send, the UE sends uplink MAC padding bits on the UL RMC.
6. Set the Downlink signal level for PCC and SCCs to the value defined for Case 1 in Table 7.5A.5.5-2 or 7.5A.5.5-5, according to the type of CA. Send Uplink power control commands to the UE (less or equal to 1dB step size should be used), to ensure that the PCC output power is within +0dB, -3.4 dB of the target level for carrier frequency  $f \leq 3.0\text{GHz}$  or within +0dB, -4 dB of the target level for carrier frequency  $3.0\text{GHz} < f \leq 4.2\text{GHz}$ , for at least the duration of the Throughput measurement.
7. Set the Interferer signal level to the value defined for Case 1 in Table 7.5A.5.5-2 or 7.5A.5.5-5, according to the type of CA, with frequency below the measured carrier(s) according to table 7.5A.5.4.2-1, using a modulated interferer bandwidth as defined in Annex D of the present document. The interferer frequencies are adjusted in analogy with table 7.5A.1.4.2-1.
8. Measure the average throughput for the carrier(s) indicated in table 7.5A.5.4.2-1 for a duration sufficient to achieve statistical significance according to Annex G.2A.
9. Repeat steps from 6 to 8, using an interfering signal above the measured carrier(s) according to table 7.5A.5.4.2-1.
10. Set the Downlink signal level for PCC and SCCs to the value defined for Case 2 in Table 7.5A.5.5-3 or 7.5A.5.5-6, according to the type of CA. Send Uplink power control commands to the UE (less or equal to 1dB step size should be used), to ensure that the PCC output power is within +0dB, -3.4 dB of the target level for carrier frequency  $f \leq 3.0\text{GHz}$ , or within +0dB, -4 dB of the target level for carrier frequency  $3.0\text{GHz} < f \leq 4.2\text{GHz}$ , for at least the duration of the Throughput measurement.
11. Set the Interferer signal level to the value defined for Case 2 in Table 7.5A.5.5-3 or 7.5A.5.5-6, according to the type of CA, with frequency below the measured carrier(s) according to table 7.5A.5.4.2-1, using a modulated interferer bandwidth as defined in Annex D of the present document. The interferer frequencies are adjusted in analogy with table 7.5A.1.4.2-1.
12. Measure the average throughput for the carrier(s) indicated in table 7.5A.5.4.2-1 for a duration sufficient to achieve statistical significance according to Annex G.2A.
13. Repeat steps from 10 to 12, using an interfering signal above the measured carrier(s) according to table 7.5A.5.4.2-1.
14. Repeat steps 6 to 13 for component carriers listed in Table 7.5A.5.4.2-1.

Note 1: Test point ID for the particular CA configuration as defined in section 7.5A.5.4.1. Note 2: The reference for the placement of the interferer signals is the centre frequency of the carrier closest to the interferer among the carriers throughput is measured on. Note 3: Where there are multiple rows for a single Test point ID, the test is repeated for each row.			

#### 7.5A.5.4.3 Message contents

Message contents are according to TS 36.508 [7] subclause 4.6

#### 7.5A.5.5 Test requirement

The throughput measurement of each carrier derived in test procedure shall be  $\geq 95\%$  of the maximum throughput of the reference measurement channels as specified in Annex A.3.2 with parameters specified in Tables below, according to the type of CA.

**Table 7.5A.5.5-1: Adjacent channel selectivity for 3DL CA (Intra-band contiguous)**

## 7.5A.6

### 7.5A.7 Adjacent Channel Selectivity (ACS) for 4DL CA

Editor's note: Following aspects missing or not yet determined:

- The test applicability needs to be added to TS36.521-2
- The test case needs to be added to Annex G
- Test configuration tables format are under investigation and may change in RAN5.

#### 7.5A.7.1 Test purpose

Adjacent channel selectivity for CA test verifies the UE's ability to receive data with a given average throughput for a specified reference measurement channel, in the presence of an adjacent channel signal at a given frequency offset from the centre frequency of the assigned channel, under conditions of ideal propagation and no added noise.

A UE unable to meet the throughput requirement under these conditions will decrease the coverage area when other e-NodeB transmitters exist in the adjacent channel.

### 7.5A.7.2 Test applicability

This test case applies to all types of E-UTRA UE release 11 and forward that support 4DL Intra-band contiguous CA with or 4DL Inter-band CA with or 4DL Intra-band contiguous Inter-band CA.

This test case also applies to all types of E-UTRA UE release 12 and forward that support 4DL with Intra-band non-contiguous CA and Inter-band CA, or 4DL with Intra-band non-contiguous and Intra-band contiguous CA.

This test case also applies to all types of E-UTRA UE release 12 and forward that support 4DL CA with FDD-TDD CA.

### 7.5A.7.3 Minimum conformance requirements

The Minimum conformance requirements are defined in clause 7.5A.0.

### 7.5A.7.4 Test description

#### 7.5A.7.4.1 Initial conditions

Initial conditions are a set of test configurations the UE needs to be tested in and the steps for the SS to take with the UE to reach the correct measurement state.

The initial test configurations consist of environmental conditions, test frequencies, and channel bandwidths based on E-UTRA CA configurations specified in tables of 5.4.2A.1 as applicable. All of these configurations shall be tested with applicable test parameters for each CA Configuration, and are shown in tables 7.5A.7.4.1-1 to 7.5A.7.4.1-6. The details of the uplink and downlink reference measurement channels (RMCs) are specified in Annexes A.2 and A.3 respectively. The details of the OCNG patterns used are specified in Annex A.5. Configurations of PDSCH and PDCCH before measurement are specified in Annex C.2.

Table 7.5A.7.4.1-1: Test Configuration Table (Intra-band contiguous)

Initial Conditions																	
Test Environment as specified in TS 36.508 [7] subclause 4.1											NC						
Test Frequencies as specified in TS36.508 [7] subclause 4.3.1 for different CA bandwidth classes.											For test frequencies refer to "Range" columns. For mapping within Band refer to "CC" columns						
Test CC Combination setting ( $N_{RB\_agg}$ ) as specified in subclause 5.4.2A.1 for the CA Configuration across bandwidth combination sets supported by the UE.											Refer to "PCC $N_{RB}$ " and "SCCs $N_{RB}$ " columns						
Network signalling value											NS_01 by default						
Test Parameters for CA Configurations																	
ID	CA Configuration / $N_{RB\_agg}$								DL Allocation				UL Allocation (Note 2,3)				
	CA Configuration						PCC $N_{RB}$	SCCs $N_{RB}$			CC MOD	PCC & SCCs RB allocation				CC MOD	PCC $L_{CRB}$ @ $RB_{start}$
	Band	Range	PCC CC	SCC1 CC	SCC2 CC	SCC3 CC		SCC1	SCC2	SCC3		PCC	SCC1	SCC2	SCC3		
Default Test Settings for a CA_XE Configuration																	
1	X	Mid	CC1	CC2	CC3	CC4	Lowest $N_{RB\_agg}$			QPSK	All RBs				QPSK	REFSENS	
2	X	Mid	CC1	CC2	CC3	CC4	Highest $N_{RB\_agg}$			QPSK	All RBs				QPSK	REFSENS	
<p>Note 1: CA Configuration Test CC Combination test settings are checked separately for each CA Configuration.</p> <p>Note 2: Use CA Configuration – specific test points if present in the table, otherwise use Default Test Settings test points.</p> <p>Note 3: X corresponds to the band of the CA Configuration. E.g. for CA_41E, X=41.</p> <p>Note 4: REFSENS refers to the PCC band's and PCC <math>N_{RB}</math> 's single carrier Uplink RB allocation for reference sensitivity according to table 7.3.5-2.</p> <p>Note 5: If in the CA Configuration UE supports multiple CC Combinations with the same <math>N_{RB\_agg}</math>, choose for testing the Combination with maximum <math>N_{RB\_PCC}</math> and then select maximum <math>N_{RB\_SCC1}</math> for the chosen <math>N_{RB\_PCC}</math></p>																	

Table 7.5A.7.4.1-2: Test Configuration Table (Inter-band)

Initial Conditions																			
Test Environment as specified in TS 36.508[7] subclause 4.1													NC						
Test Frequencies as specified in TS36.508 [7] subclause 4.3.1 for different CA bandwidth classes.													For test frequencies refer to “Range” columns. For mapping within Band refer to “CC” columns						
Test CC Combination setting ( $N_{RB\_agg}$ ) as specified in subclause 5.4.2A.1 for the CA Configuration across bandwidth combination sets supported by the UE.													Refer to “PCC $N_{RB}$ ” and “SCCs $N_{RB}$ ” columns						
Network signalling value													NS_01 by default						
Test Parameters for CA Configurations																			
ID	CA Configuration / $N_{RB\_agg}$									DL Allocation				UL Allocation (Note 2,3)					
	CA Configuration								PCC $N_{RB}$	SCCs $N_{RB}$			CC MOD	PCC & SCCs RB allocation				CC MOD	PCC $L_{CRB}$ @ $RB_{start}$
	PCC		SCC1		SCC2		SCC3			SCC1	SCC2	SCC3		PCC	SCC1	SCC2	SCC3		
	Band	Range	Band	Range	Band	Range	Band	Range											
Default Test Settings for a CA_XA-YA-ZA-RA Configuration																			
1	X	Mid	Y	Mid	Z	Mid	R	Mid	Highest $N_{RB}$	Highest $N_{RB}$	Highest $N_{RB}$	Highest $N_{RB}$	QPSK	All RBs		QPSK	REFSENS		
2	Y	Mid	X	Mid	Z	Mid	R	Mid	Highest $N_{RB}$	Highest $N_{RB}$	Highest $N_{RB}$	Highest $N_{RB}$	QPSK	All RBs		QPSK	REFSENS		
3	Z	Mid	X	Mid	Y	Mid	R	Mid	Highest $N_{RB}$	Highest $N_{RB}$	Highest $N_{RB}$	Highest $N_{RB}$	QPSK	All RBs		QPSK	REFSENS		
4	R	Mid	X	Mid	Y	Mid	Z	Mid	Highest $N_{RB}$	Highest $N_{RB}$	Highest $N_{RB}$	Highest $N_{RB}$	QPSK	All RBs		QPSK	REFSENS		
Note 1:	CA Configuration Test CC Combination test settings are checked separately for each CA Configuration.																		
Note 2:	Use CA Configuration – specific test points if present in the table, Otherwise use test points from matching Group Test Settings, if present in the table. Otherwise use the Default Test Settings test points.																		
Note 3:	If, according to the UE declared capability, UE does not support UL in an individual band within the CA Configuration, test points with that individual band as PCC are not applicable.																		
Note 4:	X,Y,Z,R correspond to the different bands in the CA Configuration. E.g. for CA_1A-3A-7A-8A,X=1,Y=3,Z=7,R=8.																		
Note 5:	REFSENS refers to the PCC band's and PCC $N_{RB}$ 's single carrier Uplink RB allocation for reference sensitivity according to table 7.3.5-2.

1. Connect the SS to the UE antenna connectors as shown in TS 36.508 [7] Annex A, Figure A.58.
2. The parameter settings for the cell are set up according to TS 36.508 [7] clause 4.4.3.
3. Downlink signals for PCC are initially set up according to Annex C.0, C.1 and C.3.1, and uplink signals according to Annex H.1 and H.3.1
4. The UL and DL Reference Measurement channels are set according to Tables 7.5A.7.4.1-1 to 7.5A.7.4.1-6.
5. Propagation conditions are set according to Annex B.0.
6. Ensure the UE is in State 3A-RF according to TS 36.508 [7] clause 5.2A.2. Message contents are defined in clause 7.5A.7.4.3.

#### 7.5A.7.4.2 Test procedure

1. Configure SCCs according to Annex C.0, C.1 and Annex C.3.1 for all downlink physical channels.
2. The SS shall configure SCCs as per TS 36.508 [7] clause 5.2A.4. Message contents are defined in clause 7.5A.7.4.3.
3. SS activates SCCs by sending the activation MAC-CE (Refer to TS 36.321 [13] clauses 5.13 and 6.1.3.8). Wait for at least 2 seconds (Refer to TS 36.133 [4], clause 8.3.3.2).
4. SS transmits PDSCH via PDCCH DCI format 1A for C\_RNTI to transmit the DL RMC according to Tables 7.5A.7.4.1-1 to 7.5A.7.4.1-6 as appropriate on PCC and SCCs. The SS sends downlink MAC padding bits on the DL RMC.
5. SS sends uplink scheduling information for each UL HARQ process via PDCCH DCI format 0 for C\_RNTI to schedule the UL RMC according to Tables 7.5A.7.4.1-1 to 7.5A.7.4.1-6 as appropriate on PCC. Since the UE has no payload and no loopback data to send, the UE sends uplink MAC padding bits on the UL RMC.
6. Set the Downlink signal level for PCC and SCCs to the value defined for Case 1 in Table 7.5A.7.5-2 or 7.5A.7.5-5, according to the type of CA. Send Uplink power control commands to the UE (less or equal to 1dB step size should be used), to ensure that the PCC output power is within +0dB, -3.4 dB of the target level for carrier frequency  $f \leq 3.0\text{GHz}$  or within +0dB, -4 dB of the target level for carrier frequency  $3.0\text{GHz} < f \leq 4.2\text{GHz}$ , for at least the duration of the Throughput measurement.
7. Set the Interferer signal level to the value defined for Case 1 in Table 7.5A.7.5-2 or 7.5A.7.5-5, according to the type of CA, with frequency below the measured carrier(s) according to table 7.5A.7.4.2-1, using a modulated interferer bandwidth as defined in Annex D of the present document.
8. Measure the average throughput for the carrier(s) indicated in table 7.5A.7.4.2-1 for a duration sufficient to achieve statistical significance according to Annex G.2A.
9. Repeat steps from 6 to 8, using an interfering signal above the measured carrier(s) according to table 7.5A.7.4.2-1.
10. Set the Downlink signal level for PCC and SCCs to the value defined for Case 2 in Table 7.5A.7.5-3 or 7.5A.7.5-6, according to the type of CA. Send Uplink power control commands to the UE (less or equal to 1dB step size should be used), to ensure that the PCC output power is within +0dB, -3.4 dB of the target level for carrier frequency  $f \leq 3.0\text{GHz}$ , or within +0dB, -4 dB of the target level for carrier frequency  $3.0\text{GHz} < f \leq 4.2\text{GHz}$ , for at least the duration of the Throughput measurement.
11. Set the Interferer signal level to the value defined for Case 2 in Table 7.5A.7.5-3 or 7.5A.7.5-6, according to the type of CA, with frequency below the measured carrier(s) according to table 7.5A.7.4.2-1, using a modulated interferer bandwidth as defined in Annex D of the present document.
12. Measure the average throughput for the carrier(s) indicated in table 7.5A.7.4.2-1 for a duration sufficient to achieve statistical significance according to Annex G.2A.
13. Repeat steps from 10 to 12, using an interfering signal above the measured carrier(s) according to table 7.5A.7.4.2-1.

14. Repeat steps 6 to 13 for component carriers listed in Table 7.5A.7.4.2-1.

## 7.5B Adjacent Channel Selectivity (ACS) for UL-MIMO

### 7.5B.1 Test purpose

Adjacent channel selectivity tests the ability of UE that support UL-MIMO to receive data with a given average throughput for a specified reference measurement channel, in the presence of an adjacent channel signal at a given frequency offset from the centre frequency of the assigned channel, under conditions of ideal propagation and no added noise.

A UE unable to meet the throughput requirement under these conditions will decrease the coverage area when other e-NodeB transmitters exist in the adjacent channel.

## 7.5B.2 Test applicability

This test applies to all types of E-UTRA UE release 10 and forward that support UL-MIMO.

## 7.5B.3 Minimum conformance requirements

For UE(s) with two transmitter antenna connectors in closed-loop spatial multiplexing scheme, the minimum requirements in Clause 7.5.3 shall be met with the UL-MIMO configurations specified in Table 6.2.2B.3-2. For UL-MIMO, the parameter  $P_{\text{CMAX,L}}$  is defined as the total transmitter power over the two transmit antenna connectors.

The normative reference for this requirement is TS 36.101 [2] clause 7.5.1B.

## 7.5B.4 Test description

### 7.5B.4.1 Initial conditions

Initial conditions are a set of test configurations the UE needs to be tested in and the steps for the SS to take with the UE to reach the correct measurement state.

The initial test configurations consist of environmental conditions, test frequencies, and channel bandwidths based on E-UTRA bands specified in table 5.4.2.1-1. All of these configurations shall be tested with applicable test parameters for each channel bandwidth, and are shown in table 7.5B.4.1-1. The details of the uplink and downlink reference measurement channels (RMCs) are specified in Annexes A.2 and A.3 respectively. The details of the OCNG patterns used are specified in Annex A.5. Configurations of PDSCH and PDCCH before measurement are specified in Annex C.2.

**Table 7.5B.4.1-1: Test Configuration Table**

Initial Conditions						
Test Environment as specified in TS 36.508[7] subclause 4.1			NC			
Test Frequencies as specified in TS36.508 [7] subclause 4.3.1			Mid range			
Test Channel Bandwidths as specified in TS 36.508 [7] subclause 4.3.1			Lowest, 5MHz, Highest			
Test Parameters for Channel Bandwidths						
Ch BW	Downlink Configuration			Uplink Configuration		
	Mod'n	RB allocation		Mod'n	RB allocation	
		FDD	TDD		FDD	TDD
1.4MHz	QPSK	Full	Full	QPSK	5	5
3MHz	QPSK	Full	Full	QPSK	4	4
5MHz	QPSK	Full	Full	QPSK	8	8
5MHz	QPSK	Full	N/A	QPSK	5 <sup>3</sup>	N/A
10MHz	QPSK	Full	Full	QPSK	12	12
15MHz	QPSK	Full	Full	QPSK	16	16
20MHz	QPSK	Full	Full	QPSK	18	18
Note 1: Test Channel Bandwidths are checked separately for each E-UTRA band. The applicable channel bandwidths are specified in Table 7.3.3-2.						
Note 2: For the DL signal one sided dynamic OCNG Pattern OP.1 FDD/TDD is used.						
Note 3: Applicable only to E-UTRA FDD Band 31. The UL resource blocks shall be located at RBstart 10 (according to Table 7.3.3-2).						

1. Connect the SS and interfering source to the UE antenna connectors as shown in TS 36.508 [7] Figure A.29.
2. The parameter settings for the cell are set up according to TS 36.508 [7] subclause 4.4.3.
3. Downlink signals are initially set up according to Annex C0, C.1 and C.3.1, and uplink signals according to Annex H.1 and H.3.1.
4. The UL and DL Reference Measurement channels are set according to Table 7.5B.4.1-1.
5. Propagation conditions are set according to Annex B.0.
6. Ensure the UE is in State 3A-RF according to TS 36.508 [7] clause 5.2A.2. Message contents are defined in clause 7.5B.4.3.

### 7.5B.4.2 Test procedure

1. SS transmits PDSCH via PDCCH DCI format 1A for C\_RNTI to transmit the DL RMC according to Table 7.5B.4.1-1. The SS sends downlink MAC padding bits on the DL RMC.
2. SS sends uplink scheduling information for each UL HARQ process via PDCCH DCI format 4 for C\_RNTI to schedule the UL RMC according to Table 7.5B.4.1-1. Since the UE has no payload data to send, the UE transmits uplink MAC padding bits on the UL RMC.
3. Set the Downlink signal level to the value as defined in Table 7.5B.5-2 (Case 1). Send Uplink power control commands to the UE (less or equal to 1dB step size should be used), to ensure that the UE output power is within +0, - 3.4 dB of the target level in Table 7.5B.5-2 (Case 1) for carrier frequency  $f \leq 3.0\text{GHz}$  or within +0, -4.0 dB of the target level for carrier frequency  $3.0\text{GHz} < f \leq 4.2\text{GHz}$ , for at least the duration of the Throughput measurement.
4. Set the Interferer signal level to the value as defined in Table 7.5B.5-2 (Case 1) and frequency below the wanted signal, using a modulated interferer bandwidth as defined in Annex D of the present document.
5. Measure the average throughput for a duration sufficient to achieve statistical significance according to Annex G.2.
6. Repeat steps from 3 to 5, using an interfering signal above the wanted signal in Case 1 at step 4.
7. Set the Downlink signal level to the value as defined in Table 7.5B.5-3 (Case 2). Send Uplink power control commands to the UE (less or equal to 1dB step size should be used), to ensure that the UE output power is within +0, - 3.4 dB of the target level in Table 7.5B.5-3 (Case 2) for carrier frequency  $f \leq 3.0\text{GHz}$  or within +0, -4.0 dB of the target level for carrier frequency  $3.0\text{GHz} < f \leq 4.2\text{GHz}$ , for at least the duration of the throughput measurement.
8. Set the Interferer signal level to the value as defined in Table 7.5B.5-3 (Case 2) and frequency below the wanted signal, using a modulated interferer bandwidth as defined in Annex D of the present document.
9. Measure the average throughput for a duration sufficient to achieve statistical significance according to Annex G.2.
10. Repeat steps from 7 to 9, using an interfering signal above the wanted signal in Case 2 at step 8.
11. Repeat for applicable channel bandwidths and operating band combinations in both Case 1 and Case 2.

### 7.5B.4.3 Message contents

Message contents are according to TS 36.508 [7] clause 4.6 with the following exception

**Table 7.5B.4.3-1: UplinkPowerControlDedicated**

Note 1:	The transmitter shall be set to 24dB below $P_{\text{CMAX,L}}$ at the minimum uplink configuration specified in Table 7.3.3-2 with $P_{\text{CMAX,L}}$ as defined in clause 6.2.5.						
Note 2:	The interferer consists of the Reference measurement channel specified in Annex A.3.2 with one sided dynamic OCNG Pattern OP.1 FDD/TDD as described in Annex A.5.1.1/A.5.2.1 and set-up according to Annex C.3.1.						

## 7.5D Adjacent Channel Selectivity (ACS) for ProSe

### 7.5D.0 Minimum conformance requirements

The UE shall fulfil the minimum requirement specified in Table 7.5D.0-1 for all values of an adjacent channel interferer up to -25 dBm. However it is not possible to directly measure the ACS, instead the lower and upper range of test parameters are chosen in Table 7.5D.0-2 and Table 7.5D.0-3 where the throughput shall be  $\geq 95\%$  of the maximum throughput of the reference measurement channels as specified in Annex A.6.2.

Table 7.5D.0-1: Adjacent channel selectivity for ProSe

Rx Parameter	Units	Channel bandwidth					
		1.4 MHz	3 MHz	5 MHz	10 MHz	15 MHz	20 MHz
ACS	dB			33.0	33.0	30	27

Table 7.5D.0-2: Test parameters for Adjacent channel selectivity for ProSe, Case 1

Rx Parameter	Units	Channel bandwidth					
		1.4 MHz	3 MHz	5 MHz	10 MHz	15 MHz	20 MHz
Power in Transmission Bandwidth Configuration	dBm	P <sub>REFSENS_ProSe</sub> + 14 dB					
P <sub>Interferer</sub>	dBm			REFSENS +45.5dB	REFSENS +45.5dB	REFSENS +42.5dB	REFSENS +39.5dB
BW <sub>Interferer</sub>	MHz			5	5	5	5
F <sub>Interferer</sub> (offset)	MHz			5+0.0025 / -5-0.0025	7.5+0.0075 / -7.5-0.0075	10+0.0125 / -10-0.0125	12.5+0.0025 / -12.5-0.0025
NOTE 1: The interferer is QPSK modulated PUSCH containing data and reference symbols. Normal cyclic prefix is used. The data content shall be uncorrelated to the wanted signal and modulated according to clause 5 of TS 36.211.							

Table 7.5D.0-3: Test parameters for Adjacent channel selectivity for ProSe, Case 2

Rx Parameter	Units	Channel bandwidth					
		1.4 MHz	3 MHz	5 MHz	10 MHz	15 MHz	20 MHz
Power in Transmission Bandwidth Configuration	dBm			-56.5	-56.5	-53.5	-50.5
P <sub>Interferer</sub>	dBm	-25					
BW <sub>Interferer</sub>	MHz			5	5	5	5
F <sub>Interferer</sub> (offset)	MHz			5+0.0025 / -5-0.0025	7.5+0.0075 / -7.5-0.0075	10+0.0125 / -10-0.0125	12.5+0.0025 / -12.5-0.0025
NOTE 1: The interferer is QPSK modulated PUSCH containing data and reference symbols. Normal cyclic prefix is used. The data content shall be uncorrelated to the wanted signal and modulated according to clause 5 of TS 36.211.							

The normative reference for this requirement is TS 36.101 [2] clause 7.5.1D.

## 7.5D.1 Adjacent Channel Selectivity (ACS) for ProSe Direct Discovery

**Editor's note: This test case is not complete. Following aspects are either missing or not yet determined:**

- ProSe UE authentication is not handled in the test case and is still under investigation.
- Use of OCNB for Downlink has not been considered and is still FFS.
- Message exceptions content needs further investigation (some values still TBD).
- Test time is FFS.
- Connection Diagram is FFS

### 7.5D.1.1 Test Purpose

Adjacent channel selectivity tests the UE's ability to receive data with a given average throughput for a specified reference measurement channel, in the presence of an adjacent channel signal at a given frequency offset from the centre frequency of the assigned channel, under conditions of ideal propagation and no added noise.

A UE unable to meet the throughput requirement under these conditions will decrease the coverage area when other e-NodeB transmitters exist in the adjacent channel.

## 7.5D.1.2 Test Applicability

This test applies to all types of E-UTRA UE release 12 and forward which support ProSe Direct Discovery, but not ProSe Direct Communication.

## 7.5D.1.3 Minimum Conformance Requirements

The minimum conformance requirements are defined in clause 7.5D.0.

## 7.5D.1.4 Test Description

### 7.5D.1.4.1 Initial Conditions

Initial conditions are a set of test configurations the UE needs to be tested in and the steps for the SS to take with the UE to reach the correct measurement state.

The initial test configurations consist of environmental conditions, test frequencies, and channel bandwidths based on E-UTRA ProSe bands specified in table 5.4.2D.1-1. All of these configurations shall be tested with applicable test parameters for each channel bandwidth, and are shown in table 7.5D.1.4.1-1. The details of the downlink, uplink and sidelink reference measurement channels (RMCs) are specified in Annexes A.2, A.3 and A.6.

**Table 7.5D.1.4.1-1: Test Configuration Table**

Initial Conditions						
Test Environment as specified in TS 36.508[7] subclause 4.1			NC			
Test Frequencies as specified in TS36.508 [7] subclause 4.3.1			Mid range(Note 4)			
Test Channel Bandwidths as specified in TS 36.508 [7] subclause 4.3.1			5MHz, Highest			
	Downlink Configuration (Note 2)		Uplink Configuration (Note 2)		Sidelink Configuration (Reception) (Note 3)	
Ch BW	Mod'n	RB allocation	Mod'n	RB allocation	Mod'n	RB allocation
5MHz	QPSK	8	QPSK	8	QPSK	2
10MHz	QPSK	16	QPSK	16	QPSK	2
15MHz	QPSK	25	QPSK	25	QPSK	2
20MHz	QPSK	30	QPSK	30	QPSK	2
Note 1: Test Channel Bandwidths are checked separately for each E-UTRA ProSe and Operating band, according to the applicability specified respectively in Table 5.4.2D.1-1 and Table 5.4.2.1-1. Note 2: After DRX configuration, DL-RMC (PDSCH) and DCI-0 for scheduling UL-RMC (PUSCH) are applied only in the DRX On subframes. Note 3: The RB start for the transmission of Sidelink RMC is RB#0. Note 4: Sidelink uses the frequencies defined for Uplink.						

1. Connect the SS to the UE antenna connectors as shown in TS 36.508 [7] Annex A, Figure [FFS].
2. The parameter settings for the cell are set up according to TS 36.508 [7] clause 4.4.3.
3. Downlink signals are initially set up according to Annex C.0, C.1 and C.3.1, and uplink signals according to Annex H.1 and H.3.1.
4. The UL and DL Reference Measurement channels are set according to Table 7.5D.1.4.1-1.
5. Propagation conditions are set according to Annex B.0.
6. Ensure the UE is in State 2A-RF according to TS 36.508 [7] clause 5.2A.1A. Message contents exceptions are defined in clause 7.5D.1.4.3.
7. SS continues with the generic procedures described in TS 36.508 [7] clause 4.5.3A.3 and 4.5.4.3 and ensures the UE is in State 4 according to TS 36.508 [7] clause 4.5.4 and the UE test loop Mode D is activated.

### 7.5D.1.4.2 Test Procedure

1. SS shall transmit an RRCConnectionReconfiguration message to configure DRX. Message contents exceptions (only those marked with "...Step 1...") are defined in clause 7.5D.1.4.3.
2. The UE shall transmit RRCConnectionReconfigurationComplete message.
3. Initialise the variables Ptot and Pok as 0.
4. SS transmits PDSCH via PDCCH DCI format 1A for C\_RNTI to transmit the DL RMC according to Table 7.5D.1.4.1-1. The SS sends downlink MAC padding bits on the DL RMC.
5. SS sends uplink scheduling information via PDCCH DCI format 0 for C\_RNTI to schedule the UL RMC according to Table 7.5D.1.4.1-1. When the UE has no payload data to send, it transmits uplink MAC padding bits on the UL RMC.
6. SS transmits PSDCH to transmit the SL RMC according to Table 7.5D.1.4.1-1. Set the Sidelink signal level to the appropriate value defined in Table 7.5D.1.4.1-1 to the value as defined in Table 7.5D.1.5-2 (Case 1)
7. Set the Interferer signal level to the value as defined in Table 7.5D.1.5-2 (Case 1) and frequency below the wanted signal, using a modulated interferer bandwidth as defined in Annex D of the present document.
8. SS shall send SL Discovery Packets (MAC padding bits) on the SL RMC for the test time [FFS]. SS stores the number of the transmitted Discovery Packets in the current test iteration in the variable Ptot.
9. SS shall send (on the available PDSCH) a "UE TEST LOOP PROSE MODE D SIDELINK DIRECT DISCOVERY PACKET COUNTER REQUEST" message and wait for the UE to respond (on the available PUSCH) with a "UE TEST LOOP PROSE MODE D SIDELINK DIRECT DISCOVERY PACKET COUNTER RESPONSE".
10. SS calculates the variable Pok as (current counter value - counter value at last test iteration).
11. SS shall compute the throughput as following:
 
$$TP = Pok / Ptot * 100\%$$
12. Repeat steps from 6 to 12, using an interfering signal above the wanted signal in Case 1 at step 7.
13. SS transmits PSDCH to transmit the SL RMC according to Table 7.5D.1.4.1-1. Set the Sidelink signal level to the appropriate value defined in Table 7.5D.1.4.1-1 to the value as defined in Table 7.5D.1.5-3 (Case 2)
14. Set the Interferer signal level to the value as defined in Table 7.5D.1.5-3 (Case 2) and frequency below the wanted signal, using a modulated interferer bandwidth as defined in Annex D of the present document.
15. SS shall send SL Discovery Packets (MAC padding bits) on the SL RMC for the test time [FFS]. SS stores the number of the transmitted Discovery Packets in the current test iteration in the variable Ptot.
16. SS shall send (on the available PDSCH) a "UE TEST LOOP PROSE MODE D SIDELINK DIRECT DISCOVERY PACKET COUNTER REQUEST" message and wait for the UE to respond (on the available PUSCH) with a "UE TEST LOOP PROSE MODE D SIDELINK DIRECT DISCOVERY PACKET COUNTER RESPONSE".
17. SS calculates the variable Pok as (current counter value - counter value at last test iteration).
18. SS shall compute the throughput as following:
 
$$TP = Pok / Ptot * 100\%$$
19. Repeat steps from 13 to 18, using an interfering signal above the wanted signal in Case 2 at step 14.

### 7.5D.1.4.3 Message Contents

Message contents are according to TS 36.508 [7] clauses TBD with following exceptions:

### 7.5D.1.5 Test Requirement

The throughput TP shall be  $\geq 95\%$  of the maximum throughput of the reference measurement channels as specified in Annex A.6.2 with parameters specified in Tables 7.5D.1.5-1, 7.5D.1.5-2 and 7.5D.1.5-3.

**Table 7.5D.1.5-1: Adjacent channel selectivity for ProSe**

Rx Parameter	Units	Channel bandwidth					
		1.4 MHz	3 MHz	5 MHz	10 MHz	15 MHz	20 MHz
ACS	dB			33.0	33.0	30	27

Table 7.5D.1.5-2: Test parameters for Adjacent channel selectivity for ProSe, Case 1

Rx Parameter	Units	Channel bandwidth					
		1.4 MHz	3 MHz	5 MHz	10 MHz	15 MHz	20 MHz
Power in Transmission Bandwidth Configuration	dBm	P <sub>REFSENS_ProSe</sub> + 14 dB

NOTE 1: The interferer is QPSK modulated PUSCH containing data and reference symbols. Normal cyclic prefix is used. The data content shall be uncorrelated to the wanted signal and modulated according to clause 5 of TS36.211.							

## 7.5D.2 Adjacent Channel Selectivity (ACS) for ProSe Direct Communication

Editor's note: This test case is not complete. Following aspects are either missing or not yet determined:

- Test procedure is TBD
- Message contents are TBD

### 7.5D.2.1 Test Purpose

Same test purpose as in clause 7.5D.1.

### 7.5D.2.2 Test Applicability

This test applies to all types of E-UTRA UE release 12 and forward which support ProSe Direct Communication.

### 7.5D.2.3 Minimum Conformance Requirements

The minimum conformance requirements are defined in clause 7.5D.0.

### 7.5D.2.4 Test Description

#### 7.5D.2.4.1 Initial Conditions

TBD

7.5D.2.4.2 Test Procedure

TBD

7.5D.2.4.3 Message Contents

TBD

7.5D.2.5 Test Requirement

Same test requirement as in clause 7.5D.1.5.

## 7.5E Adjacent Channel Selectivity (ACS) for category 0

### 7.5E.1 Test purpose

Same test purpose as in clause 7.5.1.

### 7.5E.2 Test applicability

This test applies to all types of E-UTRA UE release 12 and forward of category 0.

### 7.5E.3 Minimum conformance requirements

Same minimum conformance requirements as in clause 7.5.3

### 7.5E.4 Test description

#### 7.5E.4.1 Initial conditions

Same initial conditions as in clause 7.5.4.1 with the following exceptions:

- Instead of Table 7.5.4.1-1 → use Table 7.5E.4.1-1.
- Connect the SS to the UE antenna connectors as shown in TS 36.508[7] Annex A Figure A.4 using only main UE Tx/Rx antenna.

Table 7.5E.4.1-1: Test Configuration Table

Initial Conditions						
Test Environment as specified in TS 36.508 [7] clause 4.1			NC			
Test Frequencies as specified in TS 36.508 [7] clause 4.3.1			Mid range			
Test Channel Bandwidths as specified in TS 36.508 [7] clause 4.3.			Lowest, 5MHz, Highest			
Test Parameters for Channel Bandwidths						
Ch BW	Downlink Configuration			Uplink Configuration		
	Mod'n	RB allocation		Mod'n	RB allocation	
		FDD and HD-FDD	TDD		FDD and HD-FDD	TDD
1.4MHz	QPSK	6	6	QPSK	6	6
3MHz	QPSK	14	14	QPSK	15	15
5MHz	QPSK	14	14	QPSK	25	25
5MHz	QPSK	14	N/A	QPSK	20	N/A
10MHz	QPSK	14	14	QPSK	36	36
10MHz	QPSK	14	N/A	QPSK	25	N/A
10MHz	QPSK	14	N/A	QPSK	20	N/A
15MHz	QPSK	14	14	QPSK	36	36
15MHz	QPSK	14	N/A	QPSK	20	N/A
20MHz	QPSK	14	14	QPSK	36	36
20MHz	QPSK	14	N/A	QPSK	20	N/A
Note 1: Test Channel Bandwidths are checked separately for each E-UTRA band, which applicable channel bandwidths are specified in Table 5.4.2.1-1.						
Note 2: Depending on E-UTRA band, only the appropriate Uplink RB allocation value according to table 7.3E.3-3 is tested per Test Channel Bandwidth. The allocation shall be located as close as possible to the downlink operating band but confined within the transmission bandwidth configuration for the channel bandwidth (Table 5.4.2-1).						
Note 3: For the DL signal one sided dynamic OCNG Pattern OP.1 FDD/TDD is used.						
Note 4: Downlink RB position shall be $RB_{start} = 0$ .						

### 7.5E.4.2 Test procedure

Same test procedure as in clause 7.5.4.2

### 7.5E.4.3 Message contents

Same message contents as in clause 7.5.4.37.5E.5 Test requirement

The throughput  $R_{av}$  shall be  $\geq 95\%$  of the maximum throughput of the reference measurement channels as specified in Annex A.3.2 under the conditions specified in table 7.5E.5-2, and also under the conditions specified in table 7.5E.5-3.

Table 7.5E.5-1: Adjacent channel selectivity

Note 1: The transmitter shall be set to 24dB below $P_{\text{CMAX}_L}$ with $P_{\text{CMAX}_L}$ as defined in clause 6.2.5.							
Note 2: The interferer consists of the Reference measurement channel specified in Annex A.3.2 with one sided dynamic OCNG Pattern OP.1 FDD/TDD as described in Annex A.5.1.1/A.5.2.1 and set-up according to Annex C.3.1.							

## 7.5EA Adjacent Channel Selectivity (ACS) for UE category M1

### 7.5EA.1 Test purpose

Adjacent channel selectivity tests the ability of category M1 UE to receive data with a given average throughput for a specified reference measurement channel, in the presence of an adjacent channel signal at a given frequency offset from the centre frequency of the assigned channel, under conditions of ideal propagation and no added noise.

A UE unable to meet the throughput requirement under these conditions will decrease the coverage area when other e-NodeB transmitters exist in the adjacent channel.

### 7.5EA.2 Test applicability

This test applies to all types of E-UTRA UE release 13 and forward of category M1.

### 7.5EA.3 Minimum conformance requirements

Adjacent Channel Selectivity (ACS) is a measure of a receiver's ability to receive an E-UTRA signal at its assigned channel frequency in the presence of an adjacent channel signal at a given frequency offset from the centre frequency of the assigned channel. ACS is the ratio of the receive filter attenuation on the assigned channel frequency to the receive filter attenuation on the adjacent channel(s).

The UE shall fulfil the minimum requirement specified in Table 7.5EA.3-1 for all values of an adjacent channel interferer up to  $-25$  dBm. However it is not possible to directly measure the ACS, instead the lower and upper range of test parameters are chosen in Table 7.5EA.3-2 and Table 7.5EA.3-3 where the throughput  $R_{av}$  shall be  $\geq 95\%$  of the maximum throughput of the reference measurement channels as specified in Annexes A.2.2, A.2.3 and A.3.2 (with one

sided dynamic OCNG Pattern OP.1 FDD/TDD for the DL-signal as described in Annex A.5.1.1/A.5.2.1). For operating bands with an unpaired DL part (as noted in Table 5.2-1), the requirements only apply for carriers assigned in the paired part.

**Table 7.5EA.3-1: Adjacent channel selectivity**

Rx Parameter	Units	Channel bandwidth					
		1.4 MHz	3 MHz	5 MHz	10 MHz	15 MHz	20 MHz
ACS	dB	33.0	33.0	33.0	33.0	30	27

**Table 7.5EA.3-2: Test parameters for Adjacent channel selectivity, Case 1**

Rx Parameter	Units	Channel bandwidth					
		1.4 MHz	3 MHz	5 MHz	10 MHz	15 MHz	20 MHz
Power in Transmission Bandwidth Configuration	dBm	REFSENS + 14 dB					
$P_{\text{Interferer}}$	dBm	REFSENS +45.5dB	REFSENS +45.5dB	REFSENS +45.5dB	REFSENS +45.5dB	REFSENS +42.5dB	REFSENS +39.5dB

## 7.5EA.4 Test description

### 7.5EA.4.1 Initial conditions

Initial conditions are a set of test configurations the UE needs to be tested in and the steps for the SS to take with the UE to reach the correct measurement state.

The initial test configurations consist of environmental conditions, test frequencies, and channel bandwidths based on E-UTRA operating bands defined for CAT M1 in clause 5.2E. All of these configurations shall be tested with applicable test parameters for each channel bandwidth, and are shown in table 7.5EA.4.1-1. The details of the uplink and downlink reference measurement channels (RMCs) are specified in Annexes A.2 and A.3 respectively. The details of the OCNG patterns used are specified in Annex A.5. Configurations of PDSCH and MPDCCH before measurement are specified in Annex C.2.

**Table 7.5EA.4.1-1: Test Configuration Table RX test cases UE Cat-M1**

Initial Conditions						
Test Environment as specified in TS 36.508[7] clause 4.1			NC			
Test Frequencies as specified in TS36.508 [7] clause 4.3.1			Mid range			
Test Channel Bandwidths as specified in TS 36.508 [7] clause 4.3.			1.4, 3MHz, 5MHz			
Test Parameters for Channel Bandwidths and Narrowband positions						
Ch BW	Downlink Configuration			Uplink Configuration		
	Mod'n	RB allocation		Mod'n	RB allocation	
		FDD and HD-FDD	TDD		FDD and HD-FDD	TDD
1.4MHz	QPSK	4	4	QPSK	6	6
3MHz	QPSK	4	4	QPSK	6	6
5MHz	QPSK	4	4	QPSK	6	6
Note 1: Downlink RB position shall be $RB_{start} = 0$ within the narrowband						
Note 2: The Narrowband index (TS36.211, 5.2.4) shall be set to 0 for all testpoints.						
Note 3: Use narrowband index 0 when interferer is below carrier, and max narrowband index when interferer is above carrier.						

1. Connect the SS to the UE antenna connectors as shown in TS 36.508[7] Annex A Figure A.4 using only main UE Tx/Rx antenna.
2. The parameter settings for the cell are set up according to TS 36.508 [7] subclause 4.4.3.
3. Downlink signals are initially set up according to Annex C0, C.1 and C.3.1, and uplink signals according to Annex H.1 and H.3.1.
4. The UL and DL Reference Measurement channels are set according to Table 7.5EA.4.1-1.
5. Propagation conditions are set according to Annex B.0.
6. Ensure the UE is in State 3A-RF-CE according to TS 36.508 [7] clause 5.2A.2AA. Message contents are defined in clause 7.5EA.4.3.

### 7.5EA.4.2 Test procedure

1. SS transmits PDSCH via M-PDCCH DCI format 6-1A for C\_RNTI to transmit the DL RMC according to Table 7.5EA.4.1-1. The SS sends downlink MAC padding bits on the DL RMC.
2. SS sends uplink scheduling information for each UL HARQ process via M-PDCCH DCI format 6-0A for C\_RNTI to schedule the UL RMC according to Table 7.5EA.4.1-1. Since the UE has no payload data to send, the UE transmits uplink MAC padding bits on the UL RMC.
3. Set the Downlink signal level to the value as defined in Table 7.5EA.5-2 (Case 1). Send Uplink power control commands to the UE (less or equal to 1dB step size should be used), to ensure that the UE output power is within +0, - 3.4 dB of the target level in Table 7.5EA.5-2 (Case 1) for carrier frequency  $f \leq 3.0\text{GHz}$  or within +0, -4.0

dB of the target level for carrier frequency  $3.0\text{GHz} < f \leq 4.2\text{GHz}$ , for at least the duration of the Throughput measurement.

4. Set the Interferer signal level to the value as defined in Table 7.5EA.5-2 (Case 1) and frequency below the wanted signal, using a modulated interferer bandwidth as defined in Annex D of the present document.
5. Measure the average throughput for a duration sufficient to achieve statistical significance according to Annex G.2.
6. Repeat steps from 3 to 5, using an interfering signal above the wanted signal in Case 1 at step 4.
7. Set the Downlink signal level to the value as defined in Table 7.5EA.5-3 (Case 2). Send Uplink power control commands to the UE (less or equal to 1dB step size should be used), to ensure that the UE output power is within +0, - 3.4 dB of the target level in Table 7.5EA.5-3 (Case 2) for carrier frequency  $f \leq 3.0\text{GHz}$  or within +0, -4.0 dB of the target level for carrier frequency  $3.0\text{GHz} < f \leq 4.2\text{GHz}$ , for at least the duration of the Throughput measurement.
8. Set the Interferer signal level to the value as defined in Table 7.5EA.5-3 (Case 2) and frequency below the wanted signal, using a modulated interferer bandwidth as defined in Annex D of the present document.
9. Measure the average throughput for a duration sufficient to achieve statistical significance according to Annex G.2.
10. Repeat steps from 7 to 9, using an interfering signal above the wanted signal in Case 2 at step 8.
11. Repeat for applicable channel bandwidths and operating band combinations in both Case 1 and Case 2.

### 7.5EA.4.3 Message contents

Message contents are according to TS 36.508 [7] subclause 4.6 with the following exception

**Table 7.5EA.4.3-1: UplinkPowerControlDedicated**

Note 1:	The transmitter shall be set to 24dB below $P_{\text{CMAX\_L}}$ with $P_{\text{CMAX\_L}}$ as defined in clause 6.2.5.			
Note 2:	The interferer consists of the Reference measurement channel specified in Annex A.3.2 with one sided dynamic OCNG Pattern OP.1 FDD/TDD as described in Annex A.5.1.1/A.5.2.1 and set-up according to Annex C.3.1.			

## 7.5F Adjacent Channel Selectivity (ACS) for UE category NB1

*Editor's note: This test case is incomplete. The following aspects are either missing or not yet determined:*

- References to TS 36.508 are undefined (test environment, test frequencies, cell parameter settings, UE state)
- Scheduling of the DL RMC is undefined
- Parameters ensuring UE is transmitting NPUSCH with maximum power are TBC. (Proposed values:  $p\text{-Max} = \text{Not present}$ ,  $p0\text{-NominalNPUSCH-r13} = -85 \text{ dBm}$ ,  $p0\text{-UE-NPUSCH-r13} = 0 \text{ dBm}$ ,  $nrs\text{-Power-r13} = 40 \text{ dBm}$ ). These values may be different for Case 1 and Case 2.
- The Message contents and exceptions are undefined
- The Annex C Downlink signals are undefined
- The Annex G.2.6 entry to achieve statistical significance is undefined

### 7.5F.1 Test purpose

Adjacent channel selectivity tests the UE's ability to receive data with a given average throughput for a specified reference measurement channel, in the presence of an adjacent channel signal at a given frequency offset from the centre frequency of the assigned channel, under conditions of ideal propagation and no added noise.

A UE unable to meet the throughput requirement under these conditions will decrease the coverage area when other e-NodeB transmitters exist in the adjacent channel.

### 7.5F.2 Test applicability

This test case applies to all types of UE release 13 and forward of UE category NB1.

### 7.5F.3 Minimum conformance requirements

Adjacent Channel Selectivity (ACS) is a measure of a receiver's ability to receive a signal at its assigned channel frequency in the presence of an adjacent channel signal at a given frequency offset from the centre frequency of the assigned channel. ACS is the ratio of the receive filter attenuation on the assigned channel frequency to the receive filter attenuation on the adjacent channel(s).

Category NB1 UE shall fulfil the minimum requirement specified in Table 7.5F.3-1 for all values of an adjacent channel interferer up to  $-25$  dBm. However it is not possible to directly measure the ACS, instead the lower and upper range of test parameters are chosen in Table 7.5F.3-1 where the throughput shall be  $\geq 95\%$  of the maximum throughput of the reference measurement channel as specified in Annex A.3.2.

**Table 7.5F.3-1: Adjacent channel selectivity parameters for category NB1**

ACS1 test Parameters		
Interferer	GSM (GMSK)	E-UTRA
Category NB1 signal power ( $P_{\text{wanted}}$ ) / dBm	REFSENS + 14 dB	
interferer signal power ( $P_{\text{Interferer}}$ ) / dBm	REFSENS + 42 dB	REFSENS + 47 dB
Interferer bandwidth	200 kHz	5 MHz
Interferer offset from category NB1 channel edge	$\pm 200$ kHz	$\pm 2.5$ MHz
ACS2 test Parameters		
Interferer	GSM (GMSK)	E-UTRA
Category NB1 signal power ( $P_{\text{wanted}}$ ) / dBm	-25 dBm -28 dB	-25 dBm -33 dB
interferer signal power ( $P_{\text{Interferer}}$ ) / dBm	-25 dBm	
Interferer bandwidth	200 kHz	5 MHz
Interferer offset from category NB1 channel edge	$\pm 200$ kHz	$\pm 2.5$ MHz

The normative reference for this requirement is TS 36.101 [2] clause 7.5.1F.

### 7.5F.4 Test description

#### 7.5F.4.1 Initial conditions

Initial conditions are a set of test configurations the UE needs to be tested in and the steps for the SS to take with the UE to reach the correct measurement state.

The initial test configurations consist of environmental conditions and test frequencies based on the subset of E-UTRA operating bands defined for NB-IoT in clause 5.2F. All of these configurations shall be tested with applicable test parameters, and are shown in table 7.5F.4.1-1. The details of the downlink reference measurement channel (RMC) are specified in Annex A.3. Configurations of NPDSCH and NPDCCH before measurement are specified in Annex C.2.

**Table 7.5F.4.1-1: Test Configuration Table**

Initial Conditions					
Test Environment as specified in TS 36.508 [7] clause [X.4.1]		NC			
Test Frequencies as specified in TS36.508 [7] clause [X.4.3.1]		[FFS]			
Configuration ID	Downlink Configuration		Uplink Configuration		
	Modulation	Subcarriers	Modulation	$N_{\text{tones}}$	Subcarrier spacing
1	QPSK	12	BPSK	1@0	15kHz

1. Connect the SS to the UE antenna connector as shown in TS 36.508 [7] Annex A, Figure A.4 using only the main UE Tx/Rx antenna, and noting that the interference can be either GSM or E-UTRA.

2. The parameter settings for the cell are set up according to TS 36.508 [7] clause [FFS].
3. Downlink signals are initially set up according to Annex C.0, C.1 and C.2, and NPUSCH Format 2 is used to carry ACK/NACK on the uplink.
4. The DL Reference Measurement channel is set according to Table 7.5F.4.1-1.
5. Propagation conditions are set according to Annex B.0.
6. Ensure the UE is in State [3A-RF] according to TS 36.508 [7] clause [FFS]. Message contents are defined in clause 7.5F.4.3.

#### 7.5F.4.2 Test procedure

1. SS transmits NPDSCH via NPDCCH DCI format N1 for C\_RNTI to transmit the DL RMC according to Table 7.5F.4.1-1. The SS sends downlink MAC padding bits on the DL RMC. The UE will send HARQ feedback based on information contained in DCI format N1.
2. Set the Downlink signal level to the value defined for ACS1, GSM in Table 7.5F.5-1.
3. Set the Interferer signal level to the value defined for ACS1, GSM in Table 7.5F.5-1, with frequency below the wanted signal according to table 7.5F.5-1, using a modulated interferer bandwidth as defined in Annex D.2 of the present document.
4. Measure the average throughput for a duration sufficient to achieve statistical significance according to Annex G.2.
5. Repeat steps 2 to 4, using an interfering signal above the wanted signal at step 3.
6. Set the Downlink signal level to the value defined for ACS2, GSM in Table 7.5F.5-1.
7. Set the Interferer signal level to the value defined for ACS2, GSM in Table 7.5F.5-1, with frequency below the wanted signal according to table 7.5F.5-1, using a modulated interferer bandwidth as defined in Annex D.2 of the present document.
8. Measure the average throughput for a duration sufficient to achieve statistical significance according to Annex G.2.
9. Repeat steps 6 to 8, using an interfering signal above the wanted signal at step 7.
10. Set the Downlink signal level to the value defined for ACS1, E-UTRA in Table 7.5F.5-1.
11. Set the Interferer signal level to the value defined for ACS1, E-UTRA in Table 7.5F.5-1, with frequency below the wanted signal according to table 7.5F.5-1, using a modulated interferer of 5MHz bandwidth defined in Annex D.2 of the present document.
12. Measure the average throughput for a duration sufficient to achieve statistical significance according to Annex G.2.
13. Repeat steps 10 to 12, using an interfering signal above the wanted signal at step 11.
14. Set the Downlink signal level to the value defined for ACS2, E-UTRA in Table 7.5F.5-1.
15. Set the Interferer signal level to the value defined for ACS2, E-UTRA in Table 7.5F.5-1, with frequency below the wanted signal according to table 7.5F.5-1, using a modulated interferer of 5MHz bandwidth defined in Annex D.2 of the present document.
16. Measure the average throughput for a duration sufficient to achieve statistical significance according to Annex G.2.
17. Repeat steps 14 to 16, using an interfering signal above the wanted signal at step 15.

#### 7.5F.4.3 Message contents

Message contents are according to TS 36.508 [7] clause [FFS] with the following exceptions:

Power in Transmission Bandwidth Configuration	dBm	REFSENS + channel bandwidth specific value below					
		6	6	6	6	7	9
$BW_{\text{Interferer}}$	MHz	1.4	3	5	5	5	5
$F_{\text{offset, case 1}}$	MHz	2.1+0.0125	4.5+0.0075	7.5+0.0125	7.5+0.0025	7.5+0.0075	7.5+0.0125
$F_{\text{offset, case 2}}$	MHz	3.5+0.0075	7.5+0.0075	12.5+0.0075	12.5+0.012	12.5+0.002	12.5+0.007
Note 1:		The transmitter shall be set to 4dB below $P_{\text{CMAX,L}}$ at the minimum uplink configuration specified in Table 7.3.3-2 with $P_{\text{CMAX,L}}$ as defined in clause 6.2.5.					
Note 2:		The interferer consists of the Reference measurement channel specified in Annex A.3.2 with one sided dynamic OCNG Pattern OP.1 FDD/TDD as described in Annex A.5.1.1/A.5.2.1 and set-up according to Annex C.3.1.					

Table 7.6.1.3-2: In-band blocking

E-UTRA band	Parameter	Unit	Case 1	Case 2	Case 3	Case 4	Case 5
	$P_{\text{Interferer}}$	dBm	-56	-44			-38
	$F_{\text{Interferer}}$ (offset)	MHz	$=-BW/2 - F_{\text{offset, case 1}}$ & $=+BW/2 + F_{\text{offset, case 1}}$	$\leq -BW/2 - F_{\text{offset, case 2}}$ & $\geq +BW/2 + F_{\text{offset, case 2}}$			$-BW/2 - 11$
1, 2, 3, 4, 5, 6, 7, 8, 9, 10, 11, 12, 13, 14, 17, 18, 19, 20, 21, 22, 23, 25, 26, 27, 28, 31, 33, 34, 35, 36, 37, 38, 39, 40, 41, 42, 43, 44, 45, 65, 66	$F_{\text{Interferer}}$	MHz	(Note 2)	$F_{\text{DL,low}} - 15$ to $F_{\text{DL,high}} + 15$	Void	Void	
30	$F_{\text{Interferer}}$	MHz	(Note 2)	$F_{\text{DL,low}} - 15$ to $F_{\text{DL,high}} + 15$			$F_{\text{DL,low}} - 11$
NOTE 1: For certain bands, the unwanted modulated interfering signal may not fall inside the UE receive band, but within the first 15 MHz below or above the UE receive band							
NOTE 2: For each carrier frequency the requirement is valid for two frequencies: a. the carrier frequency $-BW/2 - F_{\text{offset, case 1}}$ and b. the carrier frequency $+BW/2 + F_{\text{offset, case 1}}$							
NOTE 3: $F_{\text{Interferer}}$ range values for unwanted modulated interfering signal are interferer centre frequencies							

For the UE which supports inter band CA configuration in Table 7.3.3-1A,  $P_{\text{Interferer}}$  power defined in Table 7.6.1.3-2 is increased by the amount given by  $\Delta R_{\text{IB,c}}$  in Table 7.3.3-1A.

The normative reference for this requirement is TS 36.101 [2] clause 7.6.1.

## 7.6.1.4 Test Description

### 7.6.1.4.1 Initial Conditions

Initial conditions are a set of test configurations the UE needs to be tested in and the steps for the SS to take with the UE to reach the correct measurement state.

The initial test configurations consist of environmental conditions, test frequencies, and channel bandwidths based on E-UTRA bands specified in table 5.4.2.1-1. All of these configurations shall be tested with applicable test parameters for each channel bandwidth, and are shown in table 7.6.1.4.1-1. The details of the uplink and downlink reference measurement channels (RMCs) are specified in Annexes A.2 and A.3 respectively. The details of the OCNG patterns used are specified in Annex A.5. Configurations of PDSCH and PDCCH before measurement are specified in Annex C.2.

Table 7.6.1.4.1-1: Test Configuration Table

Initial Conditions						
Test Environment as specified in TS 36.508[7] subclause 4.1				NC		
Test Frequencies as specified in TS36.508 [7] subclause 4.3.1				Mid range

20MHz	QPSK	100	100	QPSK	100	100
20MHz	QPSK	100	N/A	QPSK	75	N/A
20MHz	QPSK	100	N/A	QPSK	50	N/A
20MHz	QPSK	100	N/A	QPSK	25	N/A
20MHz	QPSK	100	N/A	QPSK	20	N/A
<p>Note 1: Test Channel Bandwidths are checked separately for each E-UTRA band, which applicable channel bandwidths are specified in Table 5.4.2.1-1.</p> <p>Note 2: Depending on E-UTRA band, only the appropriate Uplink RB allocation value according to table 7.3.3-2 is tested per Test Channel Bandwidth. The allocation shall be located as close as possible to the downlink operating band but confined within the transmission bandwidth configuration for the channel bandwidth (Table 5.4.2-1).</p> <p>Note 3: For the DL signal one sided dynamic OCNG Pattern OP.1 FDD/TDD is used.</p> <p>Note 4: Applicable only to E-UTRA FDD Band 31. The UL resource blocks shall be located at RBstart 10 (according to Table 7.3.3-2).</p>						

1. Connect the SS to the UE antenna connectors as shown in TS 36.508 [7] Annex A, in Figure A.4.
2. The parameter settings for the cell are set up according to TS 36.508 [7] subclause 4.4.3.
3. Downlink signals are initially set up according to Annex C0, C.1 and C.3.1, and uplink signals according to Annex H.1 and H.3.1.
4. The UL and DL Reference Measurement channels are set according to in Table 7.6.1.4.1-1.
5. Propagation conditions are set according to Annex B.0.
6. Ensure the UE is in State 3A-RF according to TS 36.508 [7] clause 5.2A.2. Message contents are defined in clause 7.6.1.4.3.

#### 7.6.1.4.2 Test Procedure

1. SS transmits PDSCH via PDCCH DCI format 1A for C\_RNTI to transmit the DL RMC according to Table 7.6.1.4.1-1. The SS sends downlink MAC padding bits on the DL RMC.
2. SS sends uplink scheduling information for each UL HARQ process via PDCCH DCI format 0 for C\_RNTI to schedule the UL RMC according to Table 7.6.1.4.1-1. Since the UE has no payload data to send, the UE transmits uplink MAC padding bits on the UL RMC.

3. Set the parameters of the signal generator for an interfering signal below the wanted signal in Case 1 according to Tables 7.6.1.5-1 and 7.6.1.5-2.
4. Set the downlink signal level according to the table 7.6.1.5-1. Send uplink power control commands to the UE (less or equal to 1dB step size should be used), to ensure that the UE output power is within +0, - 3.4 dB of the target level in table 7.6.1.5-1 for carrier frequency  $f \leq 3.0\text{GHz}$  or within +0, -4.0 dB of the target level for carrier frequency  $3.0\text{GHz} < f \leq 4.2\text{GHz}$ , for at least the duration of the throughput measurement.
5. Measure the average throughput for a duration sufficient to achieve statistical significance according to Annex G.2.
6. Repeat steps from 3 to 5, using an interfering signal above the wanted signal in Case 1 at step 3.
7. Repeat steps from 3 to 6, using interfering signals in Case 2 at step 3 and 6. The ranges of case 2 are covered in steps equal to the interferer bandwidth. The test frequencies are chosen in analogy to table 7.6.1.4.2-1.

**Table 7.6.1.4.2-1: Example for interferer frequencies**

	Lower frequency	Upper frequency
Band 1 DL	2110 MHz	2170 MHz
Band 1 Midrange	2140 MHz	
Receive band wanted signal (BW 5MHz)	2137.5 MHz	2142.5 MHz
Interferer case 1	2129.9875 MHz	2150.0125 MHz
Interferer case 2 (inner frequency)	2124.9925 MHz	2155.0075 MHz
Interferer case 2 (outer frequency)	2099.9925 MHz	2180.0075 MHz
Outer limit for in band blocking	2095MHz	2185MHz
Number of test frequencies case 2	6	6
Number of test frequencies for Band 17(asymmetric!), BW 5MHz, case 2	0	2

#### 7.6.1.4.3 Message Contents

Message contents are according to TS 36.508 [7] subclause 4.6 with the following exception

#### 7.6.1.5 Test Requirement

The throughput measurement derived in test procedure shall be  $\geq 95\%$  of the maximum throughput of the reference measurement channels as specified in Annex A.3.2 with parameters specified in Tables 7.6.1.5-1 and 7.6.1.5-2.

**Table 7.6.1.5-1: In band blocking parameters**

Rx Parameter	Units	Channel bandwidth					
		1.4 MHz	3 MHz	5 MHz	10 MHz	15 MHz	20 MHz
Power in Transmission	dBm	REFSENS + channel bandwidth specific value below					
		6	6	6	6	7	9

Bandwidth Configuration							
BW <sub>Interferer</sub>	MHz	1.4	3	5	5	5	5
F <sub>offset, case 1</sub>	MHz	2.1+0.0125	4.5+0.0075	7.5+0.0125	7.5+0.0025	7.5+0.0075	7.5+0.0125
F <sub>offset, case 2</sub>	MHz	3.5+0.0075	7.5+0.0075	12.5+0.0075	12.5+0.012	12.5+0.002	12.5+0.007

Note 1: The transmitter shall be set to 4dB below P<sub>C<sub>MAX,L</sub></sub> with P<sub>C<sub>MAX,L</sub></sub> as defined in clause 6.2.5.  
Note 2: The interferer consists of the Reference measurement channel specified in Annex A.3.2 with one sided dynamic OCNG Pattern OP.1 FDD/TDD as described in Annex A.5.1.1/A.5.2.1 and set-up according to Annex C.3.1.

Table 7.6.1.5-2: In-band blocking

E-UTRA band	Parameter	Unit	Case 1	Case 2	Case 3	Case 4	Case 5
	P <sub>Interferer</sub>	dBm	-56	-44			-38
	F <sub>Interferer (offset)</sub>	MHz	=-BW/2 - F <sub>offset, case 1</sub> & =+BW/2 + F <sub>offset, case 1</sub>	≤-BW/2 - F <sub>offset, case 2</sub> & ≥+BW/2 + F <sub>offset, case 2</sub>			-BW/2 - 11
1, 2, 3, 4, 5, 6, 7, 8, 9, 10, 11, 12, 13, 14, 17, 18, 19, 20, 21, 22, 23, 25, 26, 27, 28, 31, 33, 34, 35, 36, 37, 38, 39, 40, 41, 42, 43, 44, 45, 65, 66	F <sub>Interferer</sub>	MHz	(Note 2)	F <sub>DL_low</sub> - 15 to F <sub>DL_high</sub> + 15	Void	Void	
30	F <sub>Interferer</sub>	MHz	(Note 2)	F <sub>DL_low</sub> - 15 to F <sub>DL_high</sub> + 15			F <sub>DL_low</sub> - 11

NOTE 1: For certain bands, the unwanted modulated interfering signal may not fall inside the UE receive band, but within the first 15 MHz below or above the UE receive band  
NOTE 2: For each carrier frequency the requirement is valid for two frequencies:  
a. the carrier frequency -BW/2 - F<sub>offset, case 1</sub> and  
b. the carrier frequency +BW/2 + F<sub>offset, case 1</sub>  
NOTE 3: F<sub>Interferer</sub> range values for unwanted modulated interfering signal are interferer centre frequencies

For the UE which supports inter band CA configuration in Table 7.3.3-1A, P<sub>Interferer</sub> power defined in Table 7.6.1.5-2 is increased by the amount given by ΔR<sub>IB,c</sub> in Table 7.3.3-1A.

### 7.6.1\_1 In-band blocking with 4 Rx antenna ports

Editor's note: Following aspects missing or not yet determined:

- Connection Diagram.

#### 7.6.1\_1.1 Test Purpose

In-band blocking with 4 Rx antenna ports is defined for an unwanted interfering signal falling into the range from 15MHz below to 15MHz above the UE 4 Rx receive band, at which the relative throughput shall meet or exceed the requirement for the specified measurement channels.

The lack of in-band blocking ability will decrease the coverage area when other e-NodeB transmitters exist (except in the adjacent channels and spurious response).

#### 7.6.1\_1.2 Test Applicability

This test applies to all types of E-UTRA UE release 10 and forward that supports 4 Rx antenna ports.

### 7.6.1\_1.3 Minimum Conformance Requirements

Same as in clause 7.6.1.3 with following exceptions:

Instead of Table 7.6.1.3-1 → use Table 7.6.1\_1.3-1.

**Table 7.6.1\_1.3-1: In band blocking parameters**

Rx Parameter	Units	Channel bandwidth					
		1.4 MHz	3 MHz	5 MHz	10 MHz	15 MHz	20 MHz
Power in Transmission Bandwidth Configuration	dBm	REFSENS + channel bandwidth specific value below					
		6	6	6	6	7	9
$BW_{\text{Interferer}}$	MHz	1.4	3	5	5	5	5
$F_{\text{offset, case 1}}$	MHz	2.1+0.0125	4.5+0.0075	7.5+0.0125	7.5+0.0025	7.5+0.0075	7.5+0.0125
$F_{\text{offset, case 2}}$	MHz	3.5+0.0075	7.5+0.0075	12.5+0.0075	12.5+0.012	12.5+0.002	12.5+0.007
Note 1:		The transmitter shall be set to 4dB below $P_{\text{CMAX\_L}}$ at the minimum uplink configuration specified in Table 7.3.3-2 with $P_{\text{CMAX\_L}}$ as defined in clause 6.2.5.					
Note 2:		The interferer consists of the Reference measurement channel specified in Annex A.3.2 with one sided dynamic OCNG Pattern OP.1 FDD/TDD as described in Annex A.5.1.1/A.5.2.1 and set-up according to Annex C.3.1.					
Note 3:		The REFSENS power level is specified in Table 7.3.3-1a.					

### 7.6.1\_1.4 Test Description

#### 7.6.1\_1.4.1 Initial Conditions

Same as in clause 7.6.1.4.1 with following exceptions:

- Instead of Table 7.6.1.4.1-1 → use table 7.6.1\_1.4-1
- Instead of Figure A.4 → use Figure A.[TBD]
- Instead of clause 7.6.1.4.3 → use clause 7.6.1\_1.4.3

**Table 7.6.1\_1.4.1-1: Test Configuration Table**

Initial Conditions						
Test Environment as specified in TS 36.508[7] subclause 4.1				NC		
Test Frequencies as specified in TS36.508 [7] subclause 4.3.1				Mid range		
Test Channel Bandwidths as specified in TS 36.508 [7] subclause 4.3.1				Lowest, 5MHz, Highest		
Test Parameters for Channel Bandwidths						
Ch BW	Downlink Configuration			Uplink Configuration		
	Mod'n	RB allocation		Mod'n	RB allocation	
		FDD	TDD		FDD	TDD
1.4MHz	QPSK	6	6	QPSK	6	6
3MHz	QPSK	15	15	QPSK	15	15

Note 3:	The REFSSENS power level is specified in Table 7.3_1.5-1.						

## 7.6.1A In-band blocking for CA

### 7.6.1A.0 Minimum conformance requirements

For inter-band carrier aggregation with one component carrier per operating band and the uplink assigned to one E-UTRA band the in-band blocking requirements are defined with the uplink active on the band(s) other than the band whose downlink is being tested. The UE shall meet the requirements specified in subclause 7.6.1 for each component carrier while all downlink carriers are active. For the UE which supports inter band CA configuration in Table 7.3.3-1A,  $P_{\text{Interferer}}$  power defined in Table 7.6.1.3-2 is increased by the amount given by  $\Delta R_{\text{IB,c}}$  in Table 7.3.3-1A. For E-UTRA CA configurations including an operating band without uplink operation or an operating band with an unpaired DL part (as noted in Table 5.2-1), the requirements for all downlinks shall be met with the single uplink carrier active in each band capable of UL operation. The requirements for the component carrier configured in the operating band without uplink operation are specified in Table 7.6.1A.0-0, Table 7.6.1A.0-0a and Table 7.6.1A.0-0b.

**Table 7.6.1A.0-0: In-band blocking for additional operating bands for carrier aggregation**

E-UTRA band	Parameter	Unit	Case 1	Case 2
		$P_{\text{Interferer}}$	dBm	-56
	$F_{\text{Interferer}}$ (offset)	MHz	$=-BW/2 - F_{\text{offset, case 1}}$ & $=+BW/2 + F_{\text{offset, case 1}}$	$\leq -BW/2 - F_{\text{offset, case 2}}$ & $\geq +BW/2 + F_{\text{offset, case 2}}$
29, 32, 67	$F_{\text{Interferer}}$	MHz	(Note 2)	$F_{\text{DL\_low}} - 15$ to $F_{\text{DL\_high}} + 15$
Note 1:	For certain bands, the unwanted modulated interfering signal may not fall inside the UE receive band, but within the first 15 MHz below or above the UE receive band.			
Note 2:	For each carrier frequency the requirement is valid for two frequencies: a. the carrier frequency $-BW/2 - F_{\text{offset, case 1}}$ and b. the carrier frequency $+BW/2 + F_{\text{offset, case 1}}$			
Note 3:	$F_{\text{Interferer}}$ range values for unwanted modulated interfering signal are interferer centre frequencies.			

**Table 7.6.1A.0-0a: In band blocking parameters for additional operating bands for carrier aggregation**

E-UTRA band	Rx parameter	Units	Channel bandwidth					
			1.4 MHz	3 MHz	5 MHz	10 MHz	15 MHz	20 MHz
46 (NOTE 3)	Power in Transmission Bandwidth Configuration	dBm	REFSENS + channel bandwidth specific value below					
							9	
	$BW_{\text{Interferer}}$	MHz					20	
	$F_{\text{offset, case 1}}$	MHz					30+0.0125	
	$F_{\text{offset, case 2}}$	MHz					50+0.0075	
NOTE 1:	The transmitter shall be set to 4dB below $P_{\text{CMAX}_L}$ at the minimum uplink configuration specified in Table 7.3.1-2 with $P_{\text{CMAX}_L}$ as defined in subclause 6.2.5.							
NOTE 2:	The interferer consists of the Reference measurement channel specified in Annex A.3.2 with one sided dynamic OCNG Pattern OP.1 FDD/TDD as described in Annex A.5.1.1/A.5.2.1 and set-up according to Annex C.3.1							
NOTE 3:	The interferer consists of the Reference measurement channel specified in Annex A.3.2 (TBD)							

**Table 7.6.1A.0-0b: In-band blocking for additional operating bands for carrier aggregation**

E-UTRA band	Parameter	Unit	Case 1	Case 2
		$P_{\text{Interferer}}$	dBm	-50
	$F_{\text{Interferer}}$ (offset)	MHz	$=-BW/2 - F_{\text{offset,case 1}}$ & $=+BW/2 + F_{\text{offset,case 1}}$	$\leq -BW/2 - F_{\text{offset,case 2}}$ & $\geq +BW/2 + F_{\text{offset,case 2}}$
46	$F_{\text{Interferer}}$	MHz	(Note 2)	$F_{\text{DL\_low}} - 60$ to $F_{\text{DL\_high}} + 60$
<p>NOTE 1: For certain bands, the unwanted modulated interfering signal may not fall inside the UE receive band, but within the first 15 MHz or 60 MHz below or above the UE receive band.</p> <p>NOTE 2: For each carrier frequency the requirement is valid for two frequencies:                      a. the carrier frequency <math>-BW/2 - F_{\text{offset, case 1}}</math> and                      b. the carrier frequency <math>+BW/2 + F_{\text{offset, case 1}}</math></p> <p>NOTE 3: <math>F_{\text{Interferer}}</math> range values for unwanted modulated interfering signal are interferer center frequencies.</p>				

For E-UTRA CA configurations listed in Table 7.3A.0-1 under conditions for which reference sensitivity for the operating band being tested is N/A, the in-band blocking requirements of subclause 7.6.1A.0 do not apply.

For intra-band contiguous carrier aggregation the downlink SCC(s) shall be configured at nominal channel spacing to the PCC. For FDD, the PCC shall be configured closest to the uplink band. All downlink carriers shall be active throughout the test. The uplink output power shall be set as specified in Table 7.6.1A.0-1 with the uplink configuration set according to Table 7.3A.0-2 for the applicable carrier aggregation configuration. For UE(s) supporting one uplink carrier, the uplink configuration of the PCC shall be in accordance with Table 7.3.3-2. The UE shall fulfil the minimum requirement in presence of an interfering signal specified in Tables 7.6.1A.0-1 and Tables 7.6.1A.0-2 being on either side of the aggregated signal. The throughput of each carrier shall be  $\geq 95\%$  of the maximum throughput of the reference measurement channels as specified in Annexes A.2.2, A.2.3 and A.3.2 (with one sided dynamic OCNG Pattern OP.1 FDD/TDD for the DL-signal as described in Annex A.5.1.1/A.5.2.1) with parameters specified in Tables 7.6.1A.0-1 and 7.6.1A.0-2. For operating bands with an unpaired DL part (as noted in Table 5.2-1), the requirements also apply for an SCC assigned in the unpaired part with parameters specified in Tables 7.6.1A.0-1 and 7.6.1A.0-2.

For intra-band non-contiguous carrier aggregation with one uplink carrier and two downlink sub-blocks, each larger than or equal to 5 MHz, the in-band blocking requirements are defined with the uplink configuration in accordance with Table 7.3A.0-3. For this uplink configuration, the UE shall meet the requirements for each sub-block as specified in subclause 7.6.1.3 and in this subclause for single component carrier and two component carriers per sub-block, respectively. The requirements apply for in-gap and out-of-gap interferers while all downlink carriers are active..

**Table 7.6.1A.0-1: In band blocking parameters**

Rx Parameter	Units	CA Bandwidth Class				
		B	C	D	E	F
Pw in Transmission Bandwidth Configuration, per CC	dBm	REFSENS + CA Bandwidth Class specific value below				
		9	12	13.8	15	
$BW_{\text{Interferer}}$	MHz	5	5	5	5	
$F_{\text{offset, case 1}}$	MHz	7.5	7.5	7.5	7.5	
$F_{\text{offset, case 2}}$	MHz	12.5	12.5	12.5	12.5	
<p>Note 1: The transmitter shall be set to 4dB below <math>P_{\text{CMAX\_L}}</math> or <math>P_{\text{CMAX\_L\_CA}}</math> as defined in subclause 6.2.5A</p> <p>Note 2: The interferer consists of the Reference measurement channel specified in Annex A.3.2 with one sided dynamic OCNG Pattern OP.1 FDD/TDD as described in Annex A.5.1.1/A.5.2.1 and set-up according to Annex C.3.1</p>						

**Table 7.6.1A.0-2: In-band blocking**

CA configuration	Parameter	Unit	Case 1	Case 2
		$P_{\text{Interferer}}$	dBm	-56
	$F_{\text{Interferer}}$	MHz	$=-F_{\text{offset}} - F_{\text{offset,case 1}}$ & $=+F_{\text{offset}} + F_{\text{offset,case 1}}$	$\leq -F_{\text{offset}} - F_{\text{offset,case 2}}$ & $\geq +F_{\text{offset}} + F_{\text{offset,case 2}}$

CA_1C, CA_2C, CA_3C, CA_5B, CA_7C, CA_8B, CA_12B, CA_23B, CA_27B, CA_38C, CA_39C, CA_40C, CA_40D, CA_41C, CA_41D, CA_42C, CA_42D, CA_42E, CA_66B, CA_66C	$F_{\text{Interferer}}$ (Range)	MHz	(Note 2)	$F_{\text{DL\_low}} - 15$ to $F_{\text{DL\_high}} + 15$
Note 1:	For certain bands, the unwanted modulated interfering signal may not fall inside the UE receive band, but within the first 15 MHz below or above the UE receive band			
Note 2:	For each carrier frequency the requirement is valid for two frequencies: a) the carrier frequency $-F_{\text{offset}} - F_{\text{offset, case 1}}$ and b) the carrier frequency $+F_{\text{offset}} + F_{\text{offset, case 1}}$			
Note 3:	$F_{\text{offset}}$ is the frequency offset from the centre frequency of the adjacent CC being tested to the edge of aggregated channel bandwidth.			
Note 4:	The $F_{\text{interferer}}$ (offset) is the frequency separation of the center frequency of the carrier closest to the interferer and the center frequency of the interferer and shall be further adjusted to $\lfloor F_{\text{interferer}} / 0.015 + 0.5 \rfloor 0.015 + 0.0075$ MHz to be offset from the sub-carrier raster.			

For combinations of intra-band and inter-band carrier aggregation with up to five downlink carriers (up to two non-contiguously sub-blocks per band and up to four contiguously aggregated carriers per band) and one uplink carrier assigned to one E-UTRA band, the requirement is defined with the uplink active in the band other than that supporting the downlink(s) under test. The uplink configuration shall be in accordance with Table 7.3A.0-3 when the uplink is active in the band supporting two non-contiguous component carriers, Table 7.3A.0-2 when the uplink is active in a band supporting two contiguous component carriers and in accordance with Table 7.3.3-2 when the uplink is active in a band supporting one carrier per band. The downlink PCC shall be configured closer to the uplink operating band than the downlink SCC(s) when the uplink is active in band(s) supporting contiguous aggregation of up to four component carriers. For these uplink configurations, the UE shall meet the in-band blocking requirements for intra-band non-contiguous carrier aggregation of two downlink sub-blocks with  $\Delta R_{\text{IBNC}} = 0$  dB for all sub-block gaps (Table 7.3A.0-3) for the two non-contiguous downlink sub-blocks, the requirements for intra-band contiguous carrier aggregation for the contiguously aggregated downlink carriers and for any remaining component carrier(s) the requirements specified in subclause 7.6.1.3. All downlink carriers shall be active throughout the tests and the requirements for the downlinks shall be met with the single uplink carrier active in each band capable of uplink operation.

For contiguously aggregated component carriers configured in Band 46, the said requirements for intra-band contiguous carrier aggregation of downlink carriers are replaced by requirements in Table 7.6.1.1A-3 and 7.6.1.1A-4.

**Table 7.6.1A.0-3: In band blocking parameters**

E-UTRA Band	Rx Parameter	Units	CA Bandwidth Class				
			B	C	D	E	F
46	Pw in Transmission Bandwidth Configuration, per CC	dBm	REFSENS + CA Bandwidth Class specific value below

	F <sub>Interferer</sub> (offset)	MHz	$= -F_{\text{offset}} - F_{\text{offset, case 1}}$ & $= +F_{\text{offset}} + F_{\text{offset, case 1}}$	$\leq -F_{\text{offset}} - F_{\text{offset, case 2}}$ & $\geq +F_{\text{offset}} + F_{\text{offset, case 2}}$
46	F <sub>Interferer</sub> (Range)	MHz	(Note 2)	F <sub>DL,low</sub> - 60 to F <sub>DL,high</sub> + 60

NOTE 1: For certain bands, the unwanted modulated interfering signal may not fall inside the UE receive band, but within the first 15 MHz below or above the UE receive band.

NOTE 2: For each carrier frequency the requirement is valid for two frequencies:  
a. the carrier frequency  $-F_{\text{offset}} - F_{\text{offset, case 1}}$  and  
b. the carrier frequency  $+F_{\text{offset}} + F_{\text{offset, case 1}}$

NOTE 3: F<sub>offset</sub> is the frequency offset from the center frequency of the CC being tested to the edge of aggregated channel bandwidth.

NOTE 4: The F<sub>interferer</sub> (offset) is the frequency separation of the center frequency of the carrier closest to the interferer and the center frequency of the interferer and shall be further adjusted to  $\lfloor F_{\text{interferer}} / 0.015 + 0.5 \rfloor 0.015 + 0.0075$  MHz to be offset from the sub-carrier raster.

The normative reference for this requirement is TS 36.101 [2] clause 7.6.1.1A.

## 7.6.1A.1 In-band blocking for CA (intra-band contiguous DL CA and UL CA)

### 7.6.1A.1.1 Test Purpose

In-band blocking is defined for an unwanted interfering signal falling into the range from 15MHz below to 15MHz above the UE receive band, at which the relative throughput shall meet or exceed the requirement for the specified measurement channels. The lack of in-band blocking ability will decrease the coverage area when other e-NodeB transmitters exist (except in the adjacent channels and spurious response).

### 7.6.1A.1.2 Test Applicability

This test applies to all types of E-UTRA UE release 10 and forward that support intra-band contiguous DL CA and UL CA.

### 7.6.1A.1.3 Minimum Conformance Requirements

The minimum conformance requirements are defined in clause 7.6.1A.0.

### 7.6.1A.1.4 Test Description

#### 7.6.1A.1.4.1 Initial Conditions

Initial conditions are a set of test configurations the UE needs to be tested in and the steps for the SS to take with the UE to reach the correct measurement state.

The initial test configurations consist of environmental conditions, test frequencies, and CC combinations based on E-UTRA CA configurations specified in table 5.4.2A.1-1. All of these configurations shall be tested with applicable test parameters for each CA Configuration, and are shown in table 7.6.1A.1.4.1-1. The details of the OCN patterns used are specified in Annex A.5. Configurations of PDSCH and PDCCH before measurement are specified in Annex C.2.

**Table 7.6.1A.1.4.1-1: Test Configuration Table**

Initial Conditions							
Test Environment as specified in TS 36.508[7] subclause 4.1				NC			
Test Frequencies as specified in TS36.508 [7] subclause 4.3.1 for different CA bandwidth classes, and PCC and SCCs are mapped onto physical frequencies according to Table 7.1-2				C: Mid range			
Test CC Combination setting ( $N_{RB\_agg}$ ) as specified in subclause 5.4.2A.1 for the CA Configuration across bandwidth combination sets supported by the UE.				Lowest $N_{RB\_agg}$ Highest $N_{RB\_agg}$ (Note 3)			
Test Parameters for CA Configurations							
CA Configuration / $N_{RB\_agg}$		DL Allocation		UL Allocation			
PCC $N_{RB}$	SCC $N_{RB}$	CC MOD	PCC & SCC RB allocation	CC MOD	$N_{RB\_alloc}$	PCC & SCC RB allocations ( $L_{CRB}$ @ $RB_{start}$ )	
75	75	QPSK	75+75	QPSK	75	P_75@0	S_0@0
75	75	QPSK	75+75	QPSK	129	P_75@0	S_54@0
75	75	QPSK	75+75	QPSK	150	P_75@0	S_75@0
100	25	QPSK	100+25	QPSK	50	P_50@50	S_0@0
100	25	QPSK	100+25	QPSK	125	P_100@0	S_25@0
100	50	QPSK	100+50	QPSK	50	P_50@50	S_0@0
100	50	QPSK	100+50	QPSK	75	P_75@25	S_0@0
100	50	QPSK	100+50	QPSK	150	P_100@0	S_50@0
100	75	QPSK	100+75	QPSK	175	P_100@0	S_75@0
100	100	QPSK	100+100	QPSK	50	P_50@50	S_0@0
100	100	QPSK	100+100	QPSK	75	P_75@25	S_0@0
100	100	QPSK	100+100	QPSK	130	P_100@0	S_30@0
100	100	QPSK	100+100	QPSK	200	P_100@0	S_100@0
Note 1: CA Configuration Test CC Combination settings are checked separately for each CA Configuration, which applicable aggregated channel bandwidths are specified in Table 5.4.2A.1-1. Note 2: Depending on CA Configuration only the appropriate Uplink RB allocation value according to table 7.3A.0-2 is tested per CA Configuration Test CC combination. Note 3: If in the CA Configuration UE supports multiple CC Combinations with the same $N_{RB\_agg}$ , only the first of those is tested, according to the order on the Test Configuration Table list.							

1. Connect the SS to the UE antenna connectors as shown in TS 36.508 [7] Annex A, Figure group A.34 as appropriate.
2. The parameter settings for the cell are set up according to TS 36.508 [7] subclause 4.4.3.
3. Downlink signals are for PCC initially set up according to Annex C.0, C.1 and C.3.1, and uplink signals according to Annex H.1 and H.3.1.
4. The UL and DL Reference Measurement channels are set according to Table 7.6.1A.1.4.1-1.
5. Propagation conditions are set according to Annex B.0.
6. Ensure the UE is in State 3A-RF according to TS 36.508 [7] clause 5.2A.2. Message contents are defined in clause 7.6.1A.1.4.3.

## 7.6.1A.1.4.2 Test Procedure

1. Configure SCC according to Annex C.0, C.1 and Annex C.3.1 for all downlink physical channels.
2. The SS shall configure SCC as per TS 36.508 [7] clause 5.2A.4. Message contents are defined in clause 7.6.1A.1.4.3.
3. SS activates SCC by sending the activation MAC-CE (Refer TS 36.321 [13], clauses 5.13, 6.1.3.8). Wait for at least 2 seconds (Refer TS 36.133, clauses 8.3.3.2).
4. SS transmits PDSCH via PDCCH DCI format 1A for C\_RNTI to transmit the DL RMC according to Table 7.6.1A.1.4.1-1 on both PCC and SCC. The SS sends downlink MAC padding bits on the DL RMC.
5. SS sends uplink scheduling information for each UL HARQ process via PDCCH DCI format 0 for C\_RNTI to schedule the UL RMC according to Table 7.6.1A.1.4.1-1 on both PCC and SCC. Since the UE has no payload data to send, the UE sends uplink MAC padding bits on the UL RMC.
6. Set the parameters of the signal generator for an interfering signal below the aggregated component carriers in Case 1 according to Tables 7.6.1A.1.5-1 and 7.6.1A.1.5-2.
7. Set the downlink signal level according to the table 7.6.1A.1.5-1. Send uplink power control commands to the UE (less or equal to 1dB step size should be used), to ensure that for at least the duration of the throughput measurement:  
The PCC output power is within (+0dB, -3.4 dB) of (target level in Table 7.6.1A.1.5-1 +  $10\log(P_{L\_CRB}/N_{RB\_alloc})$ ), for carrier frequency  $f \leq 3.0\text{GHz}$ ,  
or within (+0dB, -4 dB) of (target level in Table 7.6.1A.1.5-1 +  $10\log(P_{L\_CRB}/N_{RB\_alloc})$ ) for carrier frequency  $3.0\text{GHz} < f \leq 4.2\text{GHz}$ .  
The SCC output power is within (+0dB, -3.4 dB) of (target level in Table 7.6.1A.1.5-1 +  $10\log(S_{L\_CRB}/N_{RB\_alloc})$ ), for carrier frequency  $f \leq 3.0\text{GHz}$ ,  
or within (+0dB, -4 dB) of (target level in Table 7.6.1A.1.5-1 +  $10\log(S_{L\_CRB}/N_{RB\_alloc})$ ) for carrier frequency  $3.0\text{GHz} < f \leq 4.2\text{GHz}$ .
8. Measure the average throughput for each component carrier for duration sufficient to achieve statistical significance according to Annex G.2A.
9. Repeat steps from 6 to 8, using an interfering signal above the aggregated component carriers in Case 1 at step 6.
10. Repeat steps from 6 to 9, using interfering signals in Case 2 at step 6 and 9. The ranges of case 2 are covered in steps equal to the interferer bandwidth. The test frequencies are chosen in analogy to table 7.6.1A.1.4.2-1.

Table 7.6.1A.1.4.2-1: Example for interferer frequencies

	Lower frequency	Upper frequency
Band 1 DL	2110 MHz	2170 MHz
Band 1 Midrange	PCC: 2132.5 MHz SCC: 2147.5 MHz	
Receive band wanted signal (CC Configuration / $N_{RB\_agg} 75 + 75$ )	PCC: 2125 MHz SCC: 2140 MHz	2140 MHz 2155 MHz

## 7.6.1A.1.5 Test Requirement

The throughput measurement of each carrier derived in test procedure shall be  $\geq 95\%$  of the maximum throughput of the reference measurement channels as specified in Annex A.3.2 with parameters specified in Table 7.6.1A.1.5-1 and 7.6.1A.1.5-2.

Table 7.6.1A.1.5-1: In band blocking parameters

Rx Parameter	Units	CA Bandwidth Class				
		B	C	D	E	F
Pw in Transmission Bandwidth Configuration, per CC	dBm	REFSENS + CA Bandwidth Class specific value below				
BW <sub>Interferer</sub>	MHz		12			
F <sub>offset, case 1</sub>	MHz		7.5			
F <sub>offset, case 2</sub>	MHz		12.5			
Note 1: The transmitter shall be set to 4dB below P <sub>CMAX,L</sub> or P <sub>CMAX,L,CA</sub> as defined in subclause 6.2.5 for one uplink carrier and in subclause 6.2.5A for two uplink carriers.						
Note 2: The interferer consists of the Reference measurement channel specified in Annex A.3.2 with one sided dynamic OCNG Pattern OP.1 FDD/TDD as described in Annex A.5.1.1/A.5.2.1 and set-up according to Annex C.3.1						

Table 7.6.1A.1.5-2: In-band blocking

CA configuration	Parameter	Unit	Case 1	Case 2
	P <sub>Interferer</sub>	dBm	-56	-44
	F <sub>Interferer</sub>	MHz	$= -F_{\text{offset}} - F_{\text{offset, case 1}}$ & $= +F_{\text{offset}} + F_{\text{offset, case 1}}$	$\leq -F_{\text{offset}} - F_{\text{offset, case 2}}$ & $\geq +F_{\text{offset}} + F_{\text{offset, case 2}}$

CA_1C, CA_2C, CA_3C, CA_7C, CA_12B, CA_23B, CA_27B, CA_38C, CA_39C, CA_40C, CA_41C, CA_42C	$F_{\text{Interferer}}$ (Range)	MHz	(Note 2)	$F_{\text{DL\_low}} - 15$ to $F_{\text{DL\_high}} + 15$
<p>Note 1: For certain bands, the unwanted modulated interfering signal may not fall inside the UE receive band, but within the first 15 MHz below or above the UE receive band</p> <p>Note 2: For each carrier frequency the requirement is valid for two frequencies:  a) the carrier frequency <math>-F_{\text{offset}} - F_{\text{offset, case 1}}</math> and  b) the carrier frequency <math>+F_{\text{offset}} + F_{\text{offset, case 1}}</math></p> <p>Note 3: <math>F_{\text{offset}}</math> is the frequency offset from the centre frequency of the adjacent CC being tested to the edge of aggregated channel bandwidth. Note 4: The <math>F_{\text{interferer}}</math> (offset) is the frequency separation of the center frequency of the carrier closest to the interferer and the center frequency of the interferer and shall be further adjusted to <math>\lfloor F_{\text{interferer}} / 0.015 + 0.5 \rfloor 0.015 + 0.0075</math> MHz to be offset from the sub-carrier raster.</p>				

For the UE which supports inter band CA configuration in Tables 7.3.3-1A, 7.3.3-1B and 7.3.3-1C,  $P_{\text{Interferer}}$  power defined in Table 7.6.1A.1.5-2 is increased by the amount given by  $\Delta R_{\text{IB,c}}$  in Tables 7.3.3-1A, 7.3.3-1B and 7.3.3-1C.

## 7.6.1A.2 In-band blocking for CA (intra-band contiguous DL CA without UL CA)

### 7.6.1A.2.1 Test Purpose

Same test purpose as in clause 7.6.1A.1.

### 7.6.1A.2.2 Test Applicability

This test applies to all types of E-UTRA UE release 10 and forward that support intra-band contiguous DL CA. This test case applies only for CA Configurations that do not support UL CA.

### 7.6.1A.2.3 Minimum Conformance Requirements

The minimum conformance requirements are defined in clause 7.6.1A.0.

### 7.6.1A.2.4 Test Description

#### 7.6.1A.2.4.1 Initial Conditions

Same initial conditions as in clause 7.6.1A.1.4.1 with the following exceptions:

- Instead of Table 7.6.1A.1.4.1-1 → use Table 7.6.1A.2.4.1-1.
- Instead of clause 7.6.1A.1.4.3 → use clause 7.6.1A.2.4.3.

Table 7.6.1A.2.4.1-1: Test Configuration Table

Initial Conditions							
Test Environment as specified in TS 36.508[7] subclause 4.1					NC		
Test Frequencies as specified in TS36.508 [7] subclause 4.3.1 for different CA bandwidth classes, and PCC and SCCs are mapped onto physical frequencies according to Table 7.1-2					B: Mid range C: Mid range		
Test CC Combination setting ( $N_{RB\_agg}$ ) as specified in subclause 5.4.2A.1 for the CA Configuration across bandwidth combination sets supported by the UE.					Lowest $N_{RB\_agg}$ Highest $N_{RB\_agg}$ (Note 3)		
Test Parameters for CA Configurations

100	100	QPSK	100+100	QPSK	50	P_50@50	-
Note 1: CA Configuration Test CC Combination settings are checked separately for each CA Configuration, which applicable aggregated channel bandwidths are specified in Table 5.4.2A.1-1.							
Note 2: Depending on CA Configuration only the appropriate Uplink RB allocation value according to table 7.3.3-2 is tested per CA Configuration Test CC combination.							
Note 3: If in the CA Configuration UE supports multiple CC Combinations with the same $N_{RB\_agg}$ , only the first of those is tested, according to the order on the Test Configuration Table list.							

## 7.6.1A.2.4.2 Test Procedure

1. Configure SCC according to Annex C.0, C.1 and Annex C.3.1 for all downlink physical channels.
2. The SS shall configure SCC as per TS 36.508 [7] clause 5.2A.4.
3. SS activates SCC by sending the activation MAC-CE (Refer TS 36.321 [13], clauses 5.13, 6.1.3.8). Wait for at least 2 seconds (Refer TS 36.133, clauses 8.3.3.2).
4. SS transmits PDSCH via PDCCH DCI format 1A for C\_RNTI to transmit the DL RMC according to Table 7.6.1A.2.4.1-1 on both PCC and SCC. The SS sends downlink MAC padding bits on the DL RMC.

5. SS sends uplink scheduling information for each UL HARQ process via PDCCH DCI format 0 for C\_RNTI to schedule the UL RMC according to Table 7.6.1A.2.4.1-1 on PCC. Since the UE has no payload data to send, the UE sends uplink MAC padding bits on the UL RMC.
6. Set the parameters of the signal generator for an interfering signal below the aggregated component carriers in Case 1 according to Tables 7.6.1A.1.5-1 and 7.6.1A.1.5-2.
7. Set the downlink signal level according to the table 7.6.1A.1.5-1. Send uplink power control commands to the UE (less or equal to 1dB step size should be used), to ensure that the UE output power is within +0, - 3.4 dB of the target level in table 7.6.1A.1.5-1 for carrier frequency  $f \leq 3.0\text{GHz}$  or within +0, -4.0 dB of the target level for carrier frequency  $3.0\text{GHz} < f \leq 4.2\text{GHz}$ , for at least the duration of the throughput measurement.
8. Measure the average throughput for each component carrier for duration sufficient to achieve statistical significance according to Annex G.2A.
9. Repeat steps from 6 to 8, using an interfering signal above the aggregated component carriers in Case 1 at step 6.
10. Repeat steps from 6 to 9, using interfering signals in Case 2 at step 6 and 9. The ranges of case 2 are covered in steps equal to the interferer bandwidth. The test frequencies are chosen in analogy to table 7.6.1A.1.4.2-1.

#### 7.6.1A.2.4.3 Message Contents

Same message contents as in clause 7.6.1.4.3.

#### 7.6.1A.2.5 Test Requirement

Same test requirement as in clause 7.6.1A.1.5 with the following exceptions:

- Instead of Table 7.6.1A.1.5-1 → use Table 7.6.1A.2.5-1.
- Instead of Table 7.6.1A.1.5-2 → use Table 7.6.1A.2.5-2.

**Table 7.6.1A.2.5-1: In band blocking parameter**

Note 1:	For certain bands, the unwanted modulated interfering signal may not fall inside the UE receive band, but within the first 15 MHz below or above the UE receive band			
Note 2:	For each carrier frequency the requirement is valid for two frequencies: a) the carrier frequency $-F_{\text{offset}} - F_{\text{offset, case 1}}$ and b) the carrier frequency $+F_{\text{offset}} + F_{\text{offset, case 1}}$			
Note 3:	$F_{\text{offset}}$ is the frequency offset from the centre frequency of the adjacent CC being tested to the edge of aggregated channel bandwidth. Note 4: The $F_{\text{interferer}}$ (offset) is the frequency separation of the center frequency of the carrier closest to the interferer and the center frequency of the interferer and shall be further adjusted to $\lfloor F_{\text{interferer}} / 0.015 + 0.5 \rfloor 0.015 + 0.0075$ MHz to be offset from the sub-carrier raster.			

For the UE which supports inter band CA configuration in Tables 7.3.3-1A, 7.3.3-1B and 7.3.3-1C,  $P_{\text{interferer}}$  power defined in Table 7.6.1A.2.5-2 is increased by the amount given by  $\Delta R_{\text{IB,c}}$  in Tables 7.3.3-1A, 7.3.3-1B and 7.3.3-1C.

### 7.6.1A.3 In-band blocking for CA (inter-band DL CA without UL CA)

**Editor's notes: This clause is incomplete for Band 46. The following aspects are either missing or not yet determined:**

- Test system uncertainties are missing in annex F.

#### 7.6.1A.3.1 Test Purpose

In-band blocking is defined for an unwanted interfering signal falling into the range from 15MHz below (60 MHz for band 46) to 15MHz above (60 MHz for band 46) the UE receive band, at which the relative throughput shall meet or exceed the requirement for the specified measurement channels.

#### 7.6.1A.3.2 Test Applicability

This test applies to all types of E-UTRA UE release 10 and forward that support inter-band DL CA.

This test case also applies to all types of E-UTRA UE release 12 and forward that support 2DL CA with FDD-TDD inter-band CA.

This test case also applies to all types of E-UTRA UE release 13 and forward that support DL LAA.

#### 7.6.1A.3.3 Minimum Conformance Requirements

The minimum conformance requirements are defined in clause 7.6.1A.0.

#### 7.6.1A.3.4 Test Description

##### 7.6.1A.3.4.1 Initial Conditions

Same initial conditions as in clause 7.6.1A.1.4.1 with the following exceptions:

- Instead of Table 7.6.1A.1.4.1-1 → use Table 7.6.1A.3.4.1-1.
- Instead of clause 7.6.1A.1.4.3 → use clause 7.6.1A.3.4.3.

Table 7.6.1A.3.4.1-1: Test Configuration Table

Initial Conditions						
Test Environment as specified in TS 36.508[7] subclause 4.1			NC			
Test Frequencies as specified in TS36.508 [7] subclause 4.3.1 for different CA bandwidth classes, and PCC and SCCs are mapped onto physical frequencies according to Table 7.1-2			A: Mid range for PCC and SCC			
Test CC Combination setting ( $N_{RB\_agg}$ ) as specified in subclause 5.4.2A.1 for the CA Configuration across bandwidth combination sets supported by the UE			Highest $N_{RB\_agg}$ for PCC and SCC

100	100	QPSK	100	100	QPSK	20
Note 1: CA Configuration Test CC Combination settings are checked separately for each CA Configuration, which applicable aggregated channel bandwidths are specified in Table 5.4.2A.1-2.						
Note 2: Depending on CA configurations, only the appropriate Uplink RB allocation value according to table 7.3A.3.5-2 for UE supporting one uplink carrier is tested per Test CA configuration.						
Note 3: The UL resource blocks shall be located as close as possible to the downlink PCC but confined within the transmission bandwidth configuration for the channel bandwidth (Table 5.4.2-1).						
Note 4: The frequencies of PCC and SCC shall be switched and tested in each configuration, according to the UE declared capability for UL support (within CA operation) in the individual bands.						

## 7.6.1A.3.4.2 Test Procedure

1. Configure SCC according to Annex C0, C.1 and Annex C.3.2 for all downlink physical channels.
2. The SS shall configure SCC as per TS 36.508 [7] clause 5.2A.4.

3. SS activates SCC by sending the activation MAC-CE (Refer TS 36.321 [13], clauses 5.13, 6.1.3.8). Wait for at least 2 seconds (Refer TS 36.133, clauses 8.3.3.2).
4. SS transmits PDSCH via PDCCH DCI format 1A for C\_RNTI to transmit the DL RMC according to Table 7.6.1A.3.4.1-1 on both PCC and SCC. The SS sends downlink MAC padding bits on the DL RMC.
5. SS sends uplink scheduling information for each UL HARQ process via PDCCH DCI format 0 for C\_RNTI to schedule the UL RMC according to Table 7.6.1A.3.4.1-1 on PCC. Since the UE has no payload data to send, the UE transmits uplink MAC padding bits on the UL RMC.
6. Set the parameters of the signal generator for an interfering signal below the SCC in Case 1 according to Tables 7.6.1.5-1 and 7.6.1.5-2, or 7.6.1.5-1 and 7.6.1A.3.5-0 for operating bands without uplink band (as noted in Table 5.2-1), or 7.6.1A.3.5-0a and 7.6.1A.3.5-0b for operating band 46 without uplink band.
7. Set the downlink signal level according to the table 7.6.1A.3.5-1 or table 7.6.1A.3.5-0a for operating band 46. Send uplink power control commands to the UE (less or equal to 1dB step size should be used), to ensure that the UE output power is within +0, - 3.4 dB of the target level in table 7.6.1A.3.5-1 or table 7.6.1A.3.5-0a for operating band 46 for carrier frequency  $f \leq 3.0\text{GHz}$  or within +0, -4.0 dB of the target level for carrier frequency  $3.0\text{GHz} < f \leq 4.2\text{GHz}$ , for at least the duration of the throughput measurement.
8. Measure the average throughput of SCC for duration sufficient to achieve statistical significance according to Annex G.2.
9. Repeat steps from 6 to 8, using an interfering signal above the SCC in Case 1 at step 6.
10. Repeat steps from 6 to 9, using interfering signals in Case 2 at step 6 and 9. The ranges of case 2 are covered in steps equal to the interferer bandwidth. The test frequencies are chosen in analogy to table 7.6.1.4.2-1.

#### 7.6.1A.3.4.3 Message Contents

Same message contents as in clause 7.6.1.4.3.

#### 7.6.1A.3.5 Test Requirement

For inter-band carrier aggregation with uplink assigned to one E-UTRA band the in-band blocking requirements are defined with the uplink active on the band other than the band whose downlink is being tested i.e. the requirements are tested only for the SCell downlink. The UE shall meet the requirement for each component carrier, when operated as SCell, while both downlink carriers are active.

For band combinations including an operating band without uplink band (as noted in Table 5.2-1), the requirements for both downlinks shall be met with the uplink in the band capable of UL operation.

The throughput measured during the test procedure for each component carrier, when operated as SCell, shall be  $\geq 95\%$  of the maximum throughput of the reference measurement channels as specified in Annex A.3.2 with parameters specified in Tables 7.6.1A.3.5-1 and 7.6.1A.3.5-2 (originated from the single carrier Tables 7.6.1.5-1 and 7.6.1.5-2) and also Table 7.6.1A.3.5-0 for band combinations including an operating band without uplink operation or Table 7.6.1A.3.5-0a and Table 7.6.1A.3.5-0b for band combinations including operating band 46 without uplink operation.

**Table 7.6.1A.3.5-0: In-band blocking for additional operating bands for carrier aggregation**

E-UTRA band	Parameter	Unit	Case 1	Case 2
		$P_{\text{Interferer}}$	dBm	-56
	$F_{\text{Interferer}}$ (offset from SCC)	MHz	$=-BW/2 - F_{\text{offset,case 1}}$ & $=+BW/2 + F_{\text{offset,case 1}}$	$\leq -BW/2 - F_{\text{offset,case 2}}$ & $\geq +BW/2 + F_{\text{offset,case 2}}$
29, 32	$F_{\text{Interferer}}$	MHz	(Note 2)	$F_{\text{DL\_low}} - 15$ to $F_{\text{DL\_high}} + 15$
<p>Note 1: For certain bands, the unwanted modulated interfering signal may not fall inside the UE receive band, but within the first 15 MHz below or above the UE receive band.</p> <p>Note 2: For each carrier frequency the requirement is valid for two frequencies:                      a. the carrier frequency <math>-BW/2 - F_{\text{offset, case 1}}</math> and                      b. the carrier frequency <math>+BW/2 + F_{\text{offset, case 1}}</math></p> <p>Note 3: <math>F_{\text{Interferer}}</math> range values for unwanted modulated interfering signal are interferer centre frequencies.</p>				

**Table 7.6.1A.3.5-0a: In band blocking parameters for additional operating bands for carrier aggregation**

Note 3:	Applicable if only Bandwidth Combination Set 0 is supported by the UE for the CA Configuration						
Note 4:	Not applicable if only Bandwidth Combination Set 0 is supported by the UE for the CA Configuration						

#### 7.6.1A.4.4.2 Test Procedure

1. Configure SCC according to Annex C0, C.1 and Annex C.3.2 for all downlink physical channels.
2. The SS shall configure SCC as per TS 36.508 [7] clause 5.2A.4. Message contents are defined in clause 7.6.1A.4.4.3.
3. SS activates SCC by sending the activation MAC-CE (Refer TS 36.321 [13], clauses 5.13, 6.1.3.8). Wait for at least 2 seconds (Refer TS 36.133, clauses 8.3.3.2).
4. SS transmits PDSCH via PDCCH DCI format 1A for C\_RNTI to transmit the DL RMC according to Table 7.6.1A.3.4.1-1 on both PCC and SCC. The SS sends downlink MAC padding bits on the DL RMC.
5. SS sends uplink scheduling information for each UL HARQ process via PDCCH DCI format 0 for C\_RNTI to schedule the UL RMC according to Table 7.6.1A.4.4.1-1 on PCC. Since the UE has no payload data to send, the UE transmits uplink MAC padding bits on the UL RMC.
6. Set the parameters of the signal generator for an interfering signal below the PCC in Case 1 according to Tables 7.6.1.5-1 and 7.6.1.5-2, excluding frequencies where the interferer centre frequency falls within SCC carrier  $\pm(BW/2 + F_{\text{offset,case 1}})$ , where BW & offset refer to SCC.
7. Set the downlink signal level for PCC and SCC according to the table 7.6.1.5-1. Send uplink power control commands to the UE (less or equal to 1dB step size should be used), to ensure that the UE output power is within +0, - 3.4 dB of the target level in table 7.6.1.5-1 for carrier frequency  $f \leq 3.0\text{GHz}$  or within +0, -4.0 dB of the target level for carrier frequency  $3.0\text{GHz} < f \leq 4.2\text{GHz}$ , for at least the duration of the throughput measurement.
8. Measure the average throughput of the PCC for duration sufficient to achieve statistical significance according to Annex G.2A.
9. Repeat steps from 6 to 8, using an interfering signal above the PCC in Case 1 at step 6.
10. Repeat steps from 6 to 9, using an interfering signal below and above the SCC in Case 1 and measuring SCC instead of PCC in step 8, excluding the frequencies where the interferer centre frequency falls within PCC carrier  $\pm(BW/2 + F_{\text{offset,case 1}})$ , where BW & offset refer to PCC.
11. Repeat steps from 6 to 10, replacing references to Case 1 with references to Case 2. The ranges of case 2 are covered in steps equal to the interferer bandwidth. The test frequencies are chosen in analogy to table 7.6.1.4.2-1.

#### 7.6.1A.4.4.3 Message Contents

Message contents are according to TS 36.508 [7] subclause 4.6. In test procedure step 2, for SCC configuration there are no additional message contents.

#### 7.6.1A.4.5 Test Requirement

For intra-band non-contiguous carrier aggregation with one uplink carrier and two downlink carriers, each larger than or equal to 5 MHz, the in-band blocking requirements are defined with the uplink configuration of the PCC being in accordance with Table 7.3A.0-3. The UE shall meet the requirements specified in tables 7.6.1A.4.5-1 and 7.6.1A.4.5-2 for each component carrier while both downlink carriers are active. The requirements for each component carrier are the same as single carrier requirements in Tables 7.6.1.5-1 and 7.6.1.5-2.

The throughput measurement derived in test procedure shall be  $\geq 95\%$  of the maximum throughput of the reference measurement channels as specified in Annex A.3.2 with parameters specified in Tables 7.6.1A.4.5-1 and 7.6.1A.4.5-2.

**Table 7.6.1A.4.5-1: In band blocking parameters**

Rx Parameter	Units	Channel bandwidth					
		1.4 MHz	3 MHz	5 MHz	10 MHz	15 MHz	20 MHz
Pw in Transmission Bandwidth Configuration, per CC	dBm	REFSENS + channel bandwidth specific value below					
		6	6	6	6	7	9

$BW_{\text{Interferer}}$	MHz	1.4	3	5	5	5	5
$F_{\text{offset, case 1}}$	MHz	2.1+0.0125	4.5+0.0075	7.5+0.0125	7.5+0.0025	7.5+0.0075	7.5+0.0125
$F_{\text{offset, case 2}}$	MHz	3.5+0.0075	7.5+0.0075	12.5+0.0075	12.5+0.0125	12.5+0.0025	12.5+0.0075
Note 1:	The transmitter shall be set to 4dB below $P_{\text{CMAX}_L}$ with $P_{\text{CMAX}_L}$ as defined in clause 6.2.5.						
Note 2:	The interferer consists of the Reference measurement channel specified in Annex A.3.2 with one sided dynamic OCNG Pattern OP.1 FDD/TDD as described in Annex A.5.1.1/A.5.2.1 and set-up according to Annex C.3.1.						

Table 7.6.1A.4.5-2: In-band blocking

CA Configuration	Parameter	Unit	Case 1	Case 2
		$P_{\text{Interferer}}$	dBm	-56
	$F_{\text{Interferer (offset)}}$	MHz	$=-BW/2 - F_{\text{offset, case 1}}$ & $=+BW/2 + F_{\text{offset, case 1}}$	$\leq -BW/2 - F_{\text{offset, case 2}}$ & $\geq +BW/2 + F_{\text{offset, case 2}}$
CA_2A-2A, CA_3A-3A, CA_4A-4A, CA_5A-5A, CA_7A-7A, CA_23A-23A, CA_25A-25A, CA_41A-41A, CA_42A-42A, CA_66A-66A	$F_{\text{Interferer}}$	MHz	(Note 2)	$F_{\text{DL\_low}} - 15$ to $F_{\text{DL\_high}} + 15$
Note 1:	For certain bands, the unwanted modulated interfering signal may not fall inside the UE receive band, but within the first 15 MHz below or above the UE receive band			
Note 2:	For each carrier frequency the requirement is valid for two frequencies: a. the carrier frequency $-BW/2 - F_{\text{offset, case 1}}$ and b. the carrier frequency $+BW/2 + F_{\text{offset, case 1}}$			
Note 3:	$F_{\text{Interferer}}$ range values for unwanted modulated interfering signal are interferer centre frequencies			

For the UE which supports inter band CA configuration in Tables 7.3.3-1A, 7.3.3-1B and 7.3.3-1C,  $P_{\text{Interferer}}$  power defined in Table 7.6.1A.4.5-2 is increased by the amount given by  $\Delta R_{\text{IB,c}}$  in Tables 7.3.3-1A, 7.3.3-1B and 7.3.3-1C.

## 7.6.1A.5 In-band blocking for 3DL CA

### 7.6.1A.5.1 Test Purpose

Same test purpose as in clause 7.6.1A.1.

### 7.6.1A.5.2 Test Applicability

This test case applies to all types of E-UTRA UE release 10 and forward that support 3DL with Intra-band contiguous CA or 3DL with Inter-band CA or 3DL with Intra-band contiguous and Inter-band CA.

This test case also applies to all types of E-UTRA UE release 11 and forward that support 3DL with Intra-band non-contiguous and Inter-band CA or 3DL with Intra-band non-contiguous and Intra-band contiguous CA.

This test case also applies to all types of E-UTRA UE release 12 and forward that support 3DL with FDD-TDD CA.

### 7.6.1A.5.3 Minimum Conformance Requirements

The minimum conformance requirements are defined in clause 7.6.1A.0.

### 7.6.1A.5.4 Test Description

#### 7.6.1A.5.4.1 Initial Conditions

Initial conditions are a set of test configurations the UE needs to be tested in and the steps for the SS to take with the UE to reach the correct measurement state.

The initial test configurations consist of environmental conditions, test frequencies, and channel bandwidths based on E-UTRA CA configurations specified in table 5.4.2A.1-1 through table 5.4.2A.1-2a. All of these configurations shall be tested with applicable test parameters for each channel bandwidth, and are shown in table 7.6.1A.5.4.1-1 through table 7.6.1A.5.4.1-5 as appropriate. The details of the uplink reference measurement channels (RMCs) are specified in Annex A.2 and A.3. Configurations of PDSCH and PDCCH before measurement are specified in Annex C.2.

Table 7.6.1A.5.4.1-1: Test Configuration Table (Intra-band contiguous)

Initial Conditions												
Test Environment as specified in TS 36.508 [7] subclause 4.1						NC						
Test Frequencies as specified in TS36.508 [7] subclause 4.3.1 for different CA bandwidth classes.						For test frequencies refer to "Range" columns. For mapping within Band refer to "CC" columns						
Test CC Combination setting ( $N_{RB\_agg}$ ) as specified in subclause 5.4.2A.1 for the CA Configuration across bandwidth combination sets supported by the UE.						Refer to "PCC $N_{RB}$ " and "SCCs $N_{RB}$ " columns						
Network signalling value						NS_01 by default						
Test Parameters for CA Configurations												
ID	CA Configuration / $N_{RB\_agg}$						DL Allocation			UL Allocation (Note 2,3)		
	CA Configuration			PCC $N_{RB}$	SCCs $N_{RB}$		CC MOD	PCC & SCCs RB allocation			CC MOD	PCC $L_{CRB}$ @ $RB_{start}$
	Band	Range	PCC CC		SCC1 CC	SCC2 CC		PCC	SCC1	SCC2		
Default Test Settings for a CA_XD Configuration												
1	X	Mid	CC1	CC2	CC3	Lowest $N_{RB\_agg}$	QPSK	All RBs			QPSK	REFSENS
2	X	Mid	CC1	CC2	CC3	Highest $N_{RB\_agg}$	QPSK	All RBs			QPSK	REFSENS
Note 1:	CA Configuration Test CC Combination test settings are checked separately for each CA Configuration.											
Note 2:	Use CA Configuration – specific test points if present in the table, otherwise use Default Test Settings test points.											
Note 3:	X corresponds to the band of the CA Configuration. E.g. for CA_41D, X=41											
Note 4:	REFSENS refers to the PCC band's and PCC $N_{RB}$ 's single carrier Uplink RB allocation for reference sensitivity according to table 7.3.5-2.											
Note 5:	If in the CA Configuration UE supports multiple CC Combinations with the same $N_{RB\_agg}$ , choose for testing the Combination with maximum $N_{RB\_PCC}$ and then select maximum $N_{RB\_SCC1}$ for the chosen $N_{RB\_PCC}$											

**Table 7.6.1A.5.4.1-2: Test Configuration Table (Inter-band)**

Initial Conditions															
Test Environment as specified in TS 36.508[7] subclause 4.1											NC				
Test Frequencies as specified in TS36.508 [7] subclause 4.3.1 for different CA bandwidth classes.											For test frequencies refer to “Range” columns. For mapping within Band refer to “CC” columns				
Test CC Combination setting ( $N_{RB\_agg}$ ) as specified in subclause 5.4.2A.1 for the CA Configuration across bandwidth combination sets supported by the UE.											Refer to “PCC $N_{RB}$ ” and “SCCs $N_{RB}$ ” columns				
Network signalling value											NS_01 by default				
Test Parameters for CA Configurations															
ID	CA Configuration / $N_{RB\_agg}$							DL Allocation			UL Allocation (Note 2,3)				
	CA Configuration						PCC $N_{RB}$	SCCs $N_{RB}$		CC MOD	PCC & SCCs RB allocation			CC MOD	PCC $L_{CRB}$ @ $RB_{start}$
	PCC		SCC1		SCC2			SCC1	SCC2		PCC	SCC1	SCC2		
	Band	Range	Band	Range	Band	Range									
Default Test Settings for a CA_XA-YA-ZA Configuration															
1	X	Mid	Y	Mid	Z	Mid	Highest $N_{RB}$	Highest $N_{RB}$	Highest $N_{RB}$	QPSK	All RBs	QPSK	REFSENS		
2	Y	Mid	X	Mid	Z	Mid	Highest $N_{RB}$	Highest $N_{RB}$	Highest $N_{RB}$	QPSK	All RBs	QPSK	REFSENS		
3	Z	Mid	X	Mid	Y	Mid	Highest $N_{RB}$	Highest $N_{RB}$	Highest $N_{RB}$	QPSK	All RBs	QPSK	REFSENS		
Note 1: CA Configuration Test CC Combination test settings are checked separately for each CA Configuration. Note 2: Use CA Configuration – specific test points if present in the table, Otherwise use test points from matching Group Test Settings, if present in the table. Otherwise use the Default Test Settings test points. Note 3: If, according to the UE declared capability, UE does not support UL in an individual band within the CA Configuration, test points with that individual band as PCC are not applicable. Note 4: X,Y,Z correspond to the different bands in the CA Configuration. E.g. for CA_1A-3A-19A,X=1,Y=3,Z=19 Note 5: REFSSENS refers to the PCC band’s and PCC $N_{RB}$ ‘s single carrier Uplink RB allocation for reference sensitivity according to table 7.3.5-2.															

Table 7.6.1A.5.4.1-3: Test Configuration Table (Intra-band contiguous + Inter-band)

Initial Conditions															
Test Environment as specified in TS 36.508[7] subclause 4.1										NC					
Test Frequencies as specified in TS36.508 [7] subclause 4.3.1 for different CA bandwidth classes.										For test frequencies refer to “Range” columns. For mapping within Band refer to “CC” columns					
Test CC Combination setting ( $N_{RB\_agg}$ ) as specified in subclause 5.4.2A.1 for the CA Configuration across bandwidth combination sets supported by the UE.										Refer to “PCC $N_{RB}$ ” and “SCCs $N_{RB}$ ” columns					
Network signalling value										NS_01 by default					
Test Parameters for CA Configurations															
ID	CA Configuration / $N_{RB\_agg}$							DL Allocation			UL Allocation (Note 2,3)				
	CA Configuration						PCC $N_{RB}$	SCCs $N_{RB}$		CC MOD	PCC & SCCs RB allocation			CC MOD	PCC $L_{CRB}$ @ $RB_{start}$
	PCC		SCC1		SCC2			SCC1	SCC2		PCC	SCC1	SCC2		
	Band	Range /CC	Band	Range /CC	Band	Range /CC									
Default Test Settings for CA_XB-YA and CA_XC-YA Configuration															
1	X	Mid /CC1	X	Mid /CC2	Y	Mid	Highest $N_{RB\_agg}$	Highest $N_{RB}$	QPSK	All RBs	QPSK	REFSENS			
2	X	Mid /CC1	X	Mid /CC2	Y	Mid	Lowest $N_{RB\_agg}$	Highest $N_{RB}$	QPSK	All RBs	QPSK	REFSENS			
3	Y	Mid	X	Mid /CC1	X	Mid /CC2	Highest $N_{RB}$	Highest $N_{RB\_agg}$	QPSK	All RBs	QPSK	REFSENS			
4	Y	Mid	X	Mid /CC1	X	Mid /CC2	Highest $N_{RB}$	Lowest $N_{RB\_agg}$	QPSK	All RBs	QPSK	REFSENS			
Default Test Settings for CA_XA-YB and CA_XA-YC Configuration															
1	Y	Mid /CC1	Y	Mid /CC2	X	Mid	Highest $N_{RB\_agg}$	Highest $N_{RB}$	QPSK	All RBs	QPSK	REFSENS			
2	Y	Mid /CC1	Y	Mid /CC2	X	Mid	Lowest $N_{RB\_agg}$	Highest $N_{RB}$	QPSK	All RBs	QPSK	REFSENS			
3	X	Mid	Y	Mid /CC1	Y	Mid /CC2	Highest $N_{RB}$	Highest $N_{RB\_agg}$	QPSK	All RBs	QPSK	REFSENS			
4	X	Mid	Y	Mid /CC1	Y	Mid /CC2	Highest $N_{RB}$	Lowest $N_{RB\_agg}$	QPSK	All RBs	QPSK	REFSENS			
Note 1:	CA Configuration Test CC Combination test settings are checked separately for each CA Configuration.														
Note 2:	Use CA Configuration – specific test points if present in the table. Otherwise use the Default Test Settings test points.														
Note 3:	If, according to the UE declared capability, UE does not support UL in an individual band within the CA Configuration, test points with that individual band as PCC are not applicable.														
Note 4:	X,Y correspond to the different bands in the CA Configuration. E.g. for CA_1C-3A, X=1 and Y=3														
Note 5:	REFSENS refers to the PCC band's and PCC $N_{RB}$ 's single carrier Uplink RB allocation for reference sensitivity according to table 7.3.5-2.														
Note 6:	If in the CA Configuration UE supports multiple CC Combinations with the same $N_{RB\_agg}$ , choose the Combination with $N_{RB\_PCC} = N_{RB\_SCC1}$ for testing. If no such combination is supported, choose Combination with maximum $N_{RB\_PCC}$ for testing.														

Table 7.6.1A.5.4.1-4: Test Configuration Table (Intra-band non-contiguous + Inter-band)

Initial Conditions														
Test Environment as specified in									NC					
TS 36.508[7] subclause 4.1														
Test Frequencies as specified in TS36.508 [7] subclause 4.3.1 for different CA bandwidth classes.									For test frequencies refer to “Range” columns. For mapping within Band refer to “CC” columns					
Test CC Combination setting ( $N_{RB\_agg}$ ) as specified in subclause 5.4.2A.1 for the CA Configuration across bandwidth combination sets supported by the UE.									Highest $N_{RB}$					
Network signalling value									NS_01 by default					
Test Parameters for CA Configurations														
ID	CA Configuration / $N_{RB\_agg}$							DL Allocation			UL Allocation (Note 2,3)			
	CA Configuration							CC MOD	PCC & SCCs			CC MOD	PCC	
	PCC		$W_{gap}$ [MHz]	SCC1		$W_{gap}$ [MHz]	SCC2		RB allocation				$L_{CRB}$ @ $RB_{start}$	
	Band	Range		Band	Range		Band		Range	PCC	SCC1		SCC2	
		/CC		/CC		/CC								
Default Test Settings for CA_XA-XA-YA Configurations														
1	X	CC2	Max	X	CC1	-	Y	Mid	QPSK	All RBs	QPSK	REFSENS_CA		
2	Y	Mid	-	X	CC2	Max	X	CC1	QPSK	All RBs	QPSK	REFSENS		
Default Test Settings for CA_XA-YA-YA Configurations														
1	Y	CC2	Max	Y	CC1	-	X	Mid	QPSK	All RBs	QPSK	REFSENS_CA		
2	X	Mid	-	Y	CC2	Max	Y	CC1	QPSK	All RBs	QPSK	REFSENS		
Note 1:	CA Configuration Test CC Combination test settings are checked separately for each CA Configuration.													
Note 2:	Use CA Configuration – specific test points if present in the table. Otherwise use test points from matching Group Test Settings, if present in the table. Otherwise use Default Test Settings test points.													
Note 3:	If, according to the UE declared capability, UE does not support UL in an individual band within the CA Configuration, test points with that individual band as PCC are not applicable.													
Note 4:	X and Y correspond to the different bands in the CA Configuration. E.g. for CA_2A-2A-5A,X=2,Y=5													
Note 5:	REFSENS refers to the PCC band's and PCC $N_{RB}$ 's single carrier Uplink RB allocation for reference sensitivity according to table 7.3.5-2. REFSENS_CA refers to the PCC band's and PCC $N_{RB}$ 's single carrier Uplink RB allocation for reference sensitivity according to table 7.3.4.5-2 (selecting RB allocation for SCC measurement).

<b>Test Settings for a CA_41A-41C Configuration</b>															
2	41	CC3	-	CC2	134.2	CC1	100	100	100	QPSK	All RBs	QPSK	100@0		
Note 1: CA Configuration Test CC Combination test settings are checked separately for each CA Configuration. Note 2: Use CA Configuration – specific test points if present in the table, otherwise use Default Test Settings test points. Note 3: If, according to the UE declared capability, UE does not support UL in an individual band within the CA Configuration, test points with that individual band as PCC are not applicable. Note 4: X corresponds to the band of the CA Configuration. E.g. for CA_41C-41A, X=41. Note 5: REFSENS refers to the PCC band’s and PCC $N_{RB}$ ‘s single carrier Uplink RB allocation for reference sensitivity according to table 7.3.5-2. Note 6: If in the CA Configuration UE supports multiple CC Combinations with the same $N_{RB\_agg}$ , choose the Combination with $N_{RB\_CC1} = N_{RB\_CC2}$ for testing. If no such combination is supported, choose Combination with maximum $N_{RB\_CC1}$ for testing.															

1. Connect the SS to the UE antenna connectors as shown in TS 36.508[7] Annex A Figure A.58 as appropriate.
2. The parameter settings for the cell are set up according to TS 36.508 [7] subclause 4.4.3.
3. Downlink signals for PCC are initially set up according to Annex C.0, C.1, and C.3.1, and uplink signals according to Annex H.1 and H.3.0.
4. The UL and DL Reference Measurement channels are set according to Table 7.6.1A.5.4.1-1 through Table 7.6.1A.5.4.1-5 as appropriate.
5. Propagation conditions are set according to Annex B.0.
6. Ensure the UE is in State 3A-RF according to TS 36.508 [7] clause 5.2A.2. Message contents are defined in clause 7.6.1A.5.4.3.

**7.6.1A.5.4.2 Test Procedure**

1. Configure SCCs according to Annex C.0, C.1 and Annex C.3.1 for all downlink physical channels.
2. The SS shall configure SCCs as per TS 36.508 [7] clause 5.2A.4. Message contents are defined in clause 7.6.1A.5.4.3

3. SS activates SCCs by sending the activation MAC-CE (Refer TS 36.321 [13], clauses 5.13, 6.1.3.8). Wait for at least 2 seconds (Refer TS 36.133, clauses 8.3.3.2).
4. SS transmits PDSCH via PDCCH DCI format 1A for C\_RNTI to transmit the DL RMC according to Table 7.6.1A.5.4.1-1 through Table 7.6.1A.5.4.1-5 as appropriate on PCC and SCCs. The SS sends downlink MAC padding bits on the DL RMC.
5. SS sends uplink scheduling information for each UL HARQ process via PDCCH DCI format 0 for C\_RNTI to schedule the UL RMC according to Table 7.6.1A.5.4.1-1 through Table 7.6.1A.5.4.1-5 on PCC. Since the UE has no payload data to send, the UE sends uplink MAC padding bits on the UL RMC.
6. Set the parameters of the signal generator for an interfering signal below the aggregated component carriers in Case 1 according to Table 7.6.1A.5.4.2-1.
7. Set the downlink signal level according to the Table 7.6.1A.5.4.2-1. Send uplink power control commands to the UE (less or equal to 1dB step size should be used), to ensure that the UE output power is within +0, - 3.4 dB of the target level in table 7.6.1A.5.5-1 for carrier frequency  $f \leq 3.0\text{GHz}$  or within +0, -4.0 dB of the target level for carrier frequency  $3.0\text{GHz} < f \leq 4.2\text{GHz}$ , for at least the duration of the throughput measurement.
8. Measure the average throughput for the carrier(s) indicated in Table 7.6.1A.5.4.2-1 for duration sufficient to achieve statistical significance according to Annex G.2A.
9. Repeat steps from 6 to 8, using an interfering signal above the measured carrier(s) according to Table 7.6.1A.5.5-1 in Case 1 at step 6.
10. Repeat steps from 6 to 9, using interfering signals in Case 2 at step 6 and 9. The ranges of case 2 are covered in steps equal to the interferer bandwidth. The test frequencies are chosen in analogy to table 7.6.1A.1.4.2-1.
11. Repeat steps 1 to 10 for all component carriers listed in Table 7.6.1A.5.4.2-1.

**Table 7.6.1A.5.4.2-1: Test repetition and measurement configuration**

CA configuration	ID (Note 1)	Throughput measured on (Note 3)	Table with test parameters to select (Note 2)

		7.6.1A.5.5-3	
<p>Note 1: Test point ID for the particular CA configuration as defined in section 7.6.1A.5.4.1.</p> <p>Note 2: The reference for the placement of the interferer signals is the centre frequency of the carrier closest to the interferer among the carriers throughput is measured on.</p> <p>Note 3: Where there are multiple rows for a single Test point ID, the test is repeated for each row.</p>			

### 7.6.1A.5.4.3 Message Contents

Same message contents as in clause 7.6.1.4.3.

### 7.6.1A.5.5 Test Requirement

The throughput measurement of each carrier derived in test procedure shall be  $\geq 95\%$  of the maximum throughput of the reference measurement channels as specified in Annex A.3.2 with parameters specified in Tables below, according to the type of CA.

**Table 7.6.1A.5.5-1: In-band blocking for additional operating bands for carrier aggregation (inter-band)**

E-UTRA band	Parameter	Unit	Case 1	Case 2
		$P_{\text{Interferer}}$	dBm	-56
	$F_{\text{Interferer}}$ (offset from SCC)	MHz	$=-BW/2 - F_{\text{offset,case 1}}$ & $=+BW/2 + F_{\text{offset,case 1}}$	$\leq -BW/2 - F_{\text{offset,case 2}}$ & $\geq +BW/2 + F_{\text{offset,case 2}}$
29	$F_{\text{Interferer}}$	MHz	(Note 2)	$F_{\text{DL\_low}} - 15$ to $F_{\text{DL\_high}} + 15$
<p>Note 1: For certain bands, the unwanted modulated interfering signal may not fall inside the UE receive band, but within the first 15 MHz below or above the UE receive band.</p> <p>Note 2: For each carrier frequency the requirement is valid for two frequencies:                      a. the carrier frequency <math>-BW/2 - F_{\text{offset, case 1}}</math> and                      b. the carrier frequency <math>+BW/2 + F_{\text{offset, case 1}}</math></p> <p>Note 3: <math>F_{\text{Interferer}}</math> range values for unwanted modulated interfering signal are interferer centre frequencies.</p>

		$P_{\text{Interferer}}$	dBm	-56
	$F_{\text{Interferer}}$	MHz	$=-F_{\text{offset}} - F_{\text{offset,case 1}}$ & $=+F_{\text{offset}} + F_{\text{offset,case 1}}$	$\leq -F_{\text{offset}} - F_{\text{offset,case 2}}$ & $\geq +F_{\text{offset}} + F_{\text{offset,case 2}}$
CA_1C, CA_2C, CA_3C, CA_7C, CA_12B, CA_23B, CA_27B, CA_38C, CA_39C, CA_40C, CA_41C, CA_40D, CA_41D, CA_42C	$F_{\text{Interferer}}$ (Range)	MHz	(Note 2)	$F_{\text{DL\_low}} - 15$ to $F_{\text{DL\_high}} + 15$
<p>Note 1: For certain bands, the unwanted modulated interfering signal may not fall inside the UE receive band, but within the first 15 MHz below or above the UE receive band</p> <p>Note 2: For each carrier frequency the requirement is valid for two frequencies:                      a. the carrier frequency <math>-F_{\text{offset}} - F_{\text{offset, case 1}}</math> and                      b. the carrier frequency <math>+F_{\text{offset}} + F_{\text{offset, case 1}}</math></p> <p>Note 3: <math>F_{\text{offset}}</math> is the frequency offset from the centre frequency of the adjacent CC being tested to the edge of aggregated channel bandwidth.</p> <p>Note 4: The <math>F_{\text{interferer}}</math> (offset) is the frequency separation of the center frequency of the carrier closest to the interferer and the center frequency of the interferer and shall be further adjusted to <math>\lfloor F_{\text{interferer}} / 0.015 + 0.5 \rfloor 0.015 + 0.0075</math> MHz to be offset from the sub-carrier raster.</p>				

Table 7.6.1A.5.5-4: In-band blocking parameters (inter-band, intra-band non-contiguous)

Rx Parameter	Units	Channel bandwidth					
		1.4 MHz	3 MHz	5 MHz	10 MHz	15 MHz	20 MHz
Power in Transmission Bandwidth Configuration for each CC	dBm	REFSENS + channel bandwidth specific value below					
		6	6	6	6	7	9
BW <sub>Interferer</sub>	MHz	1.4	3	5	5	5	5
F <sub>offset, case 1</sub>	MHz	2.1+0.0125	4.5+0.0075	7.5+0.0125	7.5+0.0025	7.5+0.0075	7.5+0.0125
F <sub>offset, case 2</sub>	MHz	3.5+0.0075	7.5+0.0075	12.5+0.0075	12.5+0.012	12.5+0.002	12.5+0.007
					5	5	5
Note 1: The transmitter shall be set to 4dB below P <sub>C<sub>MAX,L</sub></sub> with P <sub>C<sub>MAX,L</sub></sub> as defined in clause 6.2.5.							
Note 2: The interferer consists of the Reference measurement channel specified in Annex A.3.2 with one sided dynamic OCNG Pattern OP.1 FDD/TDD as described in Annex A.5.1.1/A.5.2.1 and set-up according to Annex C.3.1.							

Table 7.6.1A.5.5-5: In-band blocking (inter-band, intra-band non-contiguous)

E-UTRA band	Parameter	Unit	Case 1	Case 2	Case 3	Case 4	Case 5
		P <sub>Interferer</sub>	dBm	-56	-44		
	F <sub>Interferer</sub> (offset from SCC)	MHz	=-BW/2 - F <sub>offset, case 1</sub> & =+BW/2 + F <sub>offset, case 1</sub>	≤-BW/2 - F <sub>offset, case 2</sub> & ≥+BW/2 + F <sub>offset, case 2</sub>			-BW/2 - 11
1, 2, 3, 4, 5, 6, 7, 8, 9, 10, 11, 12, 13, 14, 17, 18, 19, 20, 21, 22, 23, 25, 26, 27, 28, 31, 33, 34, 35, 36, 37, 38, 39, 40, 41, 42, 43, 44	F <sub>Interferer</sub>	MHz	(Note 2)	F <sub>DL_low</sub> - 15 to F <sub>DL_high</sub> + 15	Void	Void	
30	F <sub>Interferer</sub>	MHz	(Note 2)	F <sub>DL_low</sub> - 15 to F <sub>DL_high</sub> + 15			F <sub>DL_low</sub> - 11
Note 1: For certain bands, the unwanted modulated interfering signal may not fall inside the UE receive band, but within the first 15 MHz below or above the UE receive band							
Note 2: For each carrier frequency the requirement is valid for two frequencies: a. the carrier frequency -BW/2 - F <sub>offset, case 1</sub> and b. the carrier frequency +BW/2 + F <sub>offset, case 1</sub>							
Note 3: F <sub>Interferer</sub> range values for unwanted modulated interfering signal are interferer centre frequencies							
Note 4: For intra-band non-contiguous + inter-band CA, ΔR <sub>IBNC</sub> = 0 dB for all sub-block gaps.							

For a UE, which supports CA configuration in Tables 7.3.3-1A, 7.3.3-1B and 7.3.3-1C, P<sub>Interferer</sub> power defined in Tables 7.6.1A.5.5-1, 7.6.1A.5.5-3 and 7.6.1A.5.5-5 is increased by the amount given by ΔR<sub>IB,c</sub> in Tables 7.3.3-1A, 7.3.3-1B and 7.3.3-1C accordingly.

## 7.6.1A.6

### 7.6.1A.7 In-band blocking for 4DL CA

Editor's note: Following aspects missing or not yet determined:

- The test applicability needs to be added to TS36.521-2
- The test case needs to be added to Annex G
- Test configuration tables format are under investigation and may change in RAN5.

#### 7.6.1A.7.1 Test Purpose

Same test purpose as in clause 7.6.1A.1.

#### 7.6.1A.7.2 Test Applicability

This test case applies to all types of E-UTRA UE release 11 and forward that support 4DL Intra-band contiguous CA or 4DL Inter-band CA or 4DL Intra-band contiguous + Inter-band CA.

This test case also applies to all types of E-UTRA UE release 12 and forward that support 4DL Intra-band non-contiguous CA + Inter-band CA or 4DL Intra-band non-contiguous + Intra-band contiguous CA.

This test case also applies to all types of E-UTRA UE release 12 and forward that support 4DL CA with FDD-TDD CA.

#### 7.6.1A.7.3 Minimum Conformance Requirements

The minimum conformance requirements are defined in clause 7.6.1A.0.

#### 7.6.1A.7.4 Test Description

##### 7.6.1A.7.4.1 Initial Conditions

Initial conditions are a set of test configurations the UE needs to be tested in and the steps for the SS to take with the UE to reach the correct measurement state.

The initial test configurations consist of environmental conditions, test frequencies, and channel bandwidths based on E-UTRA CA configurations specified in table 5.4.2A.1-1 through table 5.4.2A.1-2a. All of these configurations shall be tested with applicable test parameters for each channel bandwidth, and are shown in table 7.6.1A.7.4.1-1 through table 7.6.1A.7.4.1-6 as appropriate. The details of the uplink reference measurement channels (RMCs) are specified in Annex A.2 and A.3. Configurations of PDSCH and PDCCH before measurement are specified in Annex C.2.

Table 7.6.1A.7.4.1-1: Test Configuration Table (Intra-band contiguous)

Initial Conditions																	
Test Environment as specified in TS 36.508 [7] subclause 4.1											NC						
Test Frequencies as specified in TS36.508 [7] subclause 4.3.1 for different CA bandwidth classes.											For test frequencies refer to “Range” columns. For mapping within Band refer to “CC” columns						
Test CC Combination setting ( $N_{RB\_agg}$ ) as specified in subclause 5.4.2A.1 for the CA Configuration across bandwidth combination sets supported by the UE.											Refer to “PCC $N_{RB}$ ” and “SCCs $N_{RB}$ ” columns						
Network signalling value											NS_01 by default						
Test Parameters for CA Configurations																	
ID	CA Configuration / $N_{RB\_agg}$							DL Allocation				UL Allocation (Note 2,3)					
	CA Configuration						PCC $N_{RB}$	SCCs $N_{RB}$			CC MOD	PCC & SCCs RB allocation				CC MOD	PCC $L_{CRB} @ RB_{start}$
	Band	Range	PCC CC	SCC1 CC	SCC2 CC	SCC3 CC		SCC1	SCC2	SCC3		PCC	SCC1	SCC2	SCC3		
Default Test Settings for a CA_XE Configuration																	
1	X	Mid	CC1	CC2	CC3	CC4	Lowest $N_{RB\_agg}$			QPSK	All RBs				QPSK	REFSENS	
2	X	Mid	CC1	CC2	CC3	CC4	Highest $N_{RB\_agg}$			QPSK	All RBs				QPSK	REFSENS	
Note 1: CA Configuration Test CC Combination test settings are checked separately for each CA Configuration.																	
Note 2: Use CA Configuration – specific test points if present in the table, otherwise use Default Test Settings test points.																	
Note 3: X corresponds to the band of the CA Configuration. E.g. for CA_41E, X=41.																	
Note 4: REFSENS refers to the PCC band's and PCC $N_{RB}$ 's single carrier Uplink RB allocation for reference sensitivity according to table 7.3.5-2.																	
Note 5: If in the CA Configuration UE supports multiple CC Combinations with the same $N_{RB\_agg}$ , choose for testing the Combination with maximum $N_{RB\_PCC}$ and then select maximum $N_{RB\_SCC1}$ for the chosen $N_{RB\_PCC}$ .																	

Table 7.6.1A.7.4.1-2: Test Configuration Table (Inter-band)

Initial Conditions																			
Test Environment as specified in TS 36.508[7] subclause 4.1													NC						
Test Frequencies as specified in TS36.508 [7] subclause 4.3.1 for different CA bandwidth classes.													For test frequencies refer to “Range” columns. For mapping within Band refer to “CC” columns						
Test CC Combination setting ( $N_{RB\_agg}$ ) as specified in subclause 5.4.2A.1 for the CA Configuration across bandwidth combination sets supported by the UE.													Refer to “PCC $N_{RB}$ ” and “SCCs $N_{RB}$ ” columns						
Network signalling value													NS_01 by default						
Test Parameters for CA Configurations																			
ID	CA Configuration / $N_{RB\_agg}$									DL Allocation				UL Allocation (Note 2,3)

	PCC		SCC1		SCC2		SCC3			SCC1	SCC2	SCC3		PCC	SCC1	SCC2	SCC3		
	Band	Range /CC	Band	Range /CC	Band	Range /CC	Band	Range /CC											
Default Test Settings for CA_XB-YA-ZA and CA_XC-YA-ZA Configuration																			
1	X	Mid /CC1	X	Mid /CC2	Y	Mid	Z	Mid	Highest $N_{RB\_agg}$	Highest $N_{RB}$	Highest $N_{RB}$	QPSK	All RBs		QPSK	REFSENS			
2	X	Mid /CC1	X	Mid /CC2	Y	Mid	Z	Mid	Lowest $N_{RB\_agg}$	Highest $N_{RB}$	Highest $N_{RB}$	QPSK	All RBs		QPSK	REFSENS			
3	Y	Mid	X	Mid /CC1	X	Mid /CC2	Z	Mid	Highest $N_{RB}$	Highest $N_{RB\_agg}$		Highest $N_{RB}$	QPSK	All RBs		QPSK	REFSENS		
4	Y	Mid	X	Mid /CC1	X	Mid /CC2	Z	Mid	Highest $N_{RB}$	Lowest $N_{RB\_agg}$		Highest $N_{RB}$	QPSK	All RBs		QPSK	REFSENS		
5	Z	Mid	Y	Mid	X	Mid /CC1	X	Mid /CC2	Highest $N_{RB}$	Highest $N_{RB\_agg}$	Highest $N_{RB}$		QPSK	All RBs		QPSK	REFSENS		
6	Z	Mid	Y	Mid	X	Mid /CC1	X	Mid /CC2	Highest $N_{RB}$	Highest $N_{RB}$	Lowest $N_{RB\_agg}$		QPSK	All RBs		QPSK	REFSENS		
Default Test Settings CA_XA-ZA-YB and for CA_XA-ZA-YC Configuration																			
1	Y	Mid /CC1	Y	Mid /CC2	X	Mid	Z	Mid	Highest $N_{RB\_agg}$	Highest $N_{RB}$	Highest $N_{RB}$	QPSK	All RBs		QPSK	REFSENS			
2	Y	Mid /CC1	Y	Mid /CC2	X	Mid	Z	Mid	Lowest $N_{RB\_agg}$	Highest $N_{RB}$	Highest $N_{RB}$	QPSK	All RBs		QPSK	REFSENS			
3	X	Mid	Y	Mid /CC1	Y	Mid /CC2	Z	Mid	Highest $N_{RB}$	Highest $N_{RB\_agg}$		Highest $N_{RB}$	QPSK	All RBs		QPSK	REFSENS		

4	X	Mid	Y	Mid /CC1	Y	Mid /CC2	Z	Mid	Highest N <sub>RB</sub>	Lowest N <sub>RB_agg</sub>	Highest N <sub>RB</sub>	QPSK	All RBs	QPSK	REFSENS
5	Z	Mid	X	Mid	Y	Mid /CC1	Y	Mid /CC2	Highest N <sub>RB</sub>	Highest N <sub>RB_agg</sub>	Highest N <sub>RB</sub>	QPSK	All RBs	QPSK	REFSENS
6	Z	Mid	X	Mid	Y	Mid /CC1	Y	Mid /CC2	Highest N <sub>RB</sub>	Highest N <sub>RB</sub>	Lowest N <sub>RB_agg</sub>	QPSK	All RBs	QPSK	REFSENS

Note 1: CA Configuration Test CC Combination test settings are checked separately for each CA Configuration.

Note 2: Use CA Configuration – specific test points if present in the table. Otherwise use the Default Test Settings test points.

Note 3: If, according to the UE declared capability, UE does not support UL in an individual band within the CA Configuration, test points with that individual band as PCC are not applicable.

Note 4: X,Y,Z correspond to the different bands in the CA Configuration. E.g. for CA\_3C-7A-28A, X=3,Y=7 and Z=28.

Note 5: REFSENS refers to the PCC band's and PCC N<sub>RB</sub> 's single carrier Uplink RB allocation for reference sensitivity according to table 7.3.5-2.

Note 6: If in the CA Configuration UE supports multiple CC Combinations with the same N<sub>RB\_agg</sub>, choose the Combination with N<sub>RB\_PCC</sub> = N<sub>RB\_SCC1</sub> for testing. If no such combination is supported, choose Combination with maximum N<sub>RB\_PCC</sub> for testing.

Table 7.6.1A.7.4.1-4: Test Configuration Table (Intra-band non-contiguous + Inter-band)

Initial Conditions																		
Test Environment as specified in TS 36.508[7] subclause 4.1												NC						
Test Frequencies as specified in TS36.508 [7] subclause 4.3.1 for different CA bandwidth classes.												For test frequencies refer to "Range" columns. For mapping within Band refer to "CC" columns						
Test CC Combination setting ( $N_{RB\_agg}$ ) as specified in subclause 5.4.2A.1 for the CA Configuration across bandwidth combination sets supported by the UE.												Highest $N_{RB}$						
Network signalling value												NS_01 by default						
Test Parameters for CA Configurations																		
ID	CA Configuration / $N_{RB\_agg}$											DL Allocation				UL Allocation (Note 2,3)		
	CA Configuration											CC MOD	PCC & SCCs				CC MOD	PCC LCRB @ $RB_{start}$
	PCC		$W_{gap}$ [MHz]	SCC1		$W_{gap}$ [MHz]	SCC2		$W_{gap}$ [MHz]	SCC3			RB allocation					
	Band	Range		Band	Range		Band	Range		Band	Range		PCC	SCC1	SCC2	SCC3		
		/CC		/CC		/CC		/CC		/CC								
Default Test Settings for CA_XA-XA-YA-ZA Configurations																		
1	X	CC2	Max	X	CC1	-	Y	Mid	-	Z	Mid	QPSK	All RBs				QPSK	REFSENS_CA
2	Y	Mid	-	X	CC2	Max	X	CC1	-	Z	Mid	QPSK	All RBs				QPSK	REFSENS
3	Z	Mid	-	Y	Mid	-	X	CC2	Max	X	CC1	QPSK	All RBs				QPSK	REFSENS
Default Test Settings for CA_XA-ZA-YA-YA Configurations																		
1	Y	CC2	Max	Y	CC1	-	X	Mid	-	Z	Mid	QPSK	All RBs				QPSK	REFSENS_CA
2	X	Mid	-	Y	CC2	Max	Y	CC1	-	Z	Mid	QPSK	All RBs				QPSK	REFSENS
3	Z	Mid	-	X	Mid	-	Y	CC2	Max	Y	CC1	QPSK	All RBs				QPSK	REFSENS
Note 1: CA Configuration Test CC Combination test settings are checked separately for each CA Configuration.																		
Note 2: Use CA Configuration – specific test points if present in the table. Otherwise use test points from matching Group Test Settings, if present in the table. Otherwise use Default Test Settings test points.																		
Note 3: If, according to the UE declared capability, UE does not support UL in an individual band within the CA Configuration, test points with that individual band as PCC are not applicable.																		
Note 4: X,Y,Z correspond to the different bands in the CA Configuration. E.g. for CA_2A-2A-4A-12A,X=2,Y=4,Z=12.																		

Note 5: REFSSENS refers to the PCC band's and PCC  $N_{RB}$  's single carrier Uplink RB allocation for reference sensitivity according to table 7.3.5-2. REFSSENS\_CA refers to the PCC band's and PCC  $N_{RB}$  's single carrier Uplink RB allocation for reference sensitivity according to table 7.3.4.5-2 (selecting RB allocation for SCC measurement).

1. Connect the SS to the UE antenna connectors as shown in TS 36.508[7] Annex A Figure A.58 as appropriate.
2. The parameter settings for the cell are set up according to TS 36.508 [7] subclause 4.4.3.
3. Downlink signals for PCC are initially set up according to Annex C.0, C.1, and C.3.1, and uplink signals according to Annex H.1 and H.3.0.
4. The UL and DL Reference Measurement channels are set according to Table 7.6.1A.7.4.1-1 through Table 7.6.1A.7.4.1-6 as appropriate.
5. Propagation conditions are set according to Annex B.0.
6. Ensure the UE is in State 3A-RF according to TS 36.508 [7] clause 5.2A.2. Message contents are defined in clause 7.6.1A.7.4.3.

#### 7.6.1A.7.4.2 Test Procedure

1. Configure SCCs according to Annex C.0, C.1 and Annex C.3.1 for all downlink physical channels.
2. The SS shall configure SCCs as per TS 36.508 [7] clause 5.2A.4. Message contents are defined in clause 7.6.1A.7.4.3
3. SS activates SCCs by sending the activation MAC-CE (Refer TS 36.321 [13], clauses 5.13, 6.1.3.8). Wait for at least 2 seconds (Refer TS 36.133, clauses 8.3.3.2).
4. SS transmits PDSCH via PDCCH DCI format 1A for C\_RNTI to transmit the DL RMC according to Table 7.6.1A.7.4.1-1 through Table 7.6.1A.7.4.1-6 as appropriate on PCC and SCCs. The SS sends downlink MAC padding bits on the DL RMC.
5. SS sends uplink scheduling information for each UL HARQ process via PDCCH DCI format 0 for C\_RNTI to schedule the UL RMC according to Table 7.6.1A.7.4.1-1 through Table 7.6.1A.7.4.1-6 on PCC. Since the UE has no payload data to send, the UE sends uplink MAC padding bits on the UL RMC.
6. Set the parameters of the signal generator for an interfering signal below the aggregated component carriers in Case 1 according to Table 7.6.1A.7.4.2-1.
7. Set the downlink signal level according to the Table 7.6.1A.7.4.2-1. Send uplink power control commands to the UE (less or equal to 1dB step size should be used), to ensure that the UE output power is within +0, - 3.4 dB of the target level in table 7.6.1A.7.5-1 for carrier frequency  $f \leq 3.0\text{GHz}$  or within +0, -4.0 dB of the target level for carrier frequency  $3.0\text{GHz} < f \leq 4.2\text{GHz}$ , for at least the duration of the throughput measurement.
8. Measure the average throughput for the carrier(s) indicated in Table 7.6.1A.7.4.2-1 for duration sufficient to achieve statistical significance according to Annex G.2A.
9. Repeat steps from 6 to 8, using an interfering signal above the measured carrier(s) according to Table 7.6.1A.7.5-1 in Case 1 at step 6.
10. Repeat steps from 6 to 9, using interfering signals in Case 2 at step 6 and 9. The ranges of case 2 are covered in steps equal to the interferer bandwidth. The test frequencies are chosen in analogy to table 7.6.1A.1.4.2-1.
11. Repeat steps 1 to 10 for all component carriers listed in Table 7.6.1A.7.4.2-1.

### 7.6.1A.7.4.3 Message Contents

Same message contents as in clause 7.6.1A.1.4.3.

### 7.6.1A.7.5 Test Requirement

The throughput measurement of each carrier derived in test procedure shall be  $\geq 95\%$  of the maximum throughput of the reference measurement channels as specified in Annex A.3.2 with parameters specified in Tables below, according to the type of CA.

**Table 7.6.1A.7.5-1: In-band blocking for additional operating bands for carrier aggregation (inter-band)**

E-UTRA band	Parameter	Unit	Case 1	Case 2
		$P_{\text{Interferer}}$	dBm	-56
	$F_{\text{Interferer}}$ (offset from SCC)	MHz	$=-BW/2 - F_{\text{offset, case 1}}$ & $=+BW/2 + F_{\text{offset, case 1}}$	$\leq -BW/2 - F_{\text{offset, case 2}}$ & $\geq +BW/2 + F_{\text{offset, case 2}}$

Note 1:		The transmitter shall be set to 4dB below P <sub>C<sub>MAX,L</sub></sub> with P <sub>C<sub>MAX,L</sub></sub> as defined in clause 6.2.5.					
Note 2:		The interferer consists of the Reference measurement channel specified in Annex A.3.2 with one sided dynamic OCN Pattern OP.1 FDD/TDD as described in Annex A.5.1.1/A.5.2.1 and set-up according to Annex C.3.1.					

**Table 7.6.1A.7.5-5: In-band blocking (inter-band, intra-band non-contiguous)**

E-UTRA band	Parameter	Unit	Case 1	Case 2	Case 3	Case 4	Case 5
		P <sub>Interferer</sub>	dBm	-56	-44		
	F <sub>Interferer</sub> (offset from SCC)	MHz	=-BW/2 - F <sub>offset, case 1</sub> & =+BW/2 + F <sub>offset, case 1</sub>	≤-BW/2 - F <sub>offset, case 2</sub> & ≥+BW/2 + F <sub>offset, case 2</sub>			-BW/2 - 11
1, 2, 3, 4, 5, 6, 7, 8, 9, 10, 11, 12, 13, 14, 17, 18, 19, 20, 21, 22, 23, 25, 26, 27, 28, 31, 33, 34, 35, 36, 37, 38, 39, 40, 41, 42, 43, 44, 45, 65, 66, 68, 70	F <sub>Interferer</sub>	MHz	(Note 2)	F <sub>DL_low</sub> - 15 to F <sub>DL_high</sub> + 15	Void	Void	
30	F <sub>Interferer</sub>	MHz	(Note 2)	F <sub>DL_low</sub> - 15 to F <sub>DL_high</sub> + 15			F <sub>DL_low</sub> - 11
Note 1:		For certain bands, the unwanted modulated interfering signal may not fall inside the UE receive band, but within the first 15 MHz below or above the UE receive band.					
Note 2:		For each carrier frequency the requirement is valid for two frequencies: a. the carrier frequency -BW/2 - F <sub>offset, case 1</sub> and b. the carrier frequency +BW/2 + F <sub>offset, case 1</sub>					
Note 3:		F <sub>Interferer</sub> range values for unwanted modulated interfering signal are interferer centre frequencies.					
Note 4:		For intra-band non-contiguous + inter-band CA, ΔR <sub>IBNC</sub> = 0 dB for all sub-block gaps.					

For a UE, which supports CA configuration in Tables 7.3.3-1A, 7.3.3-1B and 7.3.3-1C, P<sub>Interferer</sub> power defined in Tables 7.6.1A.7.5-1, 7.6.1A.7.5-3 and 7.6.1A.7.5-5 is increased by the amount given by ΔR<sub>IB,c</sub> in Tables 7.3.3-1A, 7.3.3-1B and 7.3.3-1C accordingly.

## 7.6.1B In-band blocking for UL-MIMO

### 7.6.1B.1 Test Purpose

In-band blocking for UL- MIMO is defined for an unwanted interfering signal falling into the range from 15MHz below to 15MHz above the UE that support UL-MIMO receive band, at which the relative throughput shall meet or exceed the requirement for the specified measurement channels.

The lack of in-band blocking ability will decrease the coverage area when other e-NodeB transmitters exist (except in the adjacent channels and spurious response).

## 7.6.1B.2 Test Applicability

This test applies to all types of E-UTRA UE release 10 and forward that support UL-MIMO.

## 7.6.1B.3 Minimum Conformance Requirements

For UE with two transmitter antenna connectors in closed-loop spatial multiplexing scheme, the minimum requirements in subclause 7.6 shall be met with the UL-MIMO configurations specified in Table 6.2.2B.3-2. For UL-MIMO, the parameter  $P_{\text{CMAX}_L}$  is defined as the total transmitter power over the two transmit antenna connectors.

The normative reference for this requirement is TS 36.101 [2] clause 7.6B.

## 7.6.1B.4 Test Description

### 7.6.1B.4.1 Initial Conditions

Initial conditions are a set of test configurations the UE needs to be tested in and the steps for the SS to take with the UE to reach the correct measurement state.

The initial test configurations consist of environmental conditions, test frequencies, and channel bandwidths based on E-UTRA bands specified in table 5.4.2.1-1. All of these configurations shall be tested with applicable test parameters for each channel bandwidth, and are shown in table 7.6.1B.4.1-1. The details of the uplink and downlink reference measurement channels (RMCs) are specified in Annexes A.2 and A.3 respectively. The details of the OCNG patterns used are specified in Annex A.5. Configurations of PDSCH and PDCCH before measurement are specified in Annex C.2.

**Table 7.6.1B.4.1-1: Test Configuration Table**

Initial Conditions						
Test Environment as specified in TS 36.508[7] subclause 4.1			NC			
Test Frequencies as specified in TS36.508 [7] subclause 4.3.1			Mid range			
Test Channel Bandwidths as specified in TS 36.508 [7] subclause 4.3.1			Lowest, 5MHz, Highest			
Test Parameters for Channel Bandwidths						
Ch BW	Downlink Configuration			Uplink Configuration		
	Mod'n	RB allocation		Mod'n	RB allocation	
		FDD	TDD		FDD	TDD
1.4MHz	QPSK	6	6	QPSK	6	6
3MHz	QPSK	15	15	QPSK	15	15
5MHz	QPSK	25	25	QPSK	25	25
5MHz	QPSK	25	N/A	QPSK	20	N/A
5MHz	QPSK	25	N/A	QPSK	15	N/A
5MHz	QPSK	25	N/A	QPSK	5 <sup>4</sup>	N/A
10MHz	QPSK	50	50	QPSK	50	50
10MHz	QPSK	50	N/A	QPSK	25	N/A
10MHz	QPSK	50	N/A	QPSK	20	N/A
10MHz	QPSK	50	N/A	QPSK	15	N/A
15MHz	QPSK	75	75	QPSK	75	75
15MHz	QPSK	75	N/A	QPSK	50	N/A
15MHz	QPSK	75	N/A	QPSK	25	N/A
15MHz	QPSK	75	N/A	QPSK	20	N/A
20MHz	QPSK	100	100	QPSK	100	100
20MHz	QPSK	100	N/A	QPSK	75	N/A
20MHz	QPSK	100	N/A	QPSK	50	N/A
20MHz	QPSK	100	N/A	QPSK	25	N/A
20MHz	QPSK	100	N/A	QPSK	20	N/A
Note 1: Test Channel Bandwidths are checked separately for each E-UTRA band, which applicable channel bandwidths are specified in Table 5.4.2.1-1.						
Note 2: Depending on E-UTRA band, only the appropriate Uplink RB allocation value according to table 7.3.3-2 is tested per Test Channel Bandwidth.						
Note 3: For the DL signal one sided dynamic OCNG Pattern OP.1 FDD/TDD is used.						
Note 4: Applicable only to E-UTRA FDD Band 31. The UL resource blocks shall be located at RBstart 10 (according to Table 7.3.3-2).						

1. Connect the SS to the UE antenna connectors as shown in TS 36.508 [7] Annex A, in Figure A.29.
2. The parameter settings for the cell are set up according to TS 36.508 [7] subclause 4.4.3.
3. Downlink signals are initially set up according to Annex C0, C.1 and C.3.1, and uplink signals according to Annex H.1 and H.3.1.
4. The UL and DL Reference Measurement channels are set according to in Table 7.6.1B.4.1-1.
5. Propagation conditions are set according to Annex B.0.
6. Ensure the UE is in State 3A-RF according to TS 36.508 [7] clause 5.2A.2. Message contents are defined in clause 7.6.1B.4.3.

#### 7.6.1B.4.2 Test Procedure

1. SS transmits PDSCH via PDCCH DCI format 1A for C\_RNTI to transmit the DL RMC according to Table 7.6.1B.4.1-1. The SS sends downlink MAC padding bits on the DL RMC.
2. SS sends uplink scheduling information for each UL HARQ process via PDCCH DCI format 4 for C\_RNTI to schedule the UL RMC according to Table 7.6.1B.4.1-1. Since the UE has no payload data to send, the UE transmits uplink MAC padding bits on the UL RMC.
3. Set the parameters of the signal generator for an interfering signal below the wanted signal in Case 1 according to Tables 7.6.1B.5-1 and 7.6.1B.5-2.
4. Set the downlink signal level according to the table 7.6.1B.5-1. Send uplink power control commands to the UE (less or equal to 1dB step size should be used), to ensure that the UE output power is within +0, - 3.4 dB of the target level in table 7.6.1B.5-1 for carrier frequency  $f \leq 3.0\text{GHz}$  or within +0, -4.0 dB of the target level for carrier frequency  $3.0\text{GHz} < f \leq 4.2\text{GHz}$ , for at least the duration of the throughput measurement.
5. Measure the average throughput for a duration sufficient to achieve statistical significance according to Annex G.2.
6. Repeat steps from 3 to 5, using an interfering signal above the wanted signal in Case 1 at step 3.
7. Repeat steps from 3 to 6, using interfering signals in Case 2 at step 3 and 6. The ranges of case 2 are covered in steps equal to the interferer bandwidth. The test frequencies are chosen in analogy to table 7.6.1B.4.2-1.
8. Repeat steps from 3 to 5, using successively all interfering signals in Case 3 and Case 4 at step 3.

**Table 7.6.1B.4.2-1: Example for interferer frequencies**

	Lower frequency	Upper frequency
Band 1 DL	2110 MHz	2170 MHz
Band 1 Midrange	2140 MHz	
Receive band wanted signal (BW 5MHz)	2137.5 MHz	2142.5 MHz
Interferer case 1	2129.9875 MHz	2150.0125 MHz
Interferer case 2 (inner frequency)	2124.9925 MHz	2155.0075 MHz
Interferer case 2 (outer frequency)	2099.9925 MHz	2180.0075 MHz
Outer limit for in band blocking	2095MHz	2185MHz
Number of test frequencies case 2	6	6
Number of test frequencies for Band 17(asymmetric!), BW 5MHz, case 2	0	2

#### 7.6.1B.4.3 Message Contents

Message contents are according to TS 36.508 [7] clause 4.6 with the following exception:

Table 7.6.1B.4.3-1: UplinkPowerControlDedicated

}			

### 7.6.1B.5 Test Requirement

The throughput measurement derived in test procedure shall be  $\geq 95\%$  of the maximum throughput of the reference measurement channels as specified in Annex A.3.2 with parameters specified in Tables 7.6.1B.5-1 and 7.6.1B.5-2.

Table 7.6.1B.5-1: In band blocking parameters

Rx Parameter	Units	Channel bandwidth					
		1.4 MHz	3 MHz	5 MHz	10 MHz	15 MHz	20 MHz
Power in Transmission Bandwidth Configuration	dBm	REFSENS + channel bandwidth specific value below					
		6	6	6	6	7	9
BW <sub>Interferer</sub>	MHz	1.4	3	5	5	5	5
F <sub>offset, case 1</sub>	MHz	2.1+0.0125	4.5+0.0075	7.5+0.0125	7.5+0.0025	7.5+0.0075	7.5+0.0125
F <sub>offset, case 2</sub>	MHz	3.5+0.0075	7.5+0.0075	12.5+0.0075	12.5+0.012	12.5+0.002	12.5+0.007
Note 1:		The transmitter shall be set to 4dB below P <sub>CMAX,L</sub> with P <sub>CMAX,L</sub> as defined in clause 6.2.5.					
Note 2:		The interferer consists of the Reference measurement channel specified in Annex A.3.2 with one sided dynamic OCNG Pattern OP.1 FDD/TDD as described in Annex A.5.1.1/A.5.2.1 and set-up according to Annex C.3.1.					

**Table 7.6.1B.5-2: In-band blocking**

E-UTRA band	Parameter	Unit	Case 1	Case 2	Case 3	Case 4	Case 5
	$P_{\text{Interferer}}$	dBm	-56	-44			-38
	$F_{\text{Interferer}}$ (offset)	MHz	$=-BW/2 - F_{\text{offset,case 1}}$ & $=+BW/2 + F_{\text{offset,case 1}}$	$\leq -BW/2 - F_{\text{offset,case 2}}$ & $\geq +BW/2 + F_{\text{offset,case 2}}$			$-BW/2 - 11$
1, 2, 3, 4, 5, 6, 7, 8, 9, 10, 11, 12, 13, 14, 17, 18, 19, 20, 21, 22, 23, 25, 26, 27, 28, 31, 33, 34, 35, 36, 37, 38, 39, 40, 41, 42, 43, 44, 45, 65, 66	$F_{\text{Interferer}}$	MHz	(Note 2)	$F_{\text{DL\_low}} - 15$ to $F_{\text{DL\_high}} + 15$	Void	Void	
30	$F_{\text{Interferer}}$	MHz	(Note 2)	$F_{\text{DL\_low}} - 15$ to $F_{\text{DL\_high}} + 15$			$F_{\text{DL\_low}} - 11$

NOTE 1: For certain bands, the unwanted modulated interfering signal may not fall inside the UE receive band, but within the first 15 MHz below or above the UE receive band  
 NOTE 2: For each carrier frequency the requirement is valid for two frequencies:  
 a. the carrier frequency  $-BW/2 - F_{\text{offset, case 1}}$  and  
 b. the carrier frequency  $+BW/2 + F_{\text{offset, case 1}}$   
 NOTE 3:  $F_{\text{Interferer}}$  range values for unwanted modulated interfering signal are interferer centre frequencies

For the UE which supports inter band CA configuration in Tables 7.3.3-1A, 7.3.3-1B and 7.3.3-1C,  $P_{\text{Interferer}}$  power defined in Table 7.6.1B.5-2 is increased by the amount given by  $\Delta R_{\text{IB,c}}$  in Tables 7.3.3-1A, 7.3.3-1B and 7.3.3-1C.

### 7.6.1D In-band blocking for ProSe

#### 7.6.1D.0 Minimum conformance requirements

The throughput shall be  $\geq 95\%$  of the maximum throughput of the reference measurement channels as specified in Annex A.6.2.

**Table 7.6.1D.0-1: In band blocking parameters for ProSe Direct Discovery**

Rx parameter	Units	Channel bandwidth					
		1.4 MHz	3 MHz	5 MHz	10 MHz	15 MHz	20 MHz
Power in Transmission Bandwidth Configuration	dBm	$P_{\text{REFSENS\_ProSe}} + \text{channel bandwidth specific value below} + P_{\text{offset}}$					
				6	6	7	9
$BW_{\text{Interferer}}$	MHz			5	5	5	5
$F_{\text{offset, case 1}}$	MHz			$7.5+0.0125$	$7.5+0.0025$	$7.5+0.0075$	$7.5+0.0125$
$F_{\text{offset, case 2}}$	MHz			$12.5+0.0075$	$12.5+0.012$	$12.5+0.002$	$12.5+0.007$
$P_{\text{offset}}$	dB			10.9	13.9	15.7	16.9

NOTE 1: The interferer is QPSK modulated PUSCH containing data and reference symbols. Normal cyclic prefix is used. The data content shall be uncorrelated to the wanted signal and modulated according to clause 5 of TS36.211.

Table 7.6.1D.0-2: In band blocking parameters for ProSe Direct Communication

Rx parameter	Units	Channel bandwidth					
		1.4 MHz	3 MHz	5 MHz	10 MHz	15 MHz	20 MHz
Power in Transmission Bandwidth Configuration	dBm	$P_{\text{REFSENS, ProSe}} + \text{channel bandwidth specific value below}$					
				6	6	7	9
$BW_{\text{Interferer}}$	MHz			5	5	5	5
$F_{\text{offset, case 1}}$	MHz			$7.5+0.0125$	$7.5+0.0025$	$7.5+0.0075$	$7.5+0.0125$
$F_{\text{offset, case 2}}$	MHz			$12.5+0.0075$	$12.5+0.012$	$12.5+0.002$	$12.5+0.007$
					5	5	5
NOTE 1: The interferer is QPSK modulated PUSCH containing data and reference symbols. Normal cyclic prefix is used. The data content shall be uncorrelated to the wanted signal and modulated according to clause 5 of TS36.211.							

Table 7.6.1D.0-3: In-band blocking for ProSe

E-UTRA ProSe band	Parameter	Unit	Case 1	Case 2
		$P_{\text{Interferer}}$	dBm	-56
	$F_{\text{Interferer}}$ (offset)	MHz	$=-BW/2 - F_{\text{offset, case 1}}$ & $=+BW/2 + F_{\text{offset, case 1}}$	$\leq -BW/2 - F_{\text{offset, case 2}}$ & $\geq +BW/2 + F_{\text{offset, case 2}}$
2,3,4,7,14,20,26,28,31	$F_{\text{Interferer}}$	MHz	(Note 2)	$F_{\text{DL, low}} - 15$ to $F_{\text{DL, high}} + 15$
NOTE 1: For certain bands, the unwanted modulated interfering signal may not fall inside the UE receive band, but within the first 15 MHz below or above the UE receive band.				
NOTE 2: For each carrier frequency the requirement is valid for two frequencies: a. the carrier frequency $-BW/2 - F_{\text{offset, case 1}}$ and b. the carrier frequency $+BW/2 + F_{\text{offset, case 1}}$				
NOTE 3: $F_{\text{Interferer}}$ range values for unwanted modulated interfering signal are interferer centre frequencies.				

For the UE which supports inter band CA configuration in Tables 7.3.3-1A, 7.3.3-1B and 7.3.3-1C,  $P_{\text{Interferer}}$  power defined in Tables 7.6.1D.0-3 is increased by the amount given by  $\Delta R_{\text{IB,c}}$  in Table 7.3.3-1A, 7.3.3-1B and 7.3.3-1C.

The normative reference for this requirement is TS 36.101 [2] clause 7.6.1.1D.

### 7.6.1D.1 In-band blocking for ProSe Direct Discovery

**Editor's note: This test case is not complete. Following aspects are either missing or not yet determined:**

- ProSe UE authentication is not handled in the test case and is still under investigation.
- Use of OCNG for Downlink has not been considered and is still FFS.
- Message exceptions content needs further investigation (some values still TBD).
- Test time is FFS.
- Test system uncertainties and test tolerances are TBD
- Connection Diagram is FFS

#### 7.6.1D.1.1 Test Purpose

In-band blocking is defined for an unwanted interfering signal falling into the range from 15MHz below to 15MHz above the ProSe band, at which the relative throughput shall meet or exceed the requirement for the specified measurement channels.

The lack of in-band blocking ability will decrease the coverage area when other Sidelink transmitters exist (except in the adjacent channels and spurious response).

## 7.6.1D.1.2 Test Applicability

This test applies to all types of E-UTRA UE release 12 and forward which support ProSe Direct Discovery, but not ProSe Direct Communication.

## 7.6.1D.1.3 Minimum Conformance Requirements

The minimum conformance requirements are defined in clause 7.6.1D.0.

## 7.6.1D.1.4 Test Description

### 7.6.1D.1.4.1 Initial Conditions

Initial conditions are a set of test configurations the UE needs to be tested in and the steps for the SS to take with the UE to reach the correct measurement state.

The initial test configurations consist of environmental conditions, test frequencies, and channel bandwidths based on E-UTRA ProSe bands specified in table 5.4.2D.1-1. All of these configurations shall be tested with applicable test parameters for each channel bandwidth, and are shown in table 7.6.1D.1.4.1-1. The details of the downlink, uplink and sidelink reference measurement channels (RMCs) are specified in Annexes A.2, A.3 and A.6.

**Table 7.6.1D.1.4.1-1: Test Configuration Table**

Initial Conditions						
Test Environment as specified in TS 36.508[7] subclause 4.1			NC			
Test Frequencies as specified in TS36.508 [7] subclause 4.3.1			Mid range(Note 4)			
Test Channel Bandwidths as specified in TS 36.508 [7] subclause 4.3.1			5MHz, Highest			
	Downlink Configuration (Note 2)		Uplink Configuration (Note 2)		Sidelink Configuration (Reception) (Note 3)	
Ch BW	Mod'n	RB allocation	Mod'n	RB allocation	Mod'n	RB allocation
5MHz	QPSK	8	QPSK	8	QPSK	2
10MHz	QPSK	16	QPSK	16	QPSK	2
15MHz	QPSK	25	QPSK	25	QPSK	2
20MHz	QPSK	30	QPSK	30	QPSK	2
Note 1: Test Channel Bandwidths are checked separately for each E-UTRA ProSe and Operating band, according to the applicability specified respectively in Table 5.4.2D.1-1 and Table 5.4.2.1-1. Note 2: After DRX configuration, DL-RMC (PDSCH) and DCI-0 for scheduling UL-RMC (PUSCH) are applied only in the DRX On subframes. Note 3: The RB start for the transmission of Sidelink RMC is RB#0. Note 4: Sidelink uses the frequencies defined for Uplink.						

1. Connect the SS to the UE antenna connectors as shown in TS 36.508 [7] Annex A, Figure [FFS].
2. The parameter settings for the cell are set up according to TS 36.508 [7] clause 4.4.3.
3. Downlink signals are initially set up according to Annex C.0, C.1 and C.3.1, and uplink signals according to Annex H.1 and H.3.1.
4. The UL and DL Reference Measurement channels are set according to Table 7.6.1D.1.4.1-1.
5. Propagation conditions are set according to Annex B.0.
6. Ensure the UE is in State 2A-RF according to TS 36.508 [7] clause 5.2A.1A. Message contents exceptions are defined in clause 7.6.1D.1.4.3.
7. SS continues with the generic procedures described in TS 36.508 [7] clause 4.5.3A.3 and 4.5.4.3 and ensures the UE is in State 4 according to TS 36.508 [7] clause 4.5.4 and the UE test loop Mode D is activated.

## 7.6.1D.1.4.2 Test Procedure

1. SS shall transmit an RRCConnectionReconfiguration message to configure DRX. Message contents exceptions (only those marked with "...Step 1..." ) are defined in clause 7.6.1D.1.4.3.
2. The UE shall transmit RRCConnectionReconfigurationComplete message.
3. Initialise the variables Ptot and Pok as 0.
4. SS transmits PDSCH via PDCCH DCI format 1A for C\_RNTI to transmit the DL RMC according to Table 7.3D.1.4.1-1. The SS sends downlink MAC padding bits on the DL RMC.
5. SS sends uplink scheduling information via PDCCH DCI format 0 for C\_RNTI to schedule the UL RMC according to Table 7.3D.1.4.1-1. When the UE has no payload data to send, it transmits uplink MAC padding bits on the UL RMC.
6. SS transmits PSDCH to transmit the SL RMC according to Table 7.6.1D.1.4.1-1. Set the Sidelink signal level to the appropriate value defined in Table 7.6.1D.1.5-1.
7. Set the parameters of the signal generator for an interfering signal below the aggregated component carriers in Case 1 according to Tables 7.6.1D.1.5-1 and 7.6.1D.1.5-2.
8. SS shall send SL Discovery Packets (MAC padding bits) on the SL RMC for the test time [FFS]. SS stores the number of the transmitted Discovery Packets in the current test iteration in the variable Ptot.
10. SS shall send (on the available PDSCH) a "UE TEST LOOP PROSE MODE D SIDELINK DIRECT DISCOVERY PACKET COUNTER REQUEST" message and wait for the UE to respond (on the available PUSCH) with a "UE TEST LOOP PROSE MODE D SIDELINK DIRECT DISCOVERY PACKET COUNTER RESPONSE".
11. SS calculates the variable Pok as (current counter value - counter value at last test iteration).
12. SS shall compute the throughput as following:  

$$TP = Pok / Ptot * 100\%$$
13. Repeat steps from 6 to 12, using an interfering signal above the wanted signal in Case 1 at step 7.
14. Repeat steps from 6 to 13, using interfering signals in Case 2 at step 7 and 13. The ranges of case 2 are covered in steps equal to the interferer bandwidth. The test frequencies are chosen in analogy to table 7.6.1D.1.4.2-1.

**Table 7.6.1D.1.4.2-1: Example for interferer frequencies**

	Lower frequency	Upper frequency
Band 2 SL	1850 MHz	1910 MHz
Band 2 Midrange	1880 MHz	
Sidlink wanted signal (BW 5MHz)	1877.5 MHz	1882.5 MHz
Interferer case 1	1869.9875 MHz	1890.0125 MHz
Interferer case 2 (inner frequency)	1864.9925 MHz	1895.0075 MHz
Interferer case 2 (outer frequency)	1839.9925 MHz	1920.0075 MHz
Outer limit for in band blocking	1835 MHz	1925 MHz
Number of test frequencies case 2	6	6

## 7.6.1D.1.4.3 Message Contents

Message contents are according to TS 36.508 [7] clauses TBD with following exceptions:

- Table A.7.1.1-1 for FDD
- Table A.7.1.2-1 for TDD

### 7.6.1D.1.5 Test Requirement

The throughput shall be  $\geq 95\%$  of the maximum throughput of the reference measurement channels as specified in Annex A.6.2 with parameters specified in Tables 7.6.1D.1.5-1 and 7.6.1D.1.5-2.

**Table 7.6.1D.1.5-1: In band blocking parameters for ProSe Direct Discovery**

Rx parameter	Units	Channel bandwidth					
		1.4 MHz	3 MHz	5 MHz	10 MHz	15 MHz	20 MHz
Power in Transmission Bandwidth Configuration	dBm	$P_{\text{REFSENS-ProSe}} + \text{channel bandwidth specific value below} + P_{\text{offset}}$					
				6	6	7	9
$BW_{\text{Interferer}}$	MHz			5	5	5	5
$F_{\text{offset, case 1}}$	MHz			$7.5+0.0125$	$7.5+0.0025$	$7.5+0.0075$	$7.5+0.0125$
$F_{\text{offset, case 2}}$	MHz			$12.5+0.0075$	$12.5+0.012$	$12.5+0.002$	$12.5+0.007$
$P_{\text{offset}}$	dB			10.9	13.9	15.7	16.9
NOTE 1: The interferer is QPSK modulated PUSCH containing data and reference symbols. Normal cyclic prefix is used. The data content shall be uncorrelated to the wanted signal and modulated according to clause 5 of TS36.211.							

Table 7.6.1D.1.5-2: In-band blocking for ProSe

E-UTRA ProSe band	Parameter	Unit	Case 1	Case 2
		$P_{\text{Interferer}}$	dBm	-56
	$F_{\text{Interferer}}$ (offset)	MHz	$= -BW/2 - F_{\text{offset, case 1}}$ & $= +BW/2 + F_{\text{offset, case 1}}$	$\leq -BW/2 - F_{\text{offset, case 2}}$ & $\geq +BW/2 + F_{\text{offset, case 2}}$
2,3,4,7,14,20,26,28,31	$F_{\text{Interferer}}$	MHz	(Note 2)	$F_{\text{DL, low}} - 15$ to $F_{\text{DL, high}} + 15$
NOTE 1: For certain bands, the unwanted modulated interfering signal may not fall inside the UE receive band, but within the first 15 MHz below or above the UE receive band.				
NOTE 2: For each carrier frequency the requirement is valid for two frequencies: a. the carrier frequency $-BW/2 - F_{\text{offset, case 1}}$ and b. the carrier frequency $+BW/2 + F_{\text{offset, case 1}}$				
NOTE 3: $F_{\text{Interferer}}$ range values for unwanted modulated interfering signal are interferer centre frequencies.				

For the UE which supports inter band CA configuration in Tables 7.3.3-1A, 7.3.3-1B and 7.3.3-1C,  $P_{\text{Interferer}}$  power defined in Table 7.6.1D.1.5-2 is increased by the amount given by  $\Delta R_{\text{IB,c}}$  in Tables 7.3.3-1A, 7.3.3-1B and 7.3.3-1C.

## 7.6.1D.2 In-band blocking for ProSe Direct Communication

Editor's note: This test case is not complete. Following aspects are either missing or not yet determined:

- Test description is TBD
- Test system uncertainties and test tolerances are TBD

### 7.6.1D.2.1 Test Purpose

Same test purpose as in clause 7.6.1D.1.1.

### 7.6.1D.2.2 Test Applicability

This test applies to all types of E-UTRA UE release 12 and forward which support ProSe Direct Communication.

### 7.6.1D.2.3 Minimum Conformance Requirements

The minimum conformance requirements are defined in clause 7.6.1D.0.

### 7.6.1D.2.4 Test Description

TBD

### 7.6.1D.2.5 Test Requirement

Same test requirement as in clause 7.6.1D.1.5 with the following exceptions:

- Instead of Table 7.6.1D.1.5-1 → use Table 7.6.1D.2.5-1.

Table 7.6.1D.2.5-1: In band blocking parameters for ProSe Direct Communication

Rx parameter	Units	Channel bandwidth					
		1.4 MHz	3 MHz	5 MHz	10 MHz	15 MHz	20 MHz
Power in Transmission Bandwidth Configuration	dBm	$P_{\text{REFSENS\_ProSe}}$ + channel bandwidth specific value below					
				6	6	7	9
$BW_{\text{Interferer}}$	MHz			5	5	5	5
$F_{\text{offset, case 1}}$	MHz			$7.5+0.0125$	$7.5+0.0025$	$7.5+0.0075$	$7.5+0.0125$
$F_{\text{offset, case 2}}$	MHz			$12.5+0.0075$	$12.5+0.012$	$12.5+0.002$	$12.5+0.007$
					5	5	5
NOTE 1: The interferer is QPSK modulated PUSCH containing data and reference symbols. Normal cyclic prefix is used. The data content shall be uncorrelated to the wanted signal and modulated according to clause 5 of TS36.211.							

## 7.6.1E In-band blocking for UE category 0

### 7.6.1E.1 Test Purpose

The same test purpose as in clause 7.6.1.

### 7.6.1E.2 Test Applicability

This test applies to all types of E-UTRA UE release 12 and forward of UE category 0.

### 7.6.1E.3 Minimum Conformance Requirements

Same minimum conformance requirements as in clause 7.6.1.3.

### 7.6.1E.4 Test Description

#### 7.6.1E.4.1 Initial Conditions

Same initial conditions as in clause 7.6.1.4.1 with the following exceptions:

- Instead of Table 7.6.1.4.1-1 → use Table 7.6.1E.4.1-1.
- Connect the SS to the UE antenna connectors as shown in TS 36.508[7] Annex A Figure A.4 using only main UE Tx/Rx antenna.

Table 7.6.1E.4.1-1: Test Configuration Table

Initial Conditions						
Test Environment as specified in TS 36.508 [7] subclause 4.1			NC			
Test Frequencies as specified in TS 36.508 [7] subclause 4.3.1			Mid range			
Test Channel Bandwidths as specified in TS 36.508 [7] subclause 4.3.1			Lowest, 5MHz, Highest			
Test Parameters for Channel Bandwidths						
Ch BW	Downlink Configuration			Uplink Configuration		
	Mod'n	RB allocation		Mod'n	RB allocation	
		FDD and HD-FDD	TDD		FDD and HD-FDD	TDD
1.4MHz	QPSK	6	6	QPSK	6	6
3MHz	QPSK	14	14	QPSK	15	15
5MHz	QPSK	14	14	QPSK	25	25
5MHz	QPSK	14	N/A	QPSK	20	N/A
10MHz	QPSK	14	14	QPSK	36	36
10MHz	QPSK	14	N/A	QPSK	25	N/A
10MHz	QPSK	14	N/A	QPSK	20	N/A
15MHz	QPSK	14	14	QPSK	36	36
15MHz	QPSK	14	N/A	QPSK	20	N/A
20MHz	QPSK	14	14	QPSK	36	36
20MHz	QPSK	14	N/A	QPSK	20	N/A
Note 1: Test Channel Bandwidths are checked separately for each E-UTRA band, which applicable channel bandwidths are specified in Table 5.4.2.1-1.						
Note 2: Depending on E-UTRA band, only the appropriate Uplink RB allocation value according to table 7.3E.3-3 is tested per Test Channel Bandwidth. The allocation shall be located as close as possible to the downlink operating band but confined within the transmission bandwidth configuration for the channel bandwidth (Table 5.4.2-1).						
Note 3: For the DL signal one sided dynamic OCNG Pattern OP.1 FDD/TDD is used.						
Note 4: Downlink RB position shall be RBstart = 0.						

#### 7.6.1E.4.2 Test Procedure

Same test procedure as in clause 7.6.1.4.2

#### 7.6.1E.4.3 Message Contents

Same message contents as in clause 7.6.1.4.3

#### 7.6.1E.5 Test Requirement

The throughput measurement derived in test procedure shall be  $\geq 95\%$  of the maximum throughput of the reference measurement channels as specified in clause A.3.2 with parameters specified in Tables 7.6.1E.5-1 and 7.6.1E.5-2.

Table 7.6.1E.5-1: In band blocking parameters

Rx Parameter	Units	Channel bandwidth					
		1.4 MHz	3 MHz	5 MHz	10 MHz	15 MHz	20 MHz
Power in Transmission Bandwidth Configuration	dBm	REFSENS + channel bandwidth specific value below					
		6	6	6	6	7	9
BW <sub>Interferer</sub>	MHz	1.4	3	5	5	5	5
F <sub>offset, case 1</sub>	MHz	2.1+0.0125	4.5+0.0075	7.5+0.0125	7.5+0.0025	7.5+0.0075	7.5+0.0125
F <sub>offset, case 2</sub>	MHz	3.5+0.0075	7.5+0.0075	12.5+0.0075	12.5+0.012	12.5+0.002	12.5+0.007
					5	5	5
Note 1: The transmitter shall be set to 4dB below P <sub>C<sub>MAX,L</sub></sub> with P <sub>C<sub>MAX,L</sub></sub> as defined in clause 6.2.5E.							
Note 2: The interferer consists of the Reference measurement channel specified in clause A.3.2 with one sided dynamic OCNG Pattern OP.1 FDD/TDD as described in clauses A.5.1.1/A.5.2.1 and set-up according to clause C.3.1.							

Table 7.6.1E.5-2: In-band blocking

E-UTRA band	Parameter	Unit	Case 1	Case 2	Case 3	Case 4	Case 5
	$P_{\text{Interferer}}$	dBm	-56	-44			-38
	$F_{\text{Interferer}}$ (offset)	MHz	$= -BW/2 - F_{\text{offset, case 1}}$ & $= +BW/2 + F_{\text{offset, case 1}}$	$\leq -BW/2 - F_{\text{offset, case 2}}$ & $\geq +BW/2 + F_{\text{offset, case 2}}$	Void	Void	-BW/2 - 11
2, 3, 4, 5, 8, 13, 20, 39, 41	$F_{\text{Interferer}}$	MHz	(Note 2)	$F_{\text{DL, low}} - 15$ to $F_{\text{DL, high}} + 15$			

NOTE 1: For certain bands, the unwanted modulated interfering signal may not fall inside the UE receive band, but within the first 15 MHz below or above the UE receive band.

NOTE 2: For each carrier frequency the requirement is valid for two frequencies:  
a. the carrier frequency  $-BW/2 - F_{\text{offset, case 1}}$  and  
b. the carrier frequency  $+BW/2 + F_{\text{offset, case 1}}$ .

NOTE 3:  $F_{\text{Interferer}}$  range values for unwanted modulated interfering signal are interferer centre frequencies.

## 7.6.1EA In-band blocking for UE category M1

### 7.6.1EA.1 Test Purpose

In-band blocking is defined for an unwanted interfering signal falling into the range from 15MHz below to 15MHz above the category M1 UE receive band, at which the relative throughput shall meet or exceed the requirement for the specified measurement channels.

The lack of in-band blocking ability will decrease the coverage area when other e-NodeB transmitters exist (except in the adjacent channels and spurious response).

### 7.6.1EA.2 Test Applicability

This test applies to all types of E-UTRA UE release 13 and forward of UE category M1.

### 7.6.1EA.3 Minimum Conformance Requirements

The throughput shall be  $\geq 95\%$  of the maximum throughput of the reference measurement channels as specified in Annexes A.2.2, A.2.3 and A.3.2 (with one sided dynamic OCNG Pattern OP.1 FDD/TDD for the DL-signal as described in Annex A.5.1.1/A.5.2.1) with parameters specified in Tables 7.6.1EA.3-1 and 7.6.1EA.3-2. For operating bands with an unpaired DL part (as noted in Table 5.2-1), the requirements only apply for carriers assigned in the paired part.

Table 7.6.1EA.3-1: In band blocking parameters

Rx parameter	Units	Channel bandwidth					
		1.4 MHz	3 MHz	5 MHz	10 MHz	15 MHz	20 MHz
Power in Transmission Bandwidth Configuration	dBm	REFSENS + channel bandwidth specific value below					
		6	6	6	6	7	9
$BW_{\text{Interferer}}$	MHz	1.4	3	5	5	5	5
$F_{\text{offset, case 1}}$	MHz	2.1+0.0125	4.5+0.0075	7.5+0.0125	7.5+0.0025	7.5+0.0075	7.5+0.0125
$F_{\text{offset, case 2}}$	MHz	3.5+0.0075	7.5+0.0075	12.5+0.0075	12.5+0.012	12.5+0.002	12.5+0.007
					5	5	5
NOTE 1: The transmitter shall be set to 4dB below $P_{\text{CMAX,L}}$ at the minimum uplink configuration specified in Table 7.3.3-2 with $P_{\text{CMAX,L}}$ as defined in subclause 6.2.5EA.							
NOTE 2: The interferer consists of the Reference measurement channel specified in Annex A.3.2 with one sided dynamic OCNG Pattern OP.1 FDD/TDD as described in Annex A.5.1.1/A.5.2.1 and set-up according to Annex C.3.1.							
NOTE 3: For DL category M1 UE, the reference sensitivity for category M1 in table 7.3EA.3-1 should be used as REFSENS for the power in Transmission Bandwidth Configuration.							
NOTE 4: For DL category M1 UE, the parameters for the applicable channel bandwidth apply.							

Table 7.6.1EA.3-2: In-band blocking

E-UTRA band	Parameter	Unit	Case 1	Case 2	Case 3	Case 4	Case 5
		$P_{\text{Interferer}}$	dBm	-56	-44	Void	Void
	$F_{\text{Interferer}}$ (offset)	MHz	$=-BW/2 - F_{\text{offset, case 1}}$ & $=+BW/2 + F_{\text{offset, case 1}}$	$\leq -BW/2 - F_{\text{offset, case 2}}$ & $\geq +BW/2 + F_{\text{offset, case 2}}$	-BW/2 - 11		
1, 2, 3, 4, 5, 7, 8, 11, 12, 13, 18, 19, 20, 21, 26, 27, 28, 31, 39, 41	$F_{\text{Interferer}}$	MHz	(NOTE 2)	$F_{\text{DL\_low}} - 15$ to $F_{\text{DL\_high}} + 15$			
NOTE 1: For certain bands, the unwanted modulated interfering signal may not fall inside the UE receive band, but within the first 15 MHz below or above the UE receive band							
NOTE 2: For each carrier frequency the requirement is valid for two frequencies: a. the carrier frequency $-BW/2 - F_{\text{offset, case 1}}$ and b. the carrier frequency $+BW/2 + F_{\text{offset, case 1}}$							
NOTE 3: $F_{\text{Interferer}}$ range values for unwanted modulated interfering signal are interferer center frequencies							

The normative reference for this requirement is TS 36.101 [2] clause 7.6.1.

## 7.6.1EA.4 Test Description

### 7.6.1EA.4.1 Initial Conditions

Initial conditions are a set of test configurations the UE needs to be tested in and the steps for the SS to take with the UE to reach the correct measurement state.

The initial test configurations consist of environmental conditions and test frequencies based on the subset of E-UTRA operating bands defined for CAT M1 in clause 5.2E. All of these configurations shall be tested with applicable test parameters for each channel bandwidth, and are shown in table 7.6.1EA.4.1-1. The details of the downlink and uplink reference measurement channels (RMCs) are specified in Annexes A.2 and A.3. The details of the OCNG patterns used are specified in Annex A.5. Configurations of PDSCH and MPDCCH before measurement are specified in Annex C.2.

**Table 7.6.1EA.4.1-1: Test Configuration Table**

Initial Conditions							
Test Environment as specified in TS 36.508[7] subclause 4.1				NC			
Test Frequencies as specified in TS36.508 [7] subclause 4.3.1				Mid range			
Test Channel Bandwidths as specified in TS 36.508 [7] subclause 4.3.1				5MHz			
Test Parameters for Channel Bandwidths and Narrowband positions							
Downlink Configuration				Uplink Configuration			
Ch BW	Mod'n	RB allocation		Mod'n	RB allocation		
		FDD	TDD		FDD and HD-FDD	TDD	Narrowband index (Note 1)
5MHz	QPSK	4	4	QPSK	6	6	0
Note 1: Denotes where in the channel Bandwith the narrowband shall be placed. Narrowband and Narrowband index are defined in TS36.211, 5.2.4.							

1. Connect the SS to the UE antenna connectors as shown in TS 36.508[7] Annex A Figure A.4 using only main UE Tx/Rx antenna.
2. The parameter settings for the cell are set up according to TS 36.508 [7] subclause 4.4.3.
3. Downlink signals are initially set up according to Annex C0, C.1 and C.3.1, and uplink signals according to Annex H.1 and H.3.1.
4. The UL and DL Reference Measurement channels are set according to Table 7.6.1EA.4.1-1.
5. Propagation conditions are set according to Annex B.0.
6. Ensure the UE is in State 3A-RF-CE according to TS 36.508 [7] clause 5.2A.2AA. Message contents are defined in clause 7.6.1EA.4.3.

#### 7.6.1EA.4.2 Test Procedure

1. SS transmits PDSCH via MPDCCH DCI format 6-1A for C\_RNTI to transmit the DL RMC according to Table 7.6.1EA.4.1-1. The SS sends downlink MAC padding bits on the DL RMC. The SS sends one sided dynamic OCNG Pattern OP.1 FDD/TDD for the DL-signal as described in Annex A.5.1.1/A.5.2.1.
2. SS sends uplink scheduling information for each UL HARQ process via MPDCCH DCI format 6-0A for C\_RNTI to schedule the UL RMC according to Table 7.6.1EA.4.1-1. Since the UE has no payload data to send, the UE transmits uplink MAC padding bits on the UL RMC.
3. Set the parameters of the signal generator for an interfering signal below the wanted signal in Case 1 according to Tables 7.6.1EA.5-1 and 7.6.1EA.5-2.
4. Set the downlink signal level according to the table 7.6.1EA.5-1. Send uplink power control commands to the UE (less or equal to 1dB step size should be used), to ensure that the UE output power is within +0, - 3.4 dB of the target level in table 7.6.1EA.5-1 for carrier frequency  $f \leq 3.0\text{GHz}$  or within +0, -4.0 dB of the target level for carrier frequency  $3.0\text{GHz} < f \leq 4.2\text{GHz}$ , for at least the duration of the throughput measurement.
5. Measure the average throughput for duration sufficient to achieve statistical significance according to Annex G.2.
6. Repeat steps from 3 to 5, using an interfering signal above the wanted signal in Case 1 at step 3.
7. Repeat steps from 3 to 6, using interfering signals in Case 2 at step 3 and 6. The ranges of case 2 are covered in steps equal to the interferer bandwidth. The test frequencies are chosen in analogy to table 7.6.1EA.4.2-1.

Table 7.6.1EA.4.2-1: Example for interferer frequencies

	Lower frequency	Upper frequency
Band 1 DL	2110 MHz	2170 MHz
Band 1 Midrange	2140 MHz	
Receive band wanted signal (BW 5MHz)	2137.5 MHz	2142.5 MHz
Interferer case 1	2129.9875 MHz	2150.0125 MHz
Interferer case 2 (inner frequency)	2124.9925 MHz	2155.0075 MHz
Interferer case 2 (outer frequency)	2099.9925 MHz	2180.0075 MHz
Outer limit for in band blocking	2095MHz	2185MHz
Number of test frequencies case 2	6	6

### 7.6.1EA.4.3 Message Contents

Message contents are according to TS 36.508 [7] subclause 4.6 with the condition CEModeA and the following exception

Table 7.6.1EA.4.3-1: UplinkPowerControlDedicated

}			

### 7.6.1EA.5 Test Requirement

The throughput measurement derived in test procedure shall be  $\geq 95\%$  of the maximum throughput of the reference measurement channels as specified in Annex A.3.2 with parameters specified in Tables 7.6.1EA.5-1 and 7.6.1EA.5-2.

Table 7.6.1EA.5-1: In band blocking parameters

Rx parameter	Units	Channel bandwidth					
		1.4 MHz	3 MHz	5 MHz	10 MHz	15 MHz	20 MHz
Power in Transmission Bandwidth Configuration	dBm	REFSENS + channel bandwidth specific value below					
		6	6	6	6	7	9
BW <sub>Interferer</sub>	MHz	1.4	3	5	5	5	5
F <sub>offset, case 1</sub>	MHz	2.1+0.0125	4.5+0.0075	7.5+0.0125	7.5+0.0025	7.5+0.0075	7.5+0.0125
F <sub>offset, case 2</sub>	MHz	3.5+0.0075	7.5+0.0075	12.5+0.0075	12.5+0.0125	12.5+0.0025	12.5+0.0075
					5	5	5
NOTE 1: The transmitter shall be set to 4dB below P <sub>C<sub>MAX,L</sub></sub> at the minimum uplink configuration specified in Table 7.3.3-2 with P <sub>C<sub>MAX,L</sub></sub> as defined in subclause 6.2.5EA.							
NOTE 2: The interferer consists of the Reference measurement channel specified in Annex A.3.2 with one sided dynamic OCNG Pattern OP.1 FDD/TDD as described in Annex A.5.1.1/A.5.2.1 and set-up according to Annex C.3.1.							
NOTE 3: For DL category M1 UE, the reference sensitivity for category M1 in table 7.3EA.3-1 should be used as REFSENS for the power in Transmission Bandwidth Configuration.							
NOTE 4: For DL category M1 UE, the parameters for the applicable channel bandwidth apply.							

Power in Transmission Bandwidth Configuration	dBm	REFSENS + channel bandwidth specific value below					
		6	6	6	6	7	9
Note 1: The transmitter shall be set to 4dB below $P_{CMAX,L}$ at the minimum uplink configuration specified in Table 7.3.3-2 with $P_{CMAX,L}$ as defined in clause 6.2.5.							
Note 2: The reference measurement channel is specified in Annex A.3.2 with one sided dynamic OCNG Pattern OP.1 FDD/TDD as described in Annex A.5.1.1/A.5.2.1.							

**Table 7.6.2.3-2: Out of band blocking**

E-UTRA band	Parameter	Units	Frequency			
			range 1	range 2	range 3	range 4
	$P_{Interferer}$	dBm	-44	-30	-15	-15
1, 2, 3, 4, 5, 6, 7, 8, 9, 10, 11, 12, 13, 14, 17, 18, 19, 20, 21, 22, 23, 24, 25, 26, 27, 28, 30, 31, 33, 34, 35, 36, 37, 38, 39, 40, 41, 42 (Note 2), 43 (Note 2), 44, 45, 65, 66	$F_{Interferer}$ (CW)	MHz	$F_{DL\_low} -15$ to $F_{DL\_low} -60$	$F_{DL\_low} -60$ to $F_{DL\_low} -85$	$F_{DL\_low} -85$ to 1 MHz	-
			$F_{DL\_high} +15$ to $F_{DL\_high} +60$	$F_{DL\_high} +60$ to $F_{DL\_high} +85$	$F_{DL\_high} +85$ to +12750 MHz	-
2, 5, 12, 17	$F_{Interferer}$	MHz	-	-	-	$F_{UL\_low} - F_{UL\_high}$
Note 1: For the UE which supports both Band 11 and Band 21 the out of blocking is FFS.						
Note 2: The power level of the interferer ( $P_{Interferer}$ ) for Range 3 shall be modified to -20 dBm for $F_{Interferer} > 2800$ MHz and $F_{Interferer} < 4400$ MHz.						
Note 3: For the UE that supports both Band 4 and Band 66, the out-of-blocking frequency range for Band 4 is defined relative to $F_{DL\_low}$ and $F_{DL\_high}$ of Band 66.						

The normative reference for this requirement is TS 36.101 [2] clause 7.6.2.

### 7.6.2.4 Test Description

#### 7.6.2.4.1 Initial Conditions

Initial conditions are a set of test configurations the UE needs to be tested in and the steps for the SS to take with the UE to reach the correct measurement state.

The initial test configurations consist of environmental conditions, test frequencies, and channel bandwidths based on E-UTRA bands specified in table 5.4.2.1-1. All of these configurations shall be tested with applicable test parameters for each channel bandwidth, and are shown in table 7.6.2.4.1-1. The details of the uplink and downlink reference measurement channels (RMCs) are specified in Annexes A.2 and A.3 respectively. The details of the OCNG patterns used are specified in Annex A.5. Configurations of PDSCH and PDCCH before measurement are specified in Annex C.2.

Table 7.6.2.4.1-1: Test Configuration Table

Initial Conditions						
Test Environment as specified in TS 36.508[7] subclause 4.1				NC		
Test Frequencies as specified in TS36.508 [7] subclause 4.3.1				One frequency chosen arbitrarily from low or high range		
Test Channel Bandwidths as specified in TS 36.508 [7] subclause 4.3.1				Lowest, 5MHz, Highest

20MHz	QPSK	100	N/A	QPSK	25	N/A
20MHz	QPSK	100	N/A	QPSK	20	N/A
<p>Note 1: Test Channel Bandwidths are checked separately for each E-UTRA band, which applicable channel bandwidths are specified in Table 5.4.2.1-1.</p> <p>Note 2: Depending on E-UTRA band, only the appropriate Uplink RB allocation value according to table 7.3.3-2 is tested per Test Channel Bandwidth. The allocation shall be located as close as possible to the downlink operating band but confined within the transmission bandwidth configuration for the channel bandwidth (Table 5.4.2-1).</p> <p>Note 3: For the DL signal one sided dynamic OCNG Pattern OP.1 FDD/TDD is used.</p> <p>Note 4: Applicable only to E-UTRA FDD Band 31. The UL resource blocks shall be located at RBstart 10 (according to Table 7.3.3-2).</p>						

1. Connect the SS to the UE antenna connectors as shown in TS 36.508 [7] Annex A, in Figure A.5.
2. The parameter settings for the cell are set up according to TS 36.508 [7] subclause 4.4.3.
3. Downlink signals are initially set up according to Annex C0, C.1 and C.3.1, and uplink signals according to Annex H.1 and H.3.1.
4. The UL and DL Reference Measurement channels are set according to Table 7.6.2.4.1-1.
5. Propagation conditions are set according to Annex B.0.
6. Ensure the UE is in State 3A-RF according to TS 36.508 [7] clause 5.2A.2. Message contents are defined in clause 7.6.2.4.3.

#### 7.6.2.4.2 Test Procedure

1. SS transmits PDSCH via PDCCH DCI format 1A for C\_RNTI to transmit the DL RMC according to Table 7.6.2.4.1-1. The SS sends downlink MAC padding bits on the DL RMC.
2. SS sends uplink scheduling information for each UL HARQ process via PDCCH DCI format 0 for C\_RNTI to schedule the UL RMC according to Table 7.6.2.4.1-1. Since the UE has no payload data to send, the UE transmits uplink MAC padding bits on the UL RMC.

3. Set the parameters of the CW signal generator for an interfering signal below the wanted signal according to Table 7.6.2.5-2. The frequency step size is 1MHz.
4. Set the downlink signal level according to the table 7.6.2.5-1. Send uplink power control commands to the UE (less or equal to 1dB step size should be used), to ensure that the UE output power is within +0, - 3.4 dB of the target level in table 7.6.2.5-1 for carrier frequency  $f \leq 3.0\text{GHz}$  or within +0, -4.0 dB of the target level for carrier frequency  $3.0\text{GHz} < f \leq 4.2\text{GHz}$ , for at least the duration of the throughput measurement.
5. Measure the average throughput for a duration sufficient to achieve statistical significance according to Annex G.2.
6. Record the frequencies for which the throughput doesn't meet the requirements.
7. Repeat steps from 3 to 6, using an interfering signal above the wanted signal at step 3.

#### 7.6.2.4.3 Message Contents

Message contents are according to TS 36.508 [7] subclause 4.6 with the following exception.

**Table 7.6.2.4.3-1: UplinkPowerControlDedicated**

Derivation Path: 36.331 clause 6.3.2			
Information Element	Value/remark	Comment	Condition
UplinkPowerControlDedicated-DEFAULT ::= SEQUENCE {			
p0-UePUSCH	0		
deltaMCS-Enabled	en0		
accumulationEnabled	TRUE		
p0-uePUCCH	0		
pSRS-Offset	3 (-6 dB)		
filterCoefficient	fc8	larger filter length is used to reduce the RSRP measurement variation	
}			

#### 7.6.2.5 Test Requirement

Except for the spurious response frequencies recorded at the final step of test procedure, the throughput measurement derived in test procedure shall be  $\geq 95\%$  of the maximum throughput of the reference measurement channels as specified in Annex A.3.2 with parameters specified in Tables 7.6.2.5-1 and 7.6.2.5-2.

For frequency range 1, 2, and 3, the number of spurious response frequencies recorded in the final step of test procedure shall not exceed  $\max(24, 6 \cdot \lceil N_{RB} / 6 \rceil)$  in each assigned frequency channel when measured using a 1MHz step size. For these exceptions the requirements of clause 7.7 Spurious Response are applicable.

For frequency range 4, the number of spurious response frequencies recorded in the final step of test procedure shall not exceed  $\max(8, \lceil (N_{RB} + 2 \cdot L_{CRBS}) / 8 \rceil)$  in each assigned frequency channel when measured using a 1MHz step size. For these exceptions the requirements of clause 7.7 Spurious Response are applicable.

**Table 7.6.2.5-1: Out-of-band blocking parameters**

Rx Parameter	Units	Channel bandwidth					
		1.4 MHz	3 MHz	5 MHz	10 MHz	15 MHz	20 MHz
Power in Transmission Bandwidth Configuration	dBm	REFSENS + channel bandwidth specific value below					
		6	6	6	6	7	9

Power in Transmission Bandwidth Configuration	dBm	MHz			MHz		
		REFSENS + channel bandwidth specific value below					
		6	6	6	6	7	9

Note 1: The transmitter shall be set to 4dB below  $P_{CMAX\_L}$  at the minimum uplink configuration specified in Table 7.3.3-2 with  $P_{CMAX\_L}$  as defined in clause 6.2.5.

Note 2: The reference measurement channel is specified in Annex A.3.2 with one sided dynamic OCNG Pattern OP.1 FDD/TDD as described in Annex A.5.1.1/A.5.2.1.

Note 3: The REFSENS power level is specified in Table 7.3.3-1a.

## 7.6.2\_1.4 Test Description

### 7.6.2\_1.4.1 Initial Conditions

Same as in clause 7.6.2.4.1 with following exceptions:

- Instead of Table 7.6.2.4.1-1 → use table 7.6.2\_1.4.1-1
- Instead of Figure A.4 → use Figure A.[TBD]
- Instead of clause 7.6.2.4.3 → use clause 7.6.2\_1.4.3

**Table 7.6.2\_1.4.1-1: Test Configuration Table**

Initial Conditions						
Test Environment as specified in TS 36.508[7] subclause 4.1				NC		
Test Frequencies as specified in TS36.508 [7] subclause 4.3.1				One frequency chosen arbitrarily from low or high range		
Test Channel Bandwidths as specified in TS 36.508 [7] subclause 4.3.1				Lowest, 5MHz, Highest

- Instead of Table 7.6.2.5-1 → use Table 7.6.2\_1.5-1

**Table 7.6.2\_1.5-1: Out-of-band blocking parameters**

Rx Parameter	Units	Channel bandwidth					
		1.4 MHz	3 MHz	5 MHz	10 MHz	15 MHz	20 MHz
Power in Transmission Bandwidth Configuration	dBm	REFSENS + channel bandwidth specific value below					
		6	6	6	6	7	9
Note 1: The transmitter shall be set to 4dB below $P_{\text{CMAX}_L}$ with $P_{\text{CMAX}_L}$ as defined in clause 6.2.5.							
Note 2: The reference measurement channel is specified in Annex A.3.2 with one sided dynamic OCNG Pattern OP.1 FDD/TDD as described in Annex A.5.1.1/A.5.2.1.							
Note 3: The REFSENS power level is specified in Table 7.3_1.5-1.							

## 7.6.2A Out-of-band blocking for CA

### 7.6.2A.0 Minimum conformance requirements

For inter-band carrier aggregation with one component carrier per operating band and the uplink assigned to one E-UTRA band, the out-of-band blocking requirements are defined with the uplink active on the band(s) other than the band whose downlink is being tested. The throughput in the downlink measured shall be  $\geq 95\%$  of the maximum throughput of the reference measurement channels as specified in Annexes A.2.2, A.2.3 and A.3.2 (with one sided dynamic OCNG Pattern OP.1 FDD/TDD for the DL-signal as described in Annex A.5.1.1/A.5.2.1) with parameters specified in Tables 7.6.2.3-1 and 7.6.2A.0-0. For E-UTRA CA configurations including an operating band without uplink operation (as noted in Table 5.2-1), the requirements for all downlinks shall be met with the uplink active in the band(s) capable of UL operation. The UE shall meet these requirements for each component carrier while all downlink carriers are active.

For inter-band carrier aggregation with one component carrier per operating band and the uplink active in two E-UTRA bands, the out-of-band blocking requirements specified above shall be met with the transmitter power for the uplink set to 7 dB below  $P_{\text{CMAX}_{L,c}}$  for each serving cell  $c$ .

For E-UTRA CA configurations including an operating band without uplink band or an operating band with an unpaired DL part (as noted in Table 5.2-1), the requirements for all downlinks shall be met with the single uplink carrier active in each band capable of UL operation. For E-UTRA CA configurations listed in Table 7.3A.0-1 under conditions for which reference sensitivity for the operating band being tested is N/A, the out-of-band blocking requirements of subclause 7.6.2A.0 do not apply.

**Table 7.6.2A.0-0: Out-of-band blocking for inter-band carrier aggregation**

Parameter	Unit	Range 1	Range 2	Range 3
$P_w$	dBm	Table 7.6.2.3-1 for all component carriers		
$P_{interferer}$	dBm	$-44 + \Delta R_{IB,c}$	$-30 + \Delta R_{IB,c}$	$-15 + \Delta R_{IB,c}$
$F_{interferer}$ (CW)	MHz	$-60 < f - F_{DL\_Low(j)} < -15$ or $15 < f - F_{DL\_High(j)} < 60$	$-85 < f - F_{DL\_Low(j)} \leq -60$ or $60 \leq f - F_{DL\_High(j)} < 85$	$1 \leq f \leq F_{DL\_Low(1)} - 85$ or $F_{DL\_High(j)} + 85 \leq f \leq F_{DL\_Low(j+1)} - 85$ with $j < X$ or $F_{DL\_High(X)} + 85 \leq f \leq 12750$
Note 1:	$F_{DL\_Low(j)}$ and $F_{DL\_High(j)}$ denote the respective lower and upper frequency limits of the operating band containing carrier $j$ , $j = 1, \dots, X$ , with carriers numbered in increasing order of carrier frequency and $X$ the number of component carriers in the band combination ( $X \leq 5$ for the present version of this specification).			
Note 2:	For $F_{DL\_Low(j+1)} - F_{DL\_High(j)} < 145$ MHz and $F_{interferer}$ in $F_{DL\_High(j)} < f < F_{DL\_Low(j+1)}$ , $F_{interferer}$ can be in both Range 1 and Range 2. Then the lower of the $P_{interferer}$ applies.			
Note 3:	For $F_{DL\_Low(j)} - 15$ MHz $\leq f \leq F_{DL\_High(j)} + 15$ MHz the appropriate adjacent channel selectivity and in-band blocking requirements in the respective subclauses 7.5.1A and 7.6.1.1A shall be applied for carrier $j$ .			
Note 4:	$\Delta R_{IB,c}$ according to Table 7.3.3-1A applies when serving cell $c$ is measured.			
Note 5:	For inter-band CA combinations containing Bands 42 or 43, the interferer with respect to Band 42 or Band 43 shall have power level ( $P_{interferer}$ ) for Range 3 modified to $-20 + \Delta R_{IB,c}$ dBm for $F_{interferer} > 2800$ MHz and $F_{interferer} < 4400$ MHz.			
NOTE 6:	For inter-band CA combinations containing Bands 7 and 38 simultaneously, for $F_{interferer}$ Bands 7 and 38 are considered as one single band as follows: $F_{DL\_Low} = 2570$ MHz and $F_{DL\_High} = 2690$ MHz. For Range 2, the following applies for $F_{DL\_Low}$ : $-95 < f - F_{DL\_Low} \leq -60$ or $60 \leq f - F_{DL\_High} < 85$ . For Range 3 the following applies $1 \leq f \leq F_{DL\_Low} - 95$ or $F_{DL\_High} + 85 \leq f \leq 12750$ .			

For Table 7.6.2A.0-0 in frequency ranges 1, 2 and 3, up to  $\max(24,6 \cdot \lceil N_{RB} \cdot /6 \rceil)$  exceptions per downlink are allowed for spurious response frequencies for one active uplink when measured using a step size of 1 MHz.

For Table 7.6.2A.0-0 in frequency ranges 1, 2 and 3, up to  $2 \cdot \max(24,6 \cdot \lceil N_{RB} \cdot /6 \rceil)$  exceptions per downlink are allowed for spurious response frequencies for two active uplinks when measured using a step size of 1 MHz. For these exceptions the requirements in clause 7.7A.0 apply.

For intra-band contiguous carrier aggregations the downlink SCC(s) shall be configured at nominal channel spacing to the PCC. For FDD, the PCC shall be configured closest to the uplink band. All downlink carriers shall be active throughout the test. The uplink output power shall be set as specified in Table 7.6.2A.0-1 with the uplink configuration set according to Table 7.3A.0-2 for the applicable carrier aggregation configuration. For UE(s) supporting one uplink carrier, the uplink configuration of the PCC shall be in accordance with Table 7.3.3-2.

The UE shall fulfil the minimum requirement in presence of an interfering signal specified in Tables 7.6.2A.0-1 and Tables 7.6.2A.0-2 being on either side of the aggregated signal. The throughput of each carrier shall be  $\geq 95\%$  of the maximum throughput of the reference measurement channels as specified in Annexes A.2.2, A.2.3 and A.3.2 (with one sided dynamic OCNG Pattern OP.1 FDD/TDD for the DL-signal as described in Annex A.5.1.1/A.5.2.1) with parameters specified in Tables 7.6.2A.0-1 and 7.6.2A.0-2. For operating bands with an unpaired DL part (as noted in Table 5.2-1), the requirements also apply for an SCC assigned in the unpaired part with parameters specified in Tables 7.6.2A.0-1 and 7.6.2A.0-2.

For Table 7.6.2A.0-2 in frequency range 1, 2 and 3, up to  $\max(24,6 \cdot \lceil N_{RB} \cdot /6 \rceil)$  exceptions are allowed for spurious response frequencies in each assigned frequency channel when measured using a 1MHz step size. For these exceptions the requirements of subclause 7.7 Spurious response are applicable.

**Table 7.6.2A.0-1: Out-of-band blocking parameters**

Rx Parameter	Units	CA Bandwidth Class				
		B	C	D	E	F
Pw in Transmission Bandwidth Configuration, per CC	dBm	REFSENS + CA Bandwidth Class specific value below				
		9	9	9	9	

Note 1:	The transmitter shall be set to 4dB below $P_{\text{CMAX}_L}$ or $P_{\text{CMAX}_L, \text{CA}}$ as defined in subclause 6.2.5A.
Note 2:	Reference measurement channel is specified in Annex A.3.2 with one sided dynamic OCNG Pattern OP.1 FDD/TDD as described in Annex A.5.1.1/A.5.2.

Table 7.6.2A.0-2: Out of band blocking

CA configuration	Parameter	Units	Frequency		
			Range 1	Range 2	Range 3
	$P_{\text{Interferer}}$	dBm	-44	-30	-15
CA_1C, CA_2C, CA_3C, CA_5B, CA_7C, CA_8B, CA_12B, CA_23B, CA_27B, CA_38C, CA_40C, CA_40D, CA_41C, CA_42C <sup>1</sup> , CA_42D <sup>1</sup> , CA_42E <sup>1</sup> , CA_66B, CA_66C	$F_{\text{Interferer}}$ (CW)	MHz	$F_{\text{DL\_low}} - 15$ to $F_{\text{DL\_low}} - 60$	$F_{\text{DL\_low}} - 60$ to $F_{\text{DL\_low}} - 85$	$F_{\text{DL\_low}} - 85$ to 1 MHz
			$F_{\text{DL\_high}} + 15$ to $F_{\text{DL\_high}} + 60$	$F_{\text{DL\_high}} + 60$ to $F_{\text{DL\_high}} + 85$	$F_{\text{DL\_high}} + 85$ to +12750 MHz
Note 1: For CA_42C, the power level of the interferer ( $P_{\text{Interferer}}$ ) for Range 3 shall be modified to -20 dBm for $F_{\text{Interferer}} > 2800$ MHz and $F_{\text{Interferer}} < 4400$ MHz.					

For intra-band non-contiguous carrier aggregation with one uplink carrier and two downlink sub-blocks, the out-of-band blocking requirements are defined with the uplink configuration in accordance with table 7.3A.0-3. For this uplink configuration, the UE shall meet the requirements for each sub-block as specified in subclauses 7.6.2.3 and 7.6.2A.0 for one component carrier and two component carriers per sub-block, respectively. The requirements apply with all downlink carriers active.

For Table 7.6.2.3-2 in frequency range 1, 2 and 3, up to  $\max(24, 6 \cdot \lceil N_{RB} / 6 \rceil)$  exceptions per assigned E-UTRA channel per sub-block of the E-UTRA CA configuration are allowed for spurious response frequencies when measured using a 1MHz step size. For these exceptions the requirements of subclause 7.7A.4.3 spurious response are applicable.

For Table 7.6.2.3-2 in frequency range 4, up to  $\max(8, \lceil (N_{RB} + 2 \cdot L_{CRBs}) / 8 \rceil)$  exceptions per assigned E-UTRA channel per sub-block of the E-UTRA CA configuration are allowed for spurious response frequencies when measured using a 1MHz step size. For these exceptions the requirements of clause 7.7A.4.3 spurious response are applicable.

For intra-band non-contiguous carrier aggregation with two uplink carriers and two downlink carriers, the out-of-band blocking requirements are defined with the uplink configuration of the PCC and SCC being in accordance with Table 7.3A.0-4 and powers of both carriers set to  $P_{\text{CMAX}_L, c} - 7$  dBm. The UE shall meet the requirements specified in subclause 7.6.2A.0 for each component carrier while both downlink carriers are active.

For Table 7.6.2.3-2 in frequency range 1, 2 and 3, up to  $2 \cdot \max(24, 6 \cdot \lceil N_{RB} / 6 \rceil)$  exceptions per assigned E-UTRA channel per sub-block of the E-UTRA CA configuration are allowed for spurious response frequencies for two active uplinks in the same operating band when measured using a 1MHz step size. For these exceptions the requirements of subclause 7.7 spurious response are applicable.

For Table 7.6.2.3-2 in frequency range 4, up to  $2 \cdot \max(8, \lceil (N_{RB} + 2 \cdot L_{CRBs}) / 8 \rceil)$  exceptions per assigned E-UTRA channel per sub-block of the E-UTRA CA configuration are allowed for spurious response frequencies for two active uplinks in the same operating band when measured using a 1MHz step size. For these exceptions the requirements of clause 7.7 spurious response are applicable.

For combinations of intra-band and inter-band carrier aggregation with up to five downlink carriers (up to two non-contiguously sub-blocks per band and up to four contiguously aggregated carriers per band) and the uplink assigned to one E-UTRA band, the requirement is defined with the uplink active a band other than that supporting the downlink(s) under test. The uplink configuration shall be in accordance with Table 7.3A.0-3 when the uplink is active in the band supporting two non-contiguous component carriers, Table 7.3A.0-2 when the uplink is active in a band supporting two contiguous component carriers and in accordance with Table 7.3.3-2 when the uplink is active in a band supporting one carrier per band. The downlink PCC shall be configured closer to the uplink operating band than the downlink SCC(s) when the uplink is active in band(s) supporting contiguous aggregation of up to four component carriers. For the two non-contiguous component carriers within the same band,  $P_{\text{wanted}}$  in Table 7.6.2A.0-0 is set using  $\Delta R_{\text{IBNC}} = 0$  dB for all sub-block gaps (Table 7.3A.0-3) while a band supporting contiguously aggregated carriers the out-of-band blocking parameters in Table 7.6.2.3-1 are replaced by those specified in Table 7.6.2A.0-1. For each downlink the UE shall meet the out-of-band blocking requirements applicable for inter-band carrier aggregation with one component carrier per

operating band but with up to four component carriers assigned to the same band with the following exception. All downlink carriers shall be active throughout the tests and the requirements for the downlinks shall be met with the single uplink carrier active in each band capable of UL operation.

The normative reference for this requirement is TS 36.101 [2] clause 7.6.2.1A.

## 7.6.2A.1 Out-of-band blocking for CA (intra-band contiguous DL CA and UL CA)

### 7.6.2A.1.1 Test Purpose

Out-of-band blocking for CA is defined for an unwanted CW interfering signal falling more than 15 MHz below or above the UE receive band, at which a given average throughput shall meet or exceed the requirement for the specified measurement channels in aggregated signals.

For the first 15 MHz below or above the UE receive band the appropriate in-band blocking or adjacent channel selectivity in sub-clause 7.5A and sub-clause 7.6.1A shall be applied.

The lack of out-of-band blocking ability will decrease the coverage area when other e-NodeB transmitters exist (except in the adjacent channels and spurious response).

### 7.6.2A.1.2 Test Applicability

This test applies to all types of E-UTRA UE release 10 and forward that support intra-band contiguous DL CA and UL CA.

### 7.6.2A.1.3 Minimum Conformance Requirements

The minimum conformance requirements are defined in clause 7.6.2A.0.

### 7.6.2A.1.4 Test Description

#### 7.6.2A.1.4.1 Initial Conditions

Initial conditions are a set of test configurations the UE needs to be tested in and the steps for the SS to take with the UE to reach the correct measurement state.

The initial test configurations consist of environmental conditions, test frequencies, and CC combinations based on E-UTRA CA configurations specified in table 5.4.2A.1-1. All of these configurations shall be tested with applicable test parameters for each CA Configuration, and are shown in table 7.6.2A.1.4.1-1. The details of the OCNG patterns used are specified in Annex A.5. Configurations of PDSCH and PDCCH before measurement are specified in Annex C.2.

Table 7.6.2A.1.4.1-1: Test Configuration Table

Initial Conditions							
Test Environment as specified in TS 36.508[7] subclause 4.1					NC		
Test Frequencies as specified in TS36.508 [7] subclause 4.3.1 for different CA bandwidth classes, and PCC and SCCs are mapped onto physical frequencies according to Table 7.1-2					C: Mid range		
Test CC Combination setting ( $N_{RB\_agg}$ ) as specified in subclause 5.4.2A.1 for the CA Configuration across bandwidth combination sets supported by the UE					Highest $N_{RB\_agg}$ (Note 3)		
Test Parameters for CA Configurations							
CA Configuration / $N_{RB\_agg}$		DL Allocation		UL Allocation			
PCC $N_{RB}$	SCC $N_{RB}$	CC MOD	PCC & SCC RB allocation	CC MOD	$N_{RB\_alloc}$	PCC & SCC RB allocations ( $L_{CRB}$ @ $RB_{start}$ )	
100	75	QPSK	100+75	QPSK	175	P_100@0	S_75@0
100	100	QPSK	100+100	QPSK	50	P_50@50	S_0@0
100	100	QPSK	100+100	QPSK	75	P_75@25	S_0@0
100	100	QPSK	100+100	QPSK	130	P_100@0	S_30@0
100	100	QPSK	100+100	QPSK	200	P_100@0	S_100@0
Note 1: CA Configuration Test CC Combination settings are checked separately for each CA Configuration, which applicable aggregated channel bandwidths are specified in Table 5.4.2A.1-1.							
Note 2: Depending on CA Configuration only the appropriate Uplink RB allocation value according to table 7.3A.0-2 is tested per CA Configuration Test CC combination.							
Note 3: If in the CA Configuration UE supports multiple CC Combinations with the same $N_{RB\_agg}$ , only the first of those is tested, according to the order on the Test Configuration Table list.							

1. Connect the SS to the UE antenna connectors as shown in TS 36.508 [7] Annex A, Figure group A.34 as appropriate.
2. The parameter settings for the cell are set up according to TS 36.508 [7] subclause 4.4.3.
3. Downlink signals for PCC are initially set up according to Annex C.0, C.1 and C.3.1, and uplink signals according to Annex H.1 and H.3.1
4. The UL and DL Reference Measurement channels are set according to Table 7.6.2A.1.4.1-1.
5. Propagation conditions are set according to Annex B.0.
6. Ensure the UE is in State 3A-RF according to TS 36.508 [7] clause 5.2A.2. Message contents are defined in clause 7.6.2A.1.4.3.

#### 7.6.2A.1.4.2 Test Procedure

1. Configure SCC according to Annex C.0, C.1 and Annex C.3.1 for all downlink physical channels.
2. The SS shall configure SCC as per TS 36.508 [7] clause 5.2A.4. Message contents are defined in clause 7.6.2A.1.4.3.
3. SS activates SCC by sending the activation MAC-CE (Refer TS 36.321 [13], clauses 5.13, 6.1.3.8). Wait for at least 2 seconds (Refer TS 36.133, clauses 8.3.3.2).
4. SS transmits PDSCH via PDCCH DCI format 1A for C\_RNTI to transmit the DL RMC according to Table 7.6.2A.1.4.1-1 on both PCC and SCC. The SS sends downlink MAC padding bits on the DL RMC.
5. SS sends uplink scheduling information for each UL HARQ process via PDCCH DCI format 0 for C\_RNTI to schedule the UL RMC according to Table 7.6.2A.1.4.1-1 on both PCC and SCC. Since the UE has no payload data to send, the UE sends uplink MAC padding bits on the UL RMC.

6. Set the parameters of the CW signal generator for an interfering signal below the CA Band according to Table 7.6.2A.1.5-2. The frequency step size is 1MHz.
7. Set the downlink signal level according to the table 7.6.2A.1.5-1 for both carriers. Send uplink power control commands to the UE (less or equal to 1dB step size should be used), to ensure that for at least the duration of the throughput measurement:  
 The PCC output power is within (+0dB, -3.4 dB) of (target level in Table 7.6.2A.1.5-1 +  $10\log(P_{L\_CRB}/N_{RB\_alloc})$ ), for carrier frequency  $f \leq 3.0\text{GHz}$ ,  
 or within (+0dB, -4 dB) of (target level in Table 7.6.2A.1.5-1 +  $10\log(P_{L\_CRB}/N_{RB\_alloc})$ ) for carrier frequency  $3.0\text{GHz} < f \leq 4.2\text{GHz}$ .  
 The SCC output power is within (+0dB, -3.4 dB) of (target level in Table 7.6.2A.1.5-1 +  $10\log(S_{L\_CRB}/N_{RB\_alloc})$ ), for carrier frequency  $f \leq 3.0\text{GHz}$ ,  
 or within (+0dB, -4 dB) of (target level in Table 7.6.2A.1.5-1 +  $10\log(S_{L\_CRB}/N_{RB\_alloc})$ ) for carrier frequency  $3.0\text{GHz} < f \leq 4.2\text{GHz}$ .
8. Measure the average throughput for each component carrier for duration sufficient to achieve statistical significance according to Annex G.2A.
9. Record the frequencies for which the throughput doesn't meet the requirements.
10. Repeat steps from 6 to 9, using an interfering signal above the CA Band at step 5.

#### 7.6.2A.1.4.3 Message Contents

Message contents are according to TS 36.508 [7] subclause 4.6 with the following exception.

### 7.6.2A.1.5 Test Requirement

Except for the spurious response frequencies recorded at the final step of test procedure, the throughput measurement of each carrier derived in test procedure shall be  $\geq 95\%$  of the maximum throughput of the reference measurement channels as specified in Annex A.3.2 with parameters specified in Table 7.6.2A.1.5-1 and 7.6.2A.1.5-2.

For Table 7.6.2A.1.5-2 in frequency range 1, 2 and 3, up to  $\max(24,6 \cdot \lceil N_{RB} \cdot /6 \rceil)$  exceptions are allowed for spurious response frequencies in each assigned frequency channel when measured using a 1MHz step size, where  $N_{RB}$  is the allocated number of resource blocks in the frequency channel. For these exceptions the requirements of subclause 7.7A Spurious response for CA are applicable.

Table 7.6.2A.1.5-1: Out-of-band blocking parameters

Rx Parameter	Units	CA Bandwidth Class				
		B	C	D	E	F
Pw in Transmission Bandwidth Configuration, per CC	dBm	REFSENS + CA Bandwidth Class specific value below				
		9				
NOTE 1: The transmitter shall be set to 4dB below $P_{\text{CMAX,L}}$ or $P_{\text{CMAX,L,CA}}$ as defined in subclause 6.2.5A.						
NOTE 2: Reference measurement channel is specified in Annex A.3.2 with one sided dynamic OCN Pattern OP.1 FDD/TDD as described in Annex A.5.1.1/A.5.2.						

Table 7.6.2A.1.5-2: Out of band blocking

CA configuration	Parameter	Units	Frequency		
			range 1	range 2	range 3
	$P_{\text{Interferer}}$	dBm	-44	-30	-15
CA_1C, CA_2C, CA_3C, CA_7C, CA_12B, CA_23B, CA_27B, CA_38C, CA_39C, CA_40C, CA_41C, CA_42C (note)	$F_{\text{Interferer}}(\text{CW})$	MHz	$F_{\text{DL,low}} - 15$ to $F_{\text{DL,low}} - 60$	$F_{\text{DL,low}} - 60$ to $F_{\text{DL,low}} - 85$	$F_{\text{DL,low}} - 85$ to 1 MHz
			$F_{\text{DL,high}} + 15$ to $F_{\text{DL,high}} +$	$F_{\text{DL,high}} + 60$ to $F_{\text{DL,high}}$	$F_{\text{DL,high}} + 85$ to +12750

			60	+85	MHz
Note:	For CA_42C, the power level of the interferer ( $P_{\text{Interferer}}$ ) for Range 3 shall be modified to -20 dBm for $F_{\text{Interferer}}$				
>	2800 MHz and $F_{\text{Interferer}} < 4400$ MHz.				

For the UE which supports inter band CA configuration in Tables 7.3.3-1A, 7.3.3-1B and 7.3.3-1C,  $P_{\text{Interferer}}$  power defined in Table 7.6.2A.1.5-2 is increased by the amount given by  $\Delta R_{\text{IB,c}}$  in Tables 7.3.3-1A, 7.3.3-1B and 7.3.3-1C.

## 7.6.2A.2 Out-of-band blocking for CA (intra-band contiguous DL CA without UL CA)

### 7.6.2A.2.1 Test Purpose

Same test purpose as 7.6.2A.1.

### 7.6.2A.2.2 Test Applicability

This test applies to all types of E-UTRA UE release 10 and forward that support intra-band contiguous DL CA. This test case applies only for CA Configurations that do not support UL CA.

### 7.6.2A.2.3 Minimum Conformance Requirements

The minimum conformance requirements are defined in clause 7.6.2A.0.

### 7.6.2A.2.4 Test Description

#### 7.6.2A.2.4.1 Initial Conditions

Same initial conditions as in clause 7.6.2A.1.4.1 with the following exceptions:

- Instead of Table 7.6.2A.1.4.1-1 → use Table 7.6.2A.2.4.1-1.
- Instead of clause 7.6.2A.1.4.3 → use clause 7.6.2A.2.4.3.

Table 7.6.2A.2.4.1-1: Test Configuration Table

Initial Conditions							
Test Environment as specified in TS 36.508[7] subclause 4.1					NC

<p>Note 1: CA Configuration Test CC Combination settings are checked separately for each CA Configuration, which applicable aggregated channel bandwidths are specified in Table 5.4.2A.1-1.</p> <p>Note 2: Depending on CA Configuration only the appropriate Uplink RB allocation value according to table 7.3.3-2 is tested per CA Configuration Test CC combination.</p> <p>Note 3: If in the CA Configuration UE supports multiple CC Combinations with the same <math>N_{RB\_agg}</math>, only the first of those is tested, according to the order on the Test Configuration Table list.</p>							

#### 7.6.2A.2.4.2 Test Procedure

1. Configure SCC according to Annex C.0, C.1 and Annex C.3.1 for all downlink physical channels.
2. The SS shall configure SCC as per TS 36.508 [7] clause 5.2A.4.
3. SS activates SCC by sending the activation MAC-CE (Refer TS 36.321 [13], clauses 5.13, 6.1.3.8). Wait for at least 2 seconds (Refer TS 36.133, clauses 8.3.3.2).
4. SS transmits PDSCH via PDCCH DCI format 1A for  $C\_RNTI$  to transmit the DL RMC according to Table 7.6.2A.2.4.1-1 on both PCC and SCC. The SS sends downlink MAC padding bits on the DL RMC.
5. SS sends uplink scheduling information for each UL HARQ process via PDCCH DCI format 0 for  $C\_RNTI$  to schedule the UL RMC according to Table 7.6.2A.2.4.1-1 on PCC. Since the UE has no payload data to send, the UE sends uplink MAC padding bits on the UL RMC.
6. Set the parameters of the CW signal generator for an interfering signal below the CA Band according to Table 7.6.2A.1.5-2. The frequency step size is 1MHz.
7. Set the downlink signal level according to the table 7.6.2A.1.5-1 for both carriers. Send uplink power control commands to the UE (less or equal to 1dB step size should be used), to ensure that the UE output power is within +0, - 3.4 dB of the target level in table 7.6.2A.1.5-1 for carrier frequency  $f \leq 3.0\text{GHz}$  or within +0, -4.0 dB of the target level for carrier frequency  $3.0\text{GHz} < f \leq 4.2\text{GHz}$ , for at least the duration of the throughput measurement.
8. Measure the average throughput for each component carrier for duration sufficient to achieve statistical significance according to Annex G.2A.
9. Record the frequencies for which the throughput doesn't meet the requirements.

10. Repeat steps from 6 to 9, using an interfering signal above the CA Band at step 5.

#### 7.6.2A.2.4.3 Message Contents

Same message contents as in clause 7.6.2.4.3.

#### 7.6.2A.2.5 Test Requirement

Same test requirement as in clause 7.6.2A.1.5 with the following exceptions:

- Instead of Table 7.6.2A.1.5-1 → use Table 7.6.2A.2.5-1.
- Instead of Table 7.6.2A.1.5-2 → use Table 7.6.2A.2.5-2.

**Table 7.6.2A.2.5-1: Out-of-band blocking parameters**

Rx Parameter	Units	CA Bandwidth Class				
		B	C	D	E	F
P <sub>w</sub> in Transmission Bandwidth Configuration, per CC	dBm	REFSENS + CA Bandwidth Class specific value below				
		9	9			
Note 1: The transmitter shall be set to 4dB below P <sub>C<sub>MAX</sub>L</sub> or P <sub>C<sub>MAX</sub>L,CA</sub> as defined in subclause 6.2.5.						
Note 2: Reference measurement channel is specified in Annex A.3.2 with one sided dynamic OCNG Pattern OP.1 FDD/TDD as described in Annex A.5.1.1/A.5.2.						

**Table 7.6.2A.2.5-2: Out of band blocking**

CA configuration	Parameter	Units	Frequency		
			range 1	range 2	range 3
	P <sub>Interferer</sub>	dBm	-44	-30	-15
CA_1C, CA_2C, CA_3C, CA_5B, CA_7C, CA_12B, CA_23B, CA_27B, CA_38C, CA_39C, CA_40C, CA_41C, CA_42C (note), CA_66B, CA_66C	F <sub>Interferer</sub> (CW)	MHz	F <sub>DL_low</sub> - 15 to F <sub>DL_low</sub> - 60	F <sub>DL_low</sub> - 60 to F <sub>DL_low</sub> - 85	F <sub>DL_low</sub> - 85 to 1 MHz
			F <sub>DL_high</sub> + 15 to F <sub>DL_high</sub> + 60	F <sub>DL_high</sub> + 60 to F <sub>DL_high</sub> + 85	F <sub>DL_high</sub> + 85 to +12750 MHz
Note: For CA_42C, the power level of the interferer (P <sub>Interferer</sub> ) for Range 3 shall be modified to -20 dBm for F <sub>Interferer</sub> > 2800 MHz and F <sub>Interferer</sub> < 4400 MHz.					

For the UE which supports inter band CA configuration in Tables 7.3.3-1A, 7.3.3-1B and 7.3.3-1C P<sub>Interferer</sub> power defined in Table 7.6.2A.2.5-2 is increased by the amount given by ΔR<sub>IB,c</sub> in Tables 7.3.3-1A, 7.3.3-1B and 7.3.3-1C.

#### 7.6.2A.3 Out-of-band blocking for CA (inter-band DL CA without UL CA)

##### 7.6.2A.3.1 Test Purpose

Same test purpose as 7.6.2A.1.

##### 7.6.2A.3.2 Test Applicability

This test applies to all types of E-UTRA UE release 10 and forward that support inter-band DL CA.

This test case also applies to all types of E-UTRA UE release 12 and forward that support 2DL CA with FDD-TDD inter-band CA.

##### 7.6.2A.3.3 Minimum Conformance Requirements

The minimum conformance requirements are defined in clause 7.6.2A.0.

#### 7.6.2A.3.4 Test Description

##### 7.6.2A.3.4.1 Initial Conditions

Same initial conditions as in clause 7.6.2A.1.4.1 with the following exceptions:

- Instead of Table 7.6.2A.1.4.1-1 → use Table 7.6.2A.3.4.1-1.
- Instead of clause 7.6.2A.1.4.3 → use clause 7.6.2A.3.4.3.

Table 7.6.2A.3.4.1-1: Test Configuration Table

Initial Conditions						
Test Environment as specified in TS 36.508[7] subclause 4.1		NC				
Test Frequencies as specified in TS36.508 [7] subclause 4.3.1 for different CA bandwidth classes, and PCC and SCCs are mapped onto physical frequencies according to Table 7.1-2		A: Mid range for PCC and SCC				
Test CC Combination setting $b(N_{RB\_agg})$ as specified in subclause 5.4.2A.1 for the CA Configuration across bandwidth combination sets supported by the UE		Highest $N_{RB\_agg}$ for PCC and SCC

100	100	QPSK	100	100	QPSK	20

Note 1:	CA Configuration Test CC Combination settings are checked separately for each CA Configuration, which applicable aggregated channel bandwidths are specified in Table 5.4.2A.1-2.
Note 2:	Depending on CA configurations, only the appropriate Uplink RB allocation value according to table 7.3A.3.5-2 for UE supporting one uplink carrier is tested per Test CA configuration.
Note 3:	The UL resource blocks shall be located as close as possible to the downlink PCC but confined within the transmission bandwidth configuration for the channel bandwidth (Table 5.4.2-1).
Note 4:	The frequencies of PCC and SCC shall be switched and tested in each configuration (given UL is supported in PCC band as per Table 5.2-1).

#### 7.6.2A.3.4.2 Test Procedure

1. Configure SCC according to Annex C0, C.1 and Annex C.3.2 for all downlink physical channels.
2. The SS shall configure SCC as per TS 36.508 [7] clause 5.2A.4.
3. SS activates SCC by sending the activation MAC-CE (Refer TS 36.321 [13], clauses 5.13, 6.1.3.8). Wait for at least 2 seconds (Refer TS 36.133, clauses 8.3.3.2).
4. SS transmits PDSCH via PDCCH DCI format 1A for C\_RNTI to transmit the DL RMC according to Table 7.6.2A.3.4.1-1 on both PCC and SCC. The SS sends downlink MAC padding bits on the DL RMC.
5. SS sends uplink scheduling information for each UL HARQ process via PDCCH DCI format 0 for C\_RNTI to schedule the UL RMC according to Table 7.6.2A.3.4.1-1 on PCC. Since the UE has no payload data to send, the UE transmits uplink MAC padding bits on the UL RMC.
6. Set the parameters of the signal generator for an interfering signal below the SCC's operating band according to Table 7.6.2 A.3.5-2. The frequency step size is 1 MHz.
7. Set the downlink signal level according to the table 7.6.2A.3.5-1 for both carriers. Send uplink power control commands to the UE (less or equal to 1dB step size should be used), to ensure that the UE output power is within +0, - 3.4 dB of the target level in table 7.6.2A.3.5-1 for carrier frequency  $f \leq 3.0\text{GHz}$  or within +0, -4.0 dB of the target level for carrier frequency  $3.0\text{GHz} < f \leq 4.2\text{GHz}$ , for at least the duration of the throughput measurement.
8. Measure the average throughput of SCC for duration sufficient to achieve statistical significance according to Annex G.2.
9. Record the frequencies for which the throughput doesn't meet the requirements.
10. Repeat steps from 6 to 9, using an interfering signal above the SCC's operating band at step 6.
11. Switch the SCell into PCell and repeat steps 1 to 10, except for operating bands without uplink band (as noted in Table 5.2-1).

#### 7.6.2A.3.4.3 Message Contents

Same message contents as in clause 7.6.2.4.3.

#### 7.6.2A.3.5 Test Requirement

For inter-band carrier aggregation with uplink assigned to one E-UTRA band the out-of-band blocking requirements are defined with the uplink active on the band other than the band whose downlink is being tested i.e. the requirements are tested only for the SCell downlink. The UE shall meet the requirement for each component carrier, when operated as SCell, while both downlink carriers are active.

Except for the spurious response frequencies recorded at step 9, the throughput measured during the test procedure for each component carrier, when operated as SCell, shall be  $\geq 95\%$  of the maximum throughput of the reference measurement channels as specified in Annexes A.2.2, A.2.3 and A.3.2 (with one sided dynamic OCNG Pattern OP.1 FDD/TDD for the DL-signal as described in Annex A.5.1.1/A.5.2.1) with parameters specified in Tables 7.6.2A.3.5-1 (originated from the single carrier Table 7.6.2.5-1) and 7.6.2.3.5-2.

For frequency range 1, 2, and 3, the number of spurious response frequencies recorded in the step 9 of the test procedure shall not exceed  $\max(24, 6 \cdot \lceil N_{RB} / 6 \rceil)$  exceptions per downlink in each assigned frequency channel

when measured using a 1MHz step size. For these exceptions the requirements of clause 7.7A.3 Spurious Response are applicable.

**Table 7.6.2A.3.5-1: Out-of-band blocking parameters**

Rx Parameter	Units	Channel bandwidth					
		1.4 MHz	3 MHz	5 MHz	10 MHz	15 MHz	20 MHz
P <sub>w</sub> in Transmission Bandwidth Configuration, per CC	dBm	REFSENS + channel bandwidth specific value below					
		6	6	6	6	7	9
Note 1: The transmitter shall be set to 4dB below P <sub>C<sub>MAX</sub>L</sub> with P <sub>C<sub>MAX</sub>L</sub> as defined in clause 6.2.5.							
Note 2: The reference measurement channel is specified in Annex A.3.2 with one sided dynamic OCNG Pattern OP.1 FDD/TDD as described in Annex A.5.1.1/A.5.2.1.							

**Table 7.6.2A.3.5-2: Out-of-band blocking for inter-band carrier aggregation with one uplink carrier**

Parameter	Unit	Range 1	Range 2	Range 3
P <sub>w</sub>	dBm	Table 7.6.2A.3.5-1 for both component carriers		
P <sub>interferer</sub>	dBm	-44 + ΔR <sub>IB,c</sub>	-30 + ΔR <sub>IB,c</sub>	-15 + ΔR <sub>IB,c</sub>
F <sub>interferer</sub> (CW)	MHz	-60 < f - F <sub>DL_Low(1)</sub> < -15 or -60 < f - F <sub>DL_Low(2)</sub> < -15 or 15 < f - F <sub>DL_High(1)</sub> < 60 or 15 < f - F <sub>DL_High(2)</sub> < 60	-85 < f - F <sub>DL_Low(1)</sub> ≤ -60 or -85 < f - F <sub>DL_Low(2)</sub> ≤ -60 or 60 ≤ f - F <sub>DL_High(1)</sub> < 85 or 60 ≤ f - F <sub>DL_High(2)</sub> < 85	1 ≤ f ≤ F <sub>DL_Low(1)</sub> - 85 or F <sub>DL_High(1)</sub> + 85 ≤ f ≤ F <sub>DL_Low(2)</sub> - 85 or F <sub>DL_High(2)</sub> + 85 ≤ f ≤ 12750
Note 1: F <sub>DL_Low(1)</sub> and F <sub>DL_High(1)</sub> denote the respective lower and upper frequency limits of the lower operating band, F <sub>DL_Low(2)</sub> and F <sub>DL_High(2)</sub> the respective lower and upper frequency limits of the upper operating band.				
Note 2: For F <sub>DL_Low(2)</sub> - F <sub>DL_High(1)</sub> < 145 MHz and F <sub>interferer</sub> in F <sub>DL_High(1)</sub> < f < F <sub>DL_Low(2)</sub> , F <sub>interferer</sub> can be in both Range 1 and Range 2. Then the lower of the P <sub>interferer</sub> applies.				
Note 3: For F <sub>DL_Low(1)</sub> - 15 MHz ≤ f ≤ F <sub>DL_High(1)</sub> + 15 MHz and F <sub>DL_Low(2)</sub> - 15 MHz ≤ f ≤ F <sub>DL_High(2)</sub> + 15 MHz the appropriate adjacent channel selectivity and in-band blocking in the respective subclauses 7.5A.1.5 and 7.6.1A.5 shall be applied.				
Note 4: ΔR <sub>IB,c</sub> according to Table 7.3.3-1A applies when serving cell c is measured.				
Note 5: For inter-band CA combinations containing Bands 42 or 43, the interferer with respect to Band 42 or Band 43 shall have power level (P <sub>interferer</sub> ) for Range 3 modified to -20 + ΔR <sub>IB,c</sub> dBm for F <sub>interferer</sub> > 2800 MHz and F <sub>interferer</sub> < 4400 MHz.				

## 7.6.2A.4 Out-of-band blocking for CA (intra-band non-contiguous DL CA without UL CA)

### 7.6.2A.4.1 Test Purpose

Same as in clause 7.6.2A.1.1.

### 7.6.2A.4.2 Test Applicability

This test case applies to all types of E-UTRA UE release 11 and forward that support intra-band non-contiguous DL CA but no UL CA.

### 7.6.2A.4.3 Minimum Conformance Requirements

The minimum conformance requirements are defined in clause 7.6.2A.0.

### 7.6.2A.4.4 Test description

#### 7.6.2A.4.4.1 Initial Conditions

Same as in clause 7.6.2A.1.4.1 with the following exceptions:

- Instead of Table 7.6.2A.1.4.1-1 → use Table 7.6.2A.4.4.1-1.

Table 7.6.2A.4.4.1-1: Test Configuration Table

Initial Conditions							
Test Environment as specified in TS 36.508[7] subclause 4.1				NC			
Test Frequencies as specified in TS36.508 [7] subclause 4.3.1 for different CA bandwidth classes, and PCC and SCCs are mapped onto physical frequencies according to Table 7.1-2.				A: N/A (Range is not relevant)			
Test CC Combination setting ( $N_{RB\_agg}$ ) as specified in subclause 5.4.2A.1 for the CA Configuration.				Refer to test point

Note 1:	CA Configuration Test CC Combination settings are checked separately for each CA Configuration, which applicable aggregated channel bandwidths are specified in Table 5.4.2A.1-3.						
Note 2:	The carrier centre frequency of PCC in the UL operating band is configured closer to the DL operating band.						
Note 3:	Applicable if only Bandwidth Combination Set 0 is supported by the UE for the CA Configuration						
Note 4:	Not applicable if only Bandwidth Combination Set 0 is supported by the UE for the CA Configuration						

## 7.6.2A.4.4.2 Test Procedure

1. Configure SCC according to Annex C0, C.1 and Annex C.3.2 for all downlink physical channels.

2. The SS shall configure SCC as per TS 36.508 [7] clause 5.2A.4. Message contents are defined in clause 7.6.2A.4.4.3.
3. SS activates SCC by sending the activation MAC-CE (Refer TS 36.321 [13], clauses 5.13, 6.1.3.8). Wait for at least 2 seconds (Refer TS 36.133, clauses 8.3.3.2).
4. SS transmits PDSCH via PDCCH DCI format 1A for C\_RNTI to transmit the DL RMC according to Table 7.6.2A.3.4.1-1 on both PCC and SCC. The SS sends downlink MAC padding bits on the DL RMC.
5. SS sends uplink scheduling information for each UL HARQ process via PDCCH DCI format 0 for C\_RNTI to schedule the UL RMC according to Table 7.6.2A.4.4.1-1 on PCC. Since the UE has no payload data to send, the UE transmits uplink MAC padding bits on the UL RMC.
6. Set the parameters of the signal generator for an interfering signal below the CA band according to Table 7.6.2.5-2. The frequency step size is 1 MHz.
7. Set the downlink signal level according to the table 7.6.2.5-1 for both carriers. Send uplink power control commands to the UE (less or equal to 1dB step size should be used), to ensure that the UE output power is within +0, - 3.4 dB of the target level in table 7.6.2.5-1 for carrier frequency  $f \leq 3.0\text{GHz}$  or within +0, -4.0 dB of the target level for carrier frequency  $3.0\text{GHz} < f \leq 4.2\text{GHz}$ , for at least the duration of the throughput measurement.
8. Measure the average throughput for each component carrier for duration sufficient to achieve statistical significance according to Annex G.2A.
9. Record the frequencies for which the throughput doesn't meet the requirements.
10. Repeat steps from 6 to 9, using an interfering signal above the CA band at step 6.

#### 7.6.2A.4.4.3 Message Contents

Message contents are according to TS 36.508 [7] subclause 4.6. In test procedure step 2, for SCC configuration there are no additional message contents.

#### 7.6.2A.4.5 Test Requirement

For intra-band non-contiguous carrier aggregation with one uplink carrier and two downlink carriers, the out-of-band blocking requirements are defined with the uplink configuration of the PCC being in accordance with table 7.3.1A-3. The UE shall meet the requirements specified in tables 7.6.2A.4.5-1 and 7.6.2A.4.5-2 for each component carrier while both downlink carriers are active.

The out-of-band blocking parameters in tables 7.6.2A.4.5-1 and 7.6.2A.4.5-2 for each component carrier are the same as single carrier requirements in Tables 7.6.2.5-1 and 7.6.2.5-2.

For Table 7.6.2A.4.5-2 in frequency range 1, 2 and 3, the number of spurious response frequencies recorded in the step 9 of the test procedure shall not exceed  $\max(24, 6 \cdot \lceil N_{RB} \cdot / 6 \rceil)$  exceptions per assigned E-UTRA channel per sub-block gap of the E-UTRA CA configuration are allowed for spurious response frequencies when measured using a 1MHz step size. For these exceptions the requirements of subclause 7.7A.4 spurious response are applicable.

For Table 7.6.2A.4.5-2 in frequency range 4 the number of spurious response frequencies recorded in the step 9 of the test procedure shall not exceed  $\max(8, \lceil (N_{RB} + 2 \cdot L_{CRBs}) / 8 \rceil)$  exceptions per assigned E-UTRA channel per sub-block gap of the E-UTRA CA configuration are allowed for spurious response frequencies when measured using a 1MHz step size. For these exceptions the requirements of clause 7.7A.4 spurious response are applicable.

**Table 7.6.2A.4.5-1: Out-of-band blocking parameters**

Rx Parameter	Units	Channel bandwidth					
		1.4 MHz	3 MHz	5 MHz	10 MHz	15 MHz	20 MHz
Pw in Transmission Bandwidth Configuration, per CC	dBm	REFSENS + channel bandwidth specific value below					
		6	6	6	6	7	9

Note 1:	The transmitter shall be set to 4dB below $P_{\text{CMAX}_L}$ with $P_{\text{CMAX}_L}$ as defined in clause 6.2.5.
Note 2:	The reference measurement channel is specified in Annex A.3.2 with one sided dynamic OCNG Pattern OP.1 FDD/TDD as described in Annex A.5.1.1/A.5.2.1.

Table 7.6.2A.4.5-2: Out of band blocking

E-UTRA band	Parameter	Units	Frequency			
			range 1	range 2	range 3	range 4
	$P_{\text{Interferer}}$	dBm	-44	-30	-15	-15
1, 2, 3, 4, 5, 6, 7, 8, 9, 10, 11, 12, 13, 14, 17, 18, 19, 20, 21, 22, 23, 24, 25, 26, 27, 28, 30, 31, 33, 34, 35, 36, 37, 38, 39, 40, 41, 42 (Note 4), 43 (Note 4), 44, 66	$F_{\text{Interferer}}$ (CW)	MHz	$F_{\text{DL\_low}} -15$ to $F_{\text{DL\_low}} -60$	$F_{\text{DL\_low}} -60$ to $F_{\text{DL\_low}} -85$	$F_{\text{DL\_low}} -85$ to 1 MHz	-
			$F_{\text{DL\_high}} +15$ to $F_{\text{DL\_high}} +60$	$F_{\text{DL\_high}} +60$ to $F_{\text{DL\_high}} +85$	$F_{\text{DL\_high}} +85$ to +12750 MHz	-
2, 5, 12, 17	$F_{\text{Interferer}}$	MHz	-	-	-	$F_{\text{UL\_low}} - F_{\text{UL\_high}}$
Note 1: Range 3 shall be tested only with the highest channel bandwidth. Note 2: For the UE which supports both Band 11 and Band 21 the out of band blocking is FFS. Note 3: The power level of the interferer ( $P_{\text{Interferer}}$ ) for Range 3 shall be modified to -20 dBm for $F_{\text{Interferer}} > 2800$ MHz and $F_{\text{Interferer}} < 4400$ MHz. Note 4: For the UE that supports both Band 4 and Band 66, the out-of-blocking frequency range for Band 4 is defined relative to $F_{\text{DL\_low}}$ and $F_{\text{DL\_high}}$ of Band 66.						

For the UE which supports inter band CA configuration in Tables 7.3.3-1A, 7.3.3-1B and 7.3.3-1C,  $P_{\text{Interferer}}$  power defined in Table 7.6.2A.4.5-2 is increased by the amount given by  $\Delta_{\text{RIB,c}}$  in Tables 7.3.3-1A, 7.3.3-1B and 7.3.3-1C.

## 7.6.2A.5 Out-of-band blocking for 3DL CA

### 7.6.2A.5.1 Test Purpose

Same test purpose as in clause 7.6.2A.1.

### 7.6.2A.5.2 Test Applicability

This test case applies to all types of E-UTRA UE release 10 and forward that support 3DL with Intra-band contiguous CA or 3DL with Inter-band CA or 3DL with Intra-band contiguous and Inter-band CA.

This test case also applies to all types of E-UTRA UE release 11 and forward that support 3DL with Intra-band non-contiguous and Inter-band CA or 3DL with Intra-band non-contiguous and Intra-band contiguous CA.

This test case also applies to all types of E-UTRA UE release 12 and forward that support 3DL with FDD-TDD CA.

### 7.6.2A.5.3 Minimum Conformance Requirements

The minimum conformance requirements are defined in clause 7.6.2A.0.

### 7.6.2A.5.4 Test Description

#### 7.6.2A.5.4.1 Initial Conditions

Initial conditions are a set of test configurations the UE needs to be tested in and the steps for the SS to take with the UE to reach the correct measurement state.

The initial test configurations consist of environmental conditions, test frequencies, and channel bandwidths based on E-UTRA CA configurations specified in table 5.4.2A.1-1 through table 5.4.2A.1-2a. All of these configurations shall be tested with applicable test parameters for each channel bandwidth, and are shown in table 7.6.2A.5.4.1-1 through table 7.6.2A.5.4.1-5 as appropriate. The details of the uplink reference measurement channels (RMCs) are specified in Annex A.2 and A.3. Configurations of PDSCH and PDCCH before measurement are specified in Annex C.2.

Table 7.6.2A.5.4.1-1: Test Configuration Table (Intra-band contiguous)

Initial Conditions												
Test Environment as specified in TS 36.508 [7] subclause 4.1						NC						
Test Frequencies as specified in TS36.508 [7] subclause 4.3.1 for different CA bandwidth classes.						For test frequencies refer to “Range” columns. For mapping within Band refer to “CC” columns						
Test CC Combination setting ( $N_{RB\_agg}$ ) as specified in subclause 5.4.2A.1 for the CA Configuration across bandwidth combination sets supported by the UE.						Refer to “PCC $N_{RB}$ ” and “SCCs $N_{RB}$ ” columns						
Network signalling value						NS_01 by default						
Test Parameters for CA Configurations												
ID	CA Configuration / $N_{RB\_agg}$						DL Allocation			UL Allocation (Note 2,3)		
	CA Configuration			PCC $N_{RB}$	SCCs $N_{RB}$		CC MOD	PCC & SCCs RB allocation			CC MOD	PCC $L_{CRB}$ @ $RB_{start}$
	Band	Range	PCC CC		SCC1 CC	SCC2 CC		PCC	SCC1	SCC2		
Default Test Settings for a CA_XD Configuration												
1	X	Mid	CC1	CC2	CC3	Highest $N_{RB\_agg}$	QPSK	All RBs			QPSK	REFSENS
<p>Note 1: CA Configuration Test CC Combination test settings are checked separately for each CA Configuration.</p> <p>Note 2: Use CA Configuration – specific test points if present in the table, otherwise use Default Test Settings test points.</p> <p>Note 3: X corresponds to the band of the CA Configuration. E.g. for CA_41D, X=41</p> <p>Note 4: REFSENS refers to the PCC band's and PCC <math>N_{RB}</math> 's single carrier Uplink RB allocation for reference sensitivity according to table 7.3.5-2.</p> <p>Note 5: If in the CA Configuration UE supports multiple CC Combinations with the same <math>N_{RB\_agg}</math>, choose for testing the Combination with maximum <math>N_{RB\_PCC}</math> and then select maximum <math>N_{RB\_SCC1}</math> for the chosen <math>N_{RB\_PCC}</math></p>												

**Table 7.6.2A.5.4.1-2: Test Configuration Table (Inter-band)**

Initial Conditions															
Test Environment as specified in TS 36.508[7] subclause 4.1											NC				
Test Frequencies as specified in TS36.508 [7] subclause 4.3.1 for different CA bandwidth classes.											For test frequencies refer to "Range" columns. For mapping within Band refer to "CC" columns				
Test CC Combination setting ( $N_{RB\_agg}$ ) as specified in subclause 5.4.2A.1 for the CA Configuration across bandwidth combination sets supported by the UE.											Refer to "PCC $N_{RB}$ " and "SCCs $N_{RB}$ " columns				
Network signalling value											NS_01 by default				
Test Parameters for CA Configurations															
ID	CA Configuration / $N_{RB\_agg}$							DL Allocation			UL Allocation (Note 2,3)				
	CA Configuration						PCC $N_{RB}$	SCCs $N_{RB}$		CC MOD	PCC & SCCs RB allocation			CC MOD	PCC $L_{CRB}$ @ $RB_{start}$
	PCC		SCC1		SCC2			SCC1	SCC2		PCC	SCC1	SCC2		
	Band	Range	Band	Range	Band	Range									
Default Test Settings for a CA_XA-YA-ZA Configuration															
1	X	Mid	Y	Mid	Z	Mid	Highest $N_{RB}$	Highest $N_{RB}$	Highest $N_{RB}$	QPSK	All RBs	QPSK	REFSENS		
2	Y	Mid	X	Mid	Z	Mid	Highest $N_{RB}$	Highest $N_{RB}$	Highest $N_{RB}$	QPSK	All RBs	QPSK	REFSENS		
3	Z	Mid	X	Mid	Y	Mid	Highest $N_{RB}$	Highest $N_{RB}$	Highest $N_{RB}$	QPSK	All RBs	QPSK	REFSENS		
Note 1:	CA Configuration Test CC Combination test settings are checked separately for each CA Configuration.														
Note 2:	Use CA Configuration – specific test points if present in the table, Otherwise use test points from matching Group Test Settings, if present in the table. Otherwise use the Default Test Settings test points.														
Note 3:	If, according to the UE declared capability, UE does not support UL in an individual band within the CA Configuration, test points with that individual band as PCC are not applicable.														
Note 4:	X,Y,Z correspond to the different bands in the CA Configuration. E.g. for CA_1A-3A-19A,X=1,Y=3,Z=19														
Note 5:	REFSENS refers to the PCC band's and PCC $N_{RB}$ 's single carrier Uplink RB allocation for reference sensitivity according to table 7.3.5-2.														

**Table 7.6.2A.5.4.1-3: Test Configuration Table (Intra-band contiguous + Inter-band)**

Initial Conditions															
Test Environment as specified in TS 36.508[7] subclause 4.1										NC

Note 1: CA Configuration Test CC Combination test settings are checked separately for each CA Configuration. Note 2: Use CA Configuration – specific test points if present in the table, otherwise use Default Test Settings test points. Note 3: If, according to the UE declared capability, UE does not support UL in an individual band within the CA Configuration, test points with that individual band as PCC are not applicable. Note 4: X corresponds to the band of the CA Configuration. E.g. for CA_41C-41A, X=41. Note 5: REFSENS refers to the PCC band's and PCC $N_{RB}$ 's single carrier Uplink RB allocation for reference sensitivity according to table 7.3.5-2. Note 6: If in the CA Configuration UE supports multiple CC Combinations with the same $N_{RB\_agg}$ , choose the Combination with $N_{RB\_CC1} = N_{RB\_CC2}$ for testing. If no such combination is supported, choose Combination with maximum $N_{RB\_CC1}$ for testing.															

1. Connect the SS to the UE antenna connectors as shown in TS 36.508[7] Annex A Figure group A.58 as appropriate.
2. The parameter settings for the cell are set up according to TS 36.508 [7] subclause 4.4.3.
3. Downlink signals for PCC are initially set up according to Annex C.0, C.1, and C.3.1, and uplink signals according to Annex H.1 and H.3.0.
4. The UL and DL Reference Measurement channels are set according to Table 7.6.2A.5.4.1-1 through Table 7.6.2A.5.4.1-5 as appropriate.
5. Propagation conditions are set according to Annex B.0.
6. Ensure the UE is in State 3A-RF according to TS 36.508 [7] clause 5.2A.2. Message contents are defined in clause 7.6.2A.5.4.3.

#### 7.6.2A.5.4.2 Test Procedure

1. Configure SCCs according to Annex C.0, C.1 and Annex C.3.1 for all downlink physical channels.
2. The SS shall configure SCCs as per TS 36.508 [7] clause 5.2A.4. Message contents are defined in clause 7.6.2A.5.4.3

3. SS activates SCCs by sending the activation MAC-CE (Refer TS 36.321 [13], clauses 5.13, 6.1.3.8). Wait for at least 2 seconds (Refer TS 36.133, clauses 8.3.3.2).
4. SS transmits PDSCH via PDCCH DCI format 1A for C\_RNTI to transmit the DL RMC according to Table 7.6.2A.5.4.1-1 through Table 7.6.2A.5.4.1-5 as appropriate on PCC and SCCs. The SS sends downlink MAC padding bits on the DL RMC.
5. SS sends uplink scheduling information for each UL HARQ process via PDCCH DCI format 0 for C\_RNTI to schedule the UL RMC according to Table 7.6.2A.5.4.1-1 through Table 7.6.2A.5.4.1-5 on PCC. Since the UE has no payload data to send, the UE sends uplink MAC padding bits on the UL RMC.
6. Set the parameters of the CW signal generator for an interfering signal below the lowest CA Band according to the table indicated in the column "Table with interferer parameters to select" of Table 7.6.2A.5.4.2-1. The frequency step size is 1MHz. Use the highest  $\Delta R_{IB,c}$  among CA bands for  $P_{interferer}$  calculation.
7. Set the downlink signal level according to the table indicated in the column "Table with transmission parameters to select" of Table 7.6.2A.5.4.2-1. Send uplink power control commands to the UE (less or equal to 1dB step size should be used), to ensure that the UE output power is within +0, - 3.4 dB of the target level in table 7.6.2A.5.5-1 for carrier frequency  $f \leq 3.0\text{GHz}$  or within +0, -4.0 dB of the target level for carrier frequency  $3.0\text{GHz} < f \leq 4.2\text{GHz}$ , for at least the duration of the throughput measurement.
8. Measure the average throughput for the carrier(s) indicated in the Table 7.6.2A.5.4.2-1 for duration sufficient to achieve statistical significance according to Annex G.2A.
9. Record the frequencies for which the throughput doesn't meet the requirements and for each frequency, the carriers for which the throughput was not met.
10. Repeat steps 6 to 8 for each recorded frequency-carrier pair, with exception of pairs for which  $\Delta R_{IB,c}$  is the same as  $\Delta R_{IB}$  used in Step 6. In Step 6 use only recorded frequencies for interferer placement and use  $\Delta R_{IB,c}$  relevant to recorded carrier for  $P_{interferer}$  calculation. Remove the frequency-carrier pairs that meet the throughput requirements from the record.
11. If the CA Configuration includes multiple bands, repeat steps from 6 to 10 using an interfering signal in each gap between the CA bands, according to the table indicated in the column "Table with interferer parameters to select" of Table 7.6.2A.5.4.2-1.
12. Repeat steps from 6 to 10, using an interfering signal above the highest CA Band according to the table indicated in the column "Table with interferer parameters to select" of Table 7.6.2A.5.4.2-1.
13. Repeat steps 1 to 12 for each row of "Throughput measured on" column listed in the Table 7.6.2A.5.4.2-1.

Table 7.6.2A.5.4.2-1: Test repetition and measurement configuration

CA configuration	ID (Note 1)	Throughput measured on (Note 3)	Table with transmission parameters to select	Table with interferer parameters to select (Note 2)
Intra-band contiguous	1	PCC, SCC1, SCC2	7.6.2A.5.5-1	7.6.2A.5.5-2
	2			
Inter-band	1	SCC1, SCC2	7.6.2A.5.5-3	7.6.2A.5.5-4
	2	SCC1, SCC2		
	3	SCC1, SCC2		
Intra-band contiguous + Inter-band	1	SCC2	7.6.2A.5.5-3	7.6.2A.5.5-4
	2	SCC1, SCC2	7.6.2A.5.5-1	7.6.2A.5.5-2
Intra-band non-contiguous + Inter-band	1	SCC2	7.6.2A.5.5-3	7.6.2A.5.5-4
	2	SCC1,	7.6.2A.5.5-3	7.6.2A.5.5-5
SCC2				
Intra-band non-contiguous + Intra-band contiguous	1	PCC	7.6.2A.5.5-3	7.6.2A.5.5-5
		SCC1, SCC2	7.6.2A.5.5-1	7.6.2A.5.5-2
	2	SCC2	7.6.2A.5.5-3	7.6.2A.5.5-5
		PCC, SCC1	7.6.2A.5.5-1	7.6.2A.5.5-2

Note 1: Test point ID for the particular CA configuration as defined in section 7.6.2A.5.4.1.  
Note 2: The reference for the placement of the interferer signals is the centre frequency of the carrier closest to the interferer among the carriers throughput is measured on.  
Note 3: Where there are multiple rows for a single Test point ID, the test is repeated for each row.

## 7.6.2A.5.4.3 Message Contents

Same message contents as in clause 7.6.2.4.3.

## 7.6.2A.5.5 Test Requirement

Except for the spurious response frequencies recorded at the final step of test procedure, the throughput measurement of each carrier derived in test procedure shall be  $\geq 95\%$  of the maximum throughput of the reference measurement channels as specified in Annex A.3.2 with parameters specified in Tables below, according to the type of CA.

For Table 7.6.2A.5.5-2 in frequency range 1, 2 and 3, up to  $\max(24,6 \cdot \lceil N_{RB} \cdot /6 \rceil)$  exceptions are allowed for spurious response frequencies in each assigned frequency channel when measured using a 1MHz step size, where  $N_{RB}$  is the allocated number of resource blocks in the frequency channel. For these exceptions the requirements of subclause 7.7A.5 Spurious Response for CA are applicable.

Table 7.6.2A.5.5-1: Out-of-band blocking parameters (intra-band contiguous)

Rx Parameter	Units	CA Bandwidth Class				
		B	C	D	E	F
Pw in Transmission Bandwidth Configuration, per CC	dBm	REFSENS + CA Bandwidth Class specific value below				
		9	9	9		

Note 1: The transmitter shall be set to 4dB below  $P_{CMAX\_L}$  or  $P_{CMAX\_L\_CA}$  as defined in subclause 6.2.5.  
Note 2: Reference measurement channel is specified in Annex A.3.2 with one sided dynamic OCNG Pattern OP.1 FDD/TDD as described in Annex A.5.1.1/A.5.2.

Table 7.6.2A.5.5-2: Out of band blocking (intra-band contiguous)

CA configuration	Parameter	Units	Frequency		
			range 1	range 2	range 3
	$P_{Interferer}$	dBm	-44	-30	-15
CA_1C, CA_2C, CA_3C, CA_7C, CA_12B, CA_23B, CA_27B, CA_38C, CA_40C, CA_41C, CA_40D, CA_42C (Note)	$F_{Interferer}$ (CW)	MHz	$F_{DL\_low} - 15$ to $F_{DL\_low} - 60$	$F_{DL\_low} - 60$ to $F_{DL\_low} - 85$	$F_{DL\_low} - 85$ to 1 MHz
			$F_{DL\_high} + 15$ to	$F_{DL\_high} + 60$ to	$F_{DL\_high} + 85$ to

			F <sub>DL_high</sub> + 60	F <sub>DL_high</sub> + 85	+12750 MHz
Note:	For CA_42C, the power level of the interferer (P <sub>Interferer</sub> ) for Range 3 shall be modified to -20 dBm for F <sub>Interferer</sub> > 2800 MHz and F <sub>Interferer</sub> < 4400 MHz.				

For Table 7.6.2A.5.5-4 frequency range 1, 2, and 3, the number of spurious response frequencies recorded in the step 9 of the test procedure shall not exceed  $\max(24, 6 \cdot \lceil N_{RB} / 6 \rceil)$  exceptions per downlink in each assigned frequency channel when measured using a 1MHz step size. For these exceptions the requirements of clause 7.7A.5 Spurious Response for CA are applicable.

**Table 7.6.2A.5.5-3: Out-of-band blocking parameters (inter-band, intra-band non-contiguous)**

Rx Parameter	Units	Channel bandwidth					
		1.4 MHz	3 MHz	5 MHz	10 MHz	15 MHz	20 MHz
Pw in Transmission Bandwidth Configuration	dBm	REFSENS + channel bandwidth specific value below					
		6	6	6	6	7	9
Note 1: The transmitter shall be set to 4dB below P <sub>C<sub>MAX</sub>L</sub> with P <sub>C<sub>MAX</sub>L</sub> as defined in clause 6.2.5.							
Note 2: The reference measurement channel is specified in Annex A.3.2 with one sided dynamic OCN Pattern OP.1 FDD/TDD as described in Annex A.5.1.1/A.5.2.1.							

**Table 7.6.2A.5.5-4: Out-of-band blocking for inter-band carrier aggregation with one uplink carrier**

Parameter	Unit	Range 1	Range 2	Range 3
P <sub>wanted</sub>	dBm	Table 7.6.2A.5.5-3 for all component carriers		
P <sub>interferer</sub>	dBm	-44 + ΔR <sub>IB,c</sub>	-30 + ΔR <sub>IB,c</sub>	-15 + ΔR <sub>IB,c</sub>
F <sub>interferer</sub> (CW)	MHz	-60 < f - F <sub>DL_Low(j)</sub> < -15 or 15 < f - F <sub>DL_High(j)</sub> < 60	-85 < f - F <sub>DL_Low(j)</sub> ≤ -60 or 60 ≤ f - F <sub>DL_High(j)</sub> < 85	1 ≤ f ≤ F <sub>DL_Low(j)</sub> - 85 or F <sub>DL_High(j)</sub> + 85 ≤ f ≤ F <sub>DL_Low(j+1)</sub> - 85 or F <sub>DL_High(X)</sub> + 85 ≤ f ≤ 12750
Note 1: F <sub>DL_Low(j)</sub> and F <sub>DL_High(j)</sub> denote the respective lower and upper frequency limits of the operating band containing carrier j, j = 1, ..., X, with carriers numbered in increasing order of carrier frequency and X the number of component carriers in the band combination (X = 2 or X = 3 for the present version of this specification).				
Note 2: For F <sub>DL_Low(j+1)</sub> - F <sub>DL_High(j)</sub> < 145 MHz and F <sub>Interferer</sub> in F <sub>DL_High(j)</sub> < f < F <sub>DL_Low(j+1)</sub> , F <sub>Interferer</sub> can be in both Range 1 and Range 2. Then the lower of the P <sub>Interferer</sub> applies.				
Note 3: For F <sub>DL_Low(j)</sub> - 15 MHz ≤ f ≤ F <sub>DL_High(j)</sub> + 15 MHz the appropriate adjacent channel selectivity and in-band blocking requirements in the respective subclauses 7.5A.5.5 and 7.6.1A.5.5 shall be applied for carrier j.				
Note 4: ΔR <sub>IB,c</sub> according to Table 7.3.3-1A applies when serving cell c is measured.				
Note 5: For inter-band CA combinations containing Bands 42 or 43, the interferer with respect to Band 42 or Band 43 shall have power level (P <sub>Interferer</sub> ) for Range 3 modified to -20 + ΔR <sub>IB,c</sub> dBm for F <sub>Interferer</sub> > 2800 MHz and F <sub>Interferer</sub> < 4400 MHz.				

For Table 7.6.2A.5.5-5 in frequency range 1, 2 and 3, the number of spurious response frequencies recorded in the step 9 of the test procedure shall not exceed  $\max(24, 6 \cdot \lceil N_{RB} \cdot / 6 \rceil)$  exceptions per assigned E-UTRA channel per sub-block gap of the E-UTRA CA configuration are allowed for spurious response frequencies when measured using a 1MHz step size. For these exceptions the requirements of subclause 7.7A.5 spurious response for CA are applicable.

For Table 7.6.2A.5.5-5 in frequency range 4 the number of spurious response frequencies recorded in the step 9 of the test procedure shall not exceed  $\max(8, \lceil (N_{RB} + 2 \cdot L_{CRBS}) / 8 \rceil)$  exceptions per assigned E-UTRA channel per sub-block gap of the E-UTRA CA configuration are allowed for spurious response frequencies when measured using a 1MHz step size. For these exceptions the requirements of clause 7.7A.5 spurious response for CA are applicable.

**Table 7.6.2A.5.5-5: Out of band blocking (intra-band non-contiguous)**

E-UTRA band	Parameter	Units	Frequency			
			range 1	range 2	range 3	range 4
	P <sub>Interferer</sub>	dBm	-44	-30	-15	-15

1, 2, 3, 4, 5, 6, 7, 8, 9, 10, 11, 12, 13, 14, 17, 18, 19, 20, 21, 22, 23, 24, 25, 26, 27, 28, 30, 31, 33, 34, 35, 36, 37, 38, 39, 40, 41, 42 (Note 4), 43 (Note 4), 44	$F_{\text{Interferer}}$ (CW)	MHz	$F_{\text{DL\_low}} -15$ to $F_{\text{DL\_low}} -60$	$F_{\text{DL\_low}} -60$ to $F_{\text{DL\_low}} -85$	$F_{\text{DL\_low}} -85$ to 1 MHz	-
2, 5, 12, 17	$F_{\text{Interferer}}$	MHz	-	-	-	$F_{\text{UL\_low}} - F_{\text{UL\_high}}$
<p>Note 1: Range 3 shall be tested only with the highest channel bandwidth.</p> <p>Note 2: For the UE which supports both Band 11 and Band 21 the out of band blocking is FFS.</p> <p>Note 3: For intra-band non-contiguous + inter-band CA, <math>\Delta R_{\text{IBNC}} = 0</math> dB for all sub-block gaps.</p> <p>Note 4: The power level of the interferer (<math>P_{\text{Interferer}}</math>) for Range 3 shall be modified to -20 dBm for <math>F_{\text{Interferer}} &gt; 2800</math> MHz and <math>F_{\text{Interferer}} &lt; 4400</math> MHz.</p>						

For a UE, which supports CA configuration in Tables 7.3.3-1A, 7.3.3-1B and 7.3.3-1C,  $P_{\text{Interferer}}$  power defined in Tables 7.6.2A.5.5.2, 7.6.2A.5.5-4 and 7.6.2A.5.5-5 is increased by the amount given by  $\Delta R_{\text{IB,c}}$  in Tables 7.3.3-1A, 7.3.3-1B and 7.3.3-1C accordingly.

## 7.6.2A.6

### 7.6.2A.7 Out-of-band blocking for 4DL CA

**Editor's note: Following aspects missing or not yet determined:**

- The test applicability needs to be added to TS36.521-2
- The test case needs to be added to Annex G
- Test configuration tables format are under investigation and may change in RAN5.

#### 7.6.2A.7.1 Test Purpose

Same test purpose as in clause 7.6.2A.1.

#### 7.6.2A.7.2 Test Applicability

This test case applies to all types of E-UTRA UE release 11 and forward that support 4DL Intra-band contiguous CA or 4DL Inter-band CA or 4DL Intra-band contiguous + Inter-band CA.

This test case also applies to all types of E-UTRA UE release 12 and forward that support 4DL Intra-band non-contiguous CA + Inter-band CA or 4DL Intra-band non-contiguous + Intra-band contiguous CA.

This test case also applies to all types of E-UTRA UE release 12 and forward that support 4DL CA with FDD-TDD CA.

#### 7.6.2A.7.3 Minimum Conformance Requirements

The minimum conformance requirements are defined in clause 7.6.2A.0.

#### 7.6.2A.7.4 Test Description

##### 7.6.2A.7.4.1 Initial Conditions

Initial conditions are a set of test configurations the UE needs to be tested in and the steps for the SS to take with the UE to reach the correct measurement state.

The initial test configurations consist of environmental conditions, test frequencies, and channel bandwidths based on E-UTRA CA configurations specified in table 5.4.2A.1-1 through table 5.4.2A.1-2a. All of these configurations shall be tested with applicable test parameters for each channel bandwidth, and are shown in table 7.6.2A.7.4.1-1 through table 7.6.2A.7.4.1-6 as appropriate. The details of the uplink reference measurement channels (RMCs) are specified in Annex A.2 and A.3. Configurations of PDSCH and PDCCH before measurement are specified in Annex C.2.

Table 7.6.2A.7.4.1-1: Test Configuration Table (Intra-band

contiguous)

Initial Conditions																	
Test Environment as specified in TS 36.508 [7] subclause 4.1											NC						
Test Frequencies as specified in TS36.508 [7] subclause 4.3.1 for different CA bandwidth classes.											For test frequencies refer to “Range” columns. For mapping within Band refer to “CC” columns						
Test CC Combination setting ( $N_{RB\_agg}$ ) as specified in subclause 5.4.2A.1 for the CA Configuration across bandwidth combination sets supported by the UE.											Refer to “PCC $N_{RB}$ ” and “SCCs $N_{RB}$ ” columns						
Network signalling value											NS_01 by default						
Test Parameters for CA Configurations																	
ID	CA Configuration / $N_{RB\_agg}$							DL Allocation						UL Allocation (Note 2,3)			
	CA Configuration						PCC $N_{RB}$	SCCs $N_{RB}$			CC MOD	PCC & SCCs RB allocation				CC MOD	PCC $L_{CRB}$ @ $RB_{start}$
	Band	Range	PCC CC	SCC1 CC	SCC2 CC	SCC3 CC		SCC1	SCC2	SCC3		PCC	SCC1	SCC2	SCC3		
Default Test Settings for a CA_XE Configuration																	
1	X	Mid	CC1	CC2	CC3	CC4	Highest $N_{RB\_agg}$			QPSK	All RBs				QPSK	REFSENS	
Note 1: CA Configuration Test CC Combination test settings are checked separately for each CA Configuration.																	
Note 2: Use CA Configuration – specific test points if present in the table, otherwise use Default Test Settings test points.																	
Note 3: X corresponds to the band of the CA Configuration. E.g. for CA_41E, X=41.																	
Note 4: REFSENS refers to the PCC band's and PCC $N_{RB}$ 's single carrier Uplink RB allocation for reference sensitivity according to table 7.3.5-2.																	
Note 5: If in the CA Configuration UE supports multiple CC Combinations with the same $N_{RB\_agg}$ , choose for testing the Combination with maximum $N_{RB\_PCC}$ and then select maximum $N_{RB\_SCC1}$ for the chosen $N_{RB\_PCC}$ .																	

Table 7.6.2A.7.4.1-2: Test Configuration Table (Inter-band)

Initial Conditions																			
Test Environment as specified in TS 36.508[7] subclause 4.1														NC					
Test Frequencies as specified in TS36.508 [7] subclause 4.3.1 for different CA bandwidth classes.														For test frequencies refer to “Range” columns. For mapping within Band refer to “CC” columns					
Test CC Combination setting ( $N_{RB\_agg}$ ) as specified in subclause 5.4.2A.1 for the CA Configuration across bandwidth combination sets supported by the UE.														Refer to “PCC $N_{RB}$ ” and “SCCs $N_{RB}$ ” columns					
Network signalling value														NS_01 by default					
Test Parameters for CA Configurations																			
ID	CA Configuration / $N_{RB\_agg}$										DL Allocation				UL Allocation (Note 2,3)				
	CA Configuration								PCC $N_{RB}$	SCCs $N_{RB}$			CC MOD	PCC & SCCs RB allocation				CC MOD	PCC $L_{CRB}$ @ $RB_{start}$
	PCC		SCC1		SCC2		SCC3			SCC1	SCC2	SCC3		PCC	SCC1	SCC2	SCC3		
	Band	Range	Band	Range	Band	Range	Band	Range											
Default Test Settings for a CA_XA-YA-ZA-RA Configuration																			
1	X	Mid	Y	Mid	Z	Mid	R	Mid	Highest $N_{RB}$	Highest $N_{RB}$	Highest $N_{RB}$	Highest $N_{RB}$	QPSK	All RBs	QPSK	REFSENS			
2	Y	Mid	X	Mid	Z	Mid	R	Mid	Highest $N_{RB}$	Highest $N_{RB}$	Highest $N_{RB}$	Highest $N_{RB}$	QPSK	All RBs	QPSK	REFSENS			
3	Z	Mid	X	Mid	Y	Mid	R	Mid	Highest $N_{RB}$	Highest $N_{RB}$	Highest $N_{RB}$	Highest $N_{RB}$	QPSK	All RBs	QPSK	REFSENS			
4	R	Mid	X	Mid	Y	Mid	Z	Mid	Highest $N_{RB}$	Highest $N_{RB}$	Highest $N_{RB}$	Highest $N_{RB}$	QPSK	All RBs	QPSK	REFSENS			
Note 1:	CA Configuration Test CC Combination test settings are checked separately for each CA Configuration.																		
Note 2:	Use CA Configuration – specific test points if present in the table, Otherwise use test points from matching Group Test Settings, if present in the table. Otherwise use the Default Test Settings test points.																		
Note 3:	If, according to the UE declared capability, UE does not support UL in an individual band within the CA Configuration, test points with that individual band as PCC are not applicable.																		
Note 4:	X,Y,Z,R correspond to the different bands in the CA Configuration. E.g. for CA_1A-3A-7A-8A,X=1,Y=3,Z=7,R=8.																		
Note 5:	REFSENS refers to the PCC band's and PCC $N_{RB}$ 's single carrier Uplink RB allocation for reference sensitivity according to table 7.3.5-2.																		

Table 7.6.2A.7.4.1-3: Test Configuration Table (Intra-band contiguous +

1. Connect the SS to the UE antenna connectors as shown in TS 36.508[7] Annex A Figure group A.58 as appropriate.
2. The parameter settings for the cell are set up according to TS 36.508 [7] subclause 4.4.3.
3. Downlink signals for PCC are initially set up according to Annex C.0, C.1, and C.3.1, and uplink signals according to Annex H.1 and H.3.0.
4. The UL and DL Reference Measurement channels are set according to Table 7.6.2A.7.4.1-1 through Table 7.6.2A.7.4.1-6 as appropriate.
5. Propagation conditions are set according to Annex B.0.
6. Ensure the UE is in State 3A-RF according to TS 36.508 [7] clause 5.2A.2. Message contents are defined in clause 7.6.2A.7.4.3.

#### 7.6.2A.7.4.2 Test Procedure

1. Configure SCCs according to Annex C.0, C.1 and Annex C.3.1 for all downlink physical channels.
2. The SS shall configure SCCs as per TS 36.508 [7] clause 5.2A.4. Message contents are defined in clause 7.6.2A.7.4.3
3. SS activates SCCs by sending the activation MAC-CE (Refer TS 36.321 [13], clauses 5.13, 6.1.3.8). Wait for at least 2 seconds (Refer TS 36.133, clauses 8.3.3.2).
4. SS transmits PDSCH via PDCCH DCI format 1A for C\_RNTI to transmit the DL RMC according to Table 7.6.2A.7.4.1-1 through Table 7.6.2A.7.4.1-6 as appropriate on PCC and SCCs. The SS sends downlink MAC padding bits on the DL RMC.
5. SS sends uplink scheduling information for each UL HARQ process via PDCCH DCI format 0 for C\_RNTI to schedule the UL RMC according to Table 7.6.2A.7.4.1-1 through Table 7.6.2A.7.4.1-6 on PCC. Since the UE has no payload data to send, the UE sends uplink MAC padding bits on the UL RMC.
6. Set the parameters of the CW signal generator for an interfering signal below the lowest CA Band according to the table indicated in the column "Table with interferer parameters to select" of Table 7.6.2A.7.4.2-1. The frequency step size is 1MHz. Use the highest  $\Delta R_{IB,c}$  among CA bands for  $P_{interferer}$  calculation.
7. Set the downlink signal level according to the table indicated in the column "Table with transmission parameters to select" of Table 7.6.2A.7.4.2-1. Send uplink power control commands to the UE (less or equal to 1dB step size should be used), to ensure that the UE output power is within +0, - 3.4 dB of the target level in table 7.6.2A.7.5-1 for carrier frequency  $f \leq 3.0\text{GHz}$  or within +0, -4.0 dB of the target level for carrier frequency  $3.0\text{GHz} < f \leq 4.2\text{GHz}$ , for at least the duration of the throughput measurement.
8. Measure the average throughput for the carrier(s) indicated in the Table 7.6.2A.7.4.2-1 for duration sufficient to achieve statistical significance according to Annex G.2A.
9. Record the frequencies for which the throughput doesn't meet the requirements and for each frequency, the carriers for which the throughput was not met.
10. Repeat steps 6 to 8 for each recorded frequency-carrier pair, with exception of pairs for which  $\Delta R_{IB,c}$  is the same as  $\Delta R_{IB}$  used in Step 6. In Step 6 use only recorded frequencies for interferer placement and use  $\Delta R_{IB,c}$  relevant to recorded carrier for  $P_{interferer}$  calculation. Remove the frequency-carrier pairs that meet the throughput requirements from the record.
11. If the CA Configuration includes multiple bands, repeat steps from 6 to 10 using an interfering signal in each gap between the CA bands, according to the table indicated in the column "Table with interferer parameters to select" of Table 7.6.2A.7.4.2-1.
12. Repeat steps from 6 to 10, using an interfering signal above the highest CA Band according to the table indicated in the column "Table with interferer parameters to select" of Table 7.6.2A.7.4.2-1.
13. Repeat steps 1 to 12 for each row of "Throughput measured on" column listed in the Table 7.6.2A.7.4.2-1.

Table 7.6.2A.7.4.2-1: Test repetition and measurement configuration

CA configuration	ID (Note 1)	Throughput measured on (Note 3)	Table with transmission parameters to select	Table with interferer parameters to select (Note 2)
Intra-band contiguous	1	PCC, SCC1, SCC2, SCC3	7.6.2A.7.5-1	7.6.2A.7.5-2
Inter-band	1	SCC1, SCC2, SCC3	7.6.2A.7.5-3	7.6.2A.7.5-4
	2	SCC1, SCC2, SCC3		
	3	SCC1, SCC2, SCC3		
	4	SCC1, SCC2, SCC3		
Intra-band contiguous + Inter-band	1	SCC2	7.6.2A.7.5-3	7.6.2A.7.5-4
	2	SCC1, SCC2	7.6.2A.7.5-1	7.6.2A.7.5-2
	3	SCC3	7.6.2A.7.5-3	7.6.2A.7.5-4
Intra-band non-contiguous + Inter-band	1	SCC2	7.6.2A.7.5-3	7.6.2A.7.5-4
	2	SCC1,	7.6.2A.7.5-3	7.6.2A.7.5-5
		SCC2		
3	SCC3	7.6.2A.7.5-3	7.6.2A.7.5-4	
Intra-band non-contiguous + Intra-band contiguous	1	PCC	7.6.2A.7.5-3	7.6.2A.7.5-5
		SCC1, SCC2, SCC3	7.6.2A.7.5-1	7.6.2A.7.5-2
	2	SCC2	7.6.2A.7.5-3	7.6.2A.7.5-5
		PCC, SCC1, SCC3	7.6.2A.7.5-1	7.6.2A.7.5-2
Intra-band non-contiguous + Intra-band non-contiguous	1	SCC2 SCC3	7.6.2A.7.5-3	7.6.2A.7.5-5
	2			

Note 1: Test point ID for the particular CA configuration as defined in section 7.6.2A.7.4.1.  
Note 2: The reference for the placement of the interferer signals is the centre frequency of the carrier closest to the interferer among the carriers throughput is measured on.  
Note 3: Where there are multiple rows for a single Test point ID, the test is repeated for each row.

#### 7.6.2A.7.4.3 Message Contents

Same message contents as in clause 7.6.2A.1.4.3.

#### 7.6.2A.7.5 Test Requirement

Except for the spurious response frequencies recorded at the final step of test procedure, the throughput measurement of each carrier derived in test procedure shall be  $\geq 95\%$  of the maximum throughput of the reference measurement channels as specified in Annex A.3.2 with parameters specified in Tables below, according to the type of CA.

For Table 7.6.2A.7.5-2 in frequency range 1, 2 and 3, up to  $\max(24,6 \cdot \lceil N_{RB} \cdot /6 \rceil)$  exceptions are allowed for spurious response frequencies in each assigned frequency channel when measured using a 1MHz step size, where  $N_{RB}$  is the allocated number of resource blocks in the frequency channel. For these exceptions the requirements of subclause 7.7A.5 Spurious Response for CA are applicable.

Table 7.6.2A.7.5-1: Out-of-band blocking parameters (intra-band contiguous)

Rx Parameter	Units	CA Bandwidth Class				
		B	C	D	E	F
Pw in Transmission Bandwidth Configuration, per CC	dBm	REFSENS + CA Bandwidth Class specific value below				
		9	9	9	9	

Note 1: The transmitter shall be set to 4dB below  $P_{CMAX\_L}$  or  $P_{CMAX\_L\_CA}$  as defined in subclause 6.2.5A.  
Note 2: Reference measurement channel is specified in Annex A.3.2 with one sided dynamic OCN Pattern OP.1 FDD/TDD as described in Annex A.5.1.1/A.5.2.

**Table 7.6.2A.7.5-2: Out of band blocking (intra-band contiguous)**

CA configuration	Parameter	Units	Frequency		
			range 1	range 2	range 3
			-44	-30	-15
CA_1C, CA_2C, CA_3C, CA_5B, CA_7C, CA_8B, CA_12B, CA_23B, CA_27B, CA_38C, CA_40C, CA_41C, CA_40D, CA_42C <sup>1</sup> , CA_42D <sup>1</sup> , CA_42E <sup>1</sup> , CA_66B, CA_66C, CA_66D, CA_70C	$P_{\text{Interferer}}$	dBm	$F_{\text{DL\_low}} - 15$ to $F_{\text{DL\_low}} - 60$	$F_{\text{DL\_low}} - 60$ to $F_{\text{DL\_low}} - 85$	$F_{\text{DL\_low}} - 85$ to 1 MHz
	$F_{\text{Interferer}}$ (CW)	MHz	$F_{\text{DL\_high}} + 15$ to $F_{\text{DL\_high}} + 60$	$F_{\text{DL\_high}} + 60$ to $F_{\text{DL\_high}} + 85$	$F_{\text{DL\_high}} + 85$ to +12750 MHz
Note 1: The power level of the interferer ( $P_{\text{Interferer}}$ ) for this CA configuration for Range 3 shall be modified to -20 dBm for $F_{\text{Interferer}} > 2800$ MHz and $F_{\text{Interferer}} < 4400$ MHz.					

For Table 7.6.2A.7.5-4 frequency range 1, 2, and 3, the number of spurious response frequencies recorded in the step 9 of the test procedure shall not exceed  $\max(24, 6 \cdot \lceil N_{RB} / 6 \rceil)$  exceptions per downlink in each assigned frequency channel when measured using a 1MHz step size. For these exceptions the requirements of clause 7.7A.5 Spurious Response for CA are applicable.

**Table 7.6.2A.7.5-3: Out-of-band blocking parameters (inter-band, intra-band non-contiguous)**

Rx Parameter	Units	Channel bandwidth					
		1.4 MHz	3 MHz	5 MHz	10 MHz	15 MHz	20 MHz
Pw in Transmission Bandwidth Configuration	dBm	REFSENS + channel bandwidth specific value below					
		6	6	6	6	7	9
Note 1: The transmitter shall be set to 4dB below $P_{\text{CMAX\_L}}$ with $P_{\text{CMAX\_L}}$ as defined in clause 6.2.5. Note 2: The reference measurement channel is specified in Annex A.3.2 with one sided dynamic OCNB Pattern OP.1 FDD/TDD as described in Annex A.5.1.1/A.5.2.1. NOTE 3: The REFSENS power level is specified in Table 7.3.1-1 and Table 7.3.1-1a for two and four antenna ports, respectively.							

**Table 7.6.2A.7.5-4: Out-of-band blocking for inter-band carrier aggregation with one uplink carrier**

Parameter	Unit	Range 1	Range 2	Range 3
$P_{\text{wanted}}$	dBm	Table 7.6.2A.7.5-3 for all component carriers		
$P_{\text{interferer}}$	dBm	$-44 + \Delta R_{\text{IB,c}}$	$-30 + \Delta R_{\text{IB,c}}$	$-15 + \Delta R_{\text{IB,c}}$
$F_{\text{interferer}}$ (CW)	MHz	$-60 < f - F_{\text{DL\_Low}(j)} < -15$ or $15 < f - F_{\text{DL\_High}(j)} < 60$	$-85 < f - F_{\text{DL\_Low}(j)} \leq -60$ or $60 \leq f - F_{\text{DL\_High}(j)} < 85$	$1 \leq f \leq F_{\text{DL\_Low}(j)} - 85$ or $F_{\text{DL\_High}(j)} + 85 \leq f \leq F_{\text{DL\_Low}(j+1)} - 85$ with $j < X$ or $F_{\text{DL\_High}(X)} + 85 \leq f \leq 12750$
Note 1:	$F_{\text{DL\_Low}(j)}$ and $F_{\text{DL\_High}(j)}$ denote the respective lower and upper frequency limits of the operating band containing carrier $j$ , $j = 1, \dots, X$ , with carriers numbered in increasing order of carrier frequency and $X$ the number of component carriers in the band combination ( $X \leq 5$ for the present version of this specification).			
Note 2:	For $F_{\text{DL\_Low}(j+1)} - F_{\text{DL\_High}(j)} < 145$ MHz and $F_{\text{interferer}}$ in $F_{\text{DL\_High}(j)} < f < F_{\text{DL\_Low}(j+1)}$ , $F_{\text{interferer}}$ can be in both Range 1 and Range 2. Then the lower of the $P_{\text{interferer}}$ applies.			
Note 3:	For $F_{\text{DL\_Low}(j)} - 15$ MHz $\leq f \leq F_{\text{DL\_High}(j)} + 15$ MHz the appropriate adjacent channel selectivity and in-band blocking requirements in the respective subclauses 7.5A.5.5 and 7.6.1A.5.5 shall be applied for carrier $j$ .			
Note 4:	$\Delta R_{\text{IB,c}}$ according to Table 7.3.3-1A applies when serving cell $c$ is measured.			
Note 5:	For inter-band CA combinations containing Bands 42 or 43, the interferer with respect to Band 42 or Band 43 shall have power level ( $P_{\text{interferer}}$ ) for Range 3 modified to $-20 + \Delta R_{\text{IB,c}}$ dBm for $F_{\text{interferer}} > 2800$ MHz and $F_{\text{interferer}} < 4400$ MHz.			
Note 6:	For inter-band CA combinations containing Bands 7 and 38 simultaneously, for $F_{\text{interferer}}$ Bands 7 and 38 are considered as one single band as follows: $F_{\text{DL\_Low}} = 2570$ MHz and $F_{\text{DL\_High}} = 2690$ MHz. For Range 2, the following applies for $F_{\text{DL\_Low}}$ : $-95 < f - F_{\text{DL\_Low}} \leq -60$ or $60 \leq f - F_{\text{DL\_High}} < 85$ . For Range 3 the following applies $1 \leq f \leq F_{\text{DL\_Low}} - 95$ or $F_{\text{DL\_High}} + 85 \leq f \leq 12750$ .			

For Table 7.6.2A.7.5-5 in frequency range 1, 2 and 3, the number of spurious response frequencies recorded in the step 9 of the test procedure shall not exceed  $\max(24, 6 \cdot \lceil N_{\text{RB}} / 6 \rceil)$  exceptions per assigned E-UTRA channel per sub-block gap of the E-UTRA CA configuration are allowed for spurious response frequencies when measured using a 1MHz step size. For these exceptions the requirements of subclause 7.7A.5 spurious response for CA are applicable.

For Table 7.6.2A.7.5-5 in frequency range 4 the number of spurious response frequencies recorded in the step 9 of the test procedure shall not exceed  $\max(8, \lceil (N_{\text{RB}} + 2 \cdot L_{\text{CRBs}}) / 8 \rceil)$  exceptions per assigned E-UTRA channel per sub-block gap of the E-UTRA CA configuration are allowed for spurious response frequencies when measured using a 1MHz step size. For these exceptions the requirements of clause 7.7A.5 spurious response for CA are applicable.

**Table 7.6.2A.7.5-5: Out of band blocking (intra-band non-contiguous)**

E-UTRA band	Parameter	Units	Frequency			
			range 1	range 2	range 3	range 4
	$P_{\text{interferer}}$	dBm	-44	-30	-15	-15
1, 2, 3, 4, 5, 6, 7, 8, 9, 10, 11, 12, 13, 14, 17, 18, 19, 20, 21, 22, 23, 24, 25, 26, 27, 28, 30, 31, 33, 34, 35, 36, 37, 38, 39, 40, 41, 42 (NOTE 2), 43 (NOTE 2), 44, 45, 65, 66, 68, 70	$F_{\text{interferer}}$ (CW)	MHz	$F_{\text{DL\_low}} - 15$ to $F_{\text{DL\_low}} - 60$  $F_{\text{DL\_high}} + 15$ to $F_{\text{DL\_high}} + 60$	$F_{\text{DL\_low}} - 60$ to $F_{\text{DL\_low}} - 85$  $F_{\text{DL\_high}} + 60$ to $F_{\text{DL\_high}} + 85$	$F_{\text{DL\_low}} - 85$ to 1 MHz  $F_{\text{DL\_high}} + 85$ to +12750 MHz	-
2, 5, 12, 17	$F_{\text{interferer}}$	MHz	-	-	-	$F_{\text{UL\_low}} - F_{\text{UL\_high}}$

NOTE 1: For the UE which supports both Band 11 and Band 21 the out of blocking is FFS.

NOTE 2: The power level of the interferer ( $P_{\text{Interferer}}$ ) for Range 3 shall be modified to -20 dBm for  $F_{\text{Interferer}} > 2800$  MHz and  $F_{\text{Interferer}} < 4400$  MHz.

NOTE 3: For the UE that supports both Band 4 and Band 66, the out-of-blocking frequency range for Band 4 is defined relative to  $F_{\text{DL\_low}}$  and  $F_{\text{DL\_high}}$  of Band 66.

NOTE 4: For a UE supporting CA\_20A-28A the requirements for Band 20 and Band 28 apply with  $F_{\text{DL\_low}}$  given by the lower limit of the restricted operating frequency range in Band 28 and  $F_{\text{DL\_high}}$  by Band 20 (Table 5.5A-2).

For a UE, which supports CA configuration in Tables 7.3.3-1A, 7.3.3-1B and 7.3.3-1C,  $P_{\text{Interferer}}$  power defined in Tables 7.6.2A.7.5.2, 7.6.2A.7.5-4 and 7.6.2A.7.5-5 is increased by the amount given by  $\Delta R_{\text{IB,c}}$  in Tables 7.3.3-1A, 7.3.3-1B and 7.3.3-1C accordingly.

## 7.6.2B Out-of-band blocking for UL-MIMO

### 7.6.2B.1 Test Purpose

Out-of-band band blocking for UL-MIMO is defined for an unwanted CW interfering signal falling more than 15 MHz below or above the UE that support UL- MIMO receive band, at which a given average throughput shall meet or exceed the requirement for the specified measurement channels.

For the first 15 MHz below or above the UE that support UL-MIMO receive band the appropriate in-band blocking for UL-MIMO or adjacent channel selectivity for UL-MIMO in sub-clause 7.5.3 and sub-clause 7.6.1.3 shall be applied.

The lack of out-of-band blocking ability will decrease the coverage area when other e-NodeB transmitters exist (except in the adjacent channels and spurious response).

### 7.6.2B.2 Test Applicability

This test applies to all types of E-UTRA UE release 10 and forward that support UL-MIMO.

### 7.6.2B.3 Minimum Conformance Requirements

For UE with two transmitter antenna connectors in closed-loop spatial multiplexing scheme, the minimum requirements in subclause 7.6 shall be met with the UL-MIMO configurations specified in Table 6.2.2B.3-2. For UL-MIMO, the parameter  $P_{\text{CMAX\_L}}$  is defined as the total transmitter power over the two transmit antenna connectors.

The normative reference for this requirement is TS 36.101 [2] clause 7.6B.

### 7.6.2B.4 Test Description

#### 7.6.2B.4.1 Initial Conditions

Initial conditions are a set of test configurations the UE needs to be tested in and the steps for the SS to take with the UE to reach the correct measurement state.

The initial test configurations consist of environmental conditions, test frequencies, and channel bandwidths based on E-UTRA bands specified in table 5.4.2.1-1. All of these configurations shall be tested with applicable test parameters for each channel bandwidth, and are shown in table 7.6.2B.4.1-1. The details of the uplink and downlink reference measurement channels (RMCs) are specified in Annexes A.2 and A.3 respectively. The details of the OCNG patterns used are specified in Annex A.5. Configurations of PDSCH and PDCCH before measurement are specified in Annex C.2.

Table 7.6.2B.4.1-1: Test Configuration Table

Initial Conditions						
Test Environment as specified in TS 36.508[7] subclause 4.1			NC			
Test Frequencies as specified in TS36.508 [7] subclause 4.3.1			One frequency chosen arbitrarily from low or high range			
Test Channel Bandwidths as specified in TS 36.508 [7] subclause 4.3.1			Lowest, 5MHz, Highest			
Test Parameters for Channel Bandwidths						
Ch BW	Downlink Configuration			Uplink Configuration		
	Mod'n	RB allocation		Mod'n	RB allocation	
		FDD	TDD		FDD	TDD
1.4MHz	QPSK	6	6	QPSK	6	6
3MHz	QPSK	15	15	QPSK	15	15
5MHz	QPSK	25	25	QPSK	25	25
5MHz	QPSK	25	N/A	QPSK	20	N/A
5MHz	QPSK	25	N/A	QPSK	15	N/A
5MHz	QPSK	25	N/A	QPSK	5 <sup>4</sup>	N/A
10MHz	QPSK	50	50	QPSK	50	50
10MHz	QPSK	50	N/A	QPSK	25	N/A
10MHz	QPSK	50	N/A	QPSK	20	N/A
10MHz	QPSK	50	N/A	QPSK	15	N/A
15MHz	QPSK	75	75	QPSK	75	75
15MHz	QPSK	75	N/A	QPSK	50	N/A
15MHz	QPSK	75	N/A	QPSK	25	N/A
15MHz	QPSK	75	N/A	QPSK	20	N/A
20MHz	QPSK	100	100	QPSK	100	100
20MHz	QPSK	100	N/A	QPSK	75	N/A
20MHz	QPSK	100	N/A	QPSK	50	N/A
20MHz	QPSK	100	N/A	QPSK	25	N/A
20MHz	QPSK	100	N/A	QPSK	20	N/A
Note 1: Test Channel Bandwidths are checked separately for each E-UTRA band, which applicable channel bandwidths are specified in Table 5.4.2.1-1. Note 2: Depending on E-UTRA band, only the appropriate Uplink RB allocation value according to table 7.3.3-2 is tested per Test Channel Bandwidth. Note 3: For the DL signal one sided dynamic OCNG Pattern OP.1 FDD/TDD is used. Note 4: Applicable only to E-UTRA FDD Band 31. The UL resource blocks shall be located at RBstart 10 (according to Table 7.3.3-2).						

1. Connect the SS to the UE antenna connectors as shown in TS 36.508 [7] Annex A, in Figure A.30.
2. The parameter settings for the cell are set up according to TS 36.508 [7] subclause 4.4.3.
3. Downlink signals are initially set up according to Annex C0, C.1 and C.3.1, and uplink signals according to Annex H.1 and H.3.1.
4. The UL and DL Reference Measurement channels are set according to Table 7.6.2B.4.1-1.
5. Propagation conditions are set according to Annex B.0.
6. Ensure the UE is in State 3A-RF according to TS 36.508 [7] clause 5.2A.2. Message contents are defined in clause 7.6.2B.4.3.

#### 7.6.2B.4.2 Test Procedure

1. SS transmits PDSCH via PDCCH DCI format 1A for C\_RNTI to transmit the DL RMC according to Table 7.6.2B.4.1-1. The SS sends downlink MAC padding bits on the DL RMC.
2. SS sends uplink scheduling information for each UL HARQ process via PDCCH DCI format 4 for C\_RNTI to schedule the UL RMC according to Table 7.6.2B.4.1-1. Since the UE has no payload data to send, the UE transmits uplink MAC padding bits on the UL RMC.
3. Set the parameters of the CW signal generator for an interfering signal below the wanted signal according to Table 7.6.2B.5-2. The frequency step size is 1MHz.

4. Set the downlink signal level according to the table 7.6.2B.5-1. Send uplink power control commands to the UE (less or equal to 1dB step size should be used), to ensure that the UE output power is within +0, - 3.4 dB of the target level in table 7.6.2B.5-1 for carrier frequency  $f \leq 3.0\text{GHz}$  or within +0, -4.0 dB of the target level for carrier frequency  $3.0\text{GHz} < f \leq 4.2\text{GHz}$ , for at least the duration of the throughput measurement.
5. Measure the average throughput for a duration sufficient to achieve statistical significance according to Annex G.2.
6. Record the frequencies for which the throughput doesn't meet the requirements.
7. Repeat steps from 3 to 6, using an interfering signal above the wanted signal at step 3.

#### 7.6.2B.4.3 Message Contents

Message contents are according to TS 36.508 [7] clause 4.6 with the following exception.

**Table 7.6.2B.4.3-1: UplinkPowerControlDedicated**

Derivation Path: 36.331 clause 6.3.2			
Information Element	Value/remark	Comment	Condition
UplinkPowerControlDedicated-DEFAULT ::= SEQUENCE {			
p0-UePUSCH	0		
deltaMCS-Enabled	en0		
accumulationEnabled	TRUE		
p0-uePUCCH	0		
pSRS-Offset	3 (-6 dB)		
filterCoefficient	fc8	larger filter length is used to reduce the RSRP measurement variation	
}			

#### 7.6.2B.5 Test Requirement

Except for the spurious response frequencies recorded at the final step of test procedure, the throughput measurement derived in test procedure shall be  $\geq 95\%$  of the maximum throughput of the reference measurement channels as specified in Annex A.3.2 with parameters specified in Tables 7.6.2B.5-1 and 7.6.2B.5-2.

For frequency range 1, 2, and 3, the number of spurious response frequencies recorded in the final step of test procedure shall not exceed  $\max(24, 6 \cdot \lceil N_{RB} / 6 \rceil)$  in each assigned frequency channel when measured using a 1MHz step size. For these exceptions the requirements of clause 7.7 Spurious Response are applicable.

For frequency range 4, the number of spurious response frequencies recorded in the final step of test procedure shall not exceed  $\max(8, \lceil (N_{RB} + 2 \cdot L_{CRBS}) / 8 \rceil)$  in each assigned frequency channel when measured using a 1MHz step size. For these exceptions the requirements of clause 7.7 Spurious Response are applicable.

**Table 7.6.2B.5-1: Out-of-band blocking parameters**

Rx Parameter	Units	Channel bandwidth					
		1.4 MHz	3 MHz	5 MHz	10 MHz	15 MHz	20 MHz
Power in Transmission Bandwidth Configuration	dBm	REFSENS + channel bandwidth specific value below					
		6	6	6	6	7	9
Note 1:	The transmitter shall be set to 4dB below $P_{\text{CMAX\_L}}$ with $P_{\text{CMAX\_L}}$ as defined in clause 6.2.5.						
Note 2:	The reference measurement channel is specified in Annex A.3.2 with one sided dynamic OCN Pattern OP.1 FDD/TDD as described in Annex A.5.1.1/A.5.2.1.						

**Table 7.6.2B.5-2: Out of band blocking**

E-UTRA band	Parameter	Units	Frequency			
			range 1	range 2	range 3	range 4
	$P_{\text{Interferer}}$	dBm	-44	-30	-15	-15
1, 2, 3, 4, 5, 6, 7, 8, 9, 10, 11, 12, 13, 14, 17, 18, 19, 20, 21, 22, 23, 24, 25, 26, 27, 28, 30, 31, 33, 34, 35, 36, 37, 38, 39, 40, 41, 42, 43, 44, 45, 65, 66	$F_{\text{Interferer}}$ (CW)	MHz	$F_{\text{DL\_low}} -15$ to $F_{\text{DL\_low}} -60$	$F_{\text{DL\_low}} -60$ to $F_{\text{DL\_low}} -85$	$F_{\text{DL\_low}} -85$ to 1 MHz	-
			$F_{\text{DL\_high}} +15$ to $F_{\text{DL\_high}} +60$	$F_{\text{DL\_high}} +60$ to $F_{\text{DL\_high}} +85$	$F_{\text{DL\_high}} +85$ to +12750 MHz	-
2, 5, 12, 17	$F_{\text{Interferer}}$	MHz	-	-	-	$F_{\text{UL\_low}} - F_{\text{UL\_high}}$
Note 1: Range 3 shall be tested only with the highest channel bandwidth. Note 2: For the UE which supports both Band 11 and Band 21 the out of blocking is FFS. Note 3: The power level of the interferer ( $P_{\text{Interferer}}$ ) for Range 3 shall be modified to -20 dBm for $F_{\text{Interferer}} > 2800$ MHz and $F_{\text{Interferer}} < 4400$ MHz. Note 4: For the UE that supports both Band 4 and Band 66, the out-of-blocking frequency range for Band 4 is defined relative to $F_{\text{DL\_low}}$ and $F_{\text{DL\_high}}$ of Band 66.						

## 7.6.2D Out-of-band blocking for ProSe

### 7.6.2D.0 Minimum conformance requirements

The throughput shall be  $\geq 95\%$  of the maximum throughput of the reference measurement channels as specified in Annex A.6.2 with parameters specified in Tables 7.6.2.1D.0-1, 7.6.2.1D.0-2 and 7.6.2.1D.0-3.

For Table 7.6.2D.0-3 in frequency range 1, 2 and 3, up to  $\max(24, 6 \cdot \lceil N_{RB} / 6 \rceil)$  exceptions are allowed for spurious response frequencies in each assigned frequency channel when measured using a 1MHz step size, where  $N_{RB}$  is the number of resource blocks in the downlink transmission bandwidth configuration (see Figure 5.4.2-1). For these exceptions the requirements of subclause 7.7D Spurious response are applicable.

For Table 7.6.2D.0-3 in frequency range 4, up to  $\max(8, \lceil (N_{RB} + 2 \cdot L_{CRBs}) / 8 \rceil)$  exceptions are allowed for spurious response frequencies in each assigned frequency channel when measured using a 1MHz step size, where  $N_{RB}$  is the number of resource blocks in the downlink transmission bandwidth configurations (see Figure 5.6-1) and  $L_{CRBs}$  is the number of resource blocks allocated in the uplink. For these exceptions the requirements of clause 7.7D spurious response are applicable.

**Table 7.6.2D.0-1: Out-of-band blocking parameters for ProSe Direct Discovery**

Rx Parameter	Units	Channel bandwidth					
		1.4 MHz	3 MHz	5 MHz	10 MHz	15 MHz	20 MHz
Power in Transmission Bandwidth Configuration	dBm	$P_{\text{REFSENS\_ProSe}}$ + channel bandwidth specific value below + $P_{\text{offset}}$					
				6	6	7	9
$P_{\text{offset}}$	dB			10.9	13.9	15.7	16.9
NOTE 1: Reference measurement channel is specified in Annex A.6.2.							

**Table 7.6.2D.0-2: Out-of-band blocking parameters for ProSe Direct Communication**

Rx Parameter	Units	Channel bandwidth					
		1.4 MHz	3 MHz	5 MHz	10 MHz	15 MHz	20 MHz
Power in Transmission Bandwidth Configuration	dBm	$P_{\text{REFSENS, ProSe}} + \text{channel bandwidth specific value below}$					
				6	6	7	9

NOTE 1: Reference measurement channel is specified in Annex A.6.2.

**Table 7.6.2D.0-3: Out of band blocking for ProSe**

E-UTRA ProSe band	Parameter	Units	Frequency		
			Range 1	Range 2	Range 3
	$P_{\text{Interferer}}$	dBm	-44	-30	-15
2,3,4,7,14,20,26,28,31	$F_{\text{Interferer}}(\text{CW})$	MHz	$F_{\text{DL\_low}} -15$ to $F_{\text{DL\_low}} -60$	$F_{\text{DL\_low}} -60$ to $F_{\text{DL\_low}} -85$	$F_{\text{DL\_low}} -85$ to 1 MHz
			$F_{\text{DL\_high}} +15$ to $F_{\text{DL\_high}} +60$	$F_{\text{DL\_high}} +60$ to $F_{\text{DL\_high}} +85$	$F_{\text{DL\_high}} +85$ to +12750 MHz

NOTE 1: For the UE which supports both Band 11 and Band 21 the out of blocking is FFS.

The normative reference for this requirement is TS 36.101 [2] clause 7.6.2.1D.

### 7.6.2D.1 Out-of-band blocking for ProSe Direct Discovery

**Editor's note: This test case is not complete. Following aspects are either missing or not yet determined:**

- ProSe UE authentication is not handled in the test case and is still under investigation.
- Use of OCNG for Downlink has not been considered and is still FFS.
- Message exceptions content needs further investigation (some values still TBD).
- Test time is FFS.
- Test system uncertainties and test tolerances are TBD
- Connection Diagram is FFS

#### 7.6.2D.1.1 Test Purpose

Out-of-band blocking for ProSe is defined for an unwanted CW interfering signal falling more than 15 MHz below or above the ProSe band, at which a given average throughput shall meet or exceed the requirement for the specified measurement channels in aggregated signals.

For the first 15 MHz below or above the ProSe band the appropriate in-band blocking or adjacent channel selectivity in sub-clause 7.5D and sub-clause 7.6.1D shall be applied.

The lack of out-of-band blocking ability will decrease the coverage area when other e-NodeB transmitters exist (except in the adjacent channels and spurious response).

#### 7.6.2D.1.2 Test Applicability

This test applies to all types of E-UTRA UE release 12 and forward which support ProSe Direct Discovery, but not ProSe Direct Communication.

#### 7.6.2D.1.3 Minimum Conformance Requirements

The minimum conformance requirements are defined in clause 7.6.2D.0.

## 7.6.2D.1.4 Test Description

### 7.6.2D.1.4.1 Initial Conditions

Initial conditions are a set of test configurations the UE needs to be tested in and the steps for the SS to take with the UE to reach the correct measurement state.

The initial test configurations consist of environmental conditions, test frequencies, and channel bandwidths based on E-UTRA ProSe bands specified in table 5.4.2D.1-1. All of these configurations shall be tested with applicable test parameters for each channel bandwidth, and are shown in table 7.6.2D.1.4.1-1. The details of the downlink, uplink and sidelink reference measurement channels (RMCs) are specified in Annexes A.2, A.3 and A.6.

**Table 7.6.2D.1.4.1-1: Test Configuration Table**

Initial Conditions						
Test Environment as specified in TS 36.508 [7] subclause 4.1			NC			
Test Frequencies as specified in TS36.508 [7] subclause 4.3.1			Mid range (Note 4)			
Test Channel Bandwidths as specified in TS 36.508 [7] subclause 4.3.1			Highest			
	Downlink Configuration (Note 2)		Uplink Configuration (Note 2)		Sidelink Configuration (Reception) (Note 3)	
Ch BW	Mod'n	RB allocation	Mod'n	RB allocation	Mod'n	RB allocation
5MHz	QPSK	8	QPSK	8	QPSK	2
10MHz	QPSK	16	QPSK	16	QPSK	2
15MHz	QPSK	25	QPSK	25	QPSK	2
20MHz	QPSK	30	QPSK	30	QPSK	2
Note 1: Test Channel Bandwidths are checked separately for each E-UTRA ProSe and Operating band, according to the applicability specified respectively in Table 5.4.2D.1-1 and Table 5.4.2.1-1. Note 2: After DRX configuration, DL-RMC (PDSCH) and DCI-0 for scheduling UL-RMC (PUSCH) are applied only in the DRX On subframes. Note 3: The RB start for the transmission of Sidelink RMC is RB#0. Note 4: Sidelink uses the frequencies defined for Uplink.						

1. Connect the SS to the UE antenna connectors as shown in TS 36.508 [7] Annex A, Figure [FFS].
2. The parameter settings for the cell are set up according to TS 36.508 [7] clause 4.4.3.
3. Downlink signals are initially set up according to Annex C.0, C.1 and C.3.1, and uplink signals according to Annex H.1 and H.3.1.
4. The UL and DL Reference Measurement channels are set according to Table 7.6.2D.1.4.1-1.
5. Propagation conditions are set according to Annex B.0.
6. Ensure the UE is in State 2A-RF according to TS 36.508 [7] clause 5.2A.1A. Message contents exceptions are defined in clause 7.6.2D.1.4.3.
7. SS continues with the generic procedures described in TS 36.508 [7] clause 4.5.3A.3 and 4.5.4.3 and ensures the UE is in State 4 according to TS 36.508 [7] clause 4.5.4 and the UE test loop Mode D is activated.

### 7.6.2D.1.4.2 Test Procedure

1. SS shall transmit an RRCConnectionReconfiguration message to configure DRX. Message contents exceptions (only those marked with "...Step 1..." ) are defined in clause 7.6.2D.1.4.3.
2. The UE shall transmit RRCConnectionReconfigurationComplete message.
3. Initialise the variables Ptot and Pok as 0.
4. SS transmits PDSCH via PDCCH DCI format 1A for C\_RNTI to transmit the DL RMC according to Table 7.3D.1.4.1-1. The SS sends downlink MAC padding bits on the DL RMC.

5. SS sends uplink scheduling information via PDCCH DCI format 0 for C\_RNTI to schedule the UL RMC according to Table 7.6.2D.1.4.1-1. When the UE has no payload data to send, it transmits uplink MAC padding bits on the UL RMC.
6. Set the parameters of the CW signal generator for an interfering signal below the Sidelink Band according to Table 7.6.2D.1.5-2. The frequency step size is 1MHz.
7. SS transmits PSDCH to transmit the SL RMC according to Table 7.6.2D.1.4.1-1. Set the Sidelink signal level to the appropriate value defined in Table 7.6.2D.1.5-1.
8. SS shall send SL Discovery Packets (MAC padding bits) on the SL RMC for the test time [FFS]. SS stores the number of the transmitted Discovery Packets in the current test iteration in the variable Ptot.
9. SS shall send (on the available PDSCH) a "UE TEST LOOP PROSE MODE D SIDELINK DIRECT DISCOVERY PACKET COUNTER REQUEST" message and wait for the UE to respond (on the available PUSCH) with a "UE TEST LOOP PROSE MODE D SIDELINK DIRECT DISCOVERY PACKET COUNTER RESPONSE".
10. SS calculates the variable Pok as (current counter value - counter value at last test iteration).
11. SS shall compute the throughput as following:
 
$$TP = Pok / Ptot * 100\%$$
12. Record the frequencies for which the throughput doesn't meet the requirements.
13. Repeat steps from 6 to 12, using an interfering signal above the Sidelink Band at step 6.

### 7.6.2D.1.5 Test Requirement

Except for the spurious response frequencies recorded in step 12 of the test procedure, the throughput measurement of the sidelink derived in the test procedure shall be  $\geq 95\%$  of the maximum throughput of the reference measurement channels as specified in Annex A.6.2 with parameters specified in Table 7.6.2D.1.5-1 and 7.6.2D.1.5-2.

For Table 7.6.2D.1.5-2 in frequency range 1, 2 and 3, up to  $\max(24, 6 \cdot \lceil N_{RB} / 6 \rceil)$  exceptions are allowed for spurious response frequencies in each assigned frequency channel when measured using a 1MHz step size, where  $N_{RB}$  is the number of resource blocks in the downlink transmission bandwidth configuration (see Figure 5.6-1). For these exceptions the requirements of subclause 7.7D Spurious response are applicable.

**Table 7.6.2D.1.5-1: Out-of-band blocking parameters for ProSe Direct Discovery**

Rx Parameter	Units	Channel bandwidth					
		1.4 MHz	3 MHz	5 MHz	10 MHz	15 MHz	20 MHz
Power in Transmission Bandwidth Configuration	dBm	P <sub>REFSENS_ProSe</sub> + channel bandwidth specific value below + P <sub>offset</sub>					
				6	6	7	9
P <sub>offset</sub>	dB			10.9	13.9	15.7	16.9
NOTE 1: Reference measurement channel is specified in Annex A.6.2.							

**Table 7.6.2D.1.5-2: Out of band blocking for ProSe**

E-UTRA ProSe band	Parameter	Units	Frequency		
			Range 1	Range 2	Range 3
	P <sub>Interferer</sub>	dBm	-44	-30	-15
2,3,4,7,14,20,26,28,31	F <sub>Interferer</sub> (CW)	MHz	F <sub>DL_low</sub> -15 to F <sub>DL_low</sub> -60	F <sub>DL_low</sub> -60 to F <sub>DL_low</sub> -85	F <sub>DL_low</sub> -85 to 1 MHz
			F <sub>DL_high</sub> +15 to F <sub>DL_high</sub> +60	F <sub>DL_high</sub> +60 to F <sub>DL_high</sub> +85	F <sub>DL_high</sub> +85 to +12750 MHz
NOTE 1: For the UE which supports both Band 11 and Band 21 the out of blocking is FFS.					

## 7.6.2D.2 Out-of-band blocking for ProSe Direct Communication

Editor's note: This test case is not complete. Following aspects are either missing or not yet determined:

- Test description is TBD
- Test system uncertainties and test tolerances are TBD

### 7.6.2D.2.1 Test Purpose

Same test purpose as 7.6.2D.1.1.

### 7.6.2D.2.2 Test Applicability

This test applies to all types of E-UTRA UE release 12 and forward which support ProSe Direct Communication.

### 7.6.2D.2.3 Minimum Conformance Requirements

The minimum conformance requirements are defined in clause 7.6.2D.0.

### 7.6.2D.2.4 Test Description

TBD

### 7.6.2D.2.5 Test Requirement

Same test requirement as in clause 7.6.2D.1.5 with the following exceptions:

- Instead of Table 7.6.2D.1.5-1 → use Table 7.6.2D.2.5-1.
- Instead of Table 7.6.2D.1.5-2 → use Table 7.6.2D.2.5-2.

**Table 7.6.2D.2.5-1: Out-of-band blocking parameters for ProSe Direct Communication**

Rx Parameter	Units	Channel bandwidth				
		1.4 MHz	3 MHz	5 MHz	10 MHz	15 MHz
Power in Transmission Bandwidth Configuration	dBm	P <sub>PREFSENS_ProSe</sub> + channel bandwidth specific value below				
				6	6	7

NOTE 1: Reference measurement channel is specified in Annex A.6.2.

**Table 7.6.2D.2.5-2: Out of band blocking for ProSe**

E-UTRA ProSe band	Parameter	Units	Frequency		
			Range 1	Range 2	Range 3
	P <sub>Interferer</sub>	dBm	-44	-30	-15
2,3,4,7,14,20,26,28,31	F <sub>Interferer</sub> (CW)	MHz	F <sub>DL_low</sub> -15 to F <sub>DL_low</sub> -60	F <sub>DL_low</sub> -60 to F <sub>DL_low</sub> -85	F <sub>DL_low</sub> -85 to 1 MHz
			F <sub>DL_high</sub> +15 to F <sub>DL_high</sub> +60	F <sub>DL_high</sub> +60 to F <sub>DL_high</sub> +85	F <sub>DL_high</sub> +85 to +12750 MHz

NOTE 1: For the UE which supports both Band 11 and Band 21 the out of blocking is FFS.

## 7.6.2E Out-of-band blocking for UE category 0

### 7.6.2E.1 Test Purpose

Same test purpose as in clause 7.6.2.1.

### 7.6.2E.2 Test Applicability

This test applies to all types of E-UTRA UE release 12 and forward of UE category 0.

### 7.6.2E.3 Minimum Conformance Requirements

Same minimum conformance requirements as in clause 7.6.2.3.

### 7.6.2E.4 Test Description

#### 7.6.2E.4.1 Initial Conditions

Same initial conditions as in clause 7.6.2.4.1 with the following exceptions:

- Instead of Table 7.6.2.4.1-1 → use Table 7.6.2E.4.1-1.
- Connect the SS to the UE antenna connectors as shown in TS 36.508[7] Annex A Figure A.5 using only main UE Tx/Rx antenna.

**Table 7.6.2E.4.1-1: Test Configuration Table**

Initial Conditions						
Test Environment as specified in TS 36.508 [7] subclause 4.1				NC		
Test Frequencies as specified in TS 36.508 [7] subclause 4.3.1				One frequency chosen arbitrarily from low or high range		
Test Channel Bandwidths as specified in TS 36.508 [7] subclause 4.3.1				Lowest, 5MHz, Highest		
Test Parameters for Channel Bandwidths						
Ch BW	Downlink Configuration			Uplink Configuration		
	Mod'n	RB allocation		Mod'n	RB allocation	
		FDD and HD-FDD	TDD		FDD and HD-FDD	TDD
1.4MHz	QPSK	6	6	QPSK	6	6
3MHz	QPSK	14	14	QPSK	15	15
5MHz	QPSK	14	14	QPSK	25	25
5MHz	QPSK	14	N/A	QPSK	20	N/A
10MHz	QPSK	14	14	QPSK	36	36
10MHz	QPSK	14	N/A	QPSK	25	N/A
10MHz	QPSK	14	N/A	QPSK	20	N/A
15MHz	QPSK	14	14	QPSK	36	36
15MHz	QPSK	14	N/A	QPSK	20	N/A
20MHz	QPSK	14	14	QPSK	36	36
20MHz	QPSK	14	N/A	QPSK	20	N/A
Note 1:	Test Channel Bandwidths are checked separately for each E-UTRA band, which applicable channel bandwidths are specified in Table 5.4.2.1-1.					
Note 2:	Depending on E-UTRA band, only the appropriate Uplink RB allocation value according to table 7.3E.3-3 is tested per Test Channel Bandwidth. The allocation shall be located as close as possible to the downlink operating band but confined within the transmission bandwidth configuration for the channel bandwidth (Table 5.4.2-1).					
Note 3:	For the DL signal one sided dynamic OCNG Pattern OP.1 FDD/TDD is used.					
Note 4:	Downlink RB position shall be $RB_{start} = 0$ .					

#### 7.6.2E.4.2 Test Procedure

Same test procedure as in clause 7.6.2.4.2

#### 7.6.2E.4.3 Message Contents

Same message contents as in clause 7.6.2.4.3

#### 7.6.2E.5 Test Requirement

Except for the spurious response frequencies recorded at the final step of test procedure, the throughput measurement derived in test procedure shall be  $\geq 95\%$  of the maximum throughput of the reference measurement channels as specified in clause A.3.2 with parameters specified in Tables 7.6.2E.5-1 and 7.6.2E.5-2.

For frequency range 1, 2, and 3, the number of spurious response frequencies recorded in the final step of test procedure shall not exceed  $\max(24, 6 \cdot \lceil N_{RB} / 6 \rceil)$  in each assigned frequency channel when measured using a 1MHz step size. For these exceptions the requirements of clause 7.7E Spurious Response are applicable.

For frequency range 4, the number of spurious response frequencies recorded in the final step of test procedure shall not exceed  $\max(8, \lceil (N_{RB} + 2 \cdot L_{CRBs}) / 8 \rceil)$  in each assigned frequency channel when measured using a 1MHz step size. For these exceptions the requirements of clause 7.7E Spurious Response are applicable..

**Table 7.6.2E.5-1: Out-of-band blocking parameters**

Rx Parameter	Units	Channel bandwidth					
		1.4 MHz	3 MHz	5 MHz	10 MHz	15 MHz	20 MHz
Power in Transmission Bandwidth Configuration	dBm	REFSENS + channel bandwidth specific value below					
		6	6	6	6	7	9
Note 1: The transmitter shall be set to 4dB below $P_{CMAX\_L}$ with $P_{CMAX\_L}$ as defined in clause 6.2.5E.							
Note 2: The reference measurement channel is specified in clause A.3.2 with one sided dynamic OCN Pattern OP.1 FDD/TDD as described in clauses A.5.1.1/A.5.2.1.							

**Table 7.6.2E.5-2: Out of band blocking**

E-UTRA band	Parameter	Units	Frequency			
			range 1	range 2	range 3	range 4
	$P_{Interferer}$	dBm	-44	-30	-15	-15
2, 3, 4, 5, 8, 13, 20, 39, 41	$F_{Interferer}$ (CW)	MHz	$F_{DL\_low} -15$ to $F_{DL\_low} -60$	$F_{DL\_low} -60$ to $F_{DL\_low} -85$	$F_{DL\_low} -85$ to 1 MHz	-
			$F_{DL\_high} +15$ to $F_{DL\_high} +60$	$F_{DL\_high} +60$ to $F_{DL\_high} +85$	$F_{DL\_high} +85$ to +12750 MHz	-
2, 5,	$F_{Interferer}$	MHz	-	-	-	$F_{UL\_low} - F_{UL\_high}$
Note 1: Range 3 shall be tested only with the highest channel bandwidth.						

## 7.6.2EA Out-of-band blocking for UE category M1

### 7.6.2EA.1 Test Purpose

Out-of-band band blocking is defined for an unwanted CW interfering signal falling more than 15 MHz below or above the the category M1 UE receive band, at which a given average throughput shall meet or exceed the requirement for the specified measurement channels.

For the first 15 MHz below or above the UE receive band the appropriate in-band blocking or adjacent channel selectivity in sub-clause 7.5.1 and sub-clause 7.6.1 shall be applied.

The lack of out-of-band blocking ability will decrease the coverage area when other e-NodeB transmitters exist (except in the adjacent channels and spurious response).

### 7.6.2EA.2 Test Applicability

This test applies to all types of E-UTRA UE release 13 and forward of UE category M1.

### 7.6.2EA.3 Minimum Conformance Requirements

The throughput shall be  $\geq 95\%$  of the maximum throughput of the reference measurement channels as specified in Annexes A.2.2, A.2.3 and A.3.2 (with one sided dynamic OCN Pattern OP.1 FDD/TDD for the DL-signal as described in Annex A.5.1.1/A.5.2.1) with parameters specified in Tables 7.6.2EA.3-1 and 7.6.2EA.3-2. For operating bands with an unpaired DL part (as noted in Table 5.2-1), the requirements only apply for carriers assigned in the paired part.

For Table 7.6.2EA.3-2 in frequency range 1, 2 and 3, up to  $\max(24, 6 \cdot \lceil N_{RB} / 6 \rceil)$  exceptions are allowed for spurious response frequencies in each assigned frequency channel when measured using a 1MHz step size, where  $N_{RB}$  is the number of resource blocks in the downlink transmission bandwidth configuration (see Figure 5.4.2-1). For these exceptions the requirements of clause 7.7EA Spurious Response are applicable.

For Table 7.6.2EA.3-2 in frequency range 4, up to  $\max(8, \lceil (N_{RB} + 2 \cdot L_{CRBs}) / 8 \rceil)$  exceptions are allowed for spurious response frequencies in each assigned frequency channel when measured using a 1MHz step size, where  $N_{RB}$  is the number of resource blocks in the downlink transmission bandwidth configurations (see Figure 5.4.2-1) and  $L_{CRBs}$  is the number of resource blocks allocated in the uplink. For these exceptions the requirements of clause 7.7EA Spurious Response are applicable.

**Table 7.6.2EA.3-1: Out-of-band blocking parameters**

Rx Parameter	Units	Channel bandwidth					
		1.4 MHz	3 MHz	5 MHz	10 MHz	15 MHz	20 MHz
Power in Transmission Bandwidth Configuration	dBm	REFSENS + channel bandwidth specific value below					
		6	6	6	6	7	9
NOTE 1: The transmitter shall be set to 4dB below $P_{CMAX\_L}$ at the minimum uplink configuration specified in Table 7.3.3-2 with $P_{CMAX\_L}$ as defined in subclause 6.2.5EA.							
NOTE 2: Reference measurement channel is specified in Annex A.3.2 with one sided dynamic OCNG Pattern OP.1 FDD/TDD as described in Annex A.5.1.1/A.5.2.							
NOTE 3: For DL category M1 UE, the reference sensitivity for category M1 in table 7.3EA.3-1 should be used as REFSENS for the power in Transmission Bandwidth Configuration.							
NOTE 4: For DL category M1 UE, the parameters for the applicable channel bandwidth apply.							

**Table 7.6.2EA.3-2: Out of band blocking**

E-UTRA band	Parameter	Units	Frequency			
			Range 1	Range 2	Range 3	Range 4
	$P_{Interferer}$	dBm	-44	-30	-15	-15
1, 2, 3, 4, 5, 7, 8, 11, 12, 13, 18, 19, 20, 21, 26, 27, 28, 31, 39, 41	$F_{Interferer}$ (CW)	MHz	$F_{DL\_low} -15$ to $F_{DL\_low} -60$	$F_{DL\_low} -60$ to $F_{DL\_low} -85$	$F_{DL\_low} -85$ to 1 MHz	-
			$F_{DL\_high} +15$ to $F_{DL\_high} +60$	$F_{DL\_high} +60$ to $F_{DL\_high} +85$	$F_{DL\_high} +85$ to +12750 MHz	-
2, 5, 12	$F_{Interferer}$	MHz	-	-	-	$F_{UL\_low} - F_{UL\_high}$
NOTE 1: For the UE which supports both Band 11 and Band 21 the out of blocking is FFS.						
NOTE 2: The power level of the interferer ( $P_{Interferer}$ ) for Range 3 shall be modified to -20 dBm for $F_{Interferer} > 2800$ MHz and $F_{Interferer} < 4400$ MHz.						
NOTE 3: For the UE that supports both Band 4 and Band 66, the out-of-blocking frequency range for Band 4 is defined relative to $F_{DL\_low}$ and $F_{DL\_high}$ of Band 66.						
NOTE 4: For a UE supporting CA_20A-28A the requirements for Band 20 and Band 28 apply with $F_{DL\_low}$ given by the lower limit of the restricted operating frequency range in Band 28 and $F_{DL\_high}$ by Band 20 (Table 5.5A-2).						

The normative reference for this requirement is TS 36.101 [2] clause 7.6.2.

## 7.6.2EA.4 Test Description

### 7.6.2EA.4.1 Initial Conditions

Initial conditions are a set of test configurations the UE needs to be tested in and the steps for the SS to take with the UE to reach the correct measurement state.

The initial test configurations consist of environmental conditions and test frequencies based on the subset of E-UTRA operating bands defined for CAT M1 in clause 5.2E. All of these configurations shall be tested with applicable test parameters for each channel bandwidth, and are shown in table 7.6.2EA.4.1-1. The details of the downlink and uplink reference measurement channels (RMCs) are specified in Annexes A.2 and A.3. The details of the OCNG patterns used are specified in Annex A.5. Configurations of PDSCH and MPDCCH before measurement are specified in Annex C.2.

**Table 7.6.2EA.4.1-1: Test Configuration Table**

Initial Conditions							
Test Environment as specified in TS 36.508[7] subclause 4.1				NC			
Test Frequencies as specified in TS36.508 [7] subclause 4.3.1				One frequency chosen arbitrarily from low or high range			
Test Channel Bandwidths as specified in TS 36.508 [7] subclause 4.3.1				5MHz			
Test Parameters for Channel Bandwidths and Narrowband positions							
Downlink Configuration				Uplink Configuration			
Ch BW	Mod'n	RB allocation		Mod'n	RB allocation		
		FDD	TDD		FDD and HD-FDD	TDD	Narrowband index (Note 1)
5MHz	QPSK	4	4	QPSK	6	6	0
Note 1: Denotes where in the channel Bandwidth the narrowband shall be placed. Narrowband and Narrowband index are defined in TS36.211, 5.2.4.							

1. Connect the SS to the UE antenna connectors as shown in TS 36.508[7] Annex A Figure A.5 using only main UE Tx/Rx antenna.
2. The parameter settings for the cell are set up according to TS 36.508 [7] subclause 4.4.3.
3. Downlink signals are initially set up according to Annex C0, C.1 and C.3.1, and uplink signals according to Annex H.1 and H.3.1.
4. The UL and DL Reference Measurement channels are set according to Table 7.6.2EA.4.1-1.
5. Propagation conditions are set according to Annex B.0.
6. Ensure the UE is in State 3A-RF-CE according to TS 36.508 [7] clause 5.2A.2AA. Message contents are defined in clause 7.6.2EA.4.3.

#### 7.6.2EA.4.2 Test Procedure

1. SS transmits PDSCH via MPDCCH DCI format 6-1A for C\_RNTI to transmit the DL RMC according to Table 7.6.2EA.4.1-1. The SS sends downlink MAC padding bits on the DL RMC. The SS sends one sided dynamic OCNG Pattern OP.1 FDD/TDD for the DL-signal as described in Annex A.5.1.1/A.5.2.1.
2. SS sends uplink scheduling information for each UL HARQ process via MPDCCH DCI format 6-0A for C\_RNTI to schedule the UL RMC according to Table 7.6.2EA.4.1-1. Since the UE has no payload data to send, the UE transmits uplink MAC padding bits on the UL RMC.
3. Set the parameters of the CW signal generator for an interfering signal below the wanted signal according to Table 7.6.2EA.5-2. The frequency step size is 1MHz.
4. Set the downlink signal level according to the table 7.6.2EA.5-1. Send uplink power control commands to the UE (less or equal to 1dB step size should be used), to ensure that the UE output power is within +0, - 3.4 dB of the target level in table 7.6.2EA.5-1 for carrier frequency  $f \leq 3.0\text{GHz}$  or within +0, -4.0 dB of the target level for carrier frequency  $3.0\text{GHz} < f \leq 4.2\text{GHz}$ , for at least the duration of the throughput measurement.
5. Measure the average throughput for duration sufficient to achieve statistical significance according to Annex G.2.
6. Record the frequencies for which the throughput doesn't meet the requirements.
7. Repeat steps from 3 to 6, using an interfering signal above the wanted signal at step 3.

## 7.6.2EA.4.3 Message Contents

Message contents are according to TS 36.508 [7] subclause 4.6 with the condition CEModeA and the following exception.

Table 7.6.2EA.4.3-1: UplinkPowerControlDedicated

Derivation Path: 36.331 clause 6.3.2			
Information Element	Value/remark	Comment	Condition

}			

## 7.6.2EA.5 Test Requirement

Except for the spurious response frequencies recorded at the final step of test procedure, the throughput measurement derived in test procedure shall be  $\geq 95\%$  of the maximum throughput of the reference measurement channels as specified in Annex A.3.2 with parameters specified in Tables 7.6.2EA.5-1 and 7.6.2EA.5-2.

For frequency range 1, 2, and 3, the number of spurious response frequencies recorded in the final step of test procedure shall not exceed  $\max(24, 6 \cdot \lceil N_{RB} / 6 \rceil)$  in each assigned frequency channel when measured using a 1MHz step size. For these exceptions the requirements of clause 7.7 Spurious Response are applicable.

For frequency range 4, the number of spurious response frequencies recorded in the final step of test procedure shall not exceed  $\max(8, \lceil (N_{RB} + 2 \cdot L_{CRBS}) / 8 \rceil)$  in each assigned frequency channel when measured using a 1MHz step size. For these exceptions the requirements of clause 7.7 Spurious Response are applicable.

Table 7.6.2EA.5-1: Out-of-band blocking parameters

Rx Parameter	Units	Channel bandwidth					
		1.4 MHz	3 MHz	5 MHz	10 MHz	15 MHz	20 MHz
Power in Transmission Bandwidth Configuration	dBm	REFSENS + channel bandwidth specific value below					
		6	6	6	6	7	9
NOTE 1: The transmitter shall be set to 4dB below $P_{CMAX\_L}$ at the minimum uplink configuration specified in Table 7.3.3-2 with $P_{CMAX\_L}$ as defined in subclause 6.2.5EA.							
NOTE 2: Reference measurement channel is specified in Annex A.3.2 with one sided dynamic OCNG Pattern OP.1 FDD/TDD as described in Annex A.5.1.1/A.5.2.							
NOTE 3: For DL category M1 UE, the reference sensitivity for category M1 in table 7.3EA.3-1 should be used as REFSENS for the power in Transmission Bandwidth Configuration.							
NOTE 4: For DL category M1 UE, the parameters for the applicable channel bandwidth apply.							

Table 7.6.2EA.5-2: Out of band blocking

E-UTRA band	Parameter	Units	Frequency			
			Range 1	Range 2	Range 3	Range 4
	$P_{\text{Interferer}}$	dBm	-44	-30	-15	-15
1, 2, 3, 4, 5, 7, 8, 11, 12, 13, 18, 19, 20, 21, 26, 27, 28, 31, 39, 41	$F_{\text{Interferer}}^{\text{(CW)}}$	MHz	$F_{\text{DL\_low}} -15$ to $F_{\text{DL\_low}} -60$	$F_{\text{DL\_low}} -60$ to $F_{\text{DL\_low}} -85$	$F_{\text{DL\_low}} -85$ to 1 MHz	-
			$F_{\text{DL\_high}} +15$ to $F_{\text{DL\_high}} +60$	$F_{\text{DL\_high}} +60$ to $F_{\text{DL\_high}} +85$	$F_{\text{DL\_high}} +85$ to +12750 MHz	-
2, 5, 12	$F_{\text{Interferer}}$	MHz	-	-	-	$F_{\text{UL\_low}} - F_{\text{UL\_high}}$
NOTE 1: For the UE which supports both Band 11 and Band 21 the out of blocking is FFS.						
NOTE 2: The power level of the interferer ( $P_{\text{Interferer}}$ ) for Range 3 shall be modified to -20 dBm for $F_{\text{Interferer}} > 2800$ MHz and $F_{\text{Interferer}} < 4400$ MHz.						
NOTE 3: For the UE that supports both Band 4 and Band 66, the out-of-blocking frequency range for Band 4 is defined relative to $F_{\text{DL\_low}}$ and $F_{\text{DL\_high}}$ of Band 66.						
NOTE 4: For a UE supporting CA_20A-28A the requirements for Band 20 and Band 28 apply with $F_{\text{DL\_low}}$ given by the lower limit of the restricted operating frequency range in Band 28 and $F_{\text{DL\_high}}$ by Band 20 (Table 5.5A-2).						

## 7.6.3 Narrow band blocking

### 7.6.3.1 Test Purpose

Verifies a receiver's ability to receive an E-UTRA signal at its assigned channel frequency in the presence of an unwanted narrow band CW interferer at a frequency, which is less than the nominal channel spacing.

The lack of narrow-band blocking ability will decrease the coverage area when other e-NodeB transmitters exist (except in the adjacent channels and spurious response).

### 7.6.3.2 Test Applicability

This test applies to all types of E-UTRA UE release 8 and forward.

### 7.6.3.3 Minimum Conformance Requirements

The relative throughput shall be  $\geq 95\%$  of the maximum throughput of the reference measurement channels as specified in Annexes A.2.2, A.2.3 and A.3.2 (with one sided dynamic OCNG Pattern OP.1 FDD/TDD for the DL-signal as described in Annex A.5.1.1/A.5.2.1) with parameters specified in Table 7.6.3.3-1. For operating bands with an unpaired DL part (as noted in Table 5.2-1), the requirements only apply for carriers assigned in the paired part.

Table 7.6.3.3-1: Narrow-band blocking

Parameter	Unit	Channel Bandwidth					
		1.4 MHz	3 MHz	5 MHz	10 MHz	15 MHz	20 MHz
$P_w$	dBm	$P_{\text{REFSENS}}$ + channel-bandwidth specific value below					
		22	18	16	13	14	16
$P_{\text{uw}}^{\text{(CW)}}$	dBm	-55	-55	-55	-55	-55	-55
$F_{\text{uw}}$ (offset for $\Delta f = 15$ kHz)	MHz	0.9075	1.7025	2.7075	5.2125	7.7025	10.2075
$F_{\text{uw}}$ (offset for $\Delta f = 7.5$ kHz)	MHz						
Note 1: The transmitter shall be set a 4 dB below $P_{\text{CMAX\_L}}$ at the minimum uplink configuration specified in Table 7.3.3-2 with $P_{\text{CMAX\_L}}$ as defined in clause 6.2.5.							
Note 2: The reference measurement channel is specified in Annex A.3.2 with one sided dynamic OCNG Pattern OP.1 FDD/TDD as described in Annex A.5.1.1/A.5.2.1.							

For the UE which supports inter band CA configuration in Table 7.3.3-1A,  $P_{\text{uw}}$  power defined in Table 7.6.3.3-1 is increased by the amount given by  $\Delta R_{\text{IB,c}}$  in Table 7.3.3-1A.

The normative reference for this requirement is TS 36.101 [2] clause 7.6.3.

## 7.6.3.4 Test Description

### 7.6.3.4.1 Initial Conditions

Initial conditions are a set of test configurations the UE needs to be tested in and the steps for the SS to take with the UE to reach the correct measurement state.

The initial test configurations consist of environmental conditions, test frequencies, and channel bandwidths based on E-UTRA bands specified in table 5.4.2.1-1. All of these configurations shall be tested with applicable test parameters for each channel bandwidth, and are shown in table 7.6.3.4.1-1. The details of the uplink and downlink reference measurement channels (RMCs) are specified in Annexes A.2 and A.3 respectively. The details of the OCNG patterns used are specified in Annex A.5. Configurations of PDSCH and PDCCH before measurement are specified in Annex C.2.

**Table 7.6.3.4.1-1: Test Configuration Table**

Initial Conditions						
Test Environment as specified in TS 36.508 [7] subclause 4.1			NC			
Test Frequencies as specified in TS 36.508 [7] subclause 4.3.1			Mid range			
Test Channel Bandwidths as specified in TS 36.508 [7] subclause 4.3.1			Lowest, 5MHz, Highest			
Test Parameters for Channel Bandwidths						
Ch BW	Downlink Configuration			Uplink Configuration		
	Mod'n	RB allocation		Mod'n	RB allocation	
		FDD	TDD		FDD	TDD
1.4MHz	QPSK	6	6	QPSK	6	6
3MHz	QPSK	15	15	QPSK	15	15
5MHz	QPSK	25	25	QPSK	25	25
5MHz	QPSK	25	N/A	QPSK	20	N/A
5MHz	QPSK	25	N/A	QPSK	15	N/A
5MHz	QPSK	25	N/A	QPSK	5 <sup>4</sup>	N/A
10MHz	QPSK	50	50	QPSK	50	50
10MHz	QPSK	50	N/A	QPSK	25	N/A
10MHz	QPSK	50	N/A	QPSK	20	N/A
10MHz	QPSK	50	N/A	QPSK	15	N/A
15MHz	QPSK	75	75	QPSK	75	75
15MHz	QPSK	75	N/A	QPSK	50	N/A
15MHz	QPSK	75	N/A	QPSK	25	N/A
15MHz	QPSK	75	N/A	QPSK	20	N/A
20MHz	QPSK	100	100	QPSK	100	100
20MHz	QPSK	100	N/A	QPSK	75	N/A
20MHz	QPSK	100	N/A	QPSK	50	N/A
20MHz	QPSK	100	N/A	QPSK	25	N/A
20MHz	QPSK	100	N/A	QPSK	20	N/A
Note 1: Test Channel Bandwidths are checked separately for each E-UTRA band, which applicable channel bandwidths are specified in Table 5.4.2.1-1. Note 2: Depending on E-UTRA band, only the appropriate Uplink RB allocation value according to table 7.3.3-2 is tested per Test Channel Bandwidth. The allocation shall be located as close as possible to the downlink operating band but confined within the transmission bandwidth configuration for the channel bandwidth (Table 5.4.2-1). Note 3: For the DL signal one sided dynamic OCNG Pattern OP.1 FDD/TDD is used. Note 4: Applicable only to E-UTRA FDD Band 31. The UL resource blocks shall be located at RBstart 10 (according to Table 7.3.3-2).						

1. Connect the SS to the UE antenna connectors as shown in TS 36.508 [7] Annex A, Figure A.5.
2. The parameter settings for the cell are set up according to TS 36.508 [7] subclause 4.4.3.
3. Downlink signals are initially set up according to Annex C0, C.1 and C.3.1, and uplink signals according to Annex H.1 and H.3.1
4. The UL and DL Reference Measurement channels are set according to Table 7.6.3.4.1-1.

5. Propagation conditions are set according to Annex B.0.
6. Ensure the UE is in State 3A-RF according to TS 36.508 [7] clause 5.2A.2. Message contents are defined in clause 7.6.3.4.3.

#### 7.6.3.4.2 Test Procedure

1. SS transmits PDSCH via PDCCH DCI format 1A for C\_RNTI to transmit the DL RMC according to Table 7.6.3.4.1-1. The SS sends downlink MAC padding bits on the DL RMC.
2. SS sends uplink scheduling information for each UL HARQ process via PDCCH DCI format 0 for C\_RNTI to schedule the UL RMC according to Table 7.6.3.4.1-1. Since the UE has no payload data to send, the UE transmits uplink MAC padding bits on the UL RMC.
3. Set the parameters of the CW signal generator for an interfering signal below the wanted signal according to Table 7.6.3.5-1.
4. Set the downlink signal level according to the table 7.6.3.5-1. Send uplink power control commands to the UE (less or equal to 1dB step size should be used), to ensure that the UE output power is within +0, - 3.4 dB of the target level in table 7.6.3.5-1 for carrier frequency  $f \leq 3.0\text{GHz}$  or within +0, -4.0 dB of the target level for carrier frequency  $3.0\text{GHz} < f \leq 4.2\text{GHz}$ , for at least the duration of the throughput measurement.
5. Measure the average throughput for a duration sufficient to achieve statistical significance according to Annex G.2.
6. Repeat steps from 3 to 5, using an interfering signal above the wanted signal at step 3.

#### 7.6.3.4.3 Message Contents

Message contents are according to TS 36.508 [7] subclause 4.6 with the following exception.

**Table 7.6.3.4.3-1: UplinkPowerControlDedicated**

Derivation Path: 36.331 clause 6.3.2			
Information Element	Value/remark	Comment	Condition
UplinkPowerControlDedicated-DEFAULT ::= SEQUENCE {			
p0-UePUSCH	0		
deltaMCS-Enabled	en0		
accumulationEnabled	TRUE		
p0-uePUCCH	0		
pSRS-Offset	3 (-6 dB)		
filterCoefficient	fc8	larger filter length is used to reduce the RSRP measurement variation	
}			

#### 7.6.3.5 Test Requirement

The throughput measurement derived in test procedure shall be  $\geq 95\%$  of the maximum throughput of the reference measurement channels as specified in Annex A.3.2 with parameters specified in Table 7.6.3.5-1.

**Table 7.6.3.5-1: Narrow-band blocking**

Parameter	Unit	Channel Bandwidth					
		1.4 MHz	3 MHz	5 MHz	10 MHz	15 MHz	20 MHz
$P_w$	dBm	$P_{\text{REFSENS}}$ + channel-bandwidth specific value below					
		22	18	16	13	14	16
$P_{\text{UW}}(\text{CW})$	dBm	-55	-55	-55	-55	-55	-55
$F_{\text{UW}}$ (offset for $\Delta f = 15$ kHz)	MHz	0.9075	1.7025	2.7075	5.2125	7.7025	10.2075
$F_{\text{UW}}$ (offset for $\Delta f = 7.5$ kHz)	MHz						
Note 1: The transmitter shall be set a 4 dB below $P_{\text{CMAX,L}}$ with $P_{\text{CMAX,L}}$ as defined in clause 6.2.5.							
Note 2: The reference measurement channel is specified in Annex A.3.2 with one sided dynamic OCNG Pattern OP.1 FDD/TDD as described in Annex A.5.1.1/A.5.2.1.							

For the UE which supports inter band CA configuration in Tables 7.3.3-1A, 7.3.3-1B and 7.3.3-1C,  $P_{\text{UW}}$  power defined in Table 7.6.3.5-1 is increased by the amount given by  $\Delta R_{\text{B,c}}$  in Tables 7.3.3-1A, 7.3.3-1B and 7.3.3-1C.

### 7.6.3\_1 Narrow band blocking with 4 Rx antenna ports

Editor's note: Following aspects missing or not yet determined:

- Connection Diagram.

#### 7.6.3\_1.1 Test Purpose

Same test purpose as in clause 7.6.3.

#### 7.6.3\_1.2 Test Applicability

This test applies to all types of E-UTRA UE release 10 and forward that supports 4 Rx antenna ports.

#### 7.6.3\_1.3 Minimum Conformance Requirements

Same as in clause 7.6.3.3 with following exceptions:

Instead of Table 7.6.3.3-1 → use Table 7.6.3\_1.3-1.

**Table 7.6.3\_1.3-1: Narrow-band blocking**

Parameter	Unit	Channel Bandwidth					
		1.4 MHz	3 MHz	5 MHz	10 MHz	15 MHz	20 MHz
$P_w$	dBm	$P_{\text{REFSENS}}$ + channel-bandwidth specific value below					
		22	18	16	13	14	16
$P_{\text{UW}}(\text{CW})$	dBm	-55	-55	-55	-55	-55	-55
$F_{\text{UW}}$ (offset for $\Delta f = 15$ kHz)	MHz	0.9075	1.7025	2.7075	5.2125	7.7025	10.2075
$F_{\text{UW}}$ (offset for $\Delta f = 7.5$ kHz)	MHz						
Note 1: The transmitter shall be set a 4 dB below $P_{\text{CMAX,L}}$ at the minimum uplink configuration specified in Table 7.3.3-2 with $P_{\text{CMAX,L}}$ as defined in clause 6.2.5.							
Note 2: The reference measurement channel is specified in Annex A.3.2 with one sided dynamic OCNG Pattern OP.1 FDD/TDD as described in Annex A.5.1.1/A.5.2.1.							
Note 3: The REFSENS power level is specified in Table 7.3.3-1a.							

#### 7.6.3\_1.4 Test Description

##### 7.6.3\_1.4.1 Initial Conditions

Note 3: The REFSENS power level is specified in Table 7.3_1.5-1.							

## 7.6.3A Narrow band blocking for CA

### 7.6.3A.0 Minimum conformance requirements

For inter-band carrier aggregation with one component carrier per operating band and the uplink assigned to one E-UTRA band the narrow-band blocking requirements are defined with the uplink active on the band(s) other than the band whose downlink is being tested. The UE shall meet the requirements specified in subclause 7.6.3 for each component carrier while all downlink carriers are active. For E-UTRA CA configurations including an operating band without uplink band or an operating band with an unpaired DL part (as noted in Table 5.2-1), the requirements for all downlinks shall be met with the single uplink carrier active in each band capable of UL operation. For E-UTRA CA configurations listed in Table 7.3A.0-1 under conditions for which reference sensitivity for the operating band being tested is N/A, the narrow-band blocking requirements of subclause 7.6.3A.0 do not apply. For E-UTRA CA configurations with a component carrier assigned in Band 46, narrow-band blocking requirements do not apply in the presence of a narrow-band interferer in Band 46.

For intra-band contiguous carrier aggregation the downlink SCC(s) shall be configured at nominal channel spacing to the PCC. For FDD, the PCC shall be configured closest to the uplink band. All downlink carriers shall be active throughout the test. The uplink output power shall be set as specified in Table 7.6.3A.0-1 with the uplink configuration set according to Table 7.3A.0-2 for the applicable carrier aggregation configuration. For UE(s) supporting one uplink, the uplink configuration of the PCC shall be in accordance with Table 7.3.3-2.

The UE shall fulfil the minimum requirement in presence of an interfering signal specified in Table 7.6.3A.0-1 being on either side of the aggregated signal. The throughput of each carrier shall be  $\geq 95\%$  of the maximum throughput of the reference measurement channels as specified in Annexes A.2.2, A.2.3 and A.3.2 (with one sided dynamic OCNG Pattern OP.1 FDD/TDD for the DL-signal as described in Annex A.5.1.1/A.5.2.1) with parameters specified in Table 7.6.3A.0-1. For operating bands with an unpaired DL part (as noted in Table 5.2-1), the requirements also apply for an SCC assigned in the unpaired part with parameters specified in Table 7.6.3A.0-1.

Table 7.6.3A.0-1: Narrow-band blocking

Parameter	Unit	CA Bandwidth Class				
		B	C	D	E	F

Pw in Transmission Bandwidth Configuration, per CC	dBm	REFSENS + CA Bandwidth Class specific value below			
		16	16 <sup>4</sup>	16	16
P <sub>uw</sub> (CW)	dBm	-55	-55	-55	-55
F <sub>uw</sub> (offset for Δf = 15 kHz)	MHz	- F <sub>offset</sub> - 0.2 / + F <sub>offset</sub> + 0.2	- F <sub>offset</sub> - 0.2 / + F <sub>offset</sub> + 0.2	- F <sub>offset</sub> - 0.2 / + F <sub>offset</sub> + 0.2	- F <sub>offset</sub> - 0.2 / + F <sub>offset</sub> + 0.2
F <sub>uw</sub> (offset for Δf = 7.5 kHz)	MHz				
<p>Note 1: The transmitter shall be set to 4dB below P<sub>CMAX,L</sub> or P<sub>CMAX,L,CA</sub> as defined in subclause 6.2.5A.</p> <p>Note 2: Reference measurement channel is specified in Annex A.3.2 with one sided dynamic OCNG Pattern OP.1 FDD/TDD as described in Annex A.5.1.1/A.5.2.1.</p> <p>Note 3: The F<sub>uw</sub> (offset) is the frequency separation of the center frequency of the carrier closest to the interferer and the center frequency of the interferer and shall be further adjusted to <math>\lfloor \frac{F_{\text{interferer}}}{0.015 + 0.5} \rfloor 0.015 + 0.0075</math> MHz to be offset from the sub-carrier raster.</p> <p>Note 4: The requirement is applied for the band combinations whose component carriers' BW ≥ 5 MHz.</p>					

For combinations of intra-band and inter-band carrier aggregation with up to five downlink carriers (up to two non-contiguously sub-blocks per band and up to four contiguously aggregated carriers per band) and one uplink carrier assigned to one E-UTRA band, the requirement is defined with the uplink active in a band other than that supporting the downlink(s) under test. The uplink configuration shall be in accordance with Table 7.3A.0-3 when the uplink is active in the band supporting two non-contiguous component carriers, Table 7.3A.0-2 when the uplink is active in a band supporting two contiguous component carriers and in accordance with Table 7.3.3-2 when the uplink is active in a band supporting one carrier per band. The downlink PCC shall be configured closer to the uplink operating band than the downlink SCC(s) when the uplink is active in band(s) supporting contiguous aggregation of up to four component carriers. For these uplink configurations, the UE shall meet the narrow-band blocking requirements for intra-band non-contiguous carrier aggregation of two downlink sub-blocks with  $\Delta R_{\text{IBNC}} = 0$  dB for all sub-block gaps (Table 7.3A.0-3) for the two non-contiguous downlink sub-blocks, the requirements for intra-band contiguous carrier aggregation for the contiguously aggregated downlink carriers and for any remaining component carrier(s) the requirements specified in subclause 7.6.3. All downlink carriers shall be active throughout the tests and the requirements for the downlinks shall be met with the single uplink carrier active in each band capable of UL operation.

For E-UTRA CA configurations with a component carriers assigned in Band 46, narrow-band blocking requirements do not apply in the presence of a narrow-band interferer in Band 46.

The normative reference for this requirement is TS 36.101 [2] clause 7.6.3.1A.

## 7.6.3A.1 Narrow band blocking for CA (intra-band contiguous DL CA and UL CA)

### 7.6.3A.1.1 Test Purpose

Verifies a receiver's ability to receive an E-UTRA signal at its assigned CA channel frequencies in the presence of an unwanted narrow band CW interferer at a frequency, which is less than the nominal channel spacing.

The lack of narrow-band blocking ability will decrease the coverage area when other e-NodeB transmitters exist (except in the adjacent channels and spurious response).

### 7.6.3A.1.2 Test Applicability

This test applies to all types of E-UTRA UE release 10 and forward that support intra-band contiguous DL CA and UL CA.

### 7.6.3A.1.3 Minimum Conformance Requirements

The minimum conformance requirements are defined in clause 7.6.3A.0.

### 7.6.3A.1.4 Test Description

#### 7.6.3A.1.4.1 Initial Conditions

Initial conditions are a set of test configurations the UE needs to be tested in and the steps for the SS to take with the UE to reach the correct measurement state.

The initial test configurations consist of environmental conditions, test frequencies, and CC combinations based on E-UTRA CA configurations specified in table 5.4.2A.1-1. All of these configurations shall be tested with applicable test parameters for each CA Configuration, and are shown in table 7.6.3A.1.4.1-1. The details of the OCN patterns used are specified in Annex A.5. Configurations of PDSCH and PDCCH before measurement are specified in Annex C.2.

**Table 7.6.3A.1.4.1-1: Test Configuration Table**

Initial Conditions							
Test Environment as specified in TS 36.508[7] subclause 4.1				NC			
Test Frequencies as specified in TS36.508 [7] subclause 4.3.1 for different CA bandwidth classes, and PCC and SCCs are mapped onto physical frequencies according to Table 7.1-2				C: Mid range			
Test CC Combination setting ( $N_{RB\_agg}$ ) as specified in subclause 5.4.2A.1 for the CA Configuration across bandwidth combination sets supported by the UE.				Lowest $N_{RB\_agg}$ Highest $N_{RB\_agg}$ (Note 3)			
Test Parameters for CA Configurations

100	100	QPSK	100+100	QPSK	75	P_75@25	S_0@0
100	100	QPSK	100+100	QPSK	130	P_100@0	S_30@0
100	100	QPSK	100+100	QPSK	200	P_100@0	S_100@0
Note 1: CA Configuration Test CC Combination settings are checked separately for each CA Configuration, which applicable aggregated channel bandwidths are specified in Table 5.4.2A.1-1.							
Note 2: Depending on CA Configuration only the appropriate Uplink RB allocation value according to table 7.3A.0-2 is tested per CA Configuration Test CC combination.							
Note 3: If in the CA Configuration UE supports multiple CC Combinations with the same $N_{RB\_agg}$ , only the first of those is tested, according to the order on the Test Configuration Table list.							

1. Connect the SS to the UE antenna connectors as shown in TS 36.508 [7] Annex A, Figure group A.34 as appropriate.
2. The parameter settings for the cell are set up according to TS 36.508 [7] subclause 4.4.3.
3. Downlink signals are for PCC initially set up according to Annex C.0, C.1 and C.3.1, and uplink signals according to Annex H.1 and H.3.1.
4. The UL and DL Reference Measurement channels are set according to Table 7.6.3A.1.4.1-1.
5. Propagation conditions are set according to Annex B.0.
6. Ensure the UE is in State 3A-RF according to TS 36.508 [7] clause 5.2A.2. Message contents are defined in clause 7.6.3A.1.4.3.

## 7.6.3A.1.4.2 Test Procedure

1. Configure SCC according to Annex C.0, C.1 and Annex C.3.1 for all downlink physical channels.
2. The SS shall configure SCC as per TS 36.508 [7] clause 5.2A.4. Message contents are defined in clause 7.6.3A.1.4.3.
3. SS activates SCC by sending the activation MAC-CE (Refer TS 36.321 [13], clauses 5.13, 6.1.3.8). Wait for at least 2 seconds (Refer TS 36.133, clauses 8.3.3.2).
4. SS transmits PDSCH via PDCCH DCI format 1A for C\_RNTI to transmit the DL RMC according to Table 7.6.3A.1.4.1-1 on both PCC and SCC. The SS sends downlink MAC padding bits on the DL RMC.
5. SS sends uplink scheduling information for each UL HARQ process via PDCCH DCI format 0 for C\_RNTI to schedule the UL RMC according to Table 7.6.3A.1.4.1-1 on both PCC and SCC. Since the UE has no payload data to send, the UE sends uplink MAC padding bits on the UL RMC.
6. Set the parameters of the CW signal generator for an interfering signal below the aggregated component carriers according to Table 7.6.3A.1.5-1.
7. Set the downlink signal level according to the table 7.6.3A.1.5-1. Send uplink power control commands to the UE (less or equal to 1dB step size should be used), to ensure that for at least the duration of the throughput measurement:  
 The PCC output power is within (+0dB, -3.4 dB) of (target level in Table 7.6.3A.1.5-1 +  $10\log(P_{L\_CRB}/N_{RB\_alloc})$ ), for carrier frequency  $f \leq 3.0\text{GHz}$ ,  
 or within (+0dB, -4 dB) of (target level in Table 7.6.3A.1.5-1 +  $10\log(P_{L\_CRB}/N_{RB\_alloc})$ ) for carrier frequency  $3.0\text{GHz} < f \leq 4.2\text{GHz}$ .  
 The SCC output power is within (+0dB, -3.4 dB) of (target level in Table 7.6.3A.1.5-1 +  $10\log(S_{L\_CRB}/N_{RB\_alloc})$ ), for carrier frequency  $f \leq 3.0\text{GHz}$ ,  
 or within (+0dB, -4 dB) of (target level in Table 7.6.3A.1.5-1 +  $10\log(S_{L\_CRB}/N_{RB\_alloc})$ ) for carrier frequency  $3.0\text{GHz} < f \leq 4.2\text{GHz}$ .
8. Measure the average throughput for each component carrier for duration sufficient to achieve statistical significance according to Annex G.2A.
9. Repeat steps from 6 to 8, using an interfering signal above the aggregated component carriers at step 6.

## 7.6.3A.1.4.3 Message Contents

Message contents are according to TS 36.508 [7] subclause 4.6 with the following exception.

**Table 7.6.3A.1.4.3-1: UplinkPowerControlDedicated**

### 7.6.3A.1.5 Test Requirement

The throughput measurement of each carrier derived in test procedure shall be  $\geq 95\%$  of the maximum throughput of the reference measurement channels as specified in Annex A.3.2 with parameters specified in Table 7.6.3A.5-1.

Table 7.6.3A.1.5-1: Narrow-band blocking

Parameter	Unit	CA Bandwidth Class				
		B	C	D	E	F
P <sub>w</sub> in Transmission Bandwidth Configuration, per CC	dBm	REFSENS + CA Bandwidth Class specific value below				
			16			
P <sub>uw</sub> (CW)	dBm		-55			
F <sub>uw</sub> (offset for $\Delta f = 15$ kHz)		MHz		$-F_{\text{offset}} - 0.2$ / $+F_{\text{offset}} + 0.2$		
F <sub>uw</sub> (offset for $\Delta f = 7.5$ kHz)	MHz					
Note 1:	The transmitter shall be set to 4dB below P <sub>C<sub>MAX,L</sub></sub> or P <sub>C<sub>MAX,L,CA</sub></sub> as defined in subclause 6.2.5 for one uplink carrier and in subclause 6.2.5A for two uplink carriers.					
Note 2:	Reference measurement channel is specified in Annex A.3.2 with one sided dynamic OCNG Pattern OP.1 FDD/TDD as described in Annex A.5.1.1/A.5.2.1.					
Note 3:	The F <sub>uw</sub> (offset) is the frequency separation of the center frequency of the carrier closest to the interferer and the center frequency of the interferer and shall be further adjusted to $\lfloor  F_{\text{uw}}(\text{offset for } \Delta f = 15 \text{ kHz})  / (0.015 + 0.5) \rfloor \cdot 0.015 + 0.0075$ MHz to be offset from the sub-carrier raster.					

For the UE which supports inter band CA configuration in Table 7.3.3-1A, 7.3.3-1B and 7.3.3-1C, P<sub>uw</sub> power defined in Table 7.6.3A.1.5-1 is increased by the amount given by  $\Delta R_{\text{IB,c}}$  in Table 7.3.3-1A, 7.3.3-1B and 7.3.3-1C.

### 7.6.3A.2 Narrow band blocking for CA (intra-band contiguous DL CA without UL CA)

#### 7.6.3A.2.1 Test Purpose

Same test purpose as 7.6.3A.1.

### 7.6.3A.2.2 Test Applicability

This test applies to all types of E-UTRA UE release 10 and forward that support intra-band contiguous DL CA. This test case applies only for CA Configurations that do not support UL CA.

### 7.6.3A.2.3 Minimum Conformance Requirements

The minimum conformance requirements are defined in clause 7.6.3A.0.

### 7.6.3A.2.4 Test Description

#### 7.6.3A.2.4.1 Initial Conditions

Same initial conditions as in clause 7.6.3A.1.4.1 with the following exceptions:

- instead of Table 7.6.3A.1.4.1-1 → use Table 7.6.3A.2.4.1-1.
- Instead of clause 7.6.3A.1.4.3 → use clause 7.6.3A.2.4.3.

Table 7.6.3A.2.4.1-1: Test Configuration Table

Initial Conditions							
Test Environment as specified in TS 36.508[7] subclause 4.1					NC		
Test Frequencies as specified in TS36.508 [7] subclause 4.3.1 for different CA bandwidth classes, and PCC and SCCs are mapped onto physical frequencies according to Table 7.1-2					B: Mid range C: Mid range

100	100	QPSK	100+100	QPSK	50	P_50@75	-
Note 1: CA Configuration Test CC Combination settings are checked separately for each CA Configuration, which applicable aggregated channel bandwidths are specified in Table 5.4.2A.1-1.							
Note 2: Depending on CA Configuration only the appropriate Uplink RB allocation value according to table 7.3.3-2 is tested per CA Configuration Test CC combination.							
Note 3: If in the CA Configuration UE supports multiple CC Combinations with the same $N_{RB\_agg}$ , only the first of those is tested, according to the order on the Test Configuration Table list.							

## 7.6.3A.2.4.2 Test Procedure

1. Configure SCC according to Annex C.0, C.1 and Annex C.3.1 for all downlink physical channels.
2. The SS shall configure SCC as per TS 36.508 [7] clause 5.2A.4.
3. SS activates SCC by sending the activation MAC-CE (Refer TS 36.321 [13], clauses 5.13, 6.1.3.8). Wait for at least 2 seconds (Refer TS 36.133, clauses 8.3.3.2).
4. SS transmits PDSCH via PDCCH DCI format 1A for C\_RNTI to transmit the DL RMC according to Table 7.6.3A.2.4.1-1 on both PCC and SCC. The SS sends downlink MAC padding bits on the DL RMC.

5. SS sends uplink scheduling information for each UL HARQ process via PDCCH DCI format 0 for C\_RNTI to schedule the UL RMC according to Table 7.6.3A.2.4.1-1 on PCC. Since the UE has no payload data to send, the UE sends uplink MAC padding bits on the UL RMC.
6. Set the parameters of the CW signal generator for an interfering signal below the aggregated component carriers according to Table 7.6.3A.1.5-1. The interferer frequency is adjusted in analogy with table 7.6.3A.2.4.2-1.
7. Set the downlink signal level according to the table 7.6.3A.1.5-1. Send uplink power control commands to the UE (less or equal to 1dB step size should be used), to ensure that the UE output power is within +0, - 3.4 dB of the target level in table 7.6.3A.1.5-1 for carrier frequency  $f \leq 3.0\text{GHz}$  or within +0, -4.0 dB of the target level for carrier frequency  $3.0\text{GHz} < f \leq 4.2\text{GHz}$ , for at least the duration of the throughput measurement.
8. Measure the average throughput for each component carrier for duration sufficient to achieve statistical significance according to Annex G.2A.
9. Repeat steps from 6 to 8, using an interfering signal above the aggregated component carriers at step 6.

**Table 7.6.3A.2.4.2-1: Example for interferer frequencies**

	Lower frequency	Upper frequency
$F_{DL} = \text{CA\_1C Mid range}$ (BW 20MHz + 20MHz)	2130.1 MHz	2149.9 MHz
$F_{offset}$	10 MHz	10 MHz
$F_{uw}$ (offset for $\Delta f = 15$ kHz)	-10.2 MHz	+10.2 MHz
$\lfloor \frac{ F_{uw} \text{ (offset for } \Delta f = 15 \text{ kHz)} }{0.015 + 0.5} \rfloor 0.015 + 0.0075$	10.2075 MHz	10.2075 MHz
Adjusted $F_{uw}$ (offset for $\Delta f = 15$ kHz)	-10.2075 MHz	+10.2075 MHz
$F_{uw} = F_{DL} + \text{Adjusted } F_{uw}$ (offset for $\Delta f = 15$ kHz)	2117.5975 MHz	2162.4025 MHz

#### 7.6.3A.2.4.3 Message Contents

Same message contents as in clause 7.6.3.4.3.

#### 7.6.3A.2.5 Test Requirement

Same test requirement as in clause 7.6.3A.1.5 with the following exceptions:

- Instead of Table 7.6.3A.1.5-1 → use Table 7.6.3A.2.5-1.

**Table 7.6.3A.2.5-1: Narrow-band blocking**

Parameter	Unit	CA Bandwidth Class				
		B	C	D	E	F
Pw in Transmission Bandwidth Configuration, per CC	dBm	REFSENS + CA Bandwidth Class specific value below				
		16	16			
$P_{uw}$ (CW)	dBm	-55	-55			
$F_{uw}$ (offset for $\Delta f = 15$ kHz)		MHz	$- F_{offset} - 0.2$ / $+ F_{offset} + 0.2$	$- F_{offset} - 0.2$ / $+ F_{offset} + 0.2$		
$F_{uw}$ (offset for $\Delta f = 7.5$ kHz)	MHz					
Note 1:	The transmitter shall be set to 4dB below $P_{CMAX\_L}$ or $P_{CMAX\_L\_CA}$ as defined in subclause 6.2.5.					
Note 2:	Reference measurement channel is specified in Annex A.3.2 with one sided dynamic OCNG Pattern OP.1 FDD/TDD as described in Annex A.5.1.1/A.5.2.1.					
Note 3:	The $F_{uw}$ (offset) is the frequency separation of the center frequency of the carrier closest to the interferer and the center frequency of the interferer and shall be further adjusted to $\lfloor \frac{ F_{uw} \text{ (offset for } \Delta f = 15 \text{ kHz)} }{0.015 + 0.5} \rfloor 0.015 + 0.0075$ MHz to be offset from the sub-carrier raster.					

For the UE which supports inter band CA configuration in Table 7.3.3-1A, 7.3.3-1B and 7.3.3-1C,  $P_{uw}$  power defined in Table 7.6.3A.2.5-1 is increased by the amount given by  $\Delta R_{IB,c}$  in Table 7.3.3-1A, 7.3.3-1B and 7.3.3-1C.

### 7.6.3A.3 Narrow band blocking for CA (inter-band DL CA without UL CA)

#### 7.6.3A.3.1 Test Purpose

Same test purpose as 7.6.3A.1.

#### 7.6.3A.3.2 Test Applicability

This test applies to all types of E-UTRA UE release 10 and forward that support inter-band DL CA.

This test case also applies to all types of E-UTRA UE release 12 and forward that support 2DL CA with FDD-TDD inter-band CA.

#### 7.6.3A.3.3 Minimum Conformance Requirements

The minimum conformance requirements are defined in clause 7.6.3A.0.

#### 7.6.3A.3.4 Test Description

##### 7.6.3A.3.4.1 Initial Conditions

Same initial conditions as in clause 7.6.3A.1.4.1 with the following exceptions:

- instead of Table 7.6.3A.1.4.1-1 → use Table 7.6.3A.3.4.1-1.
- Instead of clause 7.6.3A.1.4.3 → use clause 7.6.3A.3.4.3.

Table 7.6.3A.3.4.1-1: Test Configuration Table

Initial Conditions						
Test Environment as specified in TS 36.508[7] subclause 4.1			NC			
Test Frequencies as specified in TS36.508 [7] subclause 4.3.1 for different CA bandwidth classes, and PCC and SCCs are mapped onto physical frequencies according to Table 7.1-2			A: Mid range for PCC and SCC

100	100	QPSK	100	100	QPSK	25
100	100	QPSK	100	100	QPSK	20
Note 1: CA Configuration Test CC Combination settings are checked separately for each CA Configuration, which applicable aggregated channel bandwidths are specified in Table 5.4.2A.1-2. Note 2: Depending on CA configurations, only the appropriate Uplink RB allocation value according to table 7.3A.3.5-2 for UE supporting one uplink carrier is tested per Test CA configuration. Note 3: The UL resource blocks shall be located as close as possible to the downlink PCC but confined within the transmission bandwidth configuration for the channel bandwidth (Table 5.4.2-1). Note 4: The frequencies of PCC and SCC shall be switched and tested in each configuration, according to the UE declared capability for UL support (within CA operation) in the individual bands. (given UL is supported in PCC band as per Table 5.2-1).						

## 7.6.3A.3.4.2 Test Procedure

1. Configure SCC according to Annex C0, C.1 and Annex C.3.1 for all downlink physical channels.
2. The SS shall configure SCC as per TS 36.508 [7] clause 5.2A.4.
3. SS activates SCC by sending the activation MAC-CE (Refer TS 36.321 [13], clauses 5.13, 6.1.3.8). Wait for at least 2 seconds (Refer TS 36.133, clauses 8.3.3.2).
4. SS transmits PDSCH via PDCCH DCI format 1A for C\_RNTI to transmit the DL RMC according to Table 7.6.3A.3.4.1-1 on both PCC and SCC. The SS sends downlink MAC padding bits on the DL RMC.
5. SS sends uplink scheduling information for each UL HARQ process via PDCCH DCI format 0 for C\_RNTI to schedule the UL RMC according to Table 7.6.3A.3.4.1-1 on PCC. Since the UE has no payload data to send, the UE transmits uplink MAC padding bits on the UL RMC.
6. Set the parameters of the CW signal generator for an interfering signal below the SCC according to Table 7.6.3A.3.5-1.
7. Set the downlink signal level according to the table 7.6.3A.3.5-1. Send uplink power control commands to the UE (less or equal to 1dB step size should be used), to ensure that the UE output power is within +0, - 3.4 dB of the target level in table 7.6.3A.3.5-1 for carrier frequency  $f \leq 3.0\text{GHz}$  or within +0, -4.0 dB of the target level for carrier frequency  $3.0\text{GHz} < f \leq 4.2\text{GHz}$ , for at least the duration of the throughput measurement.
8. Measure the average throughput of SCC for duration sufficient to achieve statistical significance according to Annex G.2.
9. Repeat steps from 6 to 8, using an interfering signal above the SCC at step 6.

## 7.6.3A.3.4.3 Message Contents

Same message contents as in clause 7.6.3.4.3.

## 7.6.3A.3.5 Test Requirement

For inter-band carrier aggregation with uplink assigned to one E-UTRA band the narrow-band blocking requirements are defined with the uplink active on the band other than the band whose downlink is being tested, i.e. the requirements are tested only for the SCell downlink. The UE shall meet the requirement for each component carrier, when operated as SCell, while both downlink carriers are active.

The throughput measured during the test procedure for each component carrier, when operated as SCell, shall be  $\geq 95\%$  of the maximum throughput of the reference measurement channels as specified in Annex A.3.2 with parameters specified in Table 7.6.3A.3.5-1 (originated from the single carrier Table 7.6.3.5-1).

**Table 7.6.3A.3.5-1: Narrow-band blocking**

Parameter	Unit	Channel Bandwidth					
		1.4 MHz	3 MHz	5 MHz	10 MHz	15 MHz	20 MHz
P <sub>w</sub> in Transmission Bandwidth Configuration, per CC	dBm	P <sub>REFSENS</sub> + channel-bandwidth specific value below					
		22	18	16	13	14	16
P <sub>uw</sub> (CW)	dBm	-55	-55	-55	-55	-55	-55
F <sub>uw</sub> (offset for $\Delta f = 15$ kHz from SCC)	MHz	0.9075	1.7025	2.7075	5.2125	7.7025	10.2075
F <sub>uw</sub> (offset for $\Delta f = 7.5$ kHz from SCC)	MHz						
Note 1: The transmitter shall be set a 4 dB below P <sub>CMAX,L</sub> with P <sub>CMAX,L</sub> as defined in clause 6.2.5.							
Note 2: The reference measurement channel is specified in Annex A.3.2 with one sided dynamic OCNB Pattern OP.1 FDD/TDD as described in Annex A.5.1.1/A.5.2.1.							

For the UE which supports inter band CA configuration in Table 7.3.3-1A, 7.3.3-1B and 7.3.3-1C,  $P_{\text{uw}}$  power defined in Table 7.6.3A.3.5-1 is increased by the amount given by  $\Delta R_{\text{IB,c}}$  in Table 7.3.3-1A, 7.3.3-1B and 7.3.3-1C.

#### 7.6.3A.4 Narrow band blocking for CA (intra-band non-contiguous DL CA without UL CA)

##### 7.6.3A.4.1 Test Purpose

Same as in clause 7.6.3A.1.1.

##### 7.6.3A.4.2 Test Applicability

This test case applies to all types of E-UTRA UE release 11 and forward that support intra-band non-contiguous DL CA but no UL CA.

##### 7.6.3A.4.3 Minimum Conformance Requirements

The minimum conformance requirements are defined in clause 7.6.3A.0.

##### 7.6.3A.4.4 Test description

###### 7.6.3A.4.4.1 Initial Conditions

Same as in clause 7.6.3A.1.4.1 with the following exceptions:

- Instead of Table 7.6.3A.1.4.1-1 → use Table 7.6.3A.4.4.1-1.

**Table 7.6.3A.4.4.1-1: Test Configuration Table**

Initial Conditions							
Test Environment as specified in TS 36.508[7] subclause 4.1				NC			
Test Frequencies as specified in TS36.508 [7] subclause 4.3.1 for different CA bandwidth classes, and PCC and SCCs are mapped onto physical frequencies according to Table 7.1-2				A: N/A (Range is not relevant)			
Test CC Combination setting ( $N_{\text{RB\_agg}}$ ) as specified in subclause 5.4.2A.1 for the CA Configuration.				Refer to test point

Note 1:	CA Configuration Test CC Combination settings are checked separately for each CA Configuration, which applicable aggregated channel bandwidths are specified in Table 5.4.2A.1-3.						
Note 2:	The carrier centre frequency of PCC in the UL operating band is configured closer to the DL operating band.						
Note 3:	Applicable if only Bandwidth Combination Set 0 is supported by the UE for the CA Configuration						
Note 4:	Not applicable if only Bandwidth Combination Set 0 is supported by the UE for the CA Configuration						

#### 7.6.3A.4.4.2 Test Procedure

1. Configure SCC according to Annex C0, C.1 and Annex C.3.2 for all downlink physical channels.
2. The SS shall configure SCC as per TS 36.508 [7] clause 5.2A.4. Message contents are defined in clause 7.6.3A.4.4.3.
3. SS activates SCC by sending the activation MAC-CE (Refer TS 36.321 [13], clauses 5.13, 6.1.3.8). Wait for at least 2 seconds (Refer TS 36.133, clauses 8.3.3.2).
4. SS transmits PDSCH via PDCCH DCI format 1A for C\_RNTI to transmit the DL RMC according to Table 7.6.3A.3.4.1-1 on both PCC and SCC. The SS sends downlink MAC padding bits on the DL RMC.
5. SS sends uplink scheduling information for each UL HARQ process via PDCCH DCI format 0 for C\_RNTI to schedule the UL RMC according to Table 7.6.3A.4.4.1-1 on PCC. Since the UE has no payload data to send, the UE transmits uplink MAC padding bits on the UL RMC.
6. Set the parameters of the signal generator for the interfering signal below the PCC according to Tables 7.6.3A.4.5-1.
7. Set the downlink signal level for PCC and SCC according to the table 7.6.3.5-1. Send uplink power control commands to the UE (less or equal to 1dB step size should be used), to ensure that the UE output power is within +0, - 3.4 dB of the target level in table 7.6.3A.4.5-1 for carrier frequency  $f \leq 3.0\text{GHz}$  or within +0, -4.0 dB of the target level for carrier frequency  $3.0\text{GHz} < f \leq 4.2\text{GHz}$ , for at least the duration of the throughput measurement.
8. Measure the average throughput for each component carrier for duration sufficient to achieve statistical significance according to Annex G.2A.
9. Repeat steps from 6 to 8, using the interfering signal above the PCC at step 6.
10. Repeat the steps from 6 to 9, using the interferer signal to the SCC.

#### 7.6.3A.4.4.3 Message Contents

Message contents are according to TS 36.508 [7] subclause 4.6. In test procedure step 2, for SCC configuration there are no additional message contents.

#### 7.6.3A.4.5 Test Requirement

For intra-band non-contiguous carrier aggregation with one uplink carrier and two downlink carriers, the narrow band blocking requirements are defined with the uplink configuration of the PCC being in accordance with Table 7.3A.0-3. The UE shall meet the requirements specified in table 7.6.3A.4.5-1 for each component carrier while both downlink carriers are active. The requirements for each component carrier are the same as single carrier requirements in Table 7.6.3.5-1.

The throughput measurement derived in test procedure shall be  $\geq 95\%$  of the maximum throughput of the reference measurement channels as specified in Annex A.3.2 with parameters specified in Table 7.6.3A.4.5-1.

**Table 7.6.3A.4.5-1: Narrow-band blocking**

Parameter	Unit	Channel Bandwidth					
		1.4 MHz	3 MHz	5 MHz	10 MHz	15 MHz	20 MHz
P <sub>w</sub> in Transmission Bandwidth Configuration, per CC	dBm	P <sub>REFSENS</sub> + channel-bandwidth specific value below					
		22	18	16	13	14	16
P <sub>uw</sub> (CW)	dBm	-55	-55	-55	-55	-55	-55
F <sub>uw</sub> (offset for $\Delta f = 15$ kHz)	MHz	0.9075	1.7025	2.7075	5.2125	7.7025	10.2075
F <sub>uw</sub> (offset for $\Delta f = 7.5$ kHz)	MHz						
Note 1:	The transmitter shall be set a 4 dB below P <sub>C<sub>MAX,L</sub></sub> with P <sub>C<sub>MAX,L</sub></sub> as defined in clause 6.2.5.						
Note 2:	The reference measurement channel is specified in Annex A.3.2 with one sided dynamic OCNG Pattern OP.1 FDD/TDD as described in Annex A.5.1.1/A.5.2.1.						

For the UE which supports inter band CA configuration in Table 7.3.3-1A, 7.3.3-1B and 7.3.3-1C,  $P_{\text{uw}}$  power defined in Table 7.6.3A.4.5-1 is increased by the amount given by  $\Delta R_{\text{IB,c}}$  in Table 7.3.3-1A, 7.3.3-1B and 7.3.3-1C.

### 7.6.3A.5 Narrow band blocking for 3DL CA

#### 7.6.3A.5.1 Test Purpose

Same test purpose as 7.6.3A.1.

#### 7.6.3A.5.2 Test Applicability

This test case applies to all types of E-UTRA UE release 10 and forward that support 3DL with Intra-band contiguous CA or 3DL with Inter-band CA or 3DL with Intra-band contiguous and Inter-band CA.

This test case also applies to all types of E-UTRA UE release 11 and forward that support 3DL with Intra-band non-contiguous and Inter-band CA or 3DL with Intra-band non-contiguous and Intra-band contiguous CA.

This test case also applies to all types of E-UTRA UE release 12 and forward that support 3DL with FDD-TDD CA.

#### 7.6.3A.5.3 Minimum Conformance Requirements

Same as in clause 7.6.3A.1.

#### 7.6.3A.5.4 Test Description

##### 7.6.3A.5.4.1 Initial Conditions

Initial conditions are a set of test configurations the UE needs to be tested in and the steps for the SS to take with the UE to reach the correct measurement state.

The initial test configurations consist of environmental conditions, test frequencies, and channel bandwidths based on E-UTRA CA configurations specified in table 5.4.2A.1-1 through table 5.4.2A.1-2a. All of these configurations shall be tested with applicable test parameters for each channel bandwidth, and are shown in table 7.6.3A.5.4.1-1 through table 7.6.3A.5.4.1-5 as appropriate. The details of the uplink reference measurement channels (RMCs) are specified in Annex A.2 and A.3. Configurations of PDSCH and PDCCH before measurement are specified in Annex C.2.

Table 7.6.3A.5.4.1-1: Test Configuration Table (Intra-band contiguous)

Initial Conditions												
Test Environment as specified in TS 36.508 [7] subclause 4.1						NC						
Test Frequencies as specified in TS36.508 [7] subclause 4.3.1 for different CA bandwidth classes.						For test frequencies refer to “Range” columns. For mapping within Band refer to “CC” columns						
Test CC Combination setting ( $N_{RB\_agg}$ ) as specified in subclause 5.4.2A.1 for the CA Configuration across bandwidth combination sets supported by the UE.						Refer to “PCC $N_{RB}$ ” and “SCCs $N_{RB}$ ” columns						
Network signalling value						NS_01 by default						
Test Parameters for CA Configurations												
ID	CA Configuration / $N_{RB\_agg}$						DL Allocation			UL Allocation (Note 2,3)		
	CA Configuration			PCC $N_{RB}$	SCCs $N_{RB}$		CC MOD	PCC & SCCs RB allocation			CC MOD	PCC $L_{CRB}$ @ $RB_{start}$
	Band	Range	PCC CC		SCC1 CC	SCC2 CC		PCC	SCC1	SCC2		
Default Test Settings for a CA_XD Configuration												
1	X	Mid	CC1	CC2	CC3	Lowest $N_{RB\_agg}$	QPSK	All RBs			QPSK	REFSENS
2	X	Mid	CC1	CC2	CC3	Highest $N_{RB\_agg}$	QPSK	All RBs			QPSK	REFSENS
Note 1:	CA Configuration Test CC Combination test settings are checked separately for each CA Configuration.											
Note 2:	Use CA Configuration – specific test points if present in the table, otherwise use Default Test Settings test points.											
Note 3:	X corresponds to the band of the CA Configuration. E.g. for CA_41D, X=41											
Note 4:	REFSENS refers to the PCC band's and PCC $N_{RB}$ 's single carrier Uplink RB allocation for reference sensitivity according to table 7.3.5-2.											
Note 5:	If in the CA Configuration UE supports multiple CC Combinations with the same $N_{RB\_agg}$ , choose for testing the Combination with maximum $N_{RB\_PCC}$ and then select maximum $N_{RB\_SCC1}$ for the chosen $N_{RB\_PCC}$											

**Table 7.6.3A.5.4.1-2: Test Configuration Table (Inter-band)**

Initial Conditions															
Test Environment as specified in TS 36.508[7] subclause 4.1											NC				
Test Frequencies as specified in TS36.508 [7] subclause 4.3.1 for different CA bandwidth classes.											For test frequencies refer to "Range" columns. For mapping within Band refer to "CC" columns				
Test CC Combination setting ( $N_{RB\_agg}$ ) as specified in subclause 5.4.2A.1 for the CA Configuration across bandwidth combination sets supported by the UE.											Refer to "PCC $N_{RB}$ " and "SCCs $N_{RB}$ " columns				
Network signalling value											NS_01 by default				
Test Parameters for CA Configurations															
ID	CA Configuration / $N_{RB\_agg}$							DL Allocation			UL Allocation (Note 2,3)				
	CA Configuration						PCC $N_{RB}$	SCCs $N_{RB}$		CC MOD	PCC & SCCs RB allocation			CC MOD	PCC $L_{CRB}$ @ $RB_{start}$
	PCC		SCC1		SCC2			SCC1	SCC2		PCC	SCC1	SCC2		
	Band	Range	Band	Range	Band	Range									
Default Test Settings for a CA_XA-YA-ZA Configuration															
1	X	Mid	Y	Mid	Z	Mid	Highest $N_{RB}$	Highest $N_{RB}$	Highest $N_{RB}$	QPSK	All RBs	QPSK	REFSENS		
2	Y	Mid	X	Mid	Z	Mid	Highest $N_{RB}$	Highest $N_{RB}$	Highest $N_{RB}$	QPSK	All RBs	QPSK	REFSENS		
3	Z	Mid	X	Mid	Y	Mid	Highest $N_{RB}$	Highest $N_{RB}$	Highest $N_{RB}$	QPSK	All RBs	QPSK	REFSENS		
Note 1:	CA Configuration Test CC Combination test settings are checked separately for each CA Configuration.														
Note 2:	Use CA Configuration – specific test points if present in the table, Otherwise use test points from matching Group Test Settings, if present in the table. Otherwise use the Default Test Settings test points.														
Note 3:	If, according to the UE declared capability, UE does not support UL in an individual band within the CA Configuration, test points with that individual band as PCC are not applicable.														
Note 4:	X,Y,Z correspond to the different bands in the CA Configuration. E.g. for CA_1A-3A-19A,X=1,Y=3,Z=19														
Note 5:	REFSENS refers to the PCC band's and PCC $N_{RB}$ 's single carrier Uplink RB allocation for reference sensitivity according to table 7.3.5-2.														

Table 7.6.3A.5.4.1-3: Test Configuration Table (Intra-band contiguous + Inter-band)

Initial Conditions															
Test Environment as specified in TS 36.508[7] subclause 4.1										NC					
Test Frequencies as specified in TS36.508 [7] subclause 4.3.1 for different CA bandwidth classes.										For test frequencies refer to “Range” columns. For mapping within Band refer to “CC” columns					
Test CC Combination setting ( $N_{RB\_agg}$ ) as specified in subclause 5.4.2A.1 for the CA Configuration across bandwidth combination sets supported by the UE.										Refer to “PCC $N_{RB}$ ” and “SCCs $N_{RB}$ ” columns					
Network signalling value										NS_01 by default					
Test Parameters for CA Configurations

2	41	CC3	-	CC2	134.2	CC1	100	100	100	QPSK	All RBs	QPSK	100@0		
Note 1:	CA Configuration Test CC Combination test settings are checked separately for each CA Configuration.														
Note 2:	Use CA Configuration – specific test points if present in the table, otherwise use Default Test Settings test points.														
Note 3:	If, according to the UE declared capability, UE does not support UL in an individual band within the CA Configuration, test points with that individual band as PCC are not applicable.														
Note 4:	X corresponds to the band of the CA Configuration. E.g. for CA_41C-41A, X=41.														
Note 5:	REFSENS refers to the PCC band's and PCC $N_{RB}$ 's single carrier Uplink RB allocation for reference sensitivity according to table 7.3.5-2.														
Note 6:	If in the CA Configuration UE supports multiple CC Combinations with the same $N_{RB\_agg}$ , choose the Combination with $N_{RB\_CC1} = N_{RB\_CC2}$ for testing. If no such combination is supported, choose Combination with maximum $N_{RB\_CC1}$ for testing.														

1. Connect the SS to the UE antenna connectors as shown in TS 36.508[7] Annex A Figure group A.58 as appropriate.
2. The parameter settings for the cell are set up according to TS 36.508 [7] subclause 4.4.3.
3. Downlink signals for PCC are initially set up according to Annex C.0, C.1, and C.3.1, and uplink signals according to Annex H.1 and H.3.0.
4. The UL and DL Reference Measurement channels are set according to Table 7.6.3A.5.4.1-1 through Table 7.6.3A.5.4.1-5 as appropriate.
5. Propagation conditions are set according to Annex B.0.
6. Ensure the UE is in State 3A-RF according to TS 36.508 [7] clause 5.2A.2. Message contents are defined in clause 7.6.3A.5.4.3.

#### 7.6.3A.5.4.2 Test Procedure

1. Configure SCCs according to Annex C.0, C.1 and Annex C.3.1 for all downlink physical channels.
2. The SS shall configure SCCs as per TS 36.508 [7] clause 5.2A.4. Message contents are defined in clause 7.6.3A.5.4.3

3. SS activates SCCs by sending the activation MAC-CE (Refer TS 36.321 [13], clauses 5.13, 6.1.3.8). Wait for at least 2 seconds (Refer TS 36.133, clauses 8.3.3.2).
4. SS transmits PDSCH via PDCCH DCI format 1A for C\_RNTI to transmit the DL RMC according to Table 7.6.3A.5.4.1-1 through Table 7.6.3A.5.4.1-5 as appropriate on PCC and SCCs. The SS sends downlink MAC padding bits on the DL RMC.
5. SS sends uplink scheduling information for each UL HARQ process via PDCCH DCI format 0 for C\_RNTI to schedule the UL RMC according to Table 7.6.3A.5.4.1-1 through Table 7.6.3A.5.4.1-5 on PCC. Since the UE has no payload data to send, the UE sends uplink MAC padding bits on the UL RMC.
6. Set the parameters of the CW signal generator for an interfering signal below the aggregated component carriers according to Table 7.6.3A.5.4.2-1.
7. Set the downlink signal level according to the table 7.6.3A.5.4.2-1. Send uplink power control commands to the UE (less or equal to 1dB step size should be used), to ensure that the UE output power is within +0, - 3.4 dB of the target level in table 7.6.3A.5.4.2-1 for carrier frequency  $f \leq 3.0\text{GHz}$  or within +0, -4.0 dB of the target level for carrier frequency  $3.0\text{GHz} < f \leq 4.2\text{GHz}$ , for at least the duration of the throughput measurement.
8. Measure the average throughput for the carrier(s) indicated in Table 7.6.3A.5.4.2-1 for duration sufficient to achieve statistical significance according to Annex G.2A.
9. Repeat steps from 6 to 8, using an interfering signal above the measured carrier(s) according to Table 7.6.3A.5.4.2-1 at step 6.
10. Repeat steps 1 to 9 for component carriers listed in Table 7.6.3A.5.4.2-1.

**Table 7.6.3A.5.4.2-1: Test repetition and measurement configuration**

CA configuration	ID (Note 1)	Throughput measured on (Note 3)	Table with test parameters to select (Note 2)
Intra-band contiguous	1	PCC, SCC1, SCC2	7.6.3A.5.5-1
	2		
Inter-band	1	SCC1	7.6.3A.5.5-2
		SCC2	
	2	SCC1	
		SCC2	
	3	SCC1

	2		
	3	SCC1, SCC2	7.6.3A.5.5-1
	4		
Intra-band non-contiguous + Inter-band	1	SCC2	7.6.3A.5.5-2
	2	SCC1,	7.6.3A.5.5-2
		SCC2	
Intra-band non-contiguous + Intra-band contiguous	1	PCC	7.6.3A.5.5-2
		SCC1, SCC2	7.6.3A.5.5-1
		SCC2	7.6.3A.5.5-2
	2	PCC, SCC1	7.6.3A.5.5-1
Note 1: Test point ID for the particular CA configuration as defined in section 7.6.3A.5.4.1. Note 2: The reference for the placement of the interferer signals is the centre frequency of the carrier closest to the interferer among the carriers throughput is measured on. Note 3: Where there are multiple rows for a single Test point ID, the test is repeated for each row.			

## 7.6.3A.5.4.3 Message Contents

Same message contents as in clause 7.6.3.4.3.

## 7.6.3A.5.5 Test Requirement

The throughput measurement of each carrier derived in test procedure shall be  $\geq 95\%$  of the maximum throughput of the reference measurement channels as specified in Annex A.3.2 with parameters specified in Table Tables below, according to the type of CA.

**Table 7.6.3A.5.5-1: Narrow-band blocking (intra-band contiguous)**

Parameter	Unit	CA Bandwidth Class				
		B	C	D	E	F
Power per CC in Aggregated Transmission Bandwidth Configuration	dBm	REFSENS + CA Bandwidth Class specific value below				
		16	16 <sup>4</sup>	16		
$P_{uw}$ (CW)	dBm	-55	-55	-55		
$F_{uw}$ (offset for $\Delta f = 15$ kHz)	MHz	$- F_{offset} - 0.2$ / $+ F_{offset} + 0.2$	$- F_{offset} - 0.2$ / $+ F_{offset} + 0.2$	$- F_{offset} - 0.2$ / $+ F_{offset} + 0.2$		
$F_{uw}$ (offset for $\Delta f = 7.5$ kHz)	MHz					
Note 1: The transmitter shall be set to 4dB below $P_{CMAX\_L}$ or $P_{CMAX\_L\_CA}$ as defined in subclause 6.2.5. Note 2: Reference measurement channel is specified in Annex A.3.2 with one sided dynamic OCNG Pattern OP.1 FDD/TDD as described in Annex A.5.1.1/A.5.2.1. Note 3: The $F_{uw}$ (offset) is the frequency separation of the center frequency of the carrier closest to the interferer and the center frequency of the interferer and shall be further adjusted to $\lfloor  F_{uw}(\text{offset for } \Delta f = 15 \text{ kHz})  / 0.015 + 0.5 \rfloor 0.015 + 0.0075$ MHz to be offset from the sub-carrier raster. Note 4: The requirement is applied for the band combinations whose component carriers' $BW \geq 5$ MHz.						

**Table 7.6.3A.5.5-2: Narrow-band blocking (inter-band, intra-band non-contiguous)**

Parameter	Unit	Channel Bandwidth					
		1.4 MHz	3 MHz	5 MHz	10 MHz	15 MHz	20 MHz
$P_w$ for each CC	dBm	$P_{REFSENS}$ + channel-bandwidth specific value below					
		22	18	16	13	14	16
$P_{uw}$ (CW)	dBm	-55	-55	-55	-55	-55	-55
$F_{uw}$ (offset for $\Delta f = 15$ kHz from SCC)	MHz	0.9075	1.7025	2.7075	5.2125	7.7025	10.2075
$F_{uw}$ (offset for $\Delta f = 7.5$ kHz from SCC)	MHz						
Note 1: The transmitter shall be set a 4 dB below $P_{CMAX\_L}$ with $P_{CMAX\_L}$ as defined in clause 6.2.5. Note 2: The reference measurement channel is specified in Annex A.3.2 with one sided dynamic OCNG Pattern OP.1 FDD/TDD as described in Annex A.5.1.1/A.5.2.1. Note 3: For intra-band non-contiguous + inter-band CA, $\Delta R_{IBNC} = 0$ dB for all sub-block gaps.							

For a UE, which supports CA configuration in Tables 7.3.3-1A, 7.3.3-1B and 7.3.3-1C,  $P_{uw}$  power defined in Table 7.6.3A.5.5-1 and 7.6.3A.5.5-2 is increased by the amount given by  $\Delta R_{IB,c}$  in Tables 7.3.3-1A, 7.3.3-1B and 7.3.3-1C.

## 7.6.3A.6

## 7.6.3A.7 Narrow band blocking for 4DL CA

Editor's note: Following aspects missing or not yet determined:

- The test applicability needs to be added to TS36.521-2
- The test case needs to be added to Annex G
- Test configuration tables format are under investigation and may change in RAN5.

#### 7.6.3A.7.1 Test Purpose

Same test purpose as 7.6.3A.1.

#### 7.6.3A.7.2 Test Applicability

This test case applies to all types of E-UTRA UE release 11 and forward that support 4DL Intra-band contiguous CA or 4DL Inter-band CA or 4DL Intra-band contiguous + Inter-band CA.

This test case also applies to all types of E-UTRA UE release 12 and forward that support 4DL Intra-band non-contiguous CA + Inter-band CA or 4DL Intra-band non-contiguous + Intra-band contiguous CA.

This test case also applies to all types of E-UTRA UE release 12 and forward that support 4DL CA with FDD-TDD CA.

#### 7.6.3A.7.3 Minimum Conformance Requirements

The minimum conformance requirements are defined in clause 7.6.3A.0.

#### 7.6.3A.7.4 Test Description

##### 7.6.3A.7.4.1 Initial Conditions

Initial conditions are a set of test configurations the UE needs to be tested in and the steps for the SS to take with the UE to reach the correct measurement state.

The initial test configurations consist of environmental conditions, test frequencies, and channel bandwidths based on E-UTRA CA configurations specified in table 5.4.2A.1-1 through table 5.4.2A.1-2a. All of these configurations shall be tested with applicable test parameters for each channel bandwidth, and are shown in table 7.6.3A.7.4.1-1 through table 7.6.3A.7.4.1-6 as appropriate. The details of the uplink reference measurement channels (RMCs) are specified in Annex A.2 and A.3. Configurations of PDSCH and PDCCH before measurement are specified in Annex C.2.

**Table 7.6.3A.7.4.1-1: Test Configuration Table (Intra-band contiguous)**

Initial Conditions																		
Test Environment as specified in TS 36.508 [7] subclause 4.1											NC							
Test Frequencies as specified in TS36.508 [7] subclause 4.3.1 for different CA bandwidth classes.											For test frequencies refer to “Range” columns. For mapping within Band refer to “CC” columns							
Test CC Combination setting ( $N_{RB\_agg}$ ) as specified in subclause 5.4.2A.1 for the CA Configuration across bandwidth combination sets supported by the UE.											Refer to “PCC $N_{RB}$ ” and “SCCs $N_{RB}$ ” columns							
Network signalling value											NS_01 by default							
Test Parameters for CA Configurations																		
ID	CA Configuration / $N_{RB\_agg}$								DL Allocation				UL Allocation (Note 2,3)					
	CA Configuration							PCC $N_{RB}$	SCCs $N_{RB}$			CC MOD	PCC & SCCs RB allocation				CC MOD	PCC $L_{CRB}$ @ $RB_{start}$
	Band	Range	PCC CC	SCC1 CC	SCC2 CC	SCC3 CC	SCC1		SCC2	SCC3	PCC		SCC1	SCC2	SCC3			
Default Test Settings for a CA_XE Configuration																		
1	X	Mid	CC1	CC2	CC3	CC4	Lowest $N_{RB\_agg}$			QPSK	All RBs				QPSK	REFSENS		
2	X	Mid	CC1	CC2	CC3	CC4	Highest $N_{RB\_agg}$			QPSK	All RBs				QPSK	REFSENS		
Note 1: CA Configuration Test CC Combination test settings are checked separately for each CA Configuration. Note 2: Use CA Configuration – specific test points if present in the table, otherwise use Default Test Settings test points. Note 3: X corresponds to the band of the CA Configuration. E.g. for CA_41E, X=41. Note 4: REFSENS refers to the PCC band's and PCC $N_{RB}$ 's single carrier Uplink RB allocation for reference sensitivity according to table 7.3.5-2. Note 5: If in the CA Configuration UE supports multiple CC Combinations with the same $N_{RB\_agg}$ , choose for testing the Combination with maximum $N_{RB\_PCC}$ and then select maximum $N_{RB\_SCC1}$ for the chosen $N_{RB\_PCC}$ .																		

Table 7.6.3A.7.4.1-2: Test Configuration Table (Inter-band)

Initial Conditions																			
Test Environment as specified in TS 36.508[7] subclause 4.1													NC						
Test Frequencies as specified in TS36.508 [7] subclause 4.3.1 for different CA bandwidth classes.													For test frequencies refer to “Range” columns. For mapping within Band refer to “CC” columns						
Test CC Combination setting ( $N_{RB\_agg}$ ) as specified in subclause 5.4.2A.1 for the CA Configuration across bandwidth combination sets supported by the UE.													Refer to “PCC $N_{RB}$ ” and “SCCs $N_{RB}$ ” columns						
Network signalling value													NS_01 by default						
Test Parameters for CA Configurations																			
ID	CA Configuration / $N_{RB\_agg}$									DL Allocation				UL Allocation (Note 2,3)					
	CA Configuration								PCC $N_{RB}$	SCCs $N_{RB}$			PCC & SCCs RB allocation				CC MOD	PCC $L_{CRB}$ @ $RB_{start}$	
	PCC		SCC1		SCC2		SCC3			SCC1	SCC2	SCC3	CC MOD	PCC	SCC1	SCC2			SCC3
	Band	Range	Band	Range	Band	Range	Band	Range											
Default Test Settings for a CA_XA-YA-ZA-RA Configuration																			
1	X	Mid	Y	Mid	Z	Mid	R	Mid	Highest $N_{RB}$	Highest $N_{RB}$	Highest $N_{RB}$	Highest $N_{RB}$	QPSK	All RBs			QPSK	REFSENS	
2	Y	Mid	X	Mid	Z	Mid	R	Mid	Highest $N_{RB}$	Highest $N_{RB}$	Highest $N_{RB}$	Highest $N_{RB}$	QPSK	All RBs			QPSK	REFSENS	
3	Z	Mid	X	Mid	Y	Mid	R	Mid	Highest $N_{RB}$	Highest $N_{RB}$	Highest $N_{RB}$	Highest $N_{RB}$	QPSK	All RBs			QPSK	REFSENS	
4	R	Mid	X	Mid	Y	Mid	Z	Mid	Highest $N_{RB}$	Highest $N_{RB}$	Highest $N_{RB}$	Highest $N_{RB}$	QPSK	All RBs			QPSK	REFSENS	
Note 1:	CA Configuration Test CC Combination test settings are checked separately for each CA Configuration.																		
Note 2:	Use CA Configuration – specific test points if present in the table, Otherwise use test points from matching Group Test Settings, if present in the table. Otherwise use the Default Test Settings test points.																		
Note 3:	If, according to the UE declared capability, UE does not support UL in an individual band within the CA Configuration, test points with that individual band as PCC are not applicable.																		
Note 4:	X,Y,Z,R correspond to the different bands in the CA Configuration. E.g. for CA_1A-3A-7A-8A,X=1,Y=3,Z=7,R=8.																		
Note 5:	REFSENS refers to the PCC band's and PCC $N_{RB}$ 's single carrier Uplink RB allocation for reference sensitivity according to table 7.3.5-2.																		

Table 7.6.3A.7.4.1-3: Test Configuration Table (Intra-band contiguous +

Inter-band)

Initial Conditions																			
Test Environment as specified in TS 36.508[7] subclause 4.1													NC						
Test Frequencies as specified in TS36.508 [7] subclause 4.3.1 for different CA bandwidth classes.													For test frequencies refer to “Range” columns. For mapping within Band refer to “CC” columns						
Test CC Combination setting ( $N_{RB\_agg}$ ) as specified in subclause 5.4.2A.1 for the CA Configuration across bandwidth combination sets supported by the UE.													Refer to “PCC $N_{RB}$ ” and “SCCs $N_{RB}$ ” columns

1. Connect the SS to the UE antenna connectors as shown in TS 36.508[7] Annex A Figure group A.58 as appropriate.
2. The parameter settings for the cell are set up according to TS 36.508 [7] subclause 4.4.3.
3. Downlink signals for PCC are initially set up according to Annex C.0, C.1, and C.3.1, and uplink signals according to Annex H.1 and H.3.0.
4. The UL and DL Reference Measurement channels are set according to Table 7.6.3A.7.4.1-1 through Table 7.6.3A.7.4.1-6 as appropriate.
5. Propagation conditions are set according to Annex B.0.
6. Ensure the UE is in State 3A-RF according to TS 36.508 [7] clause 5.2A.2. Message contents are defined in clause 7.6.3A.7.4.3.

#### 7.6.3A.7.4.2 Test Procedure

1. Configure SCCs according to Annex C.0, C.1 and Annex C.3.1 for all downlink physical channels.
2. The SS shall configure SCCs as per TS 36.508 [7] clause 5.2A.4. Message contents are defined in clause 7.6.3A.7.4.3.
3. SS activates SCCs by sending the activation MAC-CE (Refer TS 36.321 [13], clauses 5.13, 6.1.3.8). Wait for at least 2 seconds (Refer TS 36.133, clauses 8.3.3.2).
4. SS transmits PDSCH via PDCCH DCI format 1A for C\_RNTI to transmit the DL RMC according to Table 7.6.3A.7.4.1-1 through Table 7.6.3A.7.4.1-6 as appropriate on PCC and SCCs. The SS sends downlink MAC padding bits on the DL RMC.
5. SS sends uplink scheduling information for each UL HARQ process via PDCCH DCI format 0 for C\_RNTI to schedule the UL RMC according to Table 7.6.3A.7.4.1-1 through Table 7.6.3A.7.4.1-6 on PCC. Since the UE has no payload data to send, the UE sends uplink MAC padding bits on the UL RMC.
6. Set the parameters of the CW signal generator for an interfering signal below the aggregated component carriers according to Table 7.6.3A.7.4.2-1.
7. Set the downlink signal level according to the table 7.6.3A.7.4.2-1. Send uplink power control commands to the UE (less or equal to 1dB step size should be used), to ensure that the UE output power is within +0, - 3.4 dB of the target level in table 7.6.3A.7.4.2-1 for carrier frequency  $f \leq 3.0\text{GHz}$  or within +0, -4.0 dB of the target level for carrier frequency  $3.0\text{GHz} < f \leq 4.2\text{GHz}$ , for at least the duration of the throughput measurement.
8. Measure the average throughput for the carrier(s) indicated in Table 7.6.3A.7.4.2-1 for duration sufficient to achieve statistical significance according to Annex G.2A.
9. Repeat steps from 6 to 8, using an interfering signal above the measured carrier(s) according to Table 7.6.3A.7.4.2-1 at step 6.
10. Repeat steps 1 to 9 for component carriers listed in Table 7.6.3A.7.4.2-1.

**Table 7.6.3A.7.4.2-1: Test repetition and measurement configuration**

CA configuration	ID (Note 1)	Throughput measured on (Note 3)	Table with test parameters to select (Note 2)

Note 1: Test point ID for the particular CA configuration as defined in section 7.6.3A.7.4.1.  
 Note 2: The reference for the placement of the interferer signals is the centre frequency of the carrier closest to the interferer among the carriers throughput is measured on.  
 Note 3: Where there are multiple rows for a single Test point ID, the test is repeated for each row.

**7.6.3A.7.4.3 Message Contents**

Same message contents as in clause 7.6.3A.1.4.3.

**7.6.3A.7.5 Test Requirement**

The throughput measurement of each carrier derived in test procedure shall be  $\geq 95\%$  of the maximum throughput of the reference measurement channels as specified in Annex A.3.2 with parameters specified in Table Tables below, according to the type of CA.

**Table 7.6.3A.7.5-1: Narrow-band blocking (intra-band contiguous)**

Parameter	Unit	CA Bandwidth Class				
		B	C	D	E	F

Power per CC in Aggregated Transmission Bandwidth Configuration	dBm	REFSENS + CA Bandwidth Class specific value below			
		16	16 <sup>4</sup>	16	16
$P_{uw}$ (CW)	dBm	-55	-55	-55	-55
$F_{uw}$ (offset for $\Delta f = 15$ kHz)	MHz	$-F_{offset} - 0.2$ / $+F_{offset} + 0.2$	$-F_{offset} - 0.2$ / $+F_{offset} + 0.2$	$-F_{offset} - 0.2$ / $+F_{offset} + 0.2$	$-F_{offset} - 0.2$ / $+F_{offset} + 0.2$
$F_{uw}$ (offset for $\Delta f = 7.5$ kHz)	MHz				
<p>Note 1: The transmitter shall be set to 4dB below <math>P_{CMAX\_L}</math> or <math>P_{CMAX\_L\_CA}</math> as defined in subclause 6.2.5A.</p> <p>Note 2: Reference measurement channel is specified in Annex A.3.2 with one sided dynamic OCNG Pattern OP.1 FDD/TDD as described in Annex A.5.1.1/A.5.2.1.</p> <p>Note 3: The <math>F_{interferer}</math> (offset) is the frequency separation of the centre frequency of the carrier closest to the interferer and the centre frequency of the interferer and shall be further adjusted to <math>\lfloor F_{interferer} / 0.015 + 0.5 \rfloor 0.015 + 0.0075</math> MHz to be offset from the sub-carrier raster.</p> <p>Note 4: The requirement is applied for the band combinations whose component carriers' <math>BW \geq 5</math> MHz.</p>					

**Table 7.6.3A.7.5-2: Narrow-band blocking (inter-band, intra-band non-contiguous)**

Parameter	Unit	Channel Bandwidth					
		1.4 MHz	3 MHz	5 MHz	10 MHz	15 MHz	20 MHz
$P_w$ for each CC	dBm	$P_{REFSENS}$ + channel-bandwidth specific value below					
		22	18	16	13	14	16
$P_{uw}$ (CW)	dBm	-55	-55	-55	-55	-55	-55
$F_{uw}$ (offset for $\Delta f = 15$ kHz from SCC)	MHz	0.9075	1.7025	2.7075	5.2125	7.7025	10.2075
$F_{uw}$ (offset for $\Delta f = 7.5$ kHz from SCC)	MHz						
<p>Note 1: The transmitter shall be set a 4 dB below <math>P_{CMAX\_L}</math> with <math>P_{CMAX\_L}</math> as defined in clause 6.2.5.</p> <p>Note 2: The reference measurement channel is specified in Annex A.3.2 with one sided dynamic OCNG Pattern OP.1 FDD/TDD as described in Annex A.5.1.1/A.5.2.1.</p> <p>Note 3: For intra-band non-contiguous + inter-band CA, <math>\Delta R_{IBNC} = 0</math> dB for all sub-block gaps.</p>							

For a UE, which supports CA configuration in Tables 7.3.3-1A, 7.3.3-1B and 7.3.3-1C,  $P_{uw}$  power defined in Table 7.6.3A.7.5-1 and 7.6.3A.7.5-2 is increased by the amount given by  $\Delta R_{IB,c}$  in Tables 7.3.3-1A, 7.3.3-1B and 7.3.3-1C.

## 7.6.3B Narrow band blocking for UL-MIMO

### 7.6.3B.1 Test Purpose

Narrow band blocking for UL-MIMO is defined for an unwanted CW interfering signal falling near the UE that supports UL-MIMO receive band, at which a given average throughput shall meet or exceed the requirement for the specified measurement channels,

The lack of narrow-band blocking ability will decrease the coverage area when other e-NodeB transmitters exist (except in the adjacent channels and spurious response).

### 7.6.3B.2 Test Applicability

This test applies to all types of E-UTRA UE release 10 and forward that support UL-MIMO.

### 7.6.3B.3 Minimum Conformance Requirements

For UE with two transmitter antenna connectors in closed-loop spatial multiplexing scheme, the minimum requirements in clause 7.6 shall be met with the UL-MIMO configurations specified in Table 6.2.2B-2. For UL-MIMO, the parameter  $P_{CMAX\_L}$  is defined as the total transmitter power over the two transmit antenna connectors.

## 7.6.3B.4 Test Description

### 7.6.3B.4.1 Initial Conditions

Initial conditions are a set of test configurations the UE needs to be tested in and the steps for the SS to take with the UE to reach the correct measurement state.

The initial test configurations consist of environmental conditions, test frequencies, and channel bandwidths based on E-UTRA bands specified in table 5.4.2.1-1. All of these configurations shall be tested with applicable test parameters for each channel bandwidth, and are shown in table 7.6.3B.4.1-1. The details of the uplink and downlink reference measurement channels (RMCs) are specified in Annexes A.2 and A.3 respectively. The details of the OCNG patterns used are specified in Annex A.5. Configurations of PDSCH and PDCCH before measurement are specified in Annex C.2.

**Table 7.6.3B.4.1-1: Test Configuration Table**

Initial Conditions						
Test Environment as specified in TS 36.508 [7] clause 4.1			NC			
Test Frequencies as specified in TS 36.508 [7] clause 4.3.1			Mid range			
Test Channel Bandwidths as specified in TS 36.508 [7] clause 4.3.1			Lowest, 5MHz, Highest			
Test Parameters for Channel Bandwidths						
Ch BW	Downlink Configuration			Uplink Configuration		
	Mod'n	RB allocation		Mod'n	RB allocation	
		FDD	TDD		FDD	TDD
1.4MHz	QPSK	6	6	QPSK	6	6
3MHz	QPSK	15	15	QPSK	15	15
5MHz	QPSK	25	25	QPSK	25	25
5MHz	QPSK	25	N/A	QPSK	20	N/A
5MHz	QPSK	25	N/A	QPSK	15	N/A
5MHz	QPSK	25	N/A	QPSK	5 <sup>4</sup>	N/A
10MHz	QPSK	50	50	QPSK	50	50
10MHz	QPSK	50	N/A	QPSK	25	N/A
10MHz	QPSK	50	N/A	QPSK	20	N/A
10MHz	QPSK	50	N/A	QPSK	15	N/A
15MHz	QPSK	75	75	QPSK	75	75
15MHz	QPSK	75	N/A	QPSK	50	N/A
15MHz	QPSK	75	N/A	QPSK	25	N/A
15MHz	QPSK	75	N/A	QPSK	20	N/A
20MHz	QPSK	100	100	QPSK	100	100
20MHz	QPSK	100	N/A	QPSK	75	N/A
20MHz	QPSK	100	N/A	QPSK	50	N/A
20MHz	QPSK	100	N/A	QPSK	25	N/A
20MHz	QPSK	100	N/A	QPSK	20	N/A

Note 1: Test Channel Bandwidths are checked separately for each E-UTRA band, which applicable channel bandwidths are specified in Table 5.4.2.1-1.

Note 2: Depending on E-UTRA band, only the appropriate Uplink RB allocation value according to table 7.3.3-2 is tested per Test Channel Bandwidth.

Note 3: For the DL signal one sided dynamic OCNG Pattern OP.1 FDD/TDD is used.

Note 4: Applicable only to E-UTRA FDD Band 31. The UL resource blocks shall be located at RBstart 10 (according to Table 7.3.3-2).

1. Connect the SS to the UE antenna connectors as shown in TS 36.508 [7] Annex A, Figure A.30.
2. The parameter settings for the cell are set up according to TS 36.508 [7] clause 4.4.3.
3. Downlink signals are initially set up according to Annex C0, C.1 and C.3.1, and uplink signals according to Annex H.1 and H.3.1
4. The UL and DL Reference Measurement channels are set according to Table 7.6.3B.4.1-1.
5. Propagation conditions are set according to Annex B.0.

6. Ensure the UE is in State 3A-RF according to TS 36.508 [7] clause 5.2A.2. Message contents are defined in clause 7.6.3B.4.3.

#### 7.6.3B.4.2 Test Procedure

1. SS transmits PDSCH via PDCCH DCI format 1A for C\_RNTI to transmit the DL RMC according to Table 7.6.3B.4.1-1. The SS sends downlink MAC padding bits on the DL RMC.
2. SS sends uplink scheduling information for each UL HARQ process via PDCCH DCI format 4 for C\_RNTI to schedule the UL RMC according to Table 7.6.3B.4.1-1. Since the UE has no payload data to send, the UE transmits uplink MAC padding bits on the UL RMC.
3. Set the parameters of the CW signal generator for an interfering signal below the wanted signal according to Table 7.6.3B.5-1.
4. Set the downlink signal level according to the table 7.6.3B.5-1. Send uplink power control commands to the UE (less or equal to 1dB step size should be used), to ensure that the UE output power is within +0, - 3.4 dB of the target level in table 7.6.3B.5-1 for carrier frequency  $f \leq 3.0\text{GHz}$  or within +0, -4.0 dB of the target level for carrier frequency  $3.0\text{GHz} < f \leq 4.2\text{GHz}$ , for at least the duration of the throughput measurement and the UE output power is mean sum power of each antenna connector for UE.
5. Measure the average throughput for a duration sufficient to achieve statistical significance according to Annex G.2.
6. Repeat steps from 3 to 5, using an interfering signal above the wanted signal at step 3.

#### 7.6.3B.4.3 Message Contents

Message contents are according to TS 36.508 [7] clause 4.6 with the following exception.

**Table 7.6.3B.4.3-1: UplinkPowerControlDedicated**

Derivation Path: 36.331 clause 6.3.2			
Information Element	Value/remark	Comment	Condition
UplinkPowerControlDedicated-DEFAULT ::= SEQUENCE {			
p0-UePUSCH	0		
deltaMCS-Enabled	en0		
accumulationEnabled	TRUE		
p0-uePUCCH	0		
pSRS-Offset	3 (-6 dB)		
filterCoefficient	fc8	larger filter length is used to reduce the RSRP measurement variation	
}			

#### 7.6.3B.5 Test Requirement

The throughput measurement derived in test procedure shall be  $\geq 95\%$  of the maximum throughput of the reference measurement channels as specified in Annex A.3.2 with parameters specified in Table 7.6.3B.5-1.

Table 7.6.3B.5-1: Narrow-band blocking

Parameter	Unit	Channel Bandwidth					
		1.4 MHz	3 MHz	5 MHz	10 MHz	15 MHz	20 MHz
$P_w$	dBm	$P_{\text{REFSENS}} + \text{channel-bandwidth specific value below}$					
		22	18	16	13	14	16
$P_{\text{UW}}(\text{CW})$	dBm	-55	-55	-55	-55	-55	-55
$F_{\text{UW}}$ (offset for $\Delta f = 15$ kHz)	MHz	0.9075	1.7025	2.7075	5.2125	7.7025	10.2075
$F_{\text{UW}}$ (offset for $\Delta f = 7.5$ kHz)	MHz						
Note 1: The transmitter shall be set a 4 dB below $P_{\text{CMAX,L}}$ with $P_{\text{CMAX,L}}$ as defined in clause 6.2.5.							
Note 2: The reference measurement channel is specified in Annex A.3.2 with one sided dynamic OCNG Pattern OP.1 FDD/TDD as described in Annex A.5.1.1/A.5.2.1.							

For the UE which supports inter band CA configuration in Table 7.3.3-1A, 7.3.3-1B and 7.3.3-1C,  $P_{\text{UW}}$  power defined in Table 7.6.3B.5-1 is increased by the amount given by  $\Delta R_{\text{IB,c}}$  in Table 7.3.3-1A, 7.3.3-1B and 7.3.3-1C.

## 7.6.3D Narrow band blocking for ProSe

### 7.6.3D.0 Minimum conformance requirements

The relative throughput shall be  $\geq 95\%$  of the maximum throughput of the reference measurement channels as specified in Annex A.6.2 with parameters specified in Table 7.6.3D.0-1 and Table 7.6.3D.0-2.

Table 7.6.3D.0-1: Narrow-band blocking for ProSe Direct Discovery

Parameter	Unit	Channel Bandwidth					
		1.4 MHz	3 MHz	5 MHz	10 MHz	15 MHz	20 MHz
$P_w$	dBm	$P_{\text{REFSENS, ProSe}} + \text{channel-bandwidth specific value below} + P_{\text{offset}}$					
				16	13	14	16
$P_{\text{UW}}(\text{CW})$	dBm			-55	-55	-55	-55
$P_{\text{offset}}$	dB			10.9	13.9	15.7	16.9
$F_{\text{UW}}$ (offset for $\Delta f = 15$ kHz)	MHz			2.7075	5.2125	7.7025	10.2075
$F_{\text{UW}}$ (offset for $\Delta f = 7.5$ kHz)	MHz						
NOTE 1: Reference measurement channel is specified in Annex A.6.2.							

Table 7.6.3D.0-2: Narrow-band blocking for ProSe Direct Communication

Parameter	Unit	Channel Bandwidth					
		1.4 MHz	3 MHz	5 MHz	10 MHz	15 MHz	20 MHz
$P_w$	dBm	$P_{\text{REFSENS, ProSe}} + \text{channel-bandwidth specific value below}$					
				16	13	14	16
$P_{\text{UW}}(\text{CW})$	dBm			-55	-55	-55	-55
$F_{\text{UW}}$ (offset for $\Delta f = 15$ kHz)	MHz			2.7075	5.2125	7.7025	10.2075
$F_{\text{UW}}$ (offset for $\Delta f = 7.5$ kHz)	MHz						
NOTE 1: Reference measurement channel is specified in Annex A.6.2.							

For the UE which supports inter-band CA configuration in Table 7.3.3-1A, 7.3.3-1B and 7.3.3-1C,  $P_{\text{UW}}$  power defined in Table 7.6.3D.0-1 and Table 7.6.3D.0-2 is increased by the amount given by  $\Delta R_{\text{IB,c}}$  in Table 7.3.3-1A, 7.3.3-1B and 7.3.3-1C.

The normative reference for this requirement is TS 36.101 [2] clause 7.6.3.1D.

### 7.6.3D.1 Narrow band blocking for ProSe Direct Discovery

**Editor's note: This test case is not complete. Following aspects are either missing or not yet determined:**

- ProSe UE authentication is not handled in the test case and is still under investigation.
- Use of OCNG for Downlink has not been considered and is still FFS.
- Message exceptions content needs further investigation (some values still TBD).
- Test time is FFS.
- Connection Diagram is FFS

### 7.6.3D.1.1 Test Purpose

Narrow-band blocking verifies the receiver's ability to receive a E-UTRA signal at its assigned channel frequency in the presence of an unwanted narrow band CW interferer at a frequency, which is less than the nominal channel spacing.

### 7.6.3D.1.2 Test Applicability

This test applies to all types of E-UTRA UE release 12 and forward which support ProSe Direct Discovery, but not ProSe Direct Communication.

### 7.6.3D.1.3 Minimum Conformance Requirements

The minimum conformance requirements are defined in clause 7.6.3D.0.

### 7.6.3D.1.4 Test Description

#### 7.6.3D.1.4.1 Initial Conditions

Initial conditions are a set of test configurations the UE needs to be tested in and the steps for the SS to take with the UE to reach the correct measurement state.

The initial test configurations consist of environmental conditions, test frequencies, and channel bandwidths based on E-UTRA ProSe bands specified in table 5.4.2D.1-1. All of these configurations shall be tested with applicable test parameters for each channel bandwidth, and are shown in table 7.6.3D.1.4.1-1. The details of the downlink, uplink and sidelink reference measurement channels (RMCs) are specified in Annexes A.2, A.3 and A.6.

**Table 7.6.3D.1.4.1-1: Test Configuration Table**

Initial Conditions						
Test Environment as specified in TS 36.508[7] subclause 4.1			NC			
Test Frequencies as specified in TS36.508 [7] subclause 4.3.1			Mid range(Note 4)			
Test Channel Bandwidths as specified in TS 36.508 [7] subclause 4.3.1			5MHz, Highest			
	Downlink Configuration (Note 2)		Uplink Configuration (Note 2)		Sidelink Configuration (Reception) (Note 3)	
Ch BW	Mod'n	RB allocation	Mod'n	RB allocation	Mod'n	RB allocation
5MHz	QPSK	8	QPSK	8	QPSK	2
10MHz	QPSK	16	QPSK	16	QPSK	2
15MHz	QPSK	25	QPSK	25	QPSK	2
20MHz	QPSK	30	QPSK	30	QPSK	2
Note 1: Test Channel Bandwidths are checked separately for each E-UTRA ProSe and Operating band, according to the applicability specified respectively in Table 5.4.2D.1-1 and Table 5.4.2.1-1.						
Note 2: After DRX configuration, DL-RMC (PDSCH) and DCI-0 for scheduling UL-RMC (PUSCH) are applied only in the DRX On subframes.						
Note 3: The RB start for the transmission of Sidelink RMC is RB#0.						
Note 4: Sidelink uses the frequencies defined for Uplink.						

1. Connect the SS to the UE antenna connectors as shown in TS 36.508 [7] Annex A, Figure [FFS].
2. The parameter settings for the cell are set up according to TS 36.508 [7] clause 4.4.3.

3. Downlink signals are initially set up according to Annex C.0, C.1 and C.3.1, and uplink signals according to Annex H.1 and H.3.1.
4. The UL and DL Reference Measurement channels are set according to Table 7.6.3D.1.4.1-1.
5. Propagation conditions are set according to Annex B.0.
6. Ensure the UE is in State 2A-RF according to TS 36.508 [7] clause 5.2A.1A. Message contents exceptions are defined in clause 7.6.1D.1.4.3.
7. SS continues with the generic procedures described in TS 36.508 [7] clause 4.5.3A.3 and 4.5.4.3 and ensures the UE is in State 4 according to TS 36.508 [7] clause 4.5.4 and the UE test loop Mode D is activated.

#### 7.6.1D.1.4.2 Test Procedure

1. SS shall transmit an RRCConnectionReconfiguration message to configure DRX. Message contents exceptions (only those marked with "...Step 1..." ) are defined in clause 7.6.3D.1.4.3.
2. The UE shall transmit RRCConnectionReconfigurationComplete message.
3. Initialise the variables Ptot and Pok as 0.
4. SS transmits PDSCH via PDCCH DCI format 1A for C\_RNTI to transmit the DL RMC according to Table 7.6.3D.1.4.1-1. The SS sends downlink MAC padding bits on the DL RMC.
5. SS sends uplink scheduling information via PDCCH DCI format 0 for C\_RNTI to schedule the UL RMC according to Table 7.6.3D.1.4.1-1. When the UE has no payload data to send, it transmits uplink MAC padding bits on the UL RMC.
6. SS transmits PSDCH to transmit the SL RMC according to Table 7.6.3D.1.4.1-1. Set the Sidelink signal level to the appropriate value defined in Table 7.6.3D.1.5-1.
7. Set the parameters of the CW signal generator for an interfering signal below the wanted signal according to Table 7.6.3D.1.5-1.
8. SS shall send SL Discovery Packets (MAC padding bits) on the SL RMC for the test time [FFS]. SS stores the number of the transmitted Discovery Packets in the current test iteration in the variable Ptot.
10. SS shall send (on the available PDSCH) a "UE TEST LOOP PROSE MODE D SIDELINK DIRECT DISCOVERY PACKET COUNTER REQUEST" message and wait for the UE to respond (on the available PUSCH) with a "UE TEST LOOP PROSE MODE D SIDELINK DIRECT DISCOVERY PACKET COUNTER RESPONSE".
11. SS calculates the variable Pok as (current counter value - counter value at last test iteration).
12. SS shall compute the throughput as following:
 
$$TP = Pok / Ptot * 100\%$$
13. Repeat steps from 6 to 12, using an interfering signal above the wanted signal in step 7.

#### 7.6.1D.1.4.3 Message Contents

Message contents are according to TS 36.508 [7] clauses TBD with following exceptions:

### 7.6.3D.1.5 Test Requirement

The throughput shall be  $\geq 95\%$  of the maximum throughput of the reference measurement channels as specified in Annex A.6.2 with parameters specified in Tables 7.6.3D.1.5-1.

**Table 7.6.3D.1.5-1: Narrow-band blocking for ProSe Direct Discovery**

Parameter	Unit	Channel Bandwidth					
		1.4 MHz	3 MHz	5 MHz	10 MHz	15 MHz	20 MHz
$P_w$	dBm	$P_{\text{REFSENS, ProSe}} + \text{channel-bandwidth specific value below} + P_{\text{offset}}$					
$P_{\text{UW}}(\text{CW})$	dBm			-55	-55	-55	-55
$P_{\text{offset}}$	dB			10.9	13.9	15.7	16.9
$F_{\text{UW}}$ (offset for $\Delta f = 15$ kHz)	MHz			2.7075	5.2125	7.7025	10.2075
$F_{\text{UW}}$ (offset for $\Delta f = 7.5$ kHz)	MHz						

NOTE 1: Reference measurement channel is specified in Annex A.6.2.

For the UE which supports inter band CA configuration in Tables 7.3.3-1A, 7.3.3-1B and 7.3.3-1C,  $P_{\text{Interferer}}$  power defined in Table 7.6.1D.1.5-2 is increased by the amount given by  $\Delta R_{\text{IB,c}}$  in Tables 7.3.3-1A, 7.3.3-1B and 7.3.3-1C.

### 7.6.3D.2 Narrow band blocking for ProSe Direct Communication

**Editor's note: This test case is not complete. Following aspects are either missing or not yet determined:**

- Test description is TBD

#### 7.6.3D.2.1 Test Purpose

Same test purpose as in clause 7.6.3D.1.1.

### 7.6.3D.2.2 Test Applicability

This test applies to all types of E-UTRA UE release 12 and forward which support ProSe Direct Communication.

### 7.6.3D.2.3 Minimum Conformance Requirements

The minimum conformance requirements are defined in clause 7.6.3D.0.

### 7.6.3D.2.4 Test Description

TBD

### 7.6.3D.2.5 Test Requirement

Same test requirement as in clause 7.6.3D.1.5 with the following exceptions:

- Instead of Table 7.6.3D.1.5-1 → use Table 7.6.3D.2.5-1.

**Table 7.6.3D.2.5-1: Narrow-band blocking for ProSe Direct Communication**

Parameter	Unit	Channel Bandwidth					
		1.4 MHz	3 MHz	5 MHz	10 MHz	15 MHz	20 MHz
$P_w$	dBm	$P_{\text{REFSENS\_ProSe}}$ + channel-bandwidth specific value below					
				16	13	14	16
$P_{uw}$ (CW)	dBm			-55	-55	-55	-55
$F_{uw}$ (offset for $\Delta f = 15$ kHz)	MHz			2.7075	5.2125	7.7025	10.2075
$F_{uw}$ (offset for $\Delta f = 7.5$ kHz)	MHz						
NOTE 1: Reference measurement channel is specified in Annex A.6.2.							

## 7.6.3E Narrow band blocking for UE category 0

### 7.6.3E.1 Test Purpose

Same test purpose as in clause 7.6.3.

### 7.6.3E.2 Test Applicability

This test applies to all types of E-UTRA UE release 12 and forward of UE category 0.

### 7.6.3E.3 Minimum Conformance Requirements

Same minimum conformance requirements as in clause 7.6.3.3.

### 7.6.3E.4 Test Description

#### 7.6.3E.4.1 Initial Conditions

Same initial conditions as in clause 7.5.4.1 with the following exceptions:

- Instead of Table 7.6.3.4.1-1 → use Table 7.6.3E.4.1-1.
- Connect the SS to the UE antenna connectors as shown in TS 36.508[7] Annex A Figure A.5 using only main UE Tx/Rx antenna.

Table 7.6.3E.4.1-1: Test Configuration Table

Initial Conditions						
Test Environment as specified in TS 36.508 [7] subclause 4.1			NC			
Test Frequencies as specified in TS 36.508 [7] subclause 4.3.1			Mid range			
Test Channel Bandwidths as specified in TS 36.508 [7] subclause 4.3.1			Lowest, 5MHz, Highest			
Test Parameters for Channel Bandwidths						
Ch BW	Downlink Configuration			Uplink Configuration		
	Mod'n	RB allocation		Mod'n	RB allocation	
		FDD and HD-FDD	TDD		FDD and HD-FDD	TDD
1.4MHz	QPSK	6	6	QPSK	6	6
3MHz	QPSK	14	14	QPSK	15	15
5MHz	QPSK	14	14	QPSK	25	25
5MHz	QPSK	14	N/A	QPSK	20	N/A
10MHz	QPSK	14	14	QPSK	36	36
10MHz	QPSK	14	N/A	QPSK	25	N/A
10MHz	QPSK	14	N/A	QPSK	20	N/A
15MHz	QPSK	14	14	QPSK	36	36
15MHz	QPSK	14	N/A	QPSK	20	N/A
20MHz	QPSK	14	14	QPSK	36	36
20MHz	QPSK	14	N/A	QPSK	20	N/A
Note 1: Test Channel Bandwidths are checked separately for each E-UTRA band, which applicable channel bandwidths are specified in Table 5.4.2.1-1.						
Note 2: Depending on E-UTRA band, only the appropriate Uplink RB allocation value according to table 7.3E.3-3 is tested per Test Channel Bandwidth. The allocation shall be located as close as possible to the downlink operating band but confined within the transmission bandwidth configuration for the channel bandwidth (Table 5.4.2-1).						
Note 3: For the DL signal one sided dynamic OCNG Pattern OP.1 FDD/TDD is used.						
Note 4: Downlink RB position shall be $RB_{start} = 0$						

#### 7.6.3E.4.2 Test Procedure

Same test procedure as in clause 7.6.3.4.2

#### 7.6.3E.4.3 Message Contents

Same message contents as in clause 7.6.3.4.3

#### 7.6.3E.5 Test Requirement

The throughput measurement derived in test procedure shall be  $\geq 95\%$  of the maximum throughput of the reference measurement channels as specified in clause A.3.2 with parameters specified in Table 7.6.3E.5-1.

Table 7.6.3E.5-1: Narrow-band blocking

Parameter	Unit	Channel Bandwidth					
		1.4 MHz	3 MHz	5 MHz	10 MHz	15 MHz	20 MHz
$P_w$	dBm	$P_{REFSENS}$ + channel-bandwidth specific value below					
		22	18	16	13	14	16
$P_{UW}$ (CW)	dBm	-55	-55	-55	-55	-55	-55
$F_{UW}$ (offset for $\Delta f = 15$ kHz)	MHz	0.9075	1.7025	2.7075	5.2125	7.7025	10.2075
$F_{UW}$ (offset for $\Delta f = 7.5$ kHz)	MHz						
Note 1: The transmitter shall be set a 4 dB below $P_{CMAX\_L}$ with $P_{CMAX\_L}$ as defined in clause 6.2.5E.							
Note 2: The reference measurement channel is specified in Annex A.3.2 with one sided dynamic OCNG Pattern OP.1 FDD/TDD as described in clauses A.5.1.1/A.5.2.1.							

## 7.6.3EA Narrow band blocking for UE Category M1

### 7.6.3EA.1 Test Purpose

Verifies a receiver's ability to receive an E-UTRA signal at its assigned channel frequency in the presence of an unwanted narrow band CW interferer at a frequency, which is less than the nominal channel spacing.

The lack of narrow-band blocking ability will decrease the coverage area when other e-NodeB transmitters exist (except in the adjacent channels and spurious response).

### 7.6.3EA.2 Test Applicability

This test applies to all types of E-UTRA UE release 13 and forward of UE category M1.

### 7.6.3EA.3 Minimum Conformance Requirements

The relative throughput shall be  $\geq 95\%$  of the maximum throughput of the reference measurement channels as specified in Annexes A.2.2, A.2.3 and A.3.2 (with one sided dynamic OCNG Pattern OP.1 FDD/TDD for the DL-signal as described in Annex A.5.1.1/A.5.2.1) with parameters specified in Table 7.6.3EA.3-1. For operating bands with an unpaired DL part (as noted in Table 5.2-1), the requirements only apply for carriers assigned in the paired part.

**Table 7.6.3EA.3-1: Narrow-band blocking**

Parameter	Unit	Channel Bandwidth					
		1.4 MHz	3 MHz	5 MHz	10 MHz	15 MHz	20 MHz
$P_w$	dBm	$P_{\text{REFSENS}}$ + channel-bandwidth specific value below					
		22	18	16	13	14	16
$P_{\text{uw}}(\text{CW})$	dBm	-55	-55	-55	-55	-55	-55
$F_{\text{uw}}$ (offset for $\Delta f = 15$ kHz)	MHz	0.9075	1.7025	2.7075	5.2125	7.7025	10.2075
$F_{\text{uw}}$ (offset for $\Delta f = 7.5$ kHz)	MHz						
NOTE 1: The transmitter shall be set a 4 dB below $P_{\text{CMAX,L}}$ at the minimum uplink configuration specified in Table 7.3.3-2 with $P_{\text{CMAX,L}}$ as defined in subclause 6.2.5EA.							
NOTE 2: Reference measurement channel is specified in Annex A.3.2 with one sided dynamic OCNG Pattern OP.1 FDD/TDD as described in Annex A.5.1.1/A.5.2.1.							
NOTE 3: For DL category M1 UE, the reference sensitivity for category M1 in table 7.3EA.3-1 should be used as $P_{\text{REFSENS}}$ for $P_w$ .							
NOTE 4: For DL category M1 UE, the parameters for the applicable channel bandwidth apply.							

The normative reference for this requirement is TS 36.101 [2] clause 7.6.3.

### 7.6.3EA.4 Test Description

#### 7.6.3EA.4.1 Initial Conditions

Initial conditions are a set of test configurations the UE needs to be tested in and the steps for the SS to take with the UE to reach the correct measurement state.

The initial test configurations consist of environmental conditions and test frequencies based on the subset of E-UTRA operating bands defined for CAT M1 in clause 5.2E. All of these configurations shall be tested with applicable test parameters for each channel bandwidth, and are shown in table 7.6.1EA.4.1-1. The details of the downlink and uplink reference measurement channels (RMCs) are specified in Annexes A.2 and A.3. The details of the OCNG patterns used are specified in Annex A.5. Configurations of PDSCH and MPDCCH before measurement are specified in Annex C.2.

**Table 7.6.3EA.4.1-1: Test Configuration Table**

Initial Conditions							
Test Environment as specified in TS 36.508[7] subclause 4.1				NC			
Test Frequencies as specified in TS36.508 [7] subclause 4.3.1				Mid range			
Test Channel Bandwidths as specified in TS 36.508 [7] subclause 4.3.1				5MHz			
Test Parameters for Channel Bandwidths and Narrowband positions							
Downlink Configuration				Uplink Configuration			
Ch BW	Mod'n	RB allocation		Mod'n	RB allocation		Narrowband index (Note 1)
		FDD	TDD		FDD and HD-FDD	TDD	
5MHz	QPSK	4	4	QPSK	6	6	0
Note 1: Denotes where in the channel Bandwith the narrowband shall be placed. Narrowband and Narrowband index are defined in TS36.211, 5.2.4.							

1. Connect the SS to the UE antenna connectors as shown in TS 36.508[7] Annex A Figure A.5 using only main UE Tx/Rx antenna.
2. The parameter settings for the cell are set up according to TS 36.508 [7] subclause 4.4.3.
3. Downlink signals are initially set up according to Annex C0, C.1 and C.3.1, and uplink signals according to Annex H.1 and H.3.1
4. The UL and DL Reference Measurement channels are set according to Table 7.6.3EA.4.1-1.
5. Propagation conditions are set according to Annex B.0.
6. Ensure the UE is in State 3A-RF-CE according to TS 36.508 [7] clause 5.2A.2AA. Message contents are defined in clause 7.6.3EA.4.3.

#### 7.6.3EA.4.2 Test Procedure

1. SS transmits PDSCH via MPDCCH DCI format 6-1A for C\_RNTI to transmit the DL RMC according to Table 7.6.1EA.4.1-1. The SS sends downlink MAC padding bits on the DL RMC. The SS sends one sided dynamic OCNG Pattern OP.1 FDD/TDD for the DL-signal as described in Annex A.5.1.1/A.5.2.1.
2. SS sends uplink scheduling information for each UL HARQ process via MPDCCH DCI format 6-0A for C\_RNTI to schedule the UL RMC according to Table 7.6.3EA.4.1-1. Since the UE has no payload data to send, the UE transmits uplink MAC padding bits on the UL RMC.
3. Set the parameters of the CW signal generator for an interfering signal below the wanted signal according to Table 7.6.3EA.5-1.
4. Set the downlink signal level according to the table 7.6.3EA.5-1. Send uplink power control commands to the UE (less or equal to 1dB step size should be used), to ensure that the UE output power is within +0, - 3.4 dB of the target level in table 7.6.3EA.5-1 for carrier frequency  $f \leq 3.0\text{GHz}$  or within +0, -4.0 dB of the target level for carrier frequency  $3.0\text{GHz} < f \leq 4.2\text{GHz}$ , for at least the duration of the throughput measurement.
5. Measure the average throughput for a duration sufficient to achieve statistical significance according to Annex G.2.
6. Repeat steps from 3 to 5, using an interfering signal above the wanted signal at step 3.

#### 7.6.3EA.4.3 Message Contents

Message contents are according to TS 36.508 [7] subclause 4.6 with the condition CEModeA and the following exception.

Table 7.6.3EA.4.3-1: UplinkPowerControlDedicated

Derivation Path: 36.331 clause 6.3.2			
Information Element	Value/remark	Comment	Condition
UplinkPowerControlDedicated-DEFAULT ::= SEQUENCE {			
p0-UE-PUSCH	0		
deltaMCS-Enabled	en0		
accumulationEnabled	TRUE		
p0-UE-PUCCH	0		
pSRS-Offset	3 (-6 dB)		
filterCoefficient	fc8	larger filter length is used to reduce the RSRP measurement variation	
}			

### 7.6.3EA.5 Test Requirement

The throughput measurement derived in test procedure shall be  $\geq 95\%$  of the maximum throughput of the reference measurement channels as specified in Annex A.3.2 with parameters specified in Table 7.6.3EA.5-1.

Table 7.6.3EA.5-1: Narrow-band blocking

Parameter	Unit	Channel Bandwidth					
		1.4 MHz	3 MHz	5 MHz	10 MHz	15 MHz	20 MHz
$P_w$	dBm	$P_{\text{REFSENS}}$ + channel-bandwidth specific value below					
$P_{uw}$ (CW)	dBm	22	18	16	13	14	16
$F_{uw}$ (offset for $\Delta f = 15$ kHz)	MHz	0.9075	1.7025	2.7075	5.2125	7.7025	10.2075
$F_{uw}$ (offset for $\Delta f = 7.5$ kHz)	MHz						
NOTE 1: The transmitter shall be set a 4 dB below $P_{\text{CMAX,L}}$ at the minimum uplink configuration specified in Table 7.3.3-2 with $P_{\text{CMAX,L}}$ as defined in subclause 6.2.5EA.							
NOTE 2: Reference measurement channel is specified in Annex A.3.2 with one sided dynamic OCNG Pattern OP.1 FDD/TDD as described in Annex A.5.1.1/A.5.2.1.							
NOTE 3: For DL category M1 UE, the reference sensitivity for category M1 in table 7.3EA.3-1 should be used as $P_{\text{REFSENS}}$ for $P_w$ .							
NOTE 4: For DL category M1 UE, the parameters for the applicable channel bandwidth apply.							

## 7.7 Spurious response

### 7.7.1 Test Purpose

Spurious response verifies the receiver's ability to receive a wanted signal on its assigned channel frequency without exceeding a given degradation due to the presence of an unwanted CW interfering signal at any other frequency at which a response is obtained i.e. for which the out of band blocking limit as specified in sub-clause 7.6.2 is not met.

The lack of the spurious response ability decreases the coverage area when other unwanted interfering signal exists at any other frequency.

### 7.7.2 Test Applicability

This test applies to all types of E-UTRA UE release 8 and forward.

### 7.7.3 Minimum Conformance Requirements

The throughput shall be  $\geq 95\%$  of the maximum throughput of the reference measurement channels as specified in Annexes A.2.2, A.2.3 and A.3.2 (with one sided dynamic OCNG Pattern OP.1 FDD/TDD for the DL-signal as described in Annex A.5.1.1/A.5.2.1) with parameters specified in Tables 7.7.3-1 and 7.7.3-2. For operating bands with an unpaired DL part (as noted in Table 5.2-1), the requirements only apply for carriers assigned in the paired part.

**Table 7.7.3-1: Spurious response parameters**

Rx Parameter	Units	Channel bandwidth					
		1.4 MHz	3 MHz	5 MHz	10 MHz	15 MHz	20 MHz
Power in Transmission Bandwidth Configuration	dBm	REFSENS + channel bandwidth specific value below					
		6	6	6	6	7	9
Note 1: The transmitter shall be set to 4dB below $P_{\text{CMAX,L}}$ at the minimum uplink configuration specified in Table 7.3.3-2 with $P_{\text{CMAX,L}}$ as defined in clause 6.2.5.							
Note 2: The reference measurement channel is specified in Annex A.3.2 with one sided dynamic OCNNG Pattern OP.1 FDD/TDD as described in Annex A.5.1.1/A.5.2.1.							

**Table 7.7.3-2: Spurious Response**

Parameter	Unit	Level
$P_{\text{Interferer (CW)}}$	dBm	-44
$F_{\text{Interferer}}$	MHz	Spurious response frequencies

For the UE which supports inter band CA configuration in Table 7.3.3-1A,  $P_{\text{uw}}$  power defined in Table 7.7.3-2 is increased by the amount given by  $\Delta R_{\text{IB,c}}$  in Table 7.3.3-1A.

The normative reference for this requirement is TS 36.101 [2] clause 7.7.

## 7.7.4 Test Description

### 7.7.4.1 Initial Conditions

The initial conditions shall be the same as in clause 7.6.2.4.1 in order to test spurious responses obtained in clause 7.6.2 under the same conditions.

### 7.7.4.2 Test Procedure

1. SS transmits PDSCH via PDCCH DCI format 1A for  $C_{\text{RNTI}}$  to transmit the DL RMC according to Table 7.6.2.4.1-1. The SS sends downlink MAC padding bits on the DL RMC.
2. SS sends uplink scheduling information for each UL HARQ process via PDCCH DCI format 0 for  $C_{\text{RNTI}}$  to schedule the UL RMC according to Table 7.6.2.4.1-1. Since the UE has no payload data to send, the UE transmits uplink MAC padding bits on the UL RMC.
3. Set the parameters of the CW signal generator for an interfering signal according to Table 7.7.5-2. The spurious frequencies are taken from records in the final step of test procedures in clause 7.6.2.4.2.
4. Set the downlink signal level according to the table 7.7.5-1. Send uplink power control commands to the UE (less or equal to 1dB step size should be used), to ensure that the UE output power is within +0, - 3.4 dB of the target level in table 7.7.5-1 for carrier frequency  $f \leq 3.0\text{GHz}$  or within +0, -4.0 dB of the target level for carrier frequency  $3.0\text{GHz} < f \leq 4.2\text{GHz}$ , for at least the duration of the throughput measurement.
5. For the spurious frequency, measure the average throughput for a duration sufficient to achieve statistical significance according to Annex G.2.

### 7.7.4.3 Message Contents

Message contents are according to TS 36.508 [7] subclause 4.6 with the following exception.

Table 7.7.4.3-1: UplinkPowerControlDedicated

Derivation Path: 36.331 clause 6.3.2			
Information Element	Value/remark	Comment	Condition
UplinkPowerControlDedicated-DEFAULT ::= SEQUENCE {			
p0-UePUSCH	0		
deltaMCS-Enabled	en0		
accumulationEnabled	TRUE		
p0-uePUCCH	0		
pSRS-Offset	3 (-6 dB)		
filterCoefficient	fc8	larger filter length is used to reduce the RSRP measurement variation	
}			

## 7.7.5 Test Requirement

The throughput measurement derived in test procedure shall be  $\geq 95\%$  of the maximum throughput of the reference measurement channels as specified in Annex A.3.2 with parameters specified in Tables 7.7.5-1 and 7.7.5-2.

Table 7.7.5-1: Spurious response parameters

Rx Parameter	Units	Channel bandwidth					
		1.4 MHz	3 MHz	5 MHz	10 MHz	15 MHz	20 MHz
Power in Transmission Bandwidth Configuration	dBm	REFSENS + channel bandwidth specific value below					
		6	6	6	6	7	9
Note 1: The transmitter shall be set to 4dB below $P_{\text{CMAX}_L}$ with $P_{\text{CMAX}_L}$ as defined in clause 6.2.5.							
Note 2: The reference measurement channel is specified in Annex A.3.2 with one sided dynamic OCNG Pattern OP.1 FDD/TDD as described in Annex A.5.1.1/A.5.2.1.							

Table 7.7.5-2: Spurious Response

Parameter	Unit	Level
$P_{\text{Interferer}}(\text{CW})$	dBm	-44
$F_{\text{Interferer}}$	MHz	Spurious response frequencies

For the UE which supports inter band CA configuration in Table 7.3.3-1A, 7.3.3-1B and 7.3.3-1C,  $P_{\text{uw}}$  power defined in Table 7.7.5-2 is increased by the amount given by  $\Delta R_{\text{IB},c}$  in Table 7.3.3-1A, 7.3.3-1B and 7.3.3-1C.

### 7.7\_1 Spurious response with 4 Rx antenna ports

**Editor's note: Following aspects missing or not yet determined:**

- **Connection Diagram.**

#### 7.7\_1.1 Test Purpose

To verify the ability of UE that supports 4 Rx antenna ports to receive a wanted signal on its assigned channel frequency without exceeding a given degradation due to the presence of an unwanted CW interfering signal at any other frequency at which a response is obtained i.e. for which the out of band blocking limit as specified in sub-clause 7.6.2\_2 is not met.

The lack of the spurious response ability decreases the coverage area when other unwanted interfering signal exists at any other frequency.

## 7.7\_1.2 Test Applicability

This test applies to all types of E-UTRA UE release 10 and forward that supports 4 Rx antenna ports.

## 7.7\_1.3 Minimum Conformance Requirements

Same as in clause 7.7.3 with following exceptions:

- Instead of Table 7.7.3-1 → use Table 7.7\_1.3-1.

**Table 7.7\_1.3-1: Spurious response parameters**

Rx Parameter	Units	Channel bandwidth					
		1.4 MHz	3 MHz	5 MHz	10 MHz	15 MHz	20 MHz
Power in Transmission Bandwidth Configuration	dBm	REFSENS + channel bandwidth specific value below					
		6	6	6	6	7	9
Note 1: The transmitter shall be set to 4dB below PCMAX_L at the minimum uplink configuration specified in Table 7.3.3-2 with PCMAX_L as defined in clause 6.2.5.							
Note 2: The reference measurement channel is specified in Annex A.3.2 with one sided dynamic OCNG Pattern OP.1 FDD/TDD as described in Annex A.5.1.1/A.5.2.1.							
Note 3: The REFSENS power level is specified in Table 7.3.3-1a.							

## 7.7\_1.4 Test Description

### 7.7\_1.4.1 Initial Conditions

The initial conditions shall be the same as in clause 7.6.2\_1.4.1 in order to test spurious responses obtained in clause 7.6.2\_1 under the same conditions.

### 7.7\_1.4.2 Test Procedure

1. SS transmits PDSCH via PDCCH DCI format 1A for C\_RNTI to transmit the DL RMC according to Table 7.6.2\_1.4.1-1. The SS sends downlink MAC padding bits on the DL RMC.
2. SS sends uplink scheduling information for each UL HARQ process via PDCCH DCI format 0 for C\_RNTI to schedule the UL RMC according to Table 7.6.2\_1.4.1-1. Since the UE has no payload data to send, the UE transmits uplink MAC padding bits on the UL RMC.
3. Set the parameters of the CW signal generator for an interfering signal according to Table 7.7\_1.5-2. The spurious frequencies are taken from records in the final step of test procedures in clause 7.6.2\_1.4.2.
4. Set the downlink signal level according to the table 7.7\_1.5-1. Send uplink power control commands to the UE (less or equal to 1dB step size should be used), to ensure that the UE output power is within +0, - 3.4 dB of the target level in table 7.7\_1.5-1 for carrier frequency  $f \leq 3.0\text{GHz}$  or within +0, -4.0 dB of the target level for carrier frequency  $3.0\text{GHz} < f \leq 4.2\text{GHz}$ , for at least the duration of the throughput measurement.
5. For the spurious frequency, measure the average throughput for a duration sufficient to achieve statistical significance according to Annex G.2.

### 7.7\_1.4.3 Message Contents

Same as in clause 7.7.4.3.

## 7.7\_1.5 Test Requirement

The throughput measurement derived in test procedure shall be  $\geq 95\%$  of the maximum throughput of the reference measurement channels as specified in Annex A.3.2 with parameters specified in Tables 7.7\_1.5-1 and 7.7\_1.5-2.

**Table 7.7\_1.5-1: Spurious response parameters**

Rx Parameter	Units	Channel bandwidth					
		1.4 MHz	3 MHz	5 MHz	10 MHz	15 MHz	20 MHz

Power in Transmission Bandwidth Configuration	dBm	REFSENS + channel bandwidth specific value below					
		6	6	6	6	7	9
Note 1:	The transmitter shall be set to 4dB below $P_{\text{CMAX}_L}$ with $P_{\text{CMAX}_L}$ as defined in clause 6.2.5.						
Note 2:	The reference measurement channel is specified in Annex A.3.2 with one sided dynamic OCNG Pattern OP.1 FDD/TDD as described in Annex A.5.1.1/A.5.2.1.						
Note 3:	The REFSENS power level is specified in Table 7.3.3-1a.						

**Table 7.7\_1.5-2: Spurious Response**

Parameter	Unit	Level
$P_{\text{Interferer}}$ (CW)	dBm	-44
$F_{\text{Interferer}}$	MHz	Spurious response frequencies

For the UE which supports inter band CA configuration in Table 7.3.3-1A, 7.3.3-1B and 7.3.3-1C,  $P_{\text{uw}}$  power defined in Table 7.7\_1.5-2 is increased by the amount given by  $\Delta R_{\text{IB},c}$  in Table 7.3.3-1A, 7.3.3-1B and 7.3.3-1C.

## 7.7A Spurious response for CA

### 7.7A.0 Minimum conformance requirements

For inter-band carrier aggregation with one component carrier per operating band and the uplink assigned to one E-UTRA band the spurious response requirements are defined with the uplink active on the band(s) other than the band whose downlink is being tested. The throughput measured in each downlink with  $F_{\text{interferer}}$  in Table 7.6.2A.0-0 and Table 7.6.2A.0-0a at spurious response frequencies shall be  $\geq 95\%$  of the maximum throughput of the reference measurement channels as specified in Annexes A.2.2, A.2.3 and A.3.2 (with one sided dynamic OCNG Pattern OP.1 FDD/TDD for the DL-signal as described in Annex A.5.1.1/A.5.2.1) with parameters specified in Tables 7.7.3-1 and 7.7.3-2. The UE shall meet these requirements for each component carrier while all downlink carriers are active.

For inter-band carrier aggregation with one component carrier per operating band and the uplink active in two E-UTRA bands, the spurious response requirements applicable specified above shall be met with the transmitter power for the uplink set to 7 dB below  $P_{\text{CMAX}_{L,c}}$  for each serving cell  $c$ .

For E-UTRA CA configurations including an operating band without uplink band or an operating band with an unpaired DL part (as noted in Table 5.2-1), the requirements for all downlinks shall be met with the single uplink active in each band capable of UL operation. For E-UTRA CA configurations listed in Table 7.3A.0-1 under conditions for which reference sensitivity for the operating band being tested is N/A, the spurious response requirements of subclause 7.7A.0 do not apply.

For intra-band contiguous carrier aggregation the downlink SCC(s) shall be configured at nominal channel spacing to the PCC. For FDD, the PCC shall configure closest to the uplink band. All downlink carriers shall be active throughout the test. The uplink output power shall be set as specified in Table 7.7A.0-1 with the uplink configuration set according to Table 7.3A.0-2 for the applicable carrier aggregation configuration. For UE(s) supporting one uplink carrier, the uplink configuration of the PCC shall be in accordance with Table 7.3.3-2. The throughput shall be  $\geq 95\%$  of the maximum throughput of the reference measurement channels as specified in Annexes A.2.2, A.2.3 and A.3.2 (with one sided dynamic OCNG Pattern OP.1 FDD/TDD for the DL-signal as described in Annex A.5.1.1/A.5.2.1) with parameters specified in Tables 7.7A.0-1 and 7.7A.0-2. For operating bands with an unpaired DL part (as noted in Table 5.2-1), the requirements also apply for an SCC assigned in the unpaired part with parameters specified in Tables 7.7A.0-1 and 7.7A.0-2.

For intra-band non-contiguous carrier aggregation with one uplink carrier and two downlink sub-blocks, the spurious response requirements are defined with the uplink configuration in accordance with Table 7.3A.0-3. For this uplink configuration, the UE shall meet the requirements for each sub-block as specified in subclauses 7.7.3 and 7.7A.0 for one component carrier and two component carriers per sub-block, respectively. The requirements apply with all downlink carriers active.

For intra-band non-contiguous carrier aggregation with two uplink carriers and two downlink carriers, the spurious response requirements applicable specified above shall be met with the transmitter powers for the uplinks set to  $P_{\text{CMAX}_{L,c}} - 7$  dBm.

**Table 7.7A.0-1: Spurious response parameters**

Rx Parameter	Units	CA Bandwidth Class				
		B	C	D	E	F
Pw in Transmission Bandwidth Configuration, per CC	dBm	REFSENS + CA Bandwidth Class specific value below				
		9	9	9	9	
Note 1: The transmitter shall be set to 4dB below P <sub>CMAX,L</sub> or P <sub>CMAX,L,CA</sub> as defined in subclause 6.2.5A.						
Note 2: Reference measurement channel is specified in Annex A.3.2 with one sided dynamic OCNG Pattern OP.1 FDD/TDD as described in Annex A.5.1.1/A.5.2.1.						

**Table 7.7A.0-2: Spurious response**

Parameter	Unit	Level
P <sub>Interferer</sub> (CW)	dBm	-44
F <sub>Interferer</sub>	MHz	Spurious response frequencies

For combinations of intra-band and inter-band carrier aggregation with up to five downlink carriers (up to two non-contiguously sub-blocks per band and up to four contiguously aggregated carriers per band) and one uplink carrier assigned to one E-UTRA band, the requirement is defined with the uplink active in a band other than that supporting the downlink(s) under test. The uplink configuration shall be in accordance with Table 7.3A.0-3 when the uplink is active in the band supporting two non-contiguous component carriers, Table 7.3A.0-2 when the uplink is active in a band supporting two contiguous component carriers and in accordance with Table 7.3.3-2 when the uplink is active in a band supporting one carrier per band. The downlink PCC shall be configured closer to the uplink operating band than the downlink SCC(s) when the uplink is active in band(s) supporting contiguous aggregation of up to four component carriers. For the two non-contiguous component carriers within the same band, P<sub>wanted</sub> in Table 7.6.2A.0-0 is set using  $\Delta R_{BNC} = 0$  dB for all sub-block gaps (Table 7.3A.0-3) while a band supporting contiguously aggregated carriers the out-of-band blocking parameters in Table 7.7.3-1 are replaced by those specified in Table 7.7A.0-1. For each downlink the UE shall meet the spurious-response requirements applicable for inter-band carrier aggregation with one component carrier per operating band but with up to three component carriers assigned to the same band. All downlink carriers shall be active throughout the tests and the requirements for the downlinks shall be met with the single uplink carrier active in each band capable of UL operation.

The normative reference for this requirement is TS 36.101 [2] clause 7.7.1A.

## 7.7A.1 Spurious response for CA (intra-band contiguous DL CA and UL CA)

### 7.7A.1.1 Test Purpose

Spurious response for CA verifies the receiver's ability to receive a wanted aggregated signal on its assigned channel frequency without exceeding a given degradation due to the presence of an unwanted CW interfering signal at any other frequency at which a response is obtained i.e. for which the out of band blocking limit as specified in sub-clause 7.6.2A is not met.

The lack of the spurious response ability decreases the coverage area when other unwanted interfering signal exists at any other frequency.

### 7.7A.1.2 Test Applicability

This test applies to all types of E-UTRA UE release 10 and forward that support intra-band contiguous DL CA and UL CA.

### 7.7A.1.3 Minimum Conformance Requirements

The minimum conformance requirements are defined in clause 7.7A.0.

## 7.7A.1.4 Test Description

### 7.7A.1.4.1 Initial Conditions

The initial conditions shall be the same as in clause 7.6.2A.1.4.1 in order to test spurious responses obtained in clause 7.6.2A.1 under the same conditions.

### 7.7A.1.4.2 Test Procedure

1. Configure SCC according to Annex C.0, C.1 and Annex C.3.1 for all downlink physical channels.
2. The SS shall configure SCC as per TS 36.508 [7] clause 5.2A.4. Message contents are defined in clause 7.7A.1.4.3.
3. SS activates SCC by sending the activation MAC-CE (Refer TS 36.321 [13], clauses 5.13, 6.1.3.8). Wait for at least 2 seconds (Refer TS 36.133, clauses 8.3.3.2).
4. SS transmits PDSCH via PDCCH DCI format 1A for C\_RNTI to transmit the DL RMC according to Table 7.6.2A.1.4.1-1 on both PCC and SCC. The SS sends downlink MAC padding bits on the DL RMC.
5. SS sends uplink scheduling information for each UL HARQ process via PDCCH DCI format 0 for C\_RNTI to schedule the UL RMC according to Table 7.6.2A.1.4.1-1 on both PCC and SCC. Since the UE has no payload data to send, the UE sends uplink MAC padding bits on the UL RMC.
6. Set the parameters of the CW signal generator for an interfering signal according to Table 7.7A.1.5-2. The spurious frequencies are taken from records in the final step of test procedures in clause 7.6.2A.1.4.2.
7. Set the downlink signal level according to the table 7.7A.1.5-1 for both carriers. Send uplink power control commands to the UE (less or equal to 1dB step size should be used), to ensure that for at least the duration of the throughput measurement:  
 The PCC output power is within (+0dB, -3.4 dB) of (target level in Table 7.7A.1.5-1 +  $10\log(P_{L_{CRB}}/N_{RB\_alloc})$ ), for carrier frequency  $f \leq 3.0\text{GHz}$ ,  
 or within (+0dB, -4 dB) of (target level in Table 7.7A.1.5-1 +  $10\log(P_{L_{CRB}}/N_{RB\_alloc})$ ) for carrier frequency  $3.0\text{GHz} < f \leq 4.2\text{GHz}$ .  
 The SCC output power is within (+0dB, -3.4 dB) of (target level in Table 7.7A.1.5-1 +  $10\log(S_{L_{CRB}}/N_{RB\_alloc})$ ), for carrier frequency  $f \leq 3.0\text{GHz}$ ,  
 or within (+0dB, -4 dB) of (target level in Table 7.7A.1.5-1 +  $10\log(S_{L_{CRB}}/N_{RB\_alloc})$ ) for carrier frequency  $3.0\text{GHz} < f \leq 4.2\text{GHz}$ .
8. For each spurious frequency, measure the average throughput for each component carrier for duration sufficient to achieve statistical significance according to Annex G.2A.

### 7.7A.1.4.3 Message Contents

Message contents are according to TS 36.508 [7] subclause 4.6 with the following exception.

### 7.7A.1.5 Test Requirement

The throughput measurement of each carrier derived in test procedure shall be  $\geq 95\%$  of the maximum throughput of the reference measurement channels as specified in Annex A.3.2 with parameters specified in Table 7.7A.1.5-1 and 7.7A.1.5-2.

Table 7.7A.1.5-1: Spurious response parameters

Rx Parameter	Units	CA Bandwidth Class				
		B	C	D	E	F
Pw in Transmission Bandwidth Configuration, per CC	dBm	REFSENS + CA Bandwidth Class specific value below				
			9			
Note 1:	The transmitter shall be set to 4dB below $P_{\text{CMAX,L}}$ or $P_{\text{CMAX,L,CA}}$ as defined in subclause 6.2.5 for one uplink carrier and in subclause 6.2.5A for two uplink carriers.					
Note 2:	Reference measurement channel is specified in Annex A.3.2 with one sided dynamic OCNG Pattern OP.1 FDD/TDD as described in Annex A.5.1.1/A.5.2.1.					

Table 7.7A.1.5-2: Spurious response

Parameter	Unit	Level
$P_{\text{Interferer}}$ (CW)	dBm	-44
$F_{\text{Interferer}}$	MHz	Spurious response frequencies

For the UE which supports inter band CA configuration in Table 7.3.3-1A, 7.3.3-1B and 7.3.3-1C,  $P_{\text{Interferer}}$  power defined in Table 7.7A.1.5-2 is increased by the amount given by  $\Delta R_{\text{IB,c}}$  in Table 7.3.3-1A, 7.3.3-1B and 7.3.3-1C.

## 7.7A.2 Spurious response for CA (intra-band contiguous DL CA without UL CA)

### 7.7A.2.1 Test Purpose

Same test purpose as in clause 7.7A.1.

### 7.7A.2.2 Test Applicability

This test applies to all types of E-UTRA UE release 10 and forward that support intra-band contiguous DL CA. This test case applies only for CA Configurations that do not support UL CA.

### 7.7A.2.3 Minimum Conformance Requirements

The minimum conformance requirements are defined in clause 7.7A.0.

### 7.7A.2.4 Test Description

#### 7.7A.2.4.1 Initial Conditions

The initial conditions shall be the same as in clause 7.6.2A.2.4.1 in order to test spurious responses obtained in clause 7.6.2A.2 under the same conditions.

#### 7.7A.2.4.2 Test Procedure

1. Configure SCC according to Annex C.0, C.1 and Annex C.3.1 for all downlink physical channels.
2. The SS shall configure SCC as per TS 36.508 [7] clause 5.2A.4.
3. SS activates SCC by sending the activation MAC-CE (Refer TS 36.321 [13], clauses 5.13, 6.1.3.8). Wait for at least 2 seconds (Refer TS 36.133, clauses 8.3.3.2).
4. SS transmits PDSCH via PDCCH DCI format 1A for C\_RNTI to transmit the DL RMC according to Table 7.6.2A.2.4.1-1 on both PCC and SCC. The SS sends downlink MAC padding bits on the DL RMC.
5. SS sends uplink scheduling information for each UL HARQ process via PDCCH DCI format 0 for C\_RNTI to schedule the UL RMC according to Table 7.6.2A.2.4.1-1 on PCC. Since the UE has no payload data to send, the UE sends uplink MAC padding bits on the UL RMC.
6. Set the parameters of the CW signal generator for an interfering signal according to Table 7.7A.1.5-2. The spurious frequencies are taken from records in the final step of test procedures in clause 7.6.2A.2.4.2.
7. Set the downlink signal level according to the table 7.7A.1.5-1 for both carriers. Send uplink power control commands to the UE (less or equal to 1dB step size should be used), to ensure that the UE output power is within +0, - 3.4 dB of the target level in table 7.7A.1.5-1 for carrier frequency  $f \leq 3.0\text{GHz}$  or within +0, -4.0 dB of the target level for carrier frequency  $3.0\text{GHz} < f \leq 4.2\text{GHz}$ , for at least the duration of the throughput measurement.
8. For each spurious frequency, measure the average throughput for each component carrier for duration sufficient to achieve statistical significance according to Annex G.2A.

#### 7.7A.2.4.3 Message Contents

Same message contents as in clause 7.7.4.3.

### 7.7A.2.5 Test Requirement

Same test requirement as in clause 7.7A.1.5 with the following exceptions :

- Instead of Table 7.7A.1.5-1 → use Table 7.7A.2.5-1.

**Table 7.7A.2.5-1: Spurious response parameters**

Rx Parameter	Units	CA Bandwidth Class				
		B	C	D	E	F

Pw in Transmission Bandwidth Configuration, per CC	dBm	REFSENS + CA Bandwidth Class specific value below			
		9	9		
Note 1: The transmitter shall be set to 4dB below $P_{\text{CMAX\_L}}$ or $P_{\text{CMAX\_L\_CA}}$ as defined in subclause 6.2.5.					
Note 2: Reference measurement channel is specified in Annex A.3.2 with one sided dynamic OCNG Pattern OP.1 FDD/TDD as described in Annex A.5.1.1/A.5.2.1.					

## 7.7A.3 Spurious response for CA (inter-band DL CA without UL CA)

### 7.7A.3.1 Test Purpose

Same test purpose as in clause 7.7A.1.

### 7.7A.3.2 Test Applicability

This test applies to all types of E-UTRA UE release 10 and forward that support inter-band DL CA.

This test case also applies to all types of E-UTRA UE release 12 and forward that support 2DL CA with FDD-TDD inter-band CA.

### 7.7A.3.3 Minimum Conformance Requirements

The minimum conformance requirements are defined in clause 7.7A.0.

### 7.7A.3.4 Test Description

#### 7.7A.3.4.1 Initial Conditions

The initial conditions shall be the same as in clause 7.6.2A.3.4.1 in order to test spurious responses obtained in clause 7.6.2A.3 under the same conditions.

#### 7.7A.3.4.2 Test Procedure

1. Configure SCC according to Annex C0, C.1 and Annex C.3.1 for all downlink physical channels.
2. The SS shall configure SCC as per TS 36.508 [7] clause 5.2A.4.
3. SS activates SCC by sending the activation MAC-CE (Refer TS 36.321 [13], clauses 5.13, 6.1.3.8). Wait for at least 2 seconds (Refer TS 36.133, clauses 8.3.3.2).
4. SS transmits PDSCH via PDCCH DCI format 1A for C\_RNTI to transmit the DL RMC according to Table 7.6.2A.3.4.1-1 on both PCC and SCC. The SS sends downlink MAC padding bits on the DL RMC.
5. SS sends uplink scheduling information for each UL HARQ process via PDCCH DCI format 0 for C\_RNTI to schedule the UL RMC according to Table 7.6.2A.3.4.1-1 on PCC. Since the UE has no payload data to send, the UE transmits uplink MAC padding bits on the UL RMC.
6. Set the parameters of the CW signal generator for an interfering signal according to Table 7.7A.3.5-2. The spurious frequencies are taken from records in the step 9 of test procedures in clause 7.6.2A.3.4.2.
7. Set the downlink signal level according to the table 7.7A.3.5-1 for both carriers. Send uplink power control commands to the UE (less or equal to 1dB step size should be used), to ensure that the UE output power is within +0, - 3.4 dB of the target level in table 7.7A.3.5-1 for carrier frequency  $f \leq 3.0\text{GHz}$  or within +0, -4.0 dB of the target level for carrier frequency  $3.0\text{GHz} < f \leq 4.2\text{GHz}$ , for at least the duration of the throughput measurement.
8. For each spurious frequency, measure the average throughput of SCC for duration sufficient to achieve statistical significance according to Annex G.2.

#### 7.7A.3.4.3 Message Contents

Same message contents as in clause 7.7.4.3.

### 7.7A.3.5 Test Requirement

For inter-band carrier aggregation with uplink assigned to one E-UTRA band the spurious response requirements are defined with the uplink active on the band other than the band whose downlink is being tested i.e. the requirements are tested only for the SCell downlink. The UE shall meet the requirement for each component carrier, when operated as SCell, while both downlink carriers are active.

The throughput measured during the test procedure for each component carrier, when operated as SCell, shall be  $\geq 95\%$  of the maximum throughput of the reference measurement channels as specified in Annexes A.2.2, A.2.3 and A.3.2 (with one sided dynamic OCNG Pattern OP.1 FDD/TDD for the DL-signal as described in Annex A.5.1.1/A.5.2.1) with parameters specified in Tables 7.7A.3.5-1 (originated from the single carrier Table 7.7.5-1) and 7.7A.3.5-2 (originated from Table 7.6.2A.3.5-2).

**Table 7.7A.3.5-1: Spurious response parameters**

Rx Parameter	Units	Channel bandwidth					
		1.4 MHz	3 MHz	5 MHz	10 MHz	15 MHz	20 MHz
P <sub>w</sub> in Transmission Bandwidth Configuration, per CC	dBm	REFSENS + channel bandwidth specific value below					
		6	6	6	6	7	9
Note 1: The transmitter shall be set to 4dB below P <sub>CMAX_L</sub> with P <sub>CMAX_L</sub> as defined in clause 6.2.5.							
Note 2: The reference measurement channel is specified in Annex A.3.2 with one sided dynamic OCNG Pattern OP.1 FDD/TDD as described in Annex A.5.1.1/A.5.2.1.							

**Table 7.7A.3.5-2: Spurious Response**

Parameter	Unit	Level
P <sub>Interferer (CW)</sub>	dBm	-44
F <sub>Interferer</sub>	MHz	Spurious response frequencies

For the UE which supports inter band CA configuration in Table 7.3.3-1A, 7.3.3-1B and 7.3.3-1C, P<sub>uw</sub> power defined in Table 7.7A.3.5-2 is increased by the amount given by  $\Delta R_{IB,c}$  in Table 7.3.3-1A, 7.3.3-1B and 7.3.3-1C.

## 7.7A.4 Spurious response for CA (intra-band non-contiguous DL CA without UL CA)

### 7.7A.4.1 Test Purpose

Same test purpose as in clause 7.7A.1.

### 7.7A.4.2 Test Applicability

This test applies to all types of E-UTRA UE release 11 and forward that support intra-band non-contiguous DL CA without UL CA.

### 7.7A.4.3 Minimum Conformance Requirements

The minimum conformance requirements are defined in clause 7.7A.0.

### 7.7A.4.4 Test Description

#### 7.7A.4.4.1 Initial Conditions

The initial conditions shall be the same as in clause 7.6.2A.4.4.1 in order to test spurious responses obtained in clause 7.6.2A.4 under the same conditions.

### 7.7A.4.4.2 Test Procedure

1. Configure SCC according to Annex C0, C.1 and Annex C.3.1 for all downlink physical channels.
2. The SS shall configure SCC as per TS 36.508 [7] clause 5.2A.4. Message contents are defined in clause 7.7A.4.4.3.
3. SS activates SCC by sending the activation MAC-CE (Refer TS 36.321 [13], clauses 5.13, 6.1.3.8). Wait for at least 2 seconds (Refer TS 36.133, clauses 8.3.3.2).
4. SS transmits PDSCH via PDCCH DCI format 1A for C\_RNTI to transmit the DL RMC according to Table 7.6.2A.4.4.1-1 on both PCC and SCC. The SS sends downlink MAC padding bits on the DL RMC.
5. SS sends uplink scheduling information for each UL HARQ process via PDCCH DCI format 0 for C\_RNTI to schedule the UL RMC according to Table 7.6.2A.4.4.1-1 on PCC. Since the UE has no payload data to send, the UE transmits uplink MAC padding bits on the UL RMC.
6. Set the parameters of the CW signal generator for an interfering signal below or above the wanted aggregated signal according to Table 7.7A.4.5-2. The spurious frequencies are taken from records in the step 9 of test procedures in clause 7.6.2A.4.4.2.
7. Set the downlink signal level according to the table 7.7A.4.5-1 for both carriers. Send uplink power control commands to the UE (less or equal to 1dB step size should be used), to ensure that the UE output power is within +0, - 3.4 dB of the target level in table 7.7A.4.5-1 for carrier frequency  $f \leq 3.0\text{GHz}$  or within +0, -4.0 dB of the target level for carrier frequency  $3.0\text{GHz} < f \leq 4.2\text{GHz}$ , for at least the duration of the throughput measurement.
8. For each spurious frequency, measure the average throughput of each component carrier for duration sufficient to achieve statistical significance according to Annex G.2A.

### 7.7A.4.4.3 Message Contents

Message contents are according to TS 36.508 [7] subclause 4.6.

### 7.7A.4.5 Test Requirement

For intra-band non-contiguous carrier aggregation with one uplink carrier and two downlink carriers, the spurious response requirements are defined with the uplink configuration of the PCC being in accordance with Table 7.3A.0-3. The UE shall meet the requirements specified in tables 7.7A.4.5-1 and 7.7A.4.5-2 for each component carrier while both downlink carriers are active.

The requirements for each component carrier are the same as single carrier requirements in Tables 7.7.5-1 and 7.7.5-2.

**Table 7.7A.4.5-1: Spurious response parameters**

Rx Parameter	Units	Channel bandwidth					
		1.4 MHz	3 MHz	5 MHz	10 MHz	15 MHz	20 MHz
P <sub>w</sub> in Transmission Bandwidth Configuration, per CC	dBm	REFSENS + channel bandwidth specific value below					
		6	6	6	6	7	9
Note 1: The transmitter shall be set to 4dB below P <sub>CMAX_L</sub> with P <sub>CMAX_L</sub> as defined in clause 6.2.5.							
Note 2: The reference measurement channel is specified in Annex A.3.2 with one sided dynamic OCNB Pattern OP.1 FDD/TDD as described in Annex A.5.1.1/A.5.2.1.							

**Table 7.7A.4.5-2: Spurious Response**

Parameter	Unit	Level
P <sub>Interferer</sub> (CW)	dBm	-44
F <sub>Interferer</sub>	MHz	Spurious response frequencies

For the UE which supports inter band CA configuration in Table 7.3.3-1A, 7.3.3-1B and 7.3.3-1C,  $P_{\text{uw}}$  power defined in Table 7.7A.4.5-2 is increased by the amount given by  $\Delta R_{\text{IB,c}}$  in Table 7.3.3-1A, 7.3.3-1B and 7.3.3-1C.

## 7.7A.5 Spurious response for 3DL CA

### 7.7A.5.1 Test Purpose

Same test purpose as in clause 7.7A.1.

### 7.7A.5.2 Test Applicability

This test case applies to all types of E-UTRA UE release 10 and forward that support 3DL with Intra-band contiguous CA or 3DL with Inter-band CA or 3DL with Intra-band contiguous and Inter-band CA.

This test case also applies to all types of E-UTRA UE release 11 and forward that support 3DL with Intra-band non-contiguous and Inter-band CA or 3DL with Intra-band non-contiguous and Intra-band contiguous CA.

This test case also applies to all types of E-UTRA UE release 12 and forward that support 3DL with FDD-TDD CA.

### 7.7A.5.3 Minimum Conformance Requirements

The minimum conformance requirements are defined in clause 7.7A.0.

### 7.7A.5.4 Test Description

#### 7.7A.5.4.1 Initial Conditions

The initial conditions shall be the same as in clause 7.6.2A.5.4.1 in order to test spurious responses obtained in clause 7.6.2A.5 under the same conditions.

#### 7.7A.5.4.2 Test Procedure

1. Configure SCCs according to Annex C.0, C.1 and Annex C.3.1 for all downlink physical channels.
2. The SS shall configure SCCs as per TS 36.508 [7] clause 5.2A.4. Message contents are defined in clause 7.7A.5.4.3
3. SS activates SCCs by sending the activation MAC-CE (Refer TS 36.321 [13], clauses 5.13, 6.1.3.8). Wait for at least 2 seconds (Refer TS 36.133, clauses 8.3.3.2).
4. SS transmits PDSCH via PDCCH DCI format 1A for C\_RNTI to transmit the DL RMC according to Table 7.6.2A.5.4.1-1 through Table 7.6.2A.5.4.1-5 as appropriate on PCC and SCCs. The SS sends downlink MAC padding bits on the DL RMC.
5. SS sends uplink scheduling information for each UL HARQ process via PDCCH DCI format 0 for C\_RNTI to schedule the UL RMC according to Table 7.6.2A.5.4.1-1 through Table 7.6.2A.5.4.1-5 on PCC. Since the UE has no payload data to send, the UE sends uplink MAC padding bits on the UL RMC.
6. Set the parameters of the CW signal generator for an interfering signal according to Table 7.7A.5.5.25. The spurious frequencies are taken from records in the final step of test procedures in clause 7.6.2A.5.4.2.
7. Set the downlink signal level according to the tables 7.7A.5.5-1 and 7.7A.5.5-3 for all carriers accordingly. Send uplink power control commands to the UE (less or equal to 1dB step size should be used), to ensure that the UE output power is within +0, - 3.4 dB of the target level in corresponding tables 7.7A.5.5-1 and 7.7A.5.5-3 for carrier frequency  $f \leq 3.0\text{GHz}$  or within +0, -4.0 dB of the target level for carrier frequency  $3.0\text{GHz} < f \leq 4.2\text{GHz}$ , for at least the duration of the throughput measurement.
8. For each spurious frequency, measure the average throughput for each component carrier for duration sufficient to achieve statistical significance according to Annex G.2A.

#### 7.7A.5.4.3 Message Contents

Same message contents as in clause 7.7.4.3.

### 7.7A.5.5 Test Requirement

The throughput measurement of each carrier derived in test procedure shall be  $\geq 95\%$  of the maximum throughput of the reference measurement channels as specified in Annex A.3.2 with parameters specified in Tables below, according to the type of CA.

**Table 7.7A.5.5-1: Spurious response parameters (Intra-band contiguous)**

Rx Parameter	Units	CA Bandwidth Class				
		B	C	D	E	F
Power per CC in Aggregated Transmission Bandwidth Configuration	dBm	REFSENS + CA Bandwidth Class specific value below				
		9	9	9		
Note 1: The transmitter shall be set to 4dB below $P_{\text{CMAX\_L}}$ or $P_{\text{CMAX\_L\_CA}}$ as defined in subclause 6.2.5.						
Note 2: Reference measurement channel is specified in Annex A.3.2 with one sided dynamic OCNG Pattern OP.1 FDD/TDD as described in Annex A.5.1.1/A.5.2.1.						

**Table 7.7A.5.5-2: Spurious response (All types of CA)**

Parameter	Unit	Level
$P_{\text{Interferer (CW)}}$	dBm	-44
$F_{\text{Interferer}}$	MHz	Spurious response frequencies

**Table 7.7A.5.5-3: Spurious response parameters (Inter-band, Intra-band non-contiguous)**

Rx Parameter	Units	Channel bandwidth					
		1.4 MHz	3 MHz	5 MHz	10 MHz	15 MHz	20 MHz
Power in Transmission Bandwidth Configuration for each CC	dBm	REFSENS + channel bandwidth specific value below					
		6	6	6	6	7	9
Note 1: The transmitter shall be set to 4dB below $P_{\text{CMAX\_L}}$ with $P_{\text{CMAX\_L}}$ as defined in clause 6.2.5.							
Note 2: The reference measurement channel is specified in Annex A.3.2 with one sided dynamic OCNG Pattern OP.1 FDD/TDD as described in Annex A.5.1.1/A.5.2.1.							
Note 3: For intra-band non-contiguous + inter-band CA, $\Delta R_{\text{IBNC}} = 0$ dB for all sub-block gaps.							

For a UE, which supports CA configuration in Tables 7.3.3-1A, 7.3.3-1B and 7.3.3-1C,  $P_{\text{UW}}$  power defined in Table 7.7A.5.5-2 is increased by the amount given by  $\Delta R_{\text{IB,c}}$  in Tables 7.3.3-1A, 7.3.3-1B and 7.3.3-1C.

### 7.7A.6

### 7.7A.7 Spurious response for 4DL CA

**Editor's note: Following aspects missing or not yet determined:**

- The test applicability needs to be added to TS36.521-2
- The test case needs to be added to Annex G

#### 7.7A.7.1 Test Purpose

Same test purpose as in clause 7.7A.1.

#### 7.7A.7.2 Test Applicability

This test case applies to all types of E-UTRA UE release 11 and forward that support 4DL Intra-band contiguous CA or 4DL Inter-band CA or 4DL Intra-band contiguous + Inter-band CA.

This test case also applies to all types of E-UTRA UE release 12 and forward that support 4DL Intra-band non-contiguous CA + Inter-band CA or 4DL Intra-band non-contiguous + Intra-band contiguous CA.

This test case also applies to all types of E-UTRA UE release 12 and forward that support 4DL CA with FDD-TDD.

### 7.7A.7.3 Minimum Conformance Requirements

The minimum conformance requirements are defined in clause 7.7A.0.

### 7.7A.7.4 Test Description

#### 7.7A.7.4.1 Initial Conditions

The initial conditions shall be the same as in clause 7.6.2A.7.4.1 in order to test spurious responses obtained in clause 7.6.2A.7 under the same conditions.

#### 7.7A.7.4.2 Test Procedure

1. Configure SCCs according to Annex C.0, C.1 and Annex C.3.1 for all downlink physical channels.
2. The SS shall configure SCCs as per TS 36.508 [7] clause 5.2A.4. Message contents are defined in clause 7.7A.7.4.3.
3. SS activates SCCs by sending the activation MAC-CE (Refer TS 36.321 [13], clauses 5.13, 6.1.3.8). Wait for at least 2 seconds (Refer TS 36.133, clauses 8.3.3.2).
4. SS transmits PDSCH via PDCCH DCI format 1A for C\_RNTI to transmit the DL RMC according to Table 7.6.2A.7.4.1-1 through Table 7.6.2A.7.4.1-5 as appropriate on PCC and SCCs. The SS sends downlink MAC padding bits on the DL RMC.
5. SS sends uplink scheduling information for each UL HARQ process via PDCCH DCI format 0 for C\_RNTI to schedule the UL RMC according to Table 7.6.2A.7.4.1-1 through Table 7.6.2A.7.4.1-5 on PCC. Since the UE has no payload data to send, the UE sends uplink MAC padding bits on the UL RMC.
6. Set the parameters of the CW signal generator for an interfering signal according to Table 7.7A.7.5-2. The spurious frequencies are taken from records in the final step of test procedures in clause 7.6.2A.7.4.2.
7. Set the downlink signal level according to the tables 7.7A.7.5-1 and 7.7A.7.5-3 for all carriers accordingly. Send uplink power control commands to the UE (less or equal to 1dB step size should be used), to ensure that the UE output power is within +0, - 3.4 dB of the target level in corresponding tables 7.7A.7.5-1 and 7.7A.7.5-3 for carrier frequency  $f \leq 3.0\text{GHz}$  or within +0, -4.0 dB of the target level for carrier frequency  $3.0\text{GHz} < f \leq 4.2\text{GHz}$ , for at least the duration of the throughput measurement.
8. For each spurious frequency, measure the average throughput for each component carrier for duration sufficient to achieve statistical significance according to Annex G.2A.

#### 7.7A.7.4.3 Message Contents

Same message contents as in clause 7.7A.1.4.3.

### 7.7A.7.5 Test Requirement

The throughput measurement of each carrier derived in test procedure shall be  $\geq 95\%$  of the maximum throughput of the reference measurement channels as specified in Annex A.3.2 with parameters specified in Table s below, according to the type of CA.

**Table 7.7A.7.5-1: Spurious response parameters (Intra-band contiguous)**

Rx Parameter	Units	CA Bandwidth Class				
		B	C	D	E	F
Power per CC in Aggregated Transmission Bandwidth Configuration	dBm	REFSENS + CA Bandwidth Class specific value below				
		9	9	9	9	

Note 1:	The transmitter shall be set to 4dB below $P_{\text{CMAX\_L}}$ or $P_{\text{CMAX\_L\_CA}}$ as defined in subclause 6.2.5A.
Note 2:	Reference measurement channel is specified in Annex A.3.2 with one sided dynamic OCNG Pattern OP.1 FDD/TDD as described in Annex A.5.1.1/A.5.2.1.

**Table 7.7A.7.5-2: Spurious response (All types of CA)**

Parameter	Unit	Level
$P_{\text{Interferer}}$ (CW)	dBm	-44
$F_{\text{Interferer}}$	MHz	Spurious response frequencies

**Table 7.7A.7.5-3: Spurious response parameters (Inter-band, Intra-band non-contiguous)**

Rx Parameter	Units	Channel bandwidth					
		1.4 MHz	3 MHz	5 MHz	10 MHz	15 MHz	20 MHz
Power in Transmission Bandwidth Configuration for each CC	dBm	REFSENS + channel bandwidth specific value below					
		6	6	6	6	7	9
Note 1: The transmitter shall be set to 4dB below $P_{\text{CMAX\_L}}$ with $P_{\text{CMAX\_L}}$ as defined in clause 6.2.5.							
Note 2: The reference measurement channel is specified in Annex A.3.2 with one sided dynamic OCNG Pattern OP.1 FDD/TDD as described in Annex A.5.1.1/A.5.2.1.							
Note 3: For intra-band non-contiguous + inter-band CA, $\Delta R_{\text{IBNC}} = 0$ dB for all sub-block gaps.							

For a UE, which supports CA configuration in Tables 7.3.3-1A, 7.3.3-1B and 7.3.3-1C,  $P_{\text{UW}}$  power defined in Table 7.7A.7.5-2 is increased by the amount given by  $\Delta R_{\text{IB,c}}$  in Tables 7.3.3-1A, 7.3.3-1B and 7.3.3-1C.

## 7.7B Spurious response for UL-MIMO

### 7.7B.1 Test Purpose

Spurious response verifies the ability of the UE that support UL-MIMO to receive a wanted signal on its assigned channel frequency without exceeding a given degradation due to the presence of an unwanted CW interfering signal at any other frequency at which a response is obtained i.e. for which the out of band blocking limit as specified in sub-clause 7.6B.2 is not met.

The lack of the spurious response ability decreases the coverage area when other unwanted interfering signal exists at any other frequency.

### 7.7B.2 Test Applicability

This test applies to all types of E-UTRA UE release 10 and forward that support UL-MIMO.

### 7.7B.3 Minimum Conformance Requirements

For UE with two transmitter antenna connectors in closed-loop spatial multiplexing scheme, the minimum requirements in Clause 7.7.3 shall be met with the UL-MIMO configurations specified in Table 6.2.2B.3-2. For UL-MIMO, the parameter  $P_{\text{CMAX\_L}}$  is defined as the total transmitter power over the two transmit antenna connectors.

The normative reference for this requirement is TS 36.101 [2] clause 7.7.1B.

### 7.7B.4 Test Description

#### 7.7B.4.1 Initial Conditions

The initial conditions shall be the same as in clause 7.6B.2.4.1 in order to test spurious responses obtained in clause 7.6B.2 under the same conditions.

### 7.7B.4.2 Test Procedure

1. SS transmits PDSCH via PDCCH DCI format 1A for C\_RNTI to transmit the DL RMC according to Table 7.6.2B.4.1-1. The SS sends downlink MAC padding bits on the DL RMC.
2. SS sends uplink scheduling information for each UL HARQ process via PDCCH DCI format 4 for C\_RNTI to schedule the UL RMC according to Table 7.6B.2.4.1-1. Since the UE has no payload data to send, the UE transmits uplink MAC padding bits on the UL RMC.
3. Set the parameters of the CW signal generator for an interfering signal according to Table 7.7B.5-2. The spurious frequencies are taken from records in the final step of test procedures in clause 7.6B.2.4.2.
4. Set the downlink signal level according to the table 7.7B.5-1. Send uplink power control commands to the UE (less or equal to 1dB step size should be used), to ensure that the UE output power is within +0, - 3.4 dB of the target level in table 7.7B.5-1 for carrier frequency  $f \leq 3.0\text{GHz}$  or within +0, -4.0 dB of the target level for carrier frequency  $3.0\text{GHz} < f \leq 4.2\text{GHz}$ , for at least the duration of the throughput measurement.
5. For the spurious frequency, measure the average throughput for a duration sufficient to achieve statistical significance according to Annex G.2.

### 7.7B.4.3 Message Contents

Message contents are according to TS 36.508 [7] clause 4.6 with the following exception.

**Table 7.7B.4.3-1: UplinkPowerControlDedicated**

Derivation Path: 36.331 clause 6.3.2			
Information Element	Value/remark	Comment	Condition
UplinkPowerControlDedicated-DEFAULT ::= SEQUENCE {			
p0-UePUSCH	0		
deltaMCS-Enabled	en0		
accumulationEnabled	TRUE		
p0-uePUCCH	0		
pSRS-Offset	3 (-6 dB)		
filterCoefficient	fc8	larger filter length is used to reduce the RSRP measurement variation	
}			

### 7.7B.5 Test Requirement

The throughput measurement derived in test procedure shall be  $\geq 95\%$  of the maximum throughput of the reference measurement channels as specified in Annex A.3.2 with parameters specified in Tables 7.7B.5-1 and 7.7B.5-2.

**Table 7.7B.5-1: Spurious response parameters**

Rx Parameter	Units	Channel bandwidth					
		1.4 MHz	3 MHz	5 MHz	10 MHz	15 MHz	20 MHz
Power in Transmission Bandwidth Configuration	dBm	REFSENS + channel bandwidth specific value below					
		6	6	6	6	7	9
Note 1:		The transmitter shall be set to 4dB below $P_{\text{CMAX}_L}$ with $P_{\text{CMAX}_L}$ as defined in clause 6.2.5.					
Note 2:		The reference measurement channel is specified in Annex A.3.2 with one sided dynamic OCNG Pattern OP.1 FDD/TDD as described in Annex A.5.1.1/A.5.2.1.					

**Table 7.7B.5-2: Spurious Response**

Parameter	Unit	Level
$P_{\text{Interferer (CW)}}$	dBm	-44
$F_{\text{Interferer}}$	MHz	Spurious response frequencies

For the UE which supports inter band CA configuration in Tables 7.3.3-1A, 7.3.3-1B and 7.3.3-1C,  $P_{\text{UW}}$  power defined in Table 7.7B.5-2 is increased by the amount given by  $\Delta R_{\text{IB,c}}$  in Tables 7.3.3-1A, 7.3.3-1B and 7.3.3-1C.

## 7.7D Spurious response for ProSe

### 7.7D.0 Minimum conformance requirements

The throughput shall be  $\geq 95\%$  of the maximum throughput of the reference measurement channels as specified in Annex A.6.2 with parameters specified in Tables 7.7.1D-1, 7.7.1D-2, and 7.7.1D-3.

**Table 7.7D.0-1: Spurious response parameters for ProSe Direct Discovery**

Rx parameter	Units	Channel bandwidth					
		1.4 MHz	3 MHz	5 MHz	10 MHz	15 MHz	20 MHz
Power in Transmission Bandwidth Configuration	dBm	$P_{\text{REFSENS\_ProSe}} + \text{channel bandwidth specific value below} + P_{\text{offset}}$					
				6	6	7	9
$P_{\text{offset}}$	dB			10.9	13.9	15.7	16.9

NOTE 1: Reference measurement channel is specified in Annex A.6.2.

**Table 7.7D.0-2: Spurious response parameters for ProSe Direct Communication**

Rx parameter	Units	Channel bandwidth					
		1.4 MHz	3 MHz	5 MHz	10 MHz	15 MHz	20 MHz
Power in Transmission Bandwidth Configuration	dBm	$P_{\text{REFSENS\_ProSe}} + \text{channel bandwidth specific value below}$					
				6	6	7	9

NOTE 1: Reference measurement channel is specified in Annex A.6.2.

**Table 7.7D.0-3: Spurious response for ProSe**

Parameter	Unit	Level
$P_{\text{Interferer (CW)}}$	dBm	-44
$F_{\text{Interferer}}$	MHz	Spurious response frequencies

For the UE which supports inter band CA configuration in Tables 7.3.3-1A, 7.3.3-1B and 7.3.3-1C,  $P_{\text{interferer}}$  power defined in Table 7.7D.0-3 is increased by the amount given by  $\Delta R_{\text{IB,c}}$  in Tables 7.3.3-1A, 7.3.3-1B and 7.3.3-1C.

The normative reference for this requirement is TS 36.101 [2] clause 7.7.1D.

### 7.7D.1 Spurious response for ProSe Direct Discovery

**Editor's note: This test case is not complete. Following aspects are either missing or not yet determined:**

- ProSe UE authentication is not handled in the test case and is still under investigation.
- Use of OCNNG for Downlink has not been considered and is still FFS.
- Message exceptions content needs further investigation (some values still TBD).
- Test time is FFS.

- Test system uncertainties and test tolerances are TBD
- Connection Diagram is FFS

### 7.7D.1.1 Test Purpose

Spurious response for ProSe verifies the receiver's ability to receive a wanted aggregated signal on its assigned channel frequency without exceeding a given degradation due to the presence of an unwanted CW interfering signal at any other frequency at which a response is obtained i.e. for which the out of band blocking limit as specified in sub-clause 7.6.2D is not met.

The lack of the spurious response ability decreases the coverage area when other unwanted interfering signal exists at any other frequency.

### 7.7D.1.2 Test Applicability

This test applies to all types of E-UTRA UE release 12 and forward which support ProSe Direct Discovery, but not ProSe Direct Communication.

### 7.7D.1.3 Minimum Conformance Requirements

The minimum conformance requirements are defined in clause 7.7D.0.

### 7.7D.1.4 Test Description

#### 7.7D.1.4.1 Initial Conditions

The initial conditions shall be the same as in clause 7.6.2D.1.4.1 in order to test spurious responses obtained in clause 7.6.2D.1 under the same conditions.

#### 7.7D.1.4.2 Test Procedure

1. SS shall transmit an RRCConnectionReconfiguration message to configure DRX. Message contents exceptions (only those marked with "...Step 1...") are defined in clause 7.7D.1.4.3.
2. The UE shall transmit RRCConnectionReconfigurationComplete message.
3. Initialise the variables Ptot and Pok as 0.
4. SS transmits PDSCH via PDCCH DCI format 1A for C\_RNTI to transmit the DL RMC according to Table 7.6.2D.1.4.1-1. The SS sends downlink MAC padding bits on the DL RMC.
5. SS sends uplink scheduling information via PDCCH DCI format 0 for C\_RNTI to schedule the UL RMC according to Table 7.6.2D.1.4.1-1. When the UE has no payload data to send, it transmits uplink MAC padding bits on the UL RMC.
6. Set the parameters of the CW signal generator for an interfering signal according to Table 7.7D.1.5-2. The spurious frequencies are taken from records in step 12 of test procedures in clause 7.6.2D.1.4.2.
7. SS transmits PSDCH to transmit the SL RMC according to Table 7.6.2D.1.4.1-1. Set the Sidelink signal level to the appropriate value defined in Table 7.7D.1.5-1.
8. SS shall send SL Discovery Packets (MAC padding bits) on the SL RMC for the test time [FFS]. SS stores the number of the transmitted Discovery Packets in the current test iteration in the variable Ptot.
9. SS shall send (on the available PDSCH) a "UE TEST LOOP PROSE MODE D SIDELINK DIRECT DISCOVERY PACKET COUNTER REQUEST" message and wait for the UE to respond (on the available PUSCH) with a "UE TEST LOOP PROSE MODE D SIDELINK DIRECT DISCOVERY PACKET COUNTER RESPONSE".
10. SS calculates the variable Pok as (current counter value - counter value at last test iteration).
11. SS shall compute the throughput as following:

$$TP = Pok / Ptot * 100\%$$

12. Repeat steps from 6 to 11 for all frequencies recorded in step 12 of the test procedure in clause 7.6.2D.1.4.2.

### 7.7D.1.4.3 Message Contents

Message contents are according to TS 36.508 [7] clauses TBD with following exceptions:

- Table A.7.1.1-1 for FDD
- Table A.7.1.2-1 for TDD

**Table 7.7D.1.4.3-1: ACTIVATE TEST MODE: Reference sensitivity for ProSe Direct Discovery**

}			

### 7.7D.1.5 Test Requirement

The throughput measurement of each carrier derived in test procedure shall be  $\geq 95\%$  of the maximum throughput of the reference measurement channels as specified in Annex A.6.2 with parameters specified in Table 7.7D.1.5-1 and 7.7D.1.5-2.

**Table 7.7D.1.5-1: Spurious response parameters for ProSe Direct Discovery**

Rx parameter	Units	Channel bandwidth					
		1.4 MHz	3 MHz	5 MHz	10 MHz	15 MHz	20 MHz
Power in Transmission Bandwidth Configuration	dBm	$P_{\text{REFSENS, ProSe}} + \text{channel bandwidth specific value below} + P_{\text{offset}}$					
				6	6	7	9
$P_{\text{offset}}$	dB			10.9	13.9	15.7	16.9

NOTE 1: Reference measurement channel is specified in Annex A.6.2.

**Table 7.7D.1.5-2: Spurious response for ProSe**

Parameter	Unit	Level
$P_{\text{Interferer (CW)}}$	dBm	-44
$F_{\text{Interferer}}$	MHz	Spurious response frequencies

For the UE which supports inter band CA configuration in Table 7.3.3-1A, 7.3.3-1B and 7.3.3-1C,  $P_{\text{Interferer}}$  power defined in Table 7.7D.1.5-2 is increased by the amount given by  $\Delta R_{\text{IB,c}}$  in Table 7.3.3-1A, 7.3.3-1B and 7.3.3-1C.

## 7.7D.2 Spurious response for ProSe Direct Communication

**Editor's note: This test case is not complete. Following aspects are either missing or not yet determined:**

- Test procedure is TBD
- Message contents are TBD
- Test system uncertainties and test tolerances are TBD

### 7.7D.2.1 Test Purpose

Same test purpose as in clause 7.7D.1.

### 7.7D.2.2 Test Applicability

This test applies to all types of E-UTRA UE release 12 and forward which support ProSe Direct Communication.

### 7.7D.2.3 Minimum Conformance Requirements

The minimum conformance requirements are defined in clause 7.7D.0.

### 7.7D.2.4 Test Description

#### 7.7D.2.4.1 Initial Conditions

The initial conditions shall be the same as in clause 7.6.2D.2.4.1 in order to test spurious responses obtained in clause 7.6.2D.2 under the same conditions.

#### 7.7D.2.4.2 Test Procedure

TBD

#### 7.7D.2.4.3 Message Contents

TBD

### 7.7D.2.5 Test Requirement

Same test requirement as in clause 7.7D.1.5 with the following exceptions:

- Instead of Table 7.7D.1.5-1 → use Table 7.7D.2.5-1.

**Table 7.7D.2.5-1: Spurious response parameters for ProSe Direct Communication**

Rx parameter	Units	Channel bandwidth					
		1.4 MHz	3 MHz	5 MHz	10 MHz	15 MHz	20 MHz
Power in Transmission Bandwidth Configuration	dBm	$P_{\text{REFSENS ProSe}}$ + channel bandwidth specific value below					
				6	6	7	9
NOTE 1: Reference measurement channel is specified in Annex A.6.2.							

## 7.7E Spurious response for UE category 0

### 7.7E.1 Test Purpose

Same test purpose as in clause 7.7.1.

### 7.7E.2 Test Applicability

This test applies to all types of E-UTRA UE release 12 and forward of UE category 0.

### 7.7E.3 Minimum Conformance Requirements

Same minimum conformance requirements as in clause 7.7.3.

### 7.7E.4 Test Description

#### 7.7E.4.1 Initial Conditions

The initial conditions shall be the same as in clause 7.6.2E.4.1 in order to test spurious responses obtained in clause 7.6.2E under the same conditions.

#### 7.7E.4.2 Test Procedure

Same test procedure as in clause 7.7.4.2

#### 7.7E.4.3 Message Contents

Same message contents as in clause 7.7.4.3

### 7.7E.5 Test Requirement

The throughput measurement derived in test procedure shall be  $\geq 95\%$  of the maximum throughput of the reference measurement channels as specified in Annex A.3.2 with parameters specified in Tables 7.7E.5-1 and 7.7E.5-2.

**Table 7.7E.5-1: Spurious response parameters**

Rx Parameter	Units	Channel bandwidth					
		1.4 MHz	3 MHz	5 MHz	10 MHz	15 MHz	20 MHz
Power in Transmission Bandwidth Configuration	dBm	REFSENS + channel bandwidth specific value below					
		6	6	6	6	7	9
Note 1: The transmitter shall be set to 4dB below $P_{\text{CMAX\_L}}$ with $P_{\text{CMAX\_L}}$ as defined in clause 6.2.5.							
Note 2: The reference measurement channel is specified in Annex A.3.2 with one sided dynamic OCNB Pattern OP.1 FDD/TDD as described in Annex A.5.1.1/A.5.2.1.							

**Table 7.7E.5-2: Spurious Response**

Parameter	Unit	Level
$P_{\text{Interferer}}$ (CW)	dBm	-44
$F_{\text{Interferer}}$	MHz	Spurious response frequencies

## 7.7EA Spurious response for UE category M1

### 7.7EA.1 Test Purpose

Spurious response verifies the receiver's ability to receive a wanted signal on its assigned channel frequency without exceeding a given degradation due to the presence of an unwanted CW interfering signal at any other frequency at which a response is obtained i.e. for which the out of band blocking limit as specified in sub-clause 7.6.2 is not met.

The lack of the spurious response ability decreases the coverage area when other unwanted interfering signal exists at any other frequency.

## 7.7EA.2 Test Applicability

This test applies to all types of E-UTRA UE release 13 and forward of UE category M1.

## 7.7EA.3 Minimum Conformance Requirements

The throughput shall be  $\geq 95\%$  of the maximum throughput of the reference measurement channels as specified in Annexes A.2.2, A.2.3 and A.3.2 (with one sided dynamic OCNG Pattern OP.1 FDD/TDD for the DL-signal as described in Annex A.5.1.1/A.5.2.1) with parameters specified in Tables 7.7EA.3-1 and 7.7EA.3-2. For operating bands with an unpaired DL part (as noted in Table 5.5-1), the requirements only apply for carriers assigned in the paired part.

**Table 7.7EA.3-1: Spurious response parameters**

Rx parameter	Units	Channel bandwidth					
		1.4 MHz	3 MHz	5 MHz	10 MHz	15 MHz	20 MHz
Power in Transmission Bandwidth Configuration	dBm	REFSENS + channel bandwidth specific value below					
		6	6	6	6	7	9
NOTE 1: The transmitter shall be set to 4dB below $P_{\text{CMAX\_L}}$ at the minimum uplink configuration specified in Table 7.3.1-2.							
NOTE 2: Reference measurement channel is specified in Annex A.3.2 with one sided dynamic OCNG Pattern OP.1 FDD/TDD as described in Annex A.5.1.1/A.5.2.1.							

**Table 7.7EA.3-2: Spurious response**

Parameter	Unit	Level
$P_{\text{Interferer}}(\text{CW})$	dBm	-44
$F_{\text{Interferer}}$	MHz	Spurious response frequencies

The normative reference for this requirement is TS 36.101 [2] clause 7.7.

## 7.7EA.4 Test Description

### 7.7EA.4.1 Initial Conditions

Initial conditions are a set of test configurations the UE needs to be tested in and the steps for the SS to take with the UE to reach the correct measurement state.

The initial test configurations consist of environmental conditions, test frequencies, and channel bandwidths based on E-UTRA bands specified in clause 5.2E. All of these configurations shall be tested with applicable test parameters for each channel bandwidth, and are shown in table 7.7EA.4.1-1. The details of the uplink and downlink reference measurement channels (RMCs) are specified in Annexes A.2 and A.3 respectively. The details of the OCNG patterns used are specified in Annex A.5. Configurations of PDSCH and MPDCCH before measurement are specified in Annex C.2.

**Table 7.7EA.4.1-1: Test Configuration Table**

Initial Conditions							
Test Environment as specified in TS 36.508[7] subclause 4.1			NC				
Test Frequencies as specified in TS36.508 [7] subclause 4.3.1			Low range, Mid range, High range				
Test Channel Bandwidths as specified in TS 36.508 [7] subclause 4.3.1			5MHz				
Test Parameters for Channel Bandwidths and Narrowband positions							
Downlink Configuration				Uplink Configuration			
Ch BW	Mod'n	RB allocation		Mod'n	RB allocation		Narrowband index (Note 1)
		FDD	TDD		FDD and HD-FDD	TDD	
5MHz	QPSK	4	4	QPSK	6	6	0
Note 1: Denotes where in the channel Bandwidth the narrowband shall be placed. Narrowband and Narrowband index are defined in TS36.211, 5.2.4							
Note 2: Downlink RB position shall be $RB_{start} = 0$ within the narrowband							

1. Connect the SS to the UE antenna connectors as shown in TS 36.508[7] Annex A Figure A.5 using only main UE Tx/Rx antenna.
2. The parameter settings for the cell are set up according to TS 36.508 [7] subclause 4.4.3.
3. Downlink signals are initially set up according to Annex C0, C.1 and C.3.1, and uplink signals according to Annex H.1 and H.3.1.
4. The UL and DL Reference Measurement channels are set according to Table 7.7EA.4.1-1.
5. Propagation conditions are set according to Annex B.0.
6. Ensure the UE is in State 3A-RF-CE according to TS 36.508 [7] clause 5.2A.2AA. Message contents are defined in clause 7.7EA.4.3.

### 7.7EA.4.2 Test Procedure

1. SS transmits PDSCH via MPDCCH DCI format 6-1A for C\_RNTI to transmit the DL RMC according to Table 7.7EA.4.1-1. The SS sends downlink MAC padding bits on the DL RMC. The SS sends one sided dynamic OCNG Pattern OP.1 FDD/TDD for the DL-signal as described in Annex A.5.1.1/A.5.2.1.
2. SS sends uplink scheduling information for each UL HARQ process via MPDCCH DCI format 6-0A for C\_RNTI to schedule the UL RMC according to Table 7.7EA.4.1-1. Since the UE has no payload data to send, the UE transmits uplink MAC padding bits on the UL RMC.
3. Set the parameters of the CW signal generator for an interfering signal according to Table 7.7EA.5-2. The spurious frequencies are taken from records in the final step of test procedures in clause 7.6.2EA.4.2.
4. Set the downlink signal level according to the table 7.7EA.5-1. Send uplink power control commands to the UE (less or equal to 1dB step size should be used), to ensure that the UE output power is within +0, - 3.4 dB of the target level in table 7.7EA.5-1 for carrier frequency  $f \leq 3.0\text{GHz}$  or within +0, -4.0 dB of the target level for carrier frequency  $3.0\text{GHz} < f \leq 4.2\text{GHz}$ , for at least the duration of the throughput measurement.
5. For the spurious frequency, measure the average throughput for a duration sufficient to achieve statistical significance according to Annex G.2.

### 7.7EA.4.3 Message Contents

Message contents are according to TS 36.508 [7] subclause 4.6 with the following exception.

**Table 7.7EA.4.3-1: UplinkPowerControlDedicated**

Derivation Path: 36.331 clause 6.3.2			
Information Element	Value/remark	Comment	Condition
UplinkPowerControlDedicated-DEFAULT ::= SEQUENCE {			
p0-UePUSCH	0		
deltaMCS-Enabled	en0		
accumulationEnabled	TRUE		
p0-uePUCCH	0		
pSRS-Offset	3 (-6 dB)		
filterCoefficient	fc8	larger filter length is used to reduce the RSRP measurement variation	
}			

## 7.7EA.5 Test Requirement

The throughput measurement derived in test procedure shall be  $\geq 95\%$  of the maximum throughput of the reference measurement channels as specified in Annex A.3.2 with parameters specified in Tables 7.7EA.5-1 and 7.7EA.5-2.

**Table 7.7EA.5-1: Spurious response parameters**

Rx Parameter	Units	Channel bandwidth					
		1.4 MHz	3 MHz	5 MHz	10 MHz	15 MHz	20 MHz
Power in Transmission Bandwidth Configuration	dBm	REFSENS + channel bandwidth specific value below					
		6	6	6	6	7	9
Note 1: The transmitter shall be set to 4dB below $P_{\text{CMAX\_L}}$ with $P_{\text{CMAX\_L}}$ as defined in clause 6.2.5.							
Note 2: The reference measurement channel is specified in Annex A.3.2 with one sided dynamic OCNG Pattern OP.1 FDD/TDD as described in Annex A.5.1.1/A.5.2.1.							

**Table 7.7EA.5-2: Spurious Response**

Parameter	Unit	Level
$P_{\text{Interferer}}$ (CW)	dBm	-44
$F_{\text{Interferer}}$	MHz	Spurious response frequencies

## 7.7F Spurious response for UE category NB1

Editor's note: This clause is incomplete. The following aspects are either missing or not yet determined:

- References to TS 36.508 are undefined (test environment, test frequencies, cell parameter settings, UE state)
- UL RMC is undefined in Annex A
- Parameters ensuring UE is transmitting NPUSCH with maximum power are TBC.
- The Message contents and exceptions are undefined
- Downlink signals are undefined in Annex C
- Achieving statistical significance is undefined in Annex G.2.6
- Measurement uncertainty and test tolerance are undefined in Annex F

## 7.7F.1 Test purpose

Spurious response verifies the receiver's ability to receive a wanted signal on its assigned channel frequency without exceeding a given degradation due to the presence of an unwanted CW interfering signal at any other frequency at which a response is obtained i.e. for which the out of band blocking limit as specified in sub-clause 7.6.2 is not met.

The lack of the spurious response ability decreases the coverage area when other unwanted interfering signal exists at any other frequency.

## 7.7F.2 Test applicability

This test case applies to all types of UE release 13 and forward of UE category NB1.

## 7.7F.3 Minimum conformance requirements

The category NB1 UE throughput shall be  $\geq 95\%$  of the maximum throughput of the reference measurement channel as specified in Annex A.3.2 with parameters specified in Tables 7.7F.3-1.

**Table 7.7F.3-1: Spurious response parameters for UE category NB1**

Parameter	Unit	Level
$P_{\text{signal}}$	dBm	REFSENS+6
$P_{\text{Interferer (CW)}}$	dBm	-44
$F_{\text{Interferer}}$	MHz	Spurious response frequencies
Number of spurious response frequencies		24 (in OOB range 1, 2, 3)
NOTE 1: Reference measurement channel is specified in Annex FFS.		
NOTE 2: The REFSENS power level is specified in 7.3.1F.1-1.		
NOTE 3: OOB range 1, 2, 3 refers to Table 7.6.2.1F-1.		

The normative reference for this requirement is TS 36.101 [2] clause 7.7.1F.

## 7.7F.4 Test description

### 7.7F.4.1 Initial conditions

Initial conditions are a set of test configurations the UE needs to be tested in and the steps for the SS to take with the UE to reach the correct measurement state.

The initial test configurations consist of environmental conditions and test frequencies based on the subset of E-UTRA operating bands defined for NB-IoT in clause 5.2F. All of these configurations shall be tested with applicable test parameters, and are shown in table 7.7F.4.1-1. The details of the downlink reference measurement channels (RMCs) are specified in [Annex A.3]. Configurations of NPDSCH and NPDCCH before measurement are specified in [Annex C.2].

**Table 7.7F.4.1-1: Test Configuration Table**

Initial Conditions					
Test Environment as specified in TS 36.508 [7] clause [X.4.1]		NC			
Test Frequencies as specified in TS36.508 [7] clause [X.4.3.1]		[FFS]			
Configuration ID	Downlink Configuration		Uplink Configuration		
	Modulation	Subcarriers	Modulation	$N_{\text{tones}}$	Subcarrier spacing
1	QPSK	12	BPSK	1@0	15 kHz

1. Connect the SS to the UE antenna connector as shown in TS 36.508 [7] Annex A, Figure A.5 using only the main UE Tx/Rx antenna.
2. The parameter settings for the cell are set up according to TS 36.508 [7] subclause [FFS].

3. Downlink signals are initially set up according to Annex C.0, C.1 and C.2, and NPUSCH Format 2 is used to carry ACK/NACK on the uplink.
4. The DL Reference Measurement channel is set according to Table 7.7F.4.1-1.
5. Propagation conditions are set according to Annex B.0.
6. Ensure the UE is in State [3A-RF] according to TS 36.508 [7] clause [FFS]. Message contents are defined in clause 7.7F.4.3.

### 7.7F.4.2 Test procedure

1. SS transmits NPDSCH via NPDCCH DCI format N1 for C\_RNTI to transmit the DL RMC according to Table 7.7F.4.1-1. The SS sends downlink MAC padding bits on the DL RMC. The UE will send HARQ feedback based on information contained in DCI format N1.
2. Set the parameters of the CW signal generator for an interfering signal according to Table 7.7F.5-1. The spurious frequencies are taken from records in the final step of test procedures in clause 7.6.2F.4.2
3. Set the Downlink signal level according to the Table 7.7F.5-1.
4. For the spurious frequency, measure the average throughput for a duration sufficient to achieve statistical significance according to [Annex G.2].

### 7.7F.4.3 Message contents

Message contents are according to TS 36.508 [7] clause [FFS] with the following exceptions:

### 7.7F.5 Test requirement

The throughput measurement derived in test procedure shall be  $\geq 95\%$  of the maximum throughput of the reference measurement channels as specified in [Annex A.3.2] with parameters specified in Tables 7.7F.5-1.

**Table 7.7F.5-1: Spurious response parameters for UE category NB1**

Parameter	Unit	Level
$P_{\text{signal}}$	dBm	REFSENS+6
$P_{\text{Interferer (CW)}}$	dBm	-44
$F_{\text{Interferer}}$	MHz	Spurious response frequencies
Number of spurious response frequencies		24 (in OOB range 1, 2, 3)
NOTE 1: Reference measurement channel is specified in Annex FFS.		
NOTE 2: The REFSENS power level is specified in 7.3.1F.1-1.		
NOTE 3: OOB range 1, 2, 3 refers to Table 7.6.2.1F-1.		

## 7.8 Intermodulation characteristics

### 7.8.1 Wide band Intermodulation

#### 7.8.1.1 Test purpose

Intermodulation response tests the UE's ability to receive data with a given average throughput for a specified reference measurement channel, in the presence of two or more interfering signals which have a specific frequency relationship to the wanted signal, under conditions of ideal propagation and no added noise.

A UE unable to meet the throughput requirement under these conditions will decrease the coverage area when two or more interfering signals exist which have a specific frequency relationship to the wanted signal.

#### 7.8.1.2 Test applicability

This test applies to all types of E-UTRA UE release 8 and forward.

### 7.8.1.3 Minimum conformance requirements

Intermodulation response rejection is a measure of the capability of the receiver to receive a wanted signal on its assigned channel frequency in the presence of two or more interfering signals which have a specific frequency relationship to the wanted signal.

The throughput shall be  $\geq 95\%$  of the maximum throughput of the reference measurement channels as specified in Annexes A.2.2, A.2.3 and A.3.2 (with one sided dynamic OCNG Pattern OP.1 FDD/TDD for the DL-signal as described in Annex A.5.1.1/A.5.2.1) with parameters specified in Table 7.8.1.3-1 for the specified wanted signal mean power in the presence of two interfering signals. For operating bands with an unpaired DL part (as noted in Table 5.2-1), the requirements only apply for carriers assigned in the paired part.

**Table 7.8.1.3-1: Wide band intermodulation**

Rx Parameter	Units	Channel bandwidth					
		1.4 MHz	3 MHz	5 MHz	10 MHz	15 MHz	20 MHz
Power in Transmission Bandwidth Configuration	dBm	REFSENS + channel bandwidth specific value below					
		12	8	6	6	7	9
$P_{\text{Interferer 1}}$ (CW)	dBm	-46					
$P_{\text{Interferer 2}}$ (Modulated)	dBm	-46					
$BW_{\text{Interferer 2}}$		1.4	3	5			
$F_{\text{Interferer 1}}$ (Offset)	MHz	-BW/2 -2.1 / +BW/2+ 2.1	-BW/2 -4.5 / +BW/2 + 4.5	-BW/2 - 7.5 / +BW/2 + 7.5			
$F_{\text{Interferer 2}}$ (Offset)	MHz	$2 * F_{\text{Interferer 1}}$					
Note 1: The transmitter shall be set to 4dB below $P_{\text{C}_{\text{MAX\_L}}}$ at the minimum uplink configuration specified in Table 7.3.3-2 with $P_{\text{C}_{\text{MAX\_L}}}$ as defined in clause 6.2.5. Note 2: The reference measurement channel is specified in Annex A.3.2 with one sided dynamic OCNG Pattern OP.1 FDD/TDD as described in Annex A.5.1.1/A.5.2.1. Note 3: The modulated interferer consists of the Reference measurement channel specified in Annex A.3.2 with one sided dynamic OCNG Pattern OP.1 FDD/TDD as described in Annex A.5.1.1/A.5.2.1 with set-up according to Annex C.3.1. The interfering modulated signal is 5MHz E-UTRA signal as described in Annex D for channel bandwidth $\geq 5\text{MHz}$							

For the UE which supports inter band CA configuration in Table 7.3.1A-2,  $P_{\text{interferer1}}$  and  $P_{\text{interferer2}}$  powers defined in Table 7.8.1.1-1 are increased by the amount given by  $\Delta R_{\text{IB}}$  in Table 7.3.1A-2.

The normative reference for this requirement is TS 36.101 [2] clause 7.8.1 and TS 36.101 [2] Annexes A and D.

[FFS: Although it is not explicitly stated in TS 36.101 [2] whether the modulated interferer defined in 36.101 Annex D applies to wanted channel bandwidths of less than 5MHz, this test specification has assumed that the modulated interferer definition applies to all channel bandwidths. The content of TS 36.101 [2] Annex D.2 has been copied into Annex FFS of the present document]

### 7.8.1.4 Test description

#### 7.8.1.4.1 Initial condition

Initial conditions are a set of test configurations the UE needs to be tested in and the steps for the SS to take with the UE to reach the correct measurement state.

The initial test configurations consist of environmental conditions, test frequencies, and channel bandwidths based on E-UTRA bands specified in table 5.4.2.1-1. All of these configurations shall be tested with applicable test parameters for each channel bandwidth, and are shown in table 7.8.1.4.1-1. The details of the uplink and downlink reference measurement channels (RMCs) are specified in Annexes A.2 and A.3 respectively. The details of the OCNG patterns used are specified in Annex A.5. Configurations of PDSCH and PDCCH before measurement are specified in Annex C.2.

Table 7.8.1.4.1-1: Test Configuration Table

Initial Conditions						
Test Environment as specified in TS 36.508[7] subclause 4.1				NC		
Test Frequencies as specified in TS36.508 [7] subclause 4.3.1				Mid range		
Test Channel Bandwidths as specified in TS 36.508 [7] subclause 4.3.1				Lowest, 5MHz, Highest		
Test Parameters for Channel Bandwidths						
Ch BW	Downlink Configuration			Uplink Configuration		
	Mod'n	RB allocation		Mod'n	RB allocation	
		FDD	TDD		FDD	TDD
1.4MHz	QPSK	6	6	QPSK	6	6
3MHz	QPSK	15	15	QPSK	15	15
5MHz	QPSK	25	25	QPSK	25	25
5MHz	QPSK	25	N/A	QPSK	20	N/A
5MHz	QPSK	25	N/A	QPSK	15	N/A
5MHz	QPSK	25	N/A	QPSK	5 <sup>4</sup>	N/A
10MHz	QPSK	50	50	QPSK	50	50
10MHz	QPSK	50	N/A	QPSK	25	N/A
10MHz	QPSK	50	N/A	QPSK	20	N/A
10MHz	QPSK	50	N/A	QPSK	15	N/A
15MHz	QPSK	75	75	QPSK	75	75
15MHz	QPSK	75	N/A	QPSK	50	N/A
15MHz	QPSK	75	N/A	QPSK	25	N/A
15MHz	QPSK	75	N/A	QPSK	20	N/A
20MHz	QPSK	100	100	QPSK	100	100
20MHz	QPSK	100	N/A	QPSK	75	N/A
20MHz	QPSK	100	N/A	QPSK	50	N/A
20MHz	QPSK	100	N/A	QPSK	25	N/A
20MHz	QPSK	100	N/A	QPSK	20	N/A
Note 1: Test Channel Bandwidths are checked separately for each E-UTRA band, which applicable channel bandwidths are specified in Table 5.4.2.1-1. Note 2: Depending on E-UTRA band, only the appropriate Uplink RB allocation value according to table 7.3.3-2 is tested per Test Channel Bandwidth. The allocation shall be located as close as possible to the downlink operating band but confined within the transmission bandwidth configuration for the channel bandwidth (Table 5.4.2-1). Note 3: For the DL signal one sided dynamic OCN Pattern OP.1 FDD/TDD is used. Note 4: Applicable only to E-UTRA FDD Band 31. The UL resource blocks shall be located at RBstart 10 (according to Table 7.3.3-2).						

1. Connect the SS and interfering sources to the UE antenna connectors as shown in TS 36.508 [7] Figure A.6.
2. The parameter settings for the cell are set up according to TS 36.508 [7] subclause 4.4.3.
3. Downlink signals are initially set up according to Annex C.0, C.1 and C.3.1, and uplink signals according to Annex H.1 and H.3.1.
4. The UL and DL Reference Measurement channels are set according to Table 7.8.1.4.1-1.
5. Propagation conditions are set according to Annex B.0.
6. Ensure the UE is in State 3A-RF according to TS 36.508 [7] clause 5.2A.2. Message contents are defined in clause 7.8.1.4.3.

#### 7.8.1.4.2 Test procedure

1. SS transmits PDSCH via PDCCH DCI format 1A for C\_RNTI to transmit the DL RMC according to Table 7.8.1.4.1-1. The SS sends downlink MAC padding bits on the DL RMC.
2. SS sends uplink scheduling information for each UL HARQ process via PDCCH DCI format 0 for C\_RNTI to schedule the UL RMC according to Table 7.8.1.4.1-1. Since the UE has no payload data to send, the UE transmits uplink MAC padding bits on the UL RMC.

3. Set the Downlink signal level to the value as defined in Table 7.8.1.5-1. Send Uplink power control commands to the UE (less or equal to 1dB step size should be used), to ensure that the UE output power is within +0, - 3.4 dB of the target level in Table 7.8.1.5-1 for carrier frequency  $f \leq 3.0\text{GHz}$  or within +0, -4.0 dB of the target level for carrier frequency  $3.0\text{GHz} < f \leq 4.2\text{GHz}$ , for at least the duration of the Throughput measurement.
4. Set the Interfering signal levels to the values as defined in Table 7.8.1.5-1 and frequency below the wanted signal, using a modulated interferer bandwidth as defined in Annex D of the present document.
5. Measure the average throughput for a duration sufficient to achieve statistical significance according to Annex G.2.
6. Repeat steps from 3 to 5, using an interfering signal above the wanted signal at step 4.

#### 7.8.1.4.3 Message contents

Message contents are according to TS 36.508 [7] subclause 4.6 with the following exception.

**Table 7.8.1.4.3-1: UplinkPowerControlDedicated**

Derivation Path: 36.331 clause 6.3.2			
Information Element	Value/remark	Comment	Condition
UplinkPowerControlDedicated-DEFAULT ::= SEQUENCE {			
p0-UePUSCH	0		
deltaMCS-Enabled	en0		
accumulationEnabled	TRUE		
p0-uePUCCH	0		
pSRS-Offset	3 (-6 dB)		
filterCoefficient	fc8	larger filter length is used to reduce the RSRP measurement variation	
}			

#### 7.8.1.5 Test requirements

The throughput shall be  $\geq 95\%$  of the maximum throughput of the reference measurement channels as specified in Annex A.3.2 with parameters specified in Table 7.8.1.5-1 for the specified wanted signal mean power in the presence of two interfering signals.

**Table 7.8.1.5-1: Test parameters for Wide band intermodulation**

Rx Parameter	Units	Channel bandwidth					
		1.4 MHz	3 MHz	5 MHz	10 MHz	15 MHz	20 MHz
Power in Transmission Bandwidth Configuration	dBm	REFSENS + channel bandwidth specific value below					
		12	8	6	6	7	9

$P_{\text{Interferer 1}}$ (CW)	dBm	-46		
$P_{\text{Interferer 2}}$ (Modulated)	dBm	-46		
$BW_{\text{Interferer 2}}$		1.4	3	5
$F_{\text{Interferer 1}}$ (Offset)	MHz	-BW/2 -2.1 / +BW/2+ 2.1	-BW/2 -4.5 / +BW/2 + 4.5	-BW/2 - 7.5 / +BW/2 + 7.5
$F_{\text{Interferer 2}}$ (Offset)	MHz	$2 * F_{\text{Interferer 1}}$		
Note 1:	The transmitter shall be set to 4dB below $P_{\text{CMAX\_L}}$ with $P_{\text{CMAX\_L}}$ as defined in clause 6.2.5.			
Note 2:	The reference measurement channel is specified in Annex A.3.2 with one sided dynamic OCNG Pattern OP.1 FDD/TDD as described in Annex A.5.1.1/A.5.2.1.			
Note 3:	The modulated interferer consists of the Reference measurement channel specified in Annex A.3.2 with one sided dynamic OCNG Pattern OP.1 FDD/TDD as described in Annex A.5.1.1/A.5.2.1 and set-up according to Annex C.3.1. The interfering modulated signal is 5MHz E-UTRA signal as described in Annex D for channel bandwidth $\geq 5$ MHz			
Note 4:	For the UE which supports inter band CA configuration in Tables 7.3.3-1A and 7.3.3-1B, $P_{\text{interferer1}}$ and $P_{\text{interferer2}}$ powers are increased by the amount given by $\Delta R_{\text{IB}}$ in Tables 7.3.3-1A and 7.3.3-1B.			

## 7.8.1\_1 Wide band Intermodulation with 4 Rx antenna ports

Editor's note: Following aspects missing or not yet determined:

- Connection Diagram.

### 7.8.1\_1.1 Test purpose

To test the ability of UE that supports 4 Rx antenna ports to receive data with a given average throughput for a specified reference measurement channel, in the presence of two or more interfering signals which have a specific frequency relationship to the wanted signal, under conditions of ideal propagation and no added noise.

A UE unable to meet the throughput requirement under these conditions will decrease the coverage area when two or more interfering signals exist which have a specific frequency relationship to the wanted signal.

### 7.8.1\_1.2 Test applicability

This test applies to all types of E-UTRA UE release 10 and forward that supports 4 Rx antenna ports.

### 7.8.1\_1.3 Minimum conformance requirements

Same as in clause 7.8.1.3 with following exceptions:

- Instead of Table 7.8.1.3-1 → use Table 7.8.1\_1.3-1.

**Table 7.8.1\_1.3-1: Wide band intermodulation**

Rx Parameter	Units	Channel bandwidth					
		1.4 MHz	3 MHz	5 MHz	10 MHz	15 MHz	20 MHz
Power in Transmission Bandwidth Configuration	dBm	REFSENS + channel bandwidth specific value below					
		12	8	6	6	7	9

$P_{\text{Interferer 1}}$ (CW)	dBm	-46		
$P_{\text{Interferer 2}}$ (Modulated)	dBm	-46		
$BW_{\text{Interferer 2}}$		1.4	3	5
$F_{\text{Interferer 1}}$ (Offset)	MHz	$-BW/2 - 2.1$ / $+BW/2 + 2.1$	$-BW/2 - 4.5$ / $+BW/2 + 4.5$	$-BW/2 - 7.5$ / $+BW/2 + 7.5$
$F_{\text{Interferer 2}}$ (Offset)	MHz	$2 * F_{\text{Interferer 1}}$		
Note 1:	The transmitter shall be set to 4dB below $P_{\text{CMAX\_L}}$ at the minimum uplink configuration specified in Table 7.3.3-2 with $P_{\text{CMAX\_L}}$ as defined in clause 6.2.5.			
Note 2:	The reference measurement channel is specified in Annex A.3.2 with one sided dynamic OCNG Pattern OP.1 FDD/TDD as described in Annex A.5.1.1/A.5.2.1.			
Note 3:	The modulated interferer consists of the Reference measurement channel specified in Annex A.3.2 with one sided dynamic OCNG Pattern OP.1 FDD/TDD as described in Annex A.5.1.1/A.5.2.1 with set-up according to Annex C.3.1. The interfering modulated signal is 5MHz E-UTRA signal as described in Annex D for channel bandwidth $\geq 5\text{MHz}$			
Note 4:	The REFSENS power level is specified in Table 7.3.3-1a.			

## 7.8.1\_1.4 Test description

### 7.8.1\_1.4.1 Initial condition

Same as in clause 7.8.1.4.1 with following exceptions:

- Instead of Figure A.6 → use Figure [TBD].
- Instead of Table 7.8.1.4.1-1 → use Table 7.8.1\_1.4.1-1.

**Table 7.8.1\_1.4.1-1: Test Configuration Table**

20MHz	QPSK	100	N/A	QPSK	50	N/A
20MHz	QPSK	100	N/A	QPSK	20	N/A
Note 1:	Test Channel Bandwidths are checked separately for each E-UTRA band, which applicable channel bandwidths are specified in Table 5.4.2.1-1.					
Note 2:	Depending on E-UTRA band, only the appropriate Uplink RB allocation value according to table 7.3.3-2 is tested per Test Channel Bandwidth. The allocation shall be located as close as possible to the downlink operating band but confined within the transmission bandwidth configuration for the channel bandwidth (Table 5.4.2-1).					
Note 3:	For the DL signal one sided dynamic OCNG Pattern OP.1 FDD/TDD is used.					

### 7.8.1\_1.4.2 Test procedure

1. SS transmits PDSCH via PDCCH DCI format 1A for C\_RNTI to transmit the DL RMC according to Table 7.8.1.4.1-1. The SS sends downlink MAC padding bits on the DL RMC.
2. SS sends uplink scheduling information for each UL HARQ process via PDCCH DCI format 0 for C\_RNTI to schedule the UL RMC according to Table 7.8.1\_1.4.1-1. Since the UE has no payload data to send, the UE transmits uplink MAC padding bits on the UL RMC.
3. Set the Downlink signal level to the value as defined in Table 7.8.1\_1.5-1. Send Uplink power control commands to the UE (less or equal to 1dB step size should be used), to ensure that the UE output power is within +0, - 3.4 dB of the target level in Table 7.8.1\_1.5-1 for carrier frequency  $f \leq 3.0\text{GHz}$  or within +0, -4.0 dB of the target level for carrier frequency  $3.0\text{GHz} < f \leq 4.2\text{GHz}$ , for at least the duration of the Throughput measurement.
4. Set the Interfering signal levels to the values as defined in Table 7.8.1\_1.5-1 and frequency below the wanted signal, using a modulated interferer bandwidth as defined in Annex D of the present document.
5. Measure the average throughput for a duration sufficient to achieve statistical significance according to Annex G.2.
6. Repeat steps from 3 to 5, using an interfering signal above the wanted signal at step 4.

### 7.8.1\_1.4.3 Message contents

Same as in clause 7.8.1.4.3.

### 7.8.1\_1.5 Test requirements

The throughput shall be  $\geq 95\%$  of the maximum throughput of the reference measurement channels as specified in Annex A.3.2 with parameters specified in Table 7.8.1\_1.5-1 for the specified wanted signal mean power in the presence of two interfering signals.

**Table 7.8.1\_1.5-1: Test parameters for Wide band intermodulation**

Rx Parameter	Units	Channel bandwidth					
		1.4 MHz	3 MHz	5 MHz	10 MHz	15 MHz	20 MHz
Power in Transmission Bandwidth Configuration	dBm	REFSENS + channel bandwidth specific value below					
		12	8	6	6	7	9
$P_{\text{Interferer 1 (CW)}}$	dBm	-46					
$P_{\text{Interferer 2 (Modulated)}}$	dBm	-46					
$BW_{\text{Interferer 2}}$		1.4	3	5			
$F_{\text{Interferer 1 (Offset)}}$	MHz	-BW/2 -2.1	-BW/2 -4.5	-BW/2 - 7.5			
		/	/	/			
$F_{\text{Interferer 2 (Offset)}}$	MHz	+BW/2+ 2.1	+BW/2 + 4.5	+BW/2 + 7.5			
		$2 \cdot F_{\text{Interferer 1}}$					
Note 1:	The transmitter shall be set to 4dB below $P_{\text{CMAX\_L}}$ with $P_{\text{CMAX\_L}}$ as defined in clause 6.2.5.						
Note 2:	The reference measurement channel is specified in Annex A.3.2 with one sided dynamic OCNG Pattern OP.1 FDD/TDD as described in Annex A.5.1.1/A.5.2.1.						
Note 3:	The modulated interferer consists of the Reference measurement channel specified in Annex A.3.2 with one sided dynamic OCNG Pattern OP.1 FDD/TDD as described in Annex A.5.1.1/A.5.2.1 and set-up according to Annex C.3.1. The interfering modulated signal is 5MHz E-UTRA signal as described in Annex D for channel bandwidth $\geq 5\text{MHz}$						
Note 4:	For the UE which supports inter band CA configuration in Tables 7.3.3-1A and 7.3.3-1B, $P_{\text{interferer1}}$ and $P_{\text{interferer2}}$ powers are increased by the amount given by $\Delta R_{\text{IB}}$ in Tables 7.3.3-1A and 7.3.3-1B.						
Note 5:	The REFSENS power level is specified in Table 7.3.3-1a.						

## 7.8.1A Wide band Intermodulation for CA

### 7.8.1A.0 Minimum conformance requirements

For inter-band carrier aggregation with one component carrier per operating band and the uplink assigned to one E-UTRA band the wide band intermodulation requirements are defined with the uplink active on the band(s) other than the band whose downlink is being tested. The UE shall meet the requirements specified in subclause 7.8.1.3 for each component carrier while all downlink carriers are active. For E-UTRA CA configurations including an operating band without uplink band or an operating band with an unpaired DL part (as noted in Table 5.2-1), the requirements for all downlinks shall be met with the single uplink carrier active in each band capable of UL operation. For E-UTRA CA configurations listed in Table 7.3A.0-1 under conditions for which reference sensitivity for the operating band being tested is N/A, the wideband intermodulation requirements of subclause 7.8.1A.0 do not apply.

For intra-band contiguous carrier aggregation the downlink SCC(s) shall be configured at nominal channel spacing to the PCC. For FDD, the PCC shall be configured closest to the uplink band. All downlink carriers shall be active throughout the test. The uplink output power shall be set as specified in Table 7.8.1A.0-1 with the uplink configuration set according to Table 7.3A.0-2 for the applicable carrier aggregation configuration. For UE(s) supporting one uplink carrier, the uplink configuration of the PCC shall be in accordance with Table 7.3.3-2. The UE shall fulfil the minimum requirement in presence of an interfering signal specified in Table 7.8.1A.0-1 being on either side of the aggregated signal. The throughput of each carrier shall be  $\geq 95\%$  of the maximum throughput of the reference measurement channels as specified in Annexes A.2.2, A.2.3 and A.3.2 (with one sided dynamic OCNG Pattern OP.1 FDD/TDD for the DL-signal as described in Annex A.5.1.1/A.5.2.1) with parameters specified in Table 7.8.1A.0-1. For operating bands with an unpaired DL part (as noted in Table 5.2-1), the requirements also apply for an SCC assigned in the unpaired part with parameters specified in Tables 7.8.1A.0-1.

**Table 7.8.1A.0-1: Wide band intermodulation**

Rx parameter	Units	CA Bandwidth Class				
		B	C	D	E	F
P <sub>w</sub> in Transmission Bandwidth Configuration, per CC	dBm	REFSENS + CA Bandwidth Class specific value below				
		9	12	13.8	15	
P <sub>Interferer 1</sub> (CW)	dBm	-46				
P <sub>Interferer 2</sub> (Modulated)	dBm	-46				
BW <sub>Interferer 2</sub>	MHz	5	5	5	5	
F <sub>Interferer 1</sub> (Offset)	MHz	$-F_{\text{offset}}-7.5$ / $+F_{\text{offset}}+7.5$	$-F_{\text{offset}}-7.5$ / $+F_{\text{offset}}+7.5$	$-F_{\text{offset}}-7.5$ / $+F_{\text{offset}}+7.5$	$-F_{\text{offset}}-7.5$ / $+F_{\text{offset}}+7.5$	
F <sub>Interferer 2</sub> (Offset)	MHz	$2 \cdot F_{\text{Interferer 1}}$				
Note 1:	The transmitter shall be set to 4dB below P <sub>C<sub>MAX</sub>L</sub> or P <sub>C<sub>MAX</sub>L,CA</sub> as defined in subclause 6.2.5A.					
Note 2:	Reference measurement channel is specified in Annex A.3.2 with one sided dynamic OCNG Pattern OP.1 FDD/TDD as described in Annex A.5.1.1/A.5.2.1.					
Note 3:	The modulated interferer consists of the Reference measurement channel specified in Annex A.3.2 with one sided dynamic OCNG Pattern OP.1 FDD/TDD as described in Annex A.5.1.1/A.5.2.1 with set-up according to Annex C.3.1.					
Note 4:	The interfering modulated signal is 5MHz E-UTRA signal as described in Annex D for channel bandwidth $\geq 5$ MHz					
Note 5:	The F <sub>interferer 1</sub> (offset) is the frequency separation of the centre frequency of the carrier closest to the interferer and the centre frequency of the CW interferer and F <sub>interferer 2</sub> (offset) is the frequency separation of the centre frequency of the carrier closest to the interferer and the centre frequency of the modulated interferer.					

For intra-band non-contiguous carrier aggregation with one uplink carrier and two downlink sub-blocks, the wide band intermodulation requirements are defined with the uplink configuration in accordance with Table 7.3A.0-3. For this uplink configuration, the UE shall meet the requirements for each sub-block as specified in subclause 7.8.1.3 and in this subclause for one component carrier and two component carriers per sub-block, respectively. The requirements apply for out-of-gap interferers while all downlink carriers are active.

For combinations of intra-band and inter-band carrier aggregation with up to five downlink carriers (up to two non-contiguously sub-blocks per band and up to four contiguously aggregated carriers per band) and one uplink carrier assigned to one E-UTRA band, the requirement is defined with the uplink active in a band other than that supporting the downlink(s) under test. The uplink configuration shall be in accordance with Table 7.3A.0-3 when the uplink is active in the band supporting two non-contiguous component carriers, Table 7.3A.0-2 when the uplink is active in a band supporting two contiguous component carriers and in accordance with Table 7.3.3-2 when the uplink is active in a band supporting one carrier per band. For these uplink configurations, the UE shall meet the wide-band intermodulation requirements for intra-band non-contiguous carrier aggregation of two downlink sub-blocks with  $\Delta R_{\text{IBNC}} = 0$  dB for all sub-block gaps (Table 7.3A.0-3) for the two non-contiguous downlink sub-blocks, the requirements for intra-band contiguous carrier aggregation for the contiguously aggregated downlink carriers and for any remaining component carrier(s) the requirements specified in subclause 7.8.1. All downlink carriers shall be active throughout the tests and the requirements for the downlinks shall be met with the single uplink carrier active in each band capable of UL operation.

The normative reference for this requirement is TS 36.101 [2] clause 7.8.1A and TS 36.101 [2] Annexes A and D.

## 7.8.1A.1 Wideband intermodulation for CA (intra-band contiguous DL CA and UL CA)

### 7.8.1A.1.1 Test purpose

Intermodulation response tests the UE's ability to receive data with a given average throughput for a specified reference measurement channel, in the presence of two or more interfering signals which have a specific frequency relationship to the wanted signal, under conditions of ideal propagation and no added noise.

A UE unable to meet the throughput requirement under these conditions will decrease the coverage area when two or more interfering signals exist which have a specific frequency relationship to the wanted signal.

### 7.8.1A.1.2 Test applicability

This test applies to all types of E-UTRA UE release 10 and forward that supports intra-band contiguous DL CA and UL CA.

### 7.8.1A.1.3 Minimum conformance requirements

Minimum conformance requirements are specified in clause 7.8.1A.0.

### 7.8.1A.1.4 Test description

#### 7.8.1A.1.4.1 Initial condition

Initial conditions are a set of test configurations the UE needs to be tested in and the steps for the SS to take with the UE to reach the correct measurement state.

The initial test configurations consist of environmental conditions, test frequencies, and channel bandwidths based on E-UTRA bands specified in table 5.4.2.1-1. All of these configurations shall be tested with applicable test parameters for each channel bandwidth, and are shown in table 7.8.1A.1.4.1-1. The details of the uplink and downlink reference measurement channels (RMCs) are specified in Annexes A.2 and A.3 respectively. The details of the OCNG patterns used are specified in Annex A.5. Configurations of PDSCH and PDCCH before measurement are specified in Annex C.2.

Table 7.8.1A.1.4.1-1: Test Configuration Table

Initial Conditions								
Test Environment as specified in TS 36.508[7] subclause 4.1					NC			
Test Frequencies as specified in TS36.508 [7] subclause 4.3.1 for different CA bandwidth classes, and PCC and SCCs are mapped onto physical frequencies according to Table 7.1-2					C: Mid range			
Test CC Combination setting ( $N_{RB\_agg}$ ) as specified in subclause 5.4.2A.1 for the CA Configuration across bandwidth combination sets supported by the UE					Lowest $N_{RB\_agg}$ , Highest $N_{RB\_agg}$ (Note 3)			
Test Parameters for CA Configurations								
CA Configuration / $N_{RB\_agg}$		DL Allocation		UL Allocation				
PCC $N_{RB}$	SCC $N_{RB}$	CC MOD	PCC & SCC RB allocation	CC MOD	$N_{RB\_alloc}$	PCC & SCC RB allocations ( $L_{CRB}$ @ $RB_{start}$ )		
75	75	QPSK	75+75	QPSK	75	P_75@0	S_0@0	
75	75	QPSK	75+75	QPSK	129	P_75@0	S_54@0	
75	75	QPSK	75+75	QPSK	150	P_75@0	S_75@0	
100	25	QPSK	100+25	QPSK	50	P_50@50	S_0@0	
100	25	QPSK	100+25	QPSK	125	P_100@0	S_25@0

100	100	QPSK	100+100	QPSK	130	P_100@0	S_30@0	
100	100	QPSK	100+100	QPSK	200	P_100@0	S_100@0	
Note 1: CA Configuration Test CC Combination settings are checked separately for each CA Configuration, which applicable aggregate channel bandwidths are specified in Table 5.4.2A.1-1.								
Note 2: Depending on CA configurations, only the appropriate Uplink RB allocation value according to table 7.3A.0-2 is tested per configuration.								
Note 3: If in the CA Configuration UE supports multiple CC Combinations with the same $N_{RB\_agg}$ , only the first of those is tested, in the order on the Test Configuration Table list.								

1. Connect the SS and interfering sources to the UE antenna connectors as shown in TS 36.508 [7] Figure group A.34 as appropriate.
2. The parameter settings for the cell are set up according to TS 36.508 [7] subclause 4.4.3.
3. Downlink signals for PCC are initially set up according to Annex C.0, C.1 and C.3.1, and uplink signals according to Annex H.1 and H.3.1.
4. The UL and DL Reference Measurement channels are set according to Table 7.8.1A.1.4.1-1.
5. Propagation conditions are set according to Annex B.0.
6. Ensure the UE is in State 3A-RF according to TS 36.508 [7] clause 5.2A.2. Message contents are defined in clause 7.8.1.1A.4.3.

#### 7.8.1A.1.4.2 Test procedure

1. Configure SCC according to Annex C.0, C.1 and Annex C.3.1 for all downlink physical channels.
2. The SS shall configure SCC as per TS 36.508 [7] clause 5.2A.4. Message contents are defined in clause 7.8.1A.1.4.3
3. SS activates SCC by sending the activation MAC-CE (Refer TS 36.321 [13], clauses 5.13, 6.1.3.8). Wait for at least 2 seconds (Refer TS 36.133, clauses 8.3.3.2).
4. SS transmits PDSCH via PDCCH DCI format 1A for C\_RNTI to transmit the DL RMC according to Table 7.8.1A.1.4.1-1 on both PCC and SCC. The SS sends downlink MAC padding bits on the DL RMC.

5. SS sends uplink scheduling information for each UL HARQ process via PDCCH DCI format 0 for C\_RNTI to schedule the UL RMC according to Table 7.8.1A.1.4.1-1 on both PCC and SCC. Since the UE has no payload data to send, the UE sends uplink MAC padding bits on the UL RMC.
6. Set the Downlink signal level for PCC and SCC to the value as defined in Table 7.8.1A.1.5-1. Send Uplink power control commands to the UE (less or equal to 1dB step size should be used), to ensure that for at least the duration of the Throughput measurement:  
 The PCC output power is within (+0dB, -3.4 dB) of (target level in Table 7.8.1A.1.5-1 +  $10\log(P_{L_{CRB}}/N_{RB\_alloc})$ ), for carrier frequency  $f \leq 3.0\text{GHz}$ ,  
 or within (+0dB, -4 dB) of (target level in Table 7.8.1A.1.5-1 +  $10\log(P_{L_{CRB}}/N_{RB\_alloc})$ ) for carrier frequency  $3.0\text{GHz} < f \leq 4.2\text{GHz}$ .  
 The SCC output power is within (+0dB, -3.4 dB) of (target level in Table 7.8.1A.1.5-1 +  $10\log(S_{L_{CRB}}/N_{RB\_alloc})$ ), for carrier frequency  $f \leq 3.0\text{GHz}$ ,  
 or within (+0dB, -4 dB) of (target level in Table 7.8.1A.1.5-1 +  $10\log(S_{L_{CRB}}/N_{RB\_alloc})$ ) for carrier frequency  $3.0\text{GHz} < f \leq 4.2\text{GHz}$ .
7. Set the Interfering signal levels to the values as defined in Table 7.8.1A.1.5-1 and frequency below the wanted signal, using a modulated interferer bandwidth as defined in Annex D of the present document.
8. Measure the average throughput for each component carrier for a duration sufficient to achieve statistical significance according to Annex G.2A.
9. Repeat steps from 6 to 8, using an interfering signal above the wanted signal at step 7.

#### 7.8.1A.1.4.3 Message contents

Message contents are according to TS 36.508 [7] subclause 4.6 with the following exception.

### 7.8.1A.1.5 Test requirements

The throughput of each carrier shall be  $\geq 95\%$  of the maximum throughput of the reference measurement channels as specified in Annex A.3.2 with parameters specified in Table 7.8.1A.1.5-1 for the specified wanted signal mean power in the presence of two interfering signals.

Table 7.8.1A.1.5-1: Test parameters for Wide band intermodulation

Rx parameter	Units	CA Bandwidth Class				
		B	C	D	E	F
Pw in Transmission Bandwidth Configuration, per CC	dBm	REFSENS + CA Bandwidth Class specific value below				
			12			

$P_{\text{Interferer 1}}$ (CW)	dBm	-46				
$P_{\text{Interferer 2}}$ (Modulated)	dBm	-46				
$BW_{\text{Interferer 2}}$	MHz		5			
$F_{\text{Interferer 1}}$ (Offset)	MHz		$-F_{\text{offset}}-7.5$ / $+ F_{\text{offset}}+7.5$			
$F_{\text{Interferer 2}}$ (Offset)	MHz	$2 \cdot F_{\text{Interferer 1}}$				
Note 1:	The transmitter shall be set to 4dB below $P_{\text{CMAX\_L}}$ or $P_{\text{CMAX\_L\_CA}}$ as defined in subclause 6.2.5 for one uplink carrier and in subclause 6.2.5 for two uplink carriers A.					
Note 2:	Reference measurement channel is specified in Annex A.3.2 with one sided dynamic OCNG Pattern OP.1 FDD/TDD as described in Annex A.5.1.1/A.5.2.1.					
Note 3:	The modulated interferer consists of the Reference measurement channel specified in Annex A.3.2 with one sided dynamic OCNG Pattern OP.1 FDD/TDD as described in Annex A.5.1.1/A.5.2.1 with set-up according to Annex C.3.1.					
Note 4:	The interfering modulated signal is 5MHz E-UTRA signal as described in Annex D for channel bandwidth $\geq 5\text{MHz}$					

For the UE which supports inter band CA configuration in Tables 7.3.3-1A, 7.3.3-1B and 7.3.3-1C,  $P_{\text{Interferer 1}}$  and  $P_{\text{Interferer 2}}$  power defined in Table 7.8.1A.1.5-1 is increased by the amount given by  $\Delta R_{\text{IB,c}}$  in Tables 7.3.3-1A, 7.3.3-1B and 7.3.3-1C.

## 7.8.1A.2 Wideband intermodulation for CA (intra-band contiguous DL CA without UL CA)

### 7.8.1A.2.1 Test purpose

Same as 7.8.1A.1

### 7.8.1A.2.2 Test applicability

This test applies to all types of E-UTRA UE release 10 and forward that supports intra-band contiguous DL CA. This test case applies only for CA Configurations that do not support UL CA.

### 7.8.1A.2.3 Minimum conformance requirements

Same as 7.8.1A.1

### 7.8.1A.2.4 Test description

#### 7.8.1A.2.4.1 Initial condition

Initial conditions are a set of test configurations the UE needs to be tested in and the steps for the SS to take with the UE to reach the correct measurement state.

The initial test configurations consist of environmental conditions, test frequencies, and channel bandwidths based on E-UTRA bands specified in table 5.4.2.1-1. All of these configurations shall be tested with applicable test parameters for each channel bandwidth, and are shown in table 7.8.1A.2.4.1-1. The details of the uplink and downlink reference measurement channels (RMCs) are specified in Annexes A.2 and A.3 respectively. The details of the OCNG patterns used are specified in Annex A.5. Configurations of PDSCH and PDCCH before measurement are specified in Annex C.2.

**Table 7.8.1A.2.4.1-1: Test Configuration Table**

Initial Conditions									
Test Environment as specified in TS 36.508[7] subclause 4.1					Normal				
Test Frequencies as specified in TS36.508 [7] subclause 4.3.1 for different CA bandwidth classes, and PCC and SCCs are mapped onto physical frequencies according to Table 7.1-2					B: Mid range C: Mid range				
Test CC Combination setting ( $N_{RB\_agg}$ ) as specified in subclause 5.4.2A.1 for the CA Configuration across bandwidth combination sets supported by the UE					Lowest $N_{RB\_agg}$ , Highest $N_{RB\_agg}$ (Note 3)				
Test Parameters for CA Configurations

100	100	QPSK	100+100	QPSK	75	P_75@25			
100	100	QPSK	100+100	QPSK	50	P_50@50			
Note 1:		CA Configuration Test CC Combination settings are checked separately for each CA Configuration, which applicable aggregated channel bandwidths are specified in Table 5.4.2A.1-1.							
Note 2:		Depending on CA configurations, only the appropriate Uplink RB allocation value according to table 7.3.3-2 is tested per Test CA configuration.							
Note 3:		If in the CA Configuration UE supports multiple CC Combinations with the same $N_{RB\_agg}$ , only the first of those is tested, according to the order on the Test Configuration Table list.							

1. Connect the SS and interfering sources to the UE antenna connectors as shown in TS 36.508 [7] Figure group A.34 as appropriate.
2. The parameter settings for the cell are set up according to TS 36.508 [7] subclause 4.4.3.
3. Downlink signals for PCC are initially set up according to Annex C.0, C.1 and C.3.1, and uplink signals according to Annex H.1 and H.3.1.
4. Propagation conditions are set according to Annex B.0.
5. Ensure the UE is in State 3A-RF according to TS 36.508 [7] clause 5.2A.2. Message contents are defined in clause 7.8.1.2A.4.3.

**7.8.1A.2.4.2 Test procedure**

1. Configure SCC according to Annex C.0, C.1 and Annex C.3.1 for all downlink physical channels.
2. The SS shall configure SCC as per TS 36.508 [7] clause 5.2A.4.

3. SS activates SCC by sending the activation MAC-CE (Refer TS 36.321 [13], clauses 5.13, 6.1.3.8). Wait for at least 2 seconds (Refer TS 36.133, clauses 8.3.3.2).
4. SS transmits PDSCH via PDCCH DCI format 1A for C\_RNTI to transmit the DL RMC according to Table 7.8.1A.2.4.1-1 on both PCC and SCC. The SS sends downlink MAC padding bits on the DL RMC.
5. SS sends uplink scheduling information for each UL HARQ process via PDCCH DCI format 0 for C\_RNTI to schedule the UL RMC according to Table 7.8.1A.2.4.1-1. Since the UE has no payload data to send, the UE transmits uplink MAC padding bits on the UL RMC.
6. Set the Downlink signal level to the value as defined in Table 7.8.1A.1.5-1. Send Uplink power control commands to the UE (less or equal to 1dB step size should be used), to ensure that the UE output power is within +0, - 3.4 dB of the target level in Table 7.8.1A.1.5-1 for carrier frequency  $f \leq 3.0\text{GHz}$  or within +0, -4.0 dB of the target level for carrier frequency  $3.0\text{GHz} < f \leq 4.2\text{GHz}$ , for at least the duration of the Throughput measurement.
7. Set the Interfering signal levels to the values as defined in subclause 7.8.1A.2.5 and frequency below the aggregated component carriers, using a modulated interferer bandwidth as defined in Annex D of the present document.
8. Measure the average throughput for each component carrier for a duration sufficient to achieve statistical significance according to Annex G.2.
9. Repeat steps from 6 to 8, using an interfering signal above the aggregated component carriers at step 7.

#### 7.8.1A.2.4.3 Message contents

Same message contents as in clause 7.8.1.4.3.

#### 7.8.1A.2.5 Test requirements

Same as 7.8.1A.1.5. with the following exceptions:

- Instead of Table 7.8.1A.1.5-1 → use Table 7.8.1A.2.5-1.

**Table 7.8.1A.2.5-1: Test parameters for Wide band intermodulation**

Rx parameter	Units	CA Bandwidth Class				
		B	C	D	E	F
P <sub>w</sub> in Transmission Bandwidth Configuration, per CC	dBm	REFSENS + CA Bandwidth Class specific value below				
		9	12			
P <sub>Interferer 1</sub> (CW)	dBm	-46				
P <sub>Interferer 2</sub> (Modulated)	dBm	-46				
BW <sub>Interferer 2</sub>	MHz	5	5			
F <sub>Interferer 1</sub> (Offset)	MHz	-F <sub>offset</sub> -7.5 / + F <sub>offset</sub> +7.5	-F <sub>offset</sub> -7.5 / + F <sub>offset</sub> +7.5			
F <sub>Interferer 2</sub> (Offset)	MHz	2*F <sub>Interferer 1</sub>				
Note 1:	The transmitter shall be set to 4dB below P <sub>CMAX_L</sub> or P <sub>CMAX_L_CA</sub> as defined in subclause 6.2.5.					
Note 2:	Reference measurement channel is specified in Annex A.3.2 with one sided dynamic OCNB Pattern OP.1 FDD/TDD as described in Annex A.5.1.1/A.5.2.1.					
Note 3:	The modulated interferer consists of the Reference measurement channel specified in Annex A.3.2 with one sided dynamic OCNB Pattern OP.1 FDD/TDD as described in Annex A.5.1.1/A.5.2.1 with set-up according to Annex C.3.1.					
Note 4:	The interfering modulated signal is 5MHz E-UTRA signal as described in Annex D for channel bandwidth ≥5MHz					

For the UE which supports inter band CA configuration in Tables 7.3.3-1A, 7.3.3-1B and 7.3.3-1C,  $P_{\text{Interferer 1}}$  and  $P_{\text{Interferer 2}}$  power defined in Table 7.8.1A.2.5-1 is increased by the amount given by  $\Delta R_{\text{IB,c}}$  in Tables 7.3.3-1A, 7.3.3-1B and 7.3.3-1C.

### 7.8.1A.3 Wideband intermodulation for CA (inter-band DL CA without UL CA)

#### 7.8.1A.3.1 Test purpose

Intermodulation response tests the UE's ability to receive data with a given average throughput for a specified reference measurement channel, in the presence of two or more interfering signals which have a specific frequency relationship to the wanted signal, under conditions of ideal propagation and no added noise.

A UE unable to meet the throughput requirement under these conditions will decrease the coverage area when two or more interfering signals exist which have a specific frequency relationship to the wanted signal.

#### 7.8.1A.3.2 Test applicability

This test applies to all types of E-UTRA UE release 10 and forward that supports inter-band contiguous DL CA.

This test case also applies to all types of E-UTRA UE release 12 and forward that support 2DL CA with FDD-TDD inter-band CA.

#### 7.8.1A.3.3 Minimum conformance requirements

Same as 7.8.1A.1

#### 7.8.1A.3.4 Test description

##### 7.8.1A.3.4.1 Initial condition

Initial conditions are a set of test configurations the UE needs to be tested in and the steps for the SS to take with the UE to reach the correct measurement state.

The initial test configurations consist of environmental conditions, test frequencies, and channel bandwidths based on E-UTRA bands specified in table 5.4.2.1-1. All of these configurations shall be tested with applicable test parameters for each channel bandwidth, and are shown in table 7.8.1A.3.4.1-1. The details of the uplink and downlink reference measurement channels (RMCs) are specified in Annexes A.2 and A.3 respectively. The details of the OCNG patterns used are specified in Annex A.5. Configurations of PDSCH and PDCCH before measurement are specified in Annex C.2.

Table 7.8.1A.3.4.1-1: Test Configuration Table

Initial Conditions						
Test Environment as specified in TS 36.508[7] subclause 4.1		NC				
Test Frequencies as specified in TS36.508 [7] subclause 4.3.1 for different CA bandwidth classes, and PCC and SCCs are mapped onto physical frequencies according to Table 7.1-2		A: Mid range for PCC and SCC				
Test CC Combination setting ( $N_{RB\_agg}$ ) as specified in subclause 5.4.2A.1 for the CA Configuration across bandwidth combination sets supported by the UE		Highest $N_{RB\_agg}$ for PCC and SCC

100	100	QPSK	100	100	QPSK	20

Note 1:	CA Configuration Test CC Combination settings are checked separately for each CA Configuration, which applicable aggregated channel bandwidths are specified in Table 5.4.2A.1-2.
Note 2:	Depending on CA configurations, only the appropriate Uplink RB allocation value according to table 7.3A.3.5-2 for UE supporting one uplink carrier is tested per Test CA configuration.
Note 3:	The UL resource blocks shall be located as close as possible to the downlink PCC but confined within the transmission bandwidth configuration for the channel bandwidth (Table 5.4.2-1).
Note 4:	The frequencies of PCC and SCC shall be switched and tested in each configuration, according to the UE declared capability for UL support (within CA operation) in the individual bands.

1. Connect the SS and interfering sources to the UE antenna connectors as shown in TS 36.508 [7] Figure group A.34 as appropriate.
2. The parameter settings for the cell are set up according to TS 36.508 [7] subclause 4.4.3.
3. Downlink signals for PCC are initially set up according to Annex C.0, C.1 and C.3.1, and uplink signals according to Annex H.1 and H.3.1.
4. Propagation conditions are set according to Annex B.0.
5. Ensure the UE is in State 3A-RF according to TS 36.508 [7] clause 5.2A.2. Message contents are defined in clause 7.8.1A.3.4.3.

#### 7.8.1A.3.4.2 Test procedure

1. Configure SCC according to Annex C.0, C.1 and Annex C.3.1 for all downlink physical channels.
2. The SS shall configure SCC as per TS 36.508 [7] clause 5.2A.4.
3. SS activates SCC by sending the activation MAC-CE (Refer TS 36.321 [13], clauses 5.13, 6.1.3.8). Wait for at least 2 seconds (Refer TS 36.133, clauses 8.3.3.2).
4. SS transmits PDSCH via PDCCH DCI format 1A for C\_RNTI to transmit the DL RMC according to Table 7.8.1A.3.4.1-1 on both PCC and SCC. The SS sends downlink MAC padding bits on the DL RMC.
5. SS sends uplink scheduling information for each UL HARQ process via PDCCH DCI format 0 for C\_RNTI to schedule the UL RMC according to Table 7.8.1A.3.4.1-1. Since the UE has no payload data to send, the UE transmits uplink MAC padding bits on the UL RMC.
6. Set the Downlink signal level to the value as defined in Table 7.8.1A.3.5-1. Send Uplink power control commands to the UE (less or equal to 1dB step size should be used), to ensure that the UE output power is within +0, - 3.4 dB of the target level in Table 7.8.1A.3.5-1 for carrier frequency  $f \leq 3.0\text{GHz}$  or within +0, -4.0 dB of the target level for carrier frequency  $3.0\text{GHz} < f \leq 4.2\text{GHz}$ , for at least the duration of the Throughput measurement.
7. Set the Interfering signal levels to the values as defined in Table 7.8.1A.3.5-1 and frequency below the wanted signal, using a modulated interferer bandwidth as defined in Annex D of the present document.
8. Measure the average throughput of SCC for a duration sufficient to achieve statistical significance according to Annex G.2.
9. Repeat steps from 6 to 8, using an interfering signal above the wanted signal at step 4.

#### 7.8.1A.3.4.3 Message contents

Same message contents as in clause 7.8.1.4.3.

#### 7.8.1A.3.5 Test requirements

For inter-band carrier aggregation with uplink assigned to one E-UTRA band the in-band blocking requirements are defined with the uplink active on the band other than the band whose downlink is being tested, i.e., the requirements are tested only for the SCell downlink. The UE shall meet the requirement for each component carrier, when operated as SCell, while both downlink carriers are active.

The throughput measured during the test procedure for each component carrier, when operated as SCell, shall be  $\geq 95\%$  of the maximum throughput of the reference measurement channels as specified in Annex A.3.2 with parameters specified in Table 7.8.1A.3.5-1 (originated from the single carrier Table 7.8.1.5-1).

**Table 7.8.1A.3.5-1: Test parameters for Wide band intermodulation**

Rx Parameter	Units	Channel bandwidth					
		1.4 MHz	3 MHz	5 MHz	10 MHz	15 MHz	20 MHz
P <sub>w</sub> in Transmission Bandwidth Configuration, per CC	dBm	REFSENS + channel bandwidth specific value below					
		12	8	6	6	7	9
P <sub>Interferer 1</sub> (CW)	dBm	-46					
P <sub>Interferer 2</sub> (Modulated)	dBm	-46					
BW <sub>Interferer 2</sub>		1.4	3	5			
F <sub>Interferer 1</sub> (Offset from SCC)	MHz	-BW/2 -2.1 / +BW/2+ 2.1	-BW/2 -4.5 / +BW/2 + 4.5	-BW/2 - 7.5 / +BW/2 + 7.5			
F <sub>Interferer 2</sub> (Offset from SCC)	MHz	2*F <sub>Interferer 1</sub>					
Note 1:	The transmitter shall be set to 4dB below P <sub>C<sub>MAX,L</sub></sub> with P <sub>C<sub>MAX,L</sub></sub> as defined in clause 6.2.5.						
Note 2:	The reference measurement channel is specified in Annex A.3.2 with one sided dynamic OCNG Pattern OP.1 FDD/TDD as described in Annex A.5.1.1/A.5.2.1.						
Note 3:	The modulated interferer consists of the Reference measurement channel specified in Annex A.3.2 with one sided dynamic OCNG Pattern OP.1 FDD/TDD as described in Annex A.5.1.1/A.5.2.1 and set-up according to Annex C.3.1. The interfering modulated signal is 5MHz E-UTRA signal as described in Annex D for channel bandwidth $\geq 5$ MHz						
Note 4:	For the UE which supports inter band CA configuration in Tables 7.3.3-1A and 7.3.3-1B, P <sub>interferer1</sub> and P <sub>interferer2</sub> powers are increased by the amount given by $\Delta R_{IB}$ in Tables 7.3.3-1A and 7.3.3-1B						

#### 7.8.1A.4 Wideband intermodulation for CA (intra band non-contiguous DL CA without UL CA)

##### 7.8.1A.4.1 Test purpose

Same as 7.8.1A.1

##### 7.8.1A.4.2 Test applicability

This test case applies to all types of E-UTRA UE release 11 and forward that support intra-band non-contiguous DL CA but no UL CA.

##### 7.8.1A.4.3 Minimum conformance requirements

Same as 7.8.1A.1

##### 7.8.1A.4.4 Test description

###### 7.8.1A.4.4.1 Initial condition

Initial conditions are a set of test configurations the UE needs to be tested in and the steps for the SS to take with the UE to reach the correct measurement state.

The initial test configurations consist of environmental conditions, test frequencies, and channel bandwidths based on E-UTRA bands specified in table 5.4.2.1-1. All of these configurations shall be tested with applicable test parameters for each channel bandwidth, and are shown in table 7.8.1A.4.4.1-1. The details of the uplink and downlink reference measurement channels (RMCs) are specified in Annexes A.2 and A.3 respectively. The details of the OCNG patterns used are specified in Annex A.5. Configurations of PDSCH and PDCCH before measurement are specified in Annex C.2.

**Table 7.8.1A.4.4.1-1: Test Configuration Table**

Initial Conditions							
Test Environment as specified in TS 36.508[7] subclause 4.1				NC			
Test Frequencies as specified in TS36.508 [7] subclause 4.3.1 for different CA bandwidth classes, and PCC and SCCs are mapped onto physical frequencies according to Table 7.1-2				A: N/A (Range is not relevant)			
Test CC Combination setting ( $N_{RB\_agg}$ ) as specified in subclause 5.4.2A.1 for the CA Configuration.				Refer to test point			
Test Parameters for CA Configurations

28	100	25	65	QPSK	100+25	QPSK	P_100@0
29	100	100	50	QPSK	100+100	QPSK	P_100@0
Note 1:	CA Configuration Test CC Combination settings are checked separately for each CA Configuration, which applicable aggregated channel bandwidths are specified in Table 5.4.2A.1-3.						
Note 2:	The carrier centre frequency of PCC in the UL operating band is configured closer to the DL operating band.						
Note 3:	Applicable if only Bandwidth Combination Set 0 is supported by the UE for the CA Configuration						
Note 4:	Not applicable if only Bandwidth Combination Set 0 is supported by the UE for the CA Configuration						

1. Connect the SS and interfering sources to the UE antenna connectors as shown in TS 36.508 [7] Figure group A.34 as appropriate.
2. The parameter settings for the cell are set up according to TS 36.508 [7] subclause 4.4.3.

3. Downlink signals for PCC are initially set up according to Annex C.0, C.1 and C.3.1, and uplink signals according to Annex H.1 and H.3.1.
4. Propagation conditions are set according to Annex B.0.
5. Ensure the UE is in State 3A-RF according to TS 36.508 [7] clause 5.2A.2. Message contents are defined in clause 7.8.1A.3.4.3.

#### 7.8.1A.4.4.2 Test procedure

1. Configure SCC according to Annex C.0, C.1 and Annex C.3.1 for all downlink physical channels.
2. The SS shall configure SCC as per TS 36.508 [7] clause 5.2A.4.
3. SS activates SCC by sending the activation MAC-CE (Refer TS 36.321 [13], clauses 5.13, 6.1.3.8). Wait for at least 2 seconds (Refer TS 36.133, clauses 8.3.3.2).
4. SS transmits PDSCH via PDCCH DCI format 1A for C\_RNTI to transmit the DL RMC according to Table 7.8.1A.3.4.1-1 on both PCC and SCC. The SS sends downlink MAC padding bits on the DL RMC.
5. SS sends uplink scheduling information for each UL HARQ process via PDCCH DCI format 0 for C\_RNTI to schedule the UL RMC according to Table 7.8.1A.4.4.1-1. Since the UE has no payload data to send, the UE transmits uplink MAC padding bits on the UL RMC.
6. Set the Downlink signal level to the value as defined in Table 7.8.1A.4.5-1. Send Uplink power control commands to the UE (less or equal to 1dB step size should be used), to ensure that the UE output power is within +0, - 3.4 dB of the target level in Table 7.8.1A.4.5-1 for carrier frequency  $f \leq 3.0\text{GHz}$  or within +0, -4.0 dB of the target level for carrier frequency  $3.0\text{GHz} < f \leq 4.2\text{GHz}$ , for at least the duration of the Throughput measurement.
7. Set the Interfering signal levels to the values as defined in Table 7.8.1A.4.5-1 and frequency below SCC, using a modulated interferer bandwidth as defined in Annex D of the present document.
8. Measure the average throughput for each component carrier for a duration sufficient to achieve statistical significance according to Annex G.2A.
9. Repeat steps from 6 to 8, using an interfering signal above PCC at step 7.

#### 7.8.1A.4.4.3 Message contents

Same message contents as in clause 7.8.1.4.3.

#### 7.8.1A.4.5 Test requirements

The throughput measured during the test procedure for each component carrier, shall be  $\geq 95\%$  of the maximum throughput of the reference measurement channels as specified in Annex A.3.2 with parameters specified in Table 7.8.1A.4.5-1 (originated from the single carrier Table 7.8.1.5-1).

**Table 7.8.1A.4.5-1: Test parameters for Wide band intermodulation**

Rx Parameter	Units	Channel bandwidth					
		1.4 MHz	3 MHz	5 MHz	10 MHz	15 MHz	20 MHz
Pw in Transmission Bandwidth Configuration, per CC	dBm	REFSENS + channel bandwidth specific value below					
		12	8	6	6	7	9

$P_{\text{Interferer 1 (CW)}}$	dBm	-46		
$P_{\text{Interferer 2 (Modulated)}}$	dBm	-46		
$BW_{\text{Interferer 2}}$		1.4	3	5
$F_{\text{Interferer 1 (Offset)}}$	MHz	$-BW/2 - 2.1$ / $+BW/2 + 2.1$	$-BW/2 - 4.5$ / $+BW/2 + 4.5$	$-BW/2 - 7.5$ / $+BW/2 + 7.5$
$F_{\text{Interferer 2 (Offset)}}$	MHz	$2 * F_{\text{Interferer 1}}$		
Note 1:	The transmitter shall be set to 4dB below $P_{\text{CMAX,L}}$ with $P_{\text{CMAX,L}}$ as defined in clause 6.2.5.			
Note 2:	The reference measurement channel is specified in Annex A.3.2 with one sided dynamic OCNG Pattern OP.1 FDD/TDD as described in Annex A.5.1.1/A.5.2.1.			
Note 3:	The modulated interferer consists of the Reference measurement channel specified in Annex A.3.2 with one sided dynamic OCNG Pattern OP.1 FDD/TDD as described in Annex A.5.1.1/A.5.2.1 and set-up according to Annex C.3.1. The interfering modulated signal is 5MHz E-UTRA signal as described in Annex D for channel bandwidth $\geq 5$ MHz			
Note 4:	For the UE which supports inter band CA configuration in Tables 7.3.3-1A and 7.3.3-1B, $P_{\text{interferer1}}$ and $P_{\text{interferer2}}$ powers are increased by the amount given by $\Delta R_{\text{IB}}$ in Tables 7.3.3-1A and 7.3.3-1B			

### 7.8.1A.5 Wideband intermodulation for 3DL CA

#### 7.8.1A.5.1 Test purpose

Same as 7.8.1A.1

#### 7.8.1A.5.2 Test applicability

This test case applies to all types of E-UTRA UE release 10 and forward that support 3DL with Intra-band contiguous CA or 3DL with Inter-band CA, or 3DL with Inter-band and Intra-band contiguous CA.

This test case also applies to all types of E-UTRA UE release 11 and forward that support 3DL with Intra-band non-contiguous CA and Inter-band CA, or 3DL with Intra-band non-contiguous and Intra-band contiguous CA.

This test case also applies to all types of E-UTRA UE release 12 and forward that support 3DL with FDD-TDD CA.

#### 7.8.1A.5.3 Minimum conformance requirements

Same as 7.8.1A.1.

#### 7.8.1A.5.4 Test description

##### 7.8.1A.5.4.1 Initial conditions

Initial conditions are a set of test configurations the UE needs to be tested in and the steps for the SS to take with the UE to reach the correct measurement state.

The initial test configurations consist of environmental conditions, test frequencies, and channel bandwidths based on E-UTRA CA configurations specified in table 5.4.2A.1-1 through table 5.4.2A.1-2a. All of these configurations shall be tested with applicable test parameters for each channel bandwidth, and are shown in table 7.8.1A.5.4.1-1 through table 7.8.1A.5.4.1-5 as appropriate. The details of the uplink reference measurement channels (RMCs) are specified in Annex A.2 and A.3. Configurations of PDSCH and PDCCH before measurement are specified in Annex C.2.

**Table 7.8.1A.5.4.1-1: Test Configuration Table (Intra-band contiguous)**

Initial Conditions													
Test Environment as specified in TS 36.508[7] subclause 4.1							NC						
Test Frequencies as specified in TS36.508 [7] subclause 4.3.1 for different CA bandwidth classes.							For test frequencies refer to "Range" columns. For mapping within Band refer to "CC" columns						
Test CC Combination setting ( $N_{RB\_agg}$ ) as specified in subclause 5.4.2A.1 for the CA Configuration across bandwidth combination sets supported by the UE.							Refer to "PCC $N_{RB}$ " and "SCCs $N_{RB}$ " columns						
Network signalling value							NS_01 by default						
Test Parameters for CA Configurations													
ID	CA Configuration / $N_{RB\_agg}$					DL Allocation			UL Allocation (Note 2,3)				
	CA Configuration					PCC $N_{RB}$	SCCs $N_{RB}$		CC MOD	PCC & SCCs RB allocation		CC MOD	PCC $L_{CRB}$ @ $RB_{start}$
	Band	Range	PCC CC	SCC1 CC	SCC2 CC		SCC1	SCC2		PCC	SCC1		
Default Test Settings for a CA_XD Configuration													
1	X	Mid	CC1	CC2	CC3	Highest $N_{RB\_agg}$	QPSK	All RBs	QPSK	REFSENS			
2	X	Mid	CC1	CC2	CC3	Lowest $N_{RB\_agg}$	QPSK	All RBs	QPSK	REFSENS			
<p>Note 1: CA Configuration Test CC Combination test settings are checked separately for each CA Configuration.</p> <p>Note 2: Use CA Configuration – specific test points if present in the table, otherwise use Default Test Settings test points.</p> <p>Note 3: X corresponds to the band of the CA Configuration. E.g. for CA_41D, X=41</p> <p>Note 4: REFSENS refers to the PCC band's and PCC <math>N_{RB}</math> 's single carrier Uplink RB allocation for reference sensitivity according to table 7.3.5-2.</p> <p>Note 5: If in the CA Configuration UE supports multiple CC Combinations with the same <math>N_{RB\_agg}</math>, choose for testing the Combination with maximum <math>N_{RB\_PCC}</math> and then select maximum <math>N_{RB\_SCC1}</math> for the chosen <math>N_{RB\_PCC}</math></p>													

**Table 7.8.1A.5.4.1-2: Test Configuration Table (Inter-band)**

Initial Conditions															
Test Environment as specified in TS 36.508[7] subclause 4.1											NC				
Test Frequencies as specified in TS36.508 [7] subclause 4.3.1 for different CA bandwidth classes.											For test frequencies refer to “Range” columns. For mapping within Band refer to “CC” columns				
Test CC Combination setting ( $N_{RB\_agg}$ ) as specified in subclause 5.4.2A.1 for the CA Configuration across bandwidth combination sets supported by the UE.											Refer to “PCC $N_{RB}$ ” and “SCCs $N_{RB}$ ” columns				
Network signalling value											NS_01 by default				
Test Parameters for CA Configurations															
ID	CA Configuration / $N_{RB\_agg}$							DL Allocation			UL Allocation (Note 2,3)				
	CA Configuration						PCC $N_{RB}$	SCCs $N_{RB}$		CC MOD	PCC & SCCs RB allocation			CC MOD	PCC $L_{CRB}$ @ $RB_{start}$
	PCC		SCC1		SCC2			SCC1	SCC2		PCC	SCC1	SCC2		
	Band	Range	Band	Range	Band	Range

1. Connect the SS to the UE antenna connectors as shown in TS 36.508[7] Annex A Figure group A.58 as appropriate.
2. The parameter settings for the cell are set up according to TS 36.508 [7] subclause 4.4.3.
3. Downlink signals for PCC are initially set up according to Annex C.0, C.1, and C.3.1, and uplink signals according to Annex H.1 and H.3.0.
4. The UL and DL Reference Measurement channels are set according to Table 7.8.1A.5.4.1-1 through Table 7.8.1A.5.4.1-5 as appropriate.
5. Propagation conditions are set according to Annex B.0.
6. Ensure the UE is in State 3A-RF according to TS 36.508 [7] clause 5.2A.2. Message contents are defined in clause 7.3A.5.4.3.

#### 7.8.1A.5.4.2 Test procedure

1. Configure SCCs according to Annex C.0, C.1 and Annex C.3.1 for all downlink physical channels.
2. The SS shall configure SCCs as per TS 36.508 [7] clause 5.2A.4. Message contents are defined in clause 7.8.1A.5.4.3

3. SS activates SCCs by sending the activation MAC-CE (Refer TS 36.321 [13], clauses 5.13, 6.1.3.8). Wait for at least 2 seconds (Refer TS 36.133, clauses 8.3.3.2).
4. SS transmits PDSCH via PDCCH DCI format 1A for C\_RNTI to transmit the DL RMC according to Table 7.3A.5.4.1-1 through Table 7.3A.5.4.1-5 as appropriate on PCC and SCCs. The SS sends downlink MAC padding bits on the DL RMC.
5. SS sends uplink scheduling information for each UL HARQ process via PDCCH DCI format 0 for C\_RNTI to schedule the UL RMC according to Table 7.8.1A.5.4.1-1 through Table 7.8.1A.5.4.1-5 as appropriate on PCC and SCCs. Since the UE has no payload and no loopback data to send the UE sends uplink MAC padding bits on the UL RMC.
6. Set the Downlink signal level to the value as defined in Table 7.8.1A.5.5-1 or 7.8.1A.5.5-2. Send Uplink power control commands to the UE (less or equal to 1dB step size should be used), to ensure that the UE output power is within +0, - 3.4 dB of the target level for carrier frequency  $f \leq 3.0\text{GHz}$  or within +0, -4.0 dB of the target level for carrier frequency  $3.0\text{GHz} < f \leq 4.2\text{GHz}$ , for at least the duration of the Throughput measurement.
7. Set the Interfering signal levels to the values as defined in 7.8.1A.5.5-1 or 7.8.1A.5.5-2 and frequency below the measured carrier(s) according to table 7.8.1A.5.4.2-1, using a modulated interferer bandwidth as defined in Annex D of the present document.
8. Measure the average throughput for the carrier(s) indicated in table 7.8.1A.5.4.2-1 for a duration sufficient to achieve statistical significance according to Annex G.2A.
9. Repeat steps from 6 to 8, using an interfering signal above the measured carrier(s) according to table 7.8.1A.5.4.2-1.
10. Repeat steps 6 to 9 for component carriers listed in table 7.8.1A.5.4.2-1.

**Table 7.8.1A.5.4.2-1: Test repetition and measurement configuration**

CA configuration	ID (Note 1)	Throughput measured on (Note 3)	Table with test parameters to select (Note 2)
Intra-band contiguous	1	PCC, SCC1, SCC2	7.8.1A.5.5-2
	2		
Inter-band	1	SCC1	7.8.1A.5.5-1
		SCC2	
	2	SCC1	
		SCC2	
3	SCC1		
	SCC2		
Intra-band contiguous + Inter-band	1	SCC2	7.8.1A.5.5-1
	2		
	3	SCC1, SCC2	7.8.1A.5.5-2
	4		
Intra-band non-contiguous + Inter-band	1	SCC2	7.8.1A.5.5-1
	2	SCC1	
		SCC2	
Intra-band non-contiguous + Intra-band contiguous	1	PCC	7.8.1A.5.5-1
		SCC1, SCC2	7.8.1A.5.5-2
		SCC2	7.8.1A.5.5-1
	2	PCC, SCC1	7.8.1A.5.5-2
<p>Note 1: Test point ID for the particular CA configuration as defined in section 7.8.1A.5.4.1.</p> <p>Note 2: The reference for the placement of the interferer signals is the centre frequency of the carrier closest to the interferer among the carriers throughput is measured on.</p> <p>Note 3: Where there are multiple rows for a single Test point ID, the test is repeated for each row.</p> <p>Note 4: Skip the parts of the test procedure configuring in-gap interferer positions for a non-contiguous component carrier</p>			

#### 7.8.1A.5.4.3 Message contents

Message contents are according to TS 36.508 [7] subclause 4.6. In test procedure step 2, for SCCs configuration there are no additional message contents.

#### 7.8.1A.5.5 Test requirement

The throughput of the carrier(s) under test shall be  $\geq 95\%$  of the maximum throughput of the reference measurement channels as specified in Annex A.3.2 with parameters specified in Table 7.8.1A.5.5-1 or Table 7.8.1A.5.5-2 for the specified wanted signal mean power in the presence of two interfering signals.

Table 7.8.1A.5.5-1: Test parameters for Wide band intermodulation

Rx Parameter	Units	Channel bandwidth					
		1.4 MHz	3 MHz	5 MHz	10 MHz	15 MHz	20 MHz
Power in Transmission Bandwidth Configuration for each CC	dBm	REFSENS + channel bandwidth specific value below					
		12	8	6	6	7	9
$P_{\text{Interferer 1 (CW)}}$	dBm	-46					
$P_{\text{Interferer 2 (Modulated)}}$	dBm	-46					
$BW_{\text{Interferer 2}}$		1.4	3	5			
$F_{\text{Interferer 1 (Offset from SCC)}}$	MHz	-BW/2 -2.1 / +BW/2+ 2.1	-BW/2 -4.5 / +BW/2 + 4.5	-BW/2 - 7.5 / +BW/2 + 7.5			
$F_{\text{Interferer 2 (Offset from SCC)}}$	MHz	$2 * F_{\text{Interferer 1}}$					
Note 1:	The transmitter shall be set to 4dB below $P_{\text{CMAX\_L}}$ with $P_{\text{CMAX\_L}}$ as defined in clause 6.2.5.						
Note 2:	The reference measurement channel is specified in Annex A.3.2 with one sided dynamic OCNG Pattern OP.1 FDD/TDD as described in Annex A.5.1.1/A.5.2.1.						
Note 3:	The modulated interferer consists of the Reference measurement channel specified in Annex A.3.2 with one sided dynamic OCNG Pattern OP.1 FDD/TDD as described in Annex A.5.1.1/A.5.2.1 and set-up according to Annex C.3.1. The interfering modulated signal is 5MHz E-UTRA signal as described in Annex D for channel bandwidth $\geq 5$ MHz						
Note 4:	For the UE which supports inter band CA configuration in Tables 7.3.3-1A and 7.3.3-1B, $P_{\text{interferer1}}$ and $P_{\text{interferer2}}$ powers are increased by the amount given by $\Delta R_{\text{IB}}$ in Tables 7.3.3-1A and 7.3.3-1B						
Note 5:	For intra-band non-contiguous + inter-band CA, $\Delta R_{\text{IBNC}} = 0$ dB for all sub-block gaps						

Table 7.8.1A.5.5-2: Wide band intermodulation

Rx parameter	Units	CA Bandwidth Class				
		B	C	D	E	F
Power per CC in Aggregated Transmission Bandwidth Configuration	dBm	REFSENS + CA Bandwidth Class specific value below				
		9	12	13.8		
$P_{\text{Interferer 1 (CW)}}$	dBm	-46				
$P_{\text{Interferer 2 (Modulated)}}$	dBm	-46				
$BW_{\text{Interferer 2}}$	MHz	5	5	5		
$F_{\text{Interferer 1 (Offset)}}$	MHz	$-F_{\text{offset}}-7.5$ / $+ F_{\text{offset}}+7.5$	$-F_{\text{offset}}-7.5$ / $+ F_{\text{offset}}+7.5$	$-F_{\text{offset}}-7.5$ / $+ F_{\text{offset}}+7.5$		
$F_{\text{Interferer 2 (Offset)}}$	MHz	$2 * F_{\text{Interferer 1}}$				
Note 1:	The transmitter shall be set to 4dB below $P_{\text{CMAX\_L}}$ or $P_{\text{CMAX\_L\_CA}}$ as defined in subclause 6.2.5A.					
Note 2:	Reference measurement channel is specified in Annex A.3.2 with one sided dynamic OCNG Pattern OP.1 FDD/TDD as described in Annex A.5.1.1/A.5.2.1.					
Note 3:	The modulated interferer consists of the Reference measurement channel specified in Annex A.3.2 with one sided dynamic OCNG Pattern OP.1 FDD/TDD as described in Annex A.5.1.1/A.5.2.1 with set-up according to Annex C.3.1.					
Note 4:	The interfering modulated signal is 5MHz E-UTRA signal as described in Annex D for channel bandwidth $\geq 5$ MHz					
Note 5:	The $F_{\text{interferer 1}}$ (offset) is the frequency separation of the centre frequency of the carrier closest to the interferer and the centre frequency of the CW interferer and $F_{\text{interferer 2}}$ (offset) is the frequency separation of the centre frequency of the carrier closest to the interferer and the centre frequency of the modulated interferer.					

For a UE, which supports CA configuration in Tables 7.3.3-1A, 7.3.3-1B and 7.3.3-1C,  $P_{\text{Interferer 1}}$  and  $P_{\text{Interferer 2}}$  power defined in Table 7.8.1A.5.5-2 increased by the amount given by  $\Delta R_{\text{IB,c}}$  in Tables 7.3.3-1A, 7.3.3-1B and 7.3.3-1C.

## 7.8.1A.6

### 7.8.1A.7 Wideband intermodulation for 4DL CA

Editor's note: Following aspects missing or not yet determined:

- The test applicability needs to be added to TS36.521-2
- The test case needs to be added to Annex G
- Test Configuration Table (Intra-band non-contiguous + Intra-band contiguous) to be investigated
- Test configuration tables format are under investigation and may change in RAN5

#### 7.8.1A.7.1 Test purpose

Same as 7.8.1A.1.

#### 7.8.1A.7.2 Test applicability

This test case applies to all types of E-UTRA UE release 11 and forward that support 4DL with Intra-band contiguous CA or 4DL with Inter-band CA, or 4DL with Inter-band and Intra-band contiguous CA.

This test case also applies to all types of E-UTRA UE release 12 and forward that support 4DL with Intra-band non-contiguous CA and Inter-band CA, or 4DL with Intra-band non-contiguous and Intra-band contiguous CA.

This test case also applies to all types of E-UTRA UE release 12 and forward that support 4DL CA with FDD-TDD CA.

#### 7.8.1A.7.3 Minimum conformance requirements

The minimum conformance requirements are defined in clause 7.8.1A.0.

#### 7.8.1A.7.4 Test description

##### 7.8.1A.7.4.1 Initial conditions

Initial conditions are a set of test configurations the UE needs to be tested in and the steps for the SS to take with the UE to reach the correct measurement state.

The initial test configurations consist of environmental conditions, test frequencies, and channel bandwidths based on E-UTRA CA configurations specified in table 5.4.2A.1-1 through table 5.4.2A.1-2a. All of these configurations shall be tested with applicable test parameters for each channel bandwidth, and are shown in table 7.8.1A.7.4.1-1 through table 7.8.1A.7.4.1-6 as appropriate. The details of the uplink reference measurement channels (RMCs) are specified in Annex A.2 and A.3. Configurations of PDSCH and PDCCH before measurement are specified in Annex C.2.

**Table 7.8.1A.7.4.1-1: Test Configuration Table (Intra-band contiguous)**

Initial Conditions																	
Test Environment as specified in TS 36.508 [7] subclause 4.1											NC						
Test Frequencies as specified in TS36.508 [7] subclause 4.3.1 for different CA bandwidth classes.											For test frequencies refer to “Range” columns. For mapping within Band refer to “CC” columns						
Test CC Combination setting ( $N_{RB\_agg}$ ) as specified in subclause 5.4.2A.1 for the CA Configuration across bandwidth combination sets supported by the UE.											Refer to “PCC $N_{RB}$ ” and “SCCs $N_{RB}$ ” columns						
Network signalling value											NS_01 by default						
Test Parameters for CA Configurations																	
ID	CA Configuration / $N_{RB\_agg}$							DL Allocation				UL Allocation (Note 2,3)					
	CA Configuration						PCC $N_{RB}$	SCCs $N_{RB}$			CC MOD	PCC & SCCs RB allocation				CC MOD	PCC $L_{CRB} @ RB_{start}$
	Band	Range	PCC CC	SCC1 CC	SCC2 CC	SCC3 CC		SCC1	SCC2	SCC3		PCC	SCC1	SCC2	SCC3		
Default Test Settings for a CA_XE Configuration																	
1	X	Mid	CC1	CC2	CC3	CC4	Lowest $N_{RB\_agg}$			QPSK	All RBs				QPSK	REFSENS	
2	X	Mid	CC1	CC2	CC3	CC4	Highest $N_{RB\_agg}$			QPSK	All RBs				QPSK	REFSENS	
Note 1: CA Configuration Test CC Combination test settings are checked separately for each CA Configuration. Note 2: Use CA Configuration – specific test points if present in the table, otherwise use Default Test Settings test points. Note 3: X corresponds to the band of the CA Configuration. E.g. for CA_41E, X=41. Note 4: REFSENS refers to the PCC band's and PCC $N_{RB}$ 's single carrier Uplink RB allocation for reference sensitivity according to table 7.3.5-2. Note 5: If in the CA Configuration UE supports multiple CC Combinations with the same $N_{RB\_agg}$ , choose for testing the Combination with maximum $N_{RB\_PCC}$ and then select maximum $N_{RB\_SCC1}$ for the chosen $N_{RB\_PCC}$ .																	

Table 7.8.1A.7.4.1-2: Test Configuration Table (Inter-band)

Initial Conditions																			
Test Environment as specified in TS 36.508[7] subclause 4.1													NC						
Test Frequencies as specified in TS36.508 [7] subclause 4.3.1 for different CA bandwidth classes.													For test frequencies refer to "Range" columns. For mapping within Band refer to "CC" columns						
Test CC Combination setting ( $N_{RB\_agg}$ ) as specified in subclause 5.4.2A.1 for the CA Configuration across bandwidth combination sets supported by the UE.													Refer to "PCC $N_{RB}$ " and "SCCs $N_{RB}$ " columns						
Network signalling value													NS_01 by default						
Test Parameters for CA Configurations																			
ID	CA Configuration / $N_{RB\_agg}$									DL Allocation				UL Allocation (Note 2,3)					
	CA Configuration								PCC $N_{RB}$	SCCs $N_{RB}$			PCC & SCCs RB allocation				CC MOD	PCC $L_{CRB}$ @ $RB_{start}$	
	PCC		SCC1		SCC2		SCC3			SCC1	SCC2	SCC3	CC MOD	PCC	SCC1	SCC2			SCC3
	Band	Range	Band	Range	Band	Range	Band	Range											
Default Test Settings for a CA_XA-YA-ZA-RA Configuration																			
1	X	Mid	Y	Mid	Z	Mid	R	Mid	Highest $N_{RB}$	Highest $N_{RB}$	Highest $N_{RB}$	Highest $N_{RB}$	QPSK	All RBs		QPSK	REFSENS		
2	Y	Mid	X	Mid	Z	Mid	R	Mid	Highest $N_{RB}$	Highest $N_{RB}$	Highest $N_{RB}$	Highest $N_{RB}$	QPSK	All RBs		QPSK	REFSENS		
3	Z	Mid	X	Mid	Y	Mid	R	Mid	Highest $N_{RB}$	Highest $N_{RB}$	Highest $N_{RB}$	Highest $N_{RB}$	QPSK	All RBs		QPSK	REFSENS		
4	R	Mid	X	Mid	Y	Mid	Z	Mid	Highest $N_{RB}$	Highest $N_{RB}$	Highest $N_{RB}$	Highest $N_{RB}$	QPSK	All RBs		QPSK	REFSENS		
Note 1:	CA Configuration Test CC Combination test settings are checked separately for each CA Configuration.																		
Note 2:	Use CA Configuration – specific test points if present in the table, Otherwise use test points from matching Group Test Settings, if present in the table. Otherwise use the Default Test Settings test points.																		
Note 3:	If, according to the UE declared capability, UE does not support UL in an individual band within the CA Configuration, test points with that individual band as PCC are not applicable.																		
Note 4:	X,Y,Z,R correspond to the different bands in the CA Configuration. E.g. for CA_1A-3A-7A-8A,X=1,Y=3,Z=7,R=8.																		
Note 5:	REFSENS refers to the PCC band's and PCC $N_{RB}$ 's single carrier Uplink RB allocation for reference sensitivity according to table 7.3.5-2.

1. Connect the SS to the UE antenna connectors as shown in TS 36.508[7] Annex A Figure group A.58 as appropriate.
2. The parameter settings for the cell are set up according to TS 36.508 [7] subclause 4.4.3.
3. Downlink signals for PCC are initially set up according to Annex C.0, C.1, and C.3.1, and uplink signals according to Annex H.1 and H.3.0.
4. The UL and DL Reference Measurement channels are set according to Table 7.8.1A.7.4.1-1 through Table 7.8.1A.7.4.1-6 as appropriate.
5. Propagation conditions are set according to Annex B.0.
6. Ensure the UE is in State 3A-RF according to TS 36.508 [7] clause 5.2A.2. Message contents are defined in clause 7.3A.5.4.3.

#### 7.8.1A.7.4.2 Test procedure

1. Configure SCCs according to Annex C.0, C.1 and Annex C.3.1 for all downlink physical channels.
2. The SS shall configure SCCs as per TS 36.508 [7] clause 5.2A.4. Message contents are defined in clause 7.8.1A.7.4.3.
3. SS activates SCCs by sending the activation MAC-CE (Refer TS 36.321 [13], clauses 5.13, 6.1.3.8). Wait for at least 2 seconds (Refer TS 36.133, clauses 8.3.3.2).
4. SS transmits PDSCH via PDCCH DCI format 1A for C\_RNTI to transmit the DL RMC according to Table 7.3A.5.4.1-1 through Table 7.3A.5.4.1-6 as appropriate on PCC and SCCs. The SS sends downlink MAC padding bits on the DL RMC.
5. SS sends uplink scheduling information for each UL HARQ process via PDCCH DCI format 0 for C\_RNTI to schedule the UL RMC according to Table 7.8.1A.7.4.1-1 through Table 7.8.1A.7.4.1-6 as appropriate on PCC and SCCs. Since the UE has no payload and no loopback data to send the UE sends uplink MAC padding bits on the UL RMC.
6. Set the Downlink signal level to the value as defined in Table 7.8.1A.7.5-1 or 7.8.1A.7.5-2. Send Uplink power control commands to the UE (less or equal to 1dB step size should be used), to ensure that the UE output power is within +0, - 3.4 dB of the target level for carrier frequency  $f \leq 3.0\text{GHz}$  or within +0, -4.0 dB of the target level for carrier frequency  $3.0\text{GHz} < f \leq 4.2\text{GHz}$ , for at least the duration of the Throughput measurement.
7. Set the Interfering signal levels to the values as defined in 7.8.1A.7.5-1 or 7.8.1A.7.5-2 and frequency below the measured carrier(s) according to table 7.8.1A.7.4.2-1, using a modulated interferer bandwidth as defined in Annex D of the present document.
8. Measure the average throughput for the carrier(s) indicated in table 7.8.1A.7.4.2-1 for a duration sufficient to achieve statistical significance according to Annex G.2A.
9. Repeat steps from 6 to 8, using an interfering signal above the measured carrier(s) according to table 7.8.1A.7.4.2-1.
10. Repeat steps 6 to 9 for component carriers listed in table 7.8.1A.7.4.2-1.

Table 7.8.1A.7.4.2-1: Test repetition and measurement configuration

CA configuration	ID (Note 1)	Throughput measured on (Note 3)	Table with test parameters to select (Note 2)
Intra-band contiguous	1	PCC, SCC1, SCC2, SCC3	7.8.1A.7.5-2
	2		
Inter-band	1	SCC1	7.8.1A.7.5-1
		SCC2	
		SCC3	
	2	SCC1	
		SCC2	
		SCC3	
	3	SCC1	
		SCC2	
		SCC3

		SCC2	
		SCC3	
Intra-band contiguous + Inter-band	1	SCC2	7.8.1A.7.5-1
	2	SCC3	
	3	SCC1, SCC2, SCC3	7.8.1A.7.5-2
	4	SCC3	7.8.1A.7.5-1
	5	SCC1, SCC2, SCC3	7.8.1A.7.5-1
	6	SCC3	7.8.1A.7.5-2
Intra-band non-contiguous + Inter-band	1	SCC2, SCC3	7.8.1A.7.5-1
	2	SCC1,	7.8.1A.7.5-1
		SCC2	
3	SCC2,	7.8.1A.7.5-1	
	SCC3		
Intra-band non-contiguous + Intra-band contiguous	1	PCC	7.8.1A.7.5-1
		SCC1, SCC2, SCC3	7.8.1A.7.5-1 7.8.1A.7.5-2
		SCC2	7.8.1A.7.5-2
	2	PCC, SCC1, SCC3	7.8.1A.7.5-1 7.8.1A.7.5-2
Intra-band non-contiguous + Intra-band non-contiguous	1	SCC2	7.8.1A.7.5-1
	2	SCC3	
Note 1: Test point ID for the particular CA configuration as defined in section 7.6.3A.7.4.1. Note 2: The reference for the placement of the interferer signals is the centre frequency of the carrier closest to the interferer among the carriers throughput is measured on. Note 3: Where there are multiple rows for a single Test point ID, the test is repeated for each row.			

### 7.8.1A.7.4.3 Message contents

Same message contents as in clause 7.8.1A.1.4.3.

### 7.8.1A.7.5 Test requirement

The throughput of the carrier(s) under test shall be  $\geq 95\%$  of the maximum throughput of the reference measurement channels as specified in Annex A.3.2 with parameters specified in Table 7.8.1A.7.5-1 or Table 7.8.1A.7.5-2 for the specified wanted signal mean power in the presence of two interfering signals.

Table 7.8.1A.7.5-1: Test parameters for Wide band intermodulation (inter-band)

Rx Parameter	Units	Channel bandwidth					
		1.4 MHz	3 MHz	5 MHz	10 MHz	15 MHz	20 MHz
Power in Transmission Bandwidth Configuration for each CC	dBm	REFSENS + channel bandwidth specific value below					
		12	8	6	6	7	9
$P_{\text{Interferer 1 (CW)}}$	dBm	-46					
$P_{\text{Interferer 2 (Modulated)}}$	dBm	-46					
$BW_{\text{Interferer 2}}$		1.4	3	5			
$F_{\text{Interferer 1 (Offset from SCC)}}$	MHz	-BW/2 -2.1 / +BW/2+ 2.1	-BW/2 -4.5 / +BW/2 + 4.5	-BW/2 - 7.5 / +BW/2 + 7.5			
$F_{\text{Interferer 2 (Offset from SCC)}}$	MHz	$2 * F_{\text{Interferer 1}}$					
Note 1:	The transmitter shall be set to 4dB below $P_{\text{CMAX\_L}}$ with $P_{\text{CMAX\_L}}$ as defined in clause 6.2.5.						
Note 2:	The reference measurement channel is specified in Annex A.3.2 with one sided dynamic OCNG Pattern OP.1 FDD/TDD as described in Annex A.5.1.1/A.5.2.1.						
Note 3:	The modulated interferer consists of the Reference measurement channel specified in Annex A.3.2 with one sided dynamic OCNG Pattern OP.1 FDD/TDD as described in Annex A.5.1.1/A.5.2.1 and set-up according to Annex C.3.1. The interfering modulated signal is 5MHz E-UTRA signal as described in Annex D for channel bandwidth $\geq 5$ MHz.						
Note 4:	For the UE which supports inter band CA configuration in Tables 7.3.3-1A and 7.3.3-1B, $P_{\text{interferer1}}$ and $P_{\text{interferer2}}$ powers are increased by the amount given by $\Delta R_{\text{IB}}$ in Tables 7.3.3-1A and 7.3.3-1B.						
Note 5:	For intra-band non-contiguous + inter-band CA, $\Delta R_{\text{IBNC}} = 0$ dB for all sub-block gaps.						

Table 7.8.1A.7.5-2: Wide band intermodulation (Intra-band contiguous)

Rx parameter	Units	CA Bandwidth Class					
		B	C	D	E	F	
Power per CC in Aggregated Transmission Bandwidth Configuration	dBm	REFSENS + CA Bandwidth Class specific value below					
		9	12	13.8	15		
$P_{\text{Interferer 1 (CW)}}$	dBm	-46					
$P_{\text{Interferer 2 (Modulated)}}$	dBm	-46					
$BW_{\text{Interferer 2}}$	MHz	5	5	5	5		
$F_{\text{Interferer 1 (Offset)}}$	MHz	$-F_{\text{offset}}-7.5$ / $+ F_{\text{offset}}+7.5$	$-F_{\text{offset}}-7.5$ / $+ F_{\text{offset}}+7.5$	$-F_{\text{offset}}-7.5$ / $+ F_{\text{offset}}+7.5$	$-F_{\text{offset}}-7.5$ / $+ F_{\text{offset}}+7.5$		
$F_{\text{Interferer 2 (Offset)}}$	MHz	$2 * F_{\text{Interferer 1}}$					
Note 1:	The transmitter shall be set to 4dB below $P_{\text{CMAX\_L}}$ or $P_{\text{CMAX\_L\_CA}}$ as defined in subclause 6.2.5A.						
Note 2:	Reference measurement channel is specified in Annex A.3.2 with one sided dynamic OCNG Pattern OP.1 FDD/TDD as described in Annex A.5.1.1/A.5.2.1.						
Note 3:	The modulated interferer consists of the Reference measurement channel specified in Annex A.3.2 with one sided dynamic OCNG Pattern OP.1 FDD/TDD as described in Annex A.5.1.1/A.5.2.1 with set-up according to Annex C.3.1.						
Note 4:	The interfering modulated signal is 5MHz E-UTRA signal as described in Annex D for channel bandwidth $\geq 5$ MHz.						
Note 5:	The $F_{\text{interferer 1}}$ (offset) is the frequency separation of the centre frequency of the carrier closest to the interferer and the centre frequency of the CW interferer and $F_{\text{interferer 2}}$ (offset) is the frequency separation of the centre frequency of the carrier closest to the interferer and the centre frequency of the modulated interferer.						

For a UE, which supports CA configuration in Tables 7.3.3-1A, 7.3.3-1B and 7.3.3-1C,  $P_{\text{Interferer 1}}$  and  $P_{\text{Interferer 2}}$  power defined in Table 7.8.1A.7.5-2 increased by the amount given by  $\Delta R_{\text{IB,c}}$  in Tables 7.3.3-1A, 7.3.3-1B and 7.3.3-1C.

## 7.8.1B Wide band Intermodulation for UL-MIMO

### 7.8.1B.1 Test purpose

Intermodulation response tests the ability of UE that support UL-MIMO to receive data with a given average throughput for a specified reference measurement channel, in the presence of two or more interfering signals which have a specific frequency relationship to the wanted signal, under conditions of ideal propagation and no added noise.

A UE unable to meet the throughput requirement under these conditions will decrease the coverage area when two or more interfering signals exist which have a specific frequency relationship to the wanted signal.

### 7.8.1B.2 Test applicability

This test applies to all types of E-UTRA UE release 10 and forward that support UL-MIMO.

### 7.8.1B.3 Minimum conformance requirements

For UE(s) with two transmitter antenna connectors in closed-loop spatial multiplexing scheme, the minimum requirements in subclause 7.8.1B.3 shall be met with the UL-MIMO configurations specified in Table 6.2.2B.3-2. For UL-MIMO, the parameter  $P_{\text{CMAX}_L}$  is defined as the total transmitter power over the two transmit antenna connectors.

The normative reference for this requirement is TS 36.101 [2] clause 7.8.1B and TS 36.101 [2] Annexes A and D.

### 7.8.1B.4 Test description

#### 7.8.1B.4.1 Initial condition

Initial conditions are a set of test configurations the UE needs to be tested in and the steps for the SS to take with the UE to reach the correct measurement state.

The initial test configurations consist of environmental conditions, test frequencies, and channel bandwidths based on E-UTRA bands specified in table 5.4.2.1-1. All of these configurations shall be tested with applicable test parameters for each channel bandwidth, and are shown in table 7.8.1B.4.1-1. The details of the uplink and downlink reference measurement channels (RMCs) are specified in Annexes A.2 and A.3 respectively. The details of the OCNG patterns used are specified in Annex A.5. Configurations of PDSCH and PDCCH before measurement are specified in Annex C.2.

Table 7.8.1B.4.1-1: Test Configuration Table

Initial Conditions						
Test Environment as specified in TS 36.508[7] subclause 4.1				NC		
Test Frequencies as specified in TS36.508 [7] subclause 4.3.1				Mid range		
Test Channel Bandwidths as specified in TS 36.508 [7] subclause 4.3.1				Lowest, 5MHz, Highest		
Test Parameters for Channel Bandwidths						
Ch BW	Downlink Configuration			Uplink Configuration		
	Mod'n	RB allocation		Mod'n	RB allocation	
		FDD	TDD		FDD	TDD
1.4MHz	QPSK	6	6	QPSK	6	6
3MHz	QPSK	15	15	QPSK	15	15
5MHz	QPSK	25	25	QPSK	25	25
5MHz	QPSK	25	N/A	QPSK	20	N/A
5MHz	QPSK	25	N/A	QPSK	15	N/A
5MHz	QPSK	25	N/A	QPSK	5 <sup>4</sup>	N/A
10MHz	QPSK	50	50	QPSK	50	50
10MHz	QPSK	50	N/A	QPSK	25	N/A
10MHz	QPSK	50	N/A	QPSK	20	N/A
10MHz	QPSK	50	N/A	QPSK	15	N/A
15MHz	QPSK	75	75	QPSK	75	75
15MHz	QPSK	75	N/A	QPSK	50	N/A
15MHz	QPSK	75	N/A	QPSK	25	N/A
15MHz	QPSK	75	N/A	QPSK	20	N/A
20MHz	QPSK	100	100	QPSK	100	100
20MHz	QPSK	100	N/A	QPSK	75	N/A
20MHz	QPSK	100	N/A	QPSK	50	N/A
20MHz	QPSK	100	N/A	QPSK	25	N/A
20MHz	QPSK	100	N/A	QPSK	20	N/A
Note 1: Test Channel Bandwidths are checked separately for each E-UTRA band, which applicable channel bandwidths are specified in Table 5.4.2.1-1. Note 2: Depending on E-UTRA band, only the appropriate Uplink RB allocation value according to table 7.3.3-2 is tested per Test Channel Bandwidth. Note 3: For the DL signal one sided dynamic OCNG Pattern OP.1 FDD/TDD is used. Note 4: Applicable only to E-UTRA FDD Band 31. The UL resource blocks shall be located at RBstart 10 (according to Table 7.3.3-2).						

1. Connect the SS and interfering sources to the UE antenna connectors as shown in TS 36.508 [7] Figure A.31.
2. The parameter settings for the cell are set up according to TS 36.508 [7] subclause 4.4.3.
3. Downlink signals are initially set up according to Annex C0, C.1 and C.3.1, and uplink signals according to Annex H.1 and H.3.1.
4. The UL and DL Reference Measurement channels are set according to Table 7.8.1B.4.1-1.
5. Propagation conditions are set according to Annex B.0.
6. Ensure the UE is in State 3A-RF according to TS 36.508 [7] clause 5.2A.2. Message contents are defined in clause 7.8.1B.4.3.

#### 7.8.1B.4.2 Test procedure

1. SS transmits PDSCH via PDCCH DCI format 1A for C\_RNTI to transmit the DL RMC according to Table 7.8.1B.4.1-1. The SS sends downlink MAC padding bits on the DL RMC.
2. SS sends uplink scheduling information for each UL HARQ process via PDCCH DCI format 4 for C\_RNTI to schedule the UL RMC according to Table 7.8.1B.4.1-1. Since the UE has no payload data to send, the UE transmits uplink MAC padding bits on the UL RMC.
3. Set the Downlink signal level to the value as defined in Table 7.8.1B.5-1. Send Uplink power control commands to the UE (less or equal to 1dB step size should be used), to ensure that the UE output power is within +0, - 3.4

dB of the target level in Table 7.8.1B.5-1 for carrier frequency  $f \leq 3.0\text{GHz}$  or within  $+0, -4.0$  dB of the target level for carrier frequency  $3.0\text{GHz} < f \leq 4.2\text{GHz}$ , for at least the duration of the throughput measurement.

4. Set the Interfering signal levels to the values as defined in Table 7.8.1B.5-1 and frequency below the wanted signal, using a modulated interferer bandwidth as defined in Annex D of the present document.
5. Measure the average throughput for a duration sufficient to achieve statistical significance according to Annex G.2.
6. Repeat steps from 3 to 5, using an interfering signal above the wanted signal at step 4.

#### 7.8.1B.4.3 Message contents

Message contents are according to TS 36.508 [7] clause 4.6 with the following exception.

**Table 7.8.1B.4.3-1: UplinkPowerControlDedicated**

Derivation Path: 36.331 clause 6.3.2			
Information Element	Value/remark	Comment	Condition
UplinkPowerControlDedicated-DEFAULT ::= SEQUENCE {			
p0-UePUSCH	0		
deltaMCS-Enabled	en0		
accumulationEnabled	TRUE		
p0-uePUCCH	0		
pSRS-Offset	3 (-6 dB)		
filterCoefficient	fc8	larger filter length is used to reduce the RSRP measurement variation	
}			

#### 7.8.1B.5 Test requirements

The throughput shall be  $\geq 95\%$  of the maximum throughput of the reference measurement channels as specified in Annex A.3.2 with parameters specified in Table 7.8.1B.5-1 for the specified wanted signal mean power in the presence of two interfering signals.

**Table 7.8.1B.5-1: Test parameters for Wide band intermodulation**

Rx Parameter	Units	Channel bandwidth					
		1.4 MHz	3 MHz	5 MHz	10 MHz	15 MHz	20 MHz
Power in Transmission Bandwidth Configuration	dBm	REFSENS + channel bandwidth specific value below					
		12	8	6	6	7	9
$P_{\text{Interferer 1 (CW)}}$	dBm	-46					
$P_{\text{Interferer 2 (Modulated)}}$	dBm	-46					
$BW_{\text{Interferer 2}}$		1.4	3	5			
$F_{\text{Interferer 1 (Offset)}}$	MHz	-BW/2 -2.1 / +BW/2+ 2.1	-BW/2 -4.5 / +BW/2 + 4.5	-BW/2 - 7.5 / +BW/2 + 7.5			
$F_{\text{Interferer 2 (Offset)}}$	MHz	$2 * F_{\text{Interferer 1}}$					
Note 1:	The transmitter shall be set to 4dB below $P_{\text{CMAX\_L}}$ with $P_{\text{CMAX\_L}}$ as defined in clause 6.2.5.						
Note 2:	The reference measurement channel is specified in Annex A.3.2 with one sided dynamic OCNG Pattern OP.1 FDD/TDD as described in Annex A.5.1.1/A.5.2.1.						
Note 3:	The modulated interferer consists of the Reference measurement channel specified in Annex A.3.2 with one sided dynamic OCNG Pattern OP.1 FDD/TDD as described in Annex A.5.1.1/A.5.2.1 and set-up according to Annex C.3.1. The interfering modulated signal is 5MHz E-UTRA signal as described in Annex D for channel bandwidth $\geq 5\text{MHz}$ .						

## 7.8.1D Wide band intermodulation for ProSe

### 7.8.1D.0 Minimum conformance requirements

The throughput shall be  $\geq 95\%$  of the maximum throughput of the reference measurement channels as specified in Annex A.6.2 with parameters specified in Table 7.8.1D.0-1, Table 7.8.1D.0-2, and Table 7.8.1D.0-3 for the specified wanted signal mean power in the presence of two interfering signals.

**Table 7.8.1D.0-1: Wide band intermodulation parameters for ProSe Direct Discovery**

Rx parameter	Units	Channel bandwidth					
		1.4 MHz	3 MHz	5 MHz	10 MHz	15 MHz	20 MHz
$P_{\text{offset}}$	dB			10.9	13.9	15.7	16.9

**Table 7.8.1D.0-2: Wide band intermodulation for ProSe Direct Communication**

Rx parameter	Units	Channel bandwidth					
		1.4 MHz	3 MHz	5 MHz	10 MHz	15 MHz	20 MHz
$P_{\text{offset}}$	dB			0	0	0	0

**Table 7.8.1D.0-3: Wide band intermodulation for ProSe**

Rx Parameter	Units	Channel bandwidth					
		1.4 MHz	3 MHz	5 MHz	10 MHz	15 MHz	20 MHz
Power in Transmission Bandwidth Configuration	dBm	$P_{\text{REFSENS\_ProSe}}$ + channel bandwidth specific value below+ $P_{\text{offset}}$					
		12	8	6	6	7	9
$P_{\text{Interferer 1 (CW)}}$	dBm	-46					
$P_{\text{Interferer 2 (Modulated)}}$	dBm	-46					
$BW_{\text{Interferer 2}}$		1.4	3	5			
$F_{\text{Interferer 1 (Offset)}}$	MHz	-BW/2 -2.1 / +BW/2+ 2.1	-BW/2 -4.5 / +BW/2 + 4.5	-BW/2 - 7.5 / +BW/2 + 7.5			
$F_{\text{Interferer 2 (Offset)}}$	MHz	$2 * F_{\text{Interferer 1}}$					
NOTE 1: Reference measurement channel is specified in Annex A.6.2.							
NOTE 2: The interferer is QPSK modulated PUSCH containing data and reference symbols. Normal cyclic prefix is used. The data content shall be uncorrelated to the wanted signal and modulated according to clause 5 of TS36.211.							

For the UE which supports inter band CA configuration in Table 7.3.3-1A, 7.3.3.-1B and 7.3.3-1C,  $P_{\text{interferer1}}$  and  $P_{\text{interferer2}}$  powers defined in Table 7.8.1D.0-3 are increased by the amount given by  $\Delta R_{\text{IB,c}}$  in Table 7.3.1-1A, 7.3.3.-1B and 7.3.3-1C.

The normative reference for this requirement is TS 36.101 [2] clause 7.8.1D.

### 7.8.1D.1 Wide band intermodulation for ProSe Direct Discovery

**Editor's note: This test case is not complete. Following aspects are either missing or not yet determined:**

- ProSe UE authentication is not handled in the test case and is still under investigation.
- Use of OCN for Downlink has not been considered and is still FFS.
- Message exceptions content needs further investigation (some values still TBD).
- Test time is FFS.
- Connection Diagram is FFS

### 7.8.1D.1.1 Test Purpose

The wide band intermodulation requirement is defined following the same principles using modulated E-UTRA carrier and CW signal as interferer.

### 7.8.1D.1.2 Test Applicability

This test applies to all types of E-UTRA UE release 12 and forward which support ProSe Direct Discovery, but not ProSe Direct Communication.

### 7.8.1D.1.3 Minimum Conformance Requirements

The minimum conformance requirements are defined in clause 7.8.1D.0.

### 7.8.1D.1.4 Test Description

#### 7.8.1D.1.4.1 Initial Conditions

Initial conditions are a set of test configurations the UE needs to be tested in and the steps for the SS to take with the UE to reach the correct measurement state.

The initial test configurations consist of environmental conditions, test frequencies, and channel bandwidths based on E-UTRA ProSe bands specified in table 5.4.2D.1-1. All of these configurations shall be tested with applicable test parameters for each channel bandwidth, and are shown in table 7.8.1D.1.4.1-1. The details of the downlink, uplink and sidelink reference measurement channels (RMCs) are specified in Annexes A.2, A.3 and A.6.

**Table 7.8.1D.1.4.1-1: Test Configuration Table**

Initial Conditions						
Test Environment as specified in TS 36.508[7] subclause 4.1			NC			
Test Frequencies as specified in TS36.508 [7] subclause 4.3.1			Mid range(Note 4)			
Test Channel Bandwidths as specified in TS 36.508 [7] subclause 4.3.1			5MHz, Highest			
	Downlink Configuration (Note 2)		Uplink Configuration (Note 2)		Sidelink Configuration (Reception) (Note 3)	
Ch BW	Mod'n	RB allocation	Mod'n	RB allocation	Mod'n	RB allocation
5MHz	QPSK	8	QPSK	8	QPSK	2
10MHz	QPSK	16	QPSK	16	QPSK	2
15MHz	QPSK	25	QPSK	25	QPSK	2
20MHz	QPSK	30	QPSK	30	QPSK	2
Note 1: Test Channel Bandwidths are checked separately for each E-UTRA ProSe and Operating band, according to the applicability specified respectively in Table 5.4.2D.1-1 and Table 5.4.2.1-1. Note 2: After DRX configuration, DL-RMC (PDSCH) and DCI-0 for scheduling UL-RMC (PUSCH) are applied only in the DRX On subframes. Note 3: The RB start for the transmission of Sidelink RMC is RB#0. Note 4: Sidelink uses the frequencies defined for Uplink.						

1. Connect the SS to the UE antenna connectors as shown in TS 36.508 [7] Annex A, Figure [FFS].
2. The parameter settings for the cell are set up according to TS 36.508 [7] clause 4.4.3.
3. Downlink signals are initially set up according to Annex C.0, C.1 and C.3.1, and uplink signals according to Annex H.1 and H.3.1.
4. The UL and DL Reference Measurement channels are set according to Table 7.6.1D.1.4.1-1.
5. Propagation conditions are set according to Annex B.0.
6. Ensure the UE is in State 2A-RF according to TS 36.508 [7] clause 5.2A.1A. Message contents exceptions are defined in clause 7.6.1D.1.4.3.

7. SS continues with the generic procedures described in TS 36.508 [7] clause 4.5.3A.3 and 4.5.4.3 and ensures the UE is in State 4 according to TS 36.508 [7] clause 4.5.4 and the UE test loop Mode D is activated.

#### 7.8.1D.1.4.2 Test Procedure

1. SS shall transmit an RRCConnectionReconfiguration message to configure DRX. Message contents exceptions (only those marked with "...Step 1...") are defined in clause 7.8.1D.1.4.3.
2. The UE shall transmit RRCConnectionReconfigurationComplete message.
3. Initialise the variables Ptot and Pok as 0.
4. SS transmits PDSCH via PDCCH DCI format 1A for C\_RNTI to transmit the DL RMC according to Table 7.8.1D.1.4.1-1. The SS sends downlink MAC padding bits on the DL RMC.
5. SS sends uplink scheduling information via PDCCH DCI format 0 for C\_RNTI to schedule the UL RMC according to Table 7.8D.1.4.1-1. When the UE has no payload data to send, it transmits uplink MAC padding bits on the UL RMC.
6. SS transmits PSDCH to transmit the SL RMC according to Table 7.8.1D.1.4.1-1. Set the Sidelink signal level to the appropriate value defined in Table 7.8.1D.1.5-2.
7. Set the Interfering signal levels to the values as defined in Table 7.8.1D.1.5-2 and frequency below the wanted signal, using a modulated interferer bandwidth as defined in Annex D of the present document.
8. SS shall send SL Discovery Packets (MAC padding bits) on the SL RMC for the test time [FFS]. SS stores the number of the transmitted Discovery Packets in the current test iteration in the variable Ptot.
10. SS shall send (on the available PDSCH) a "UE TEST LOOP PROSE MODE D SIDELINK DIRECT DISCOVERY PACKET COUNTER REQUEST" message and wait for the UE to respond (on the available PUSCH) with a "UE TEST LOOP PROSE MODE D SIDELINK DIRECT DISCOVERY PACKET COUNTER RESPONSE".
11. SS calculates the variable Pok as (current counter value - counter value at last test iteration).
12. SS shall compute the throughput as following:
 
$$TP = Pok / Ptot * 100\%$$
13. Repeat steps from 6 to 12, using an interfering signal above the wanted signal at step 7.

#### 7.8.1D.1.4.3 Message Contents

Message contents are according to TS 36.508 [7] clauses TBD with following exceptions:

- Table A.7.1.1-1 for FDD
- Table A.7.1.2-1 for TDD
