Foreword

This Technical Specification has been produced by the 3rd Generation Partnership Project (3GPP).

The contents of the present document are subject to continuing work within the TSG and may change following formal TSG approval. Should the TSG modify the contents of the present document, it will be re-released by the TSG with an identifying change of release date and an increase in version number as follows:

Version x.y.z

where:

- x the first digit:
  - 1 presented to TSG for information;
  - 2 presented to TSG for approval;
  - 3 or greater indicates TSG approved document under change control.
- y the second digit is incremented for all changes of substance, i.e. technical enhancements, corrections, updates, etc.
- z the third digit is incremented when editorial only changes have been incorporated in the document.

1 Scope

The present document establishes Over the Air antenna minimum requirements for User Equipment (UE) and Mobile Station (MS).

Requirements are defined for roaming bands for the speech position (beside the head) and for the data transfer position (free space). Requirements for free space are applicable to devices used in the data transfer position and consist of laptop mounted equipment (LME) plug-in UEs and laptop embedded equipment (LEE) UEs. All bands are potential roaming bands, and the requirements for roaming bands shall therefore be fulfilled for all bands supported by a UE/MS.

Requirements for operating bands are dependent on how the network has been built and are thus operator specific and can not be specified here. Recommended performance values for operating bands (Annex B) are however included in this specification for information. It should be recognised that the ability to meet the recommended performance values depends on the number of frequency bands supported by the UE/MS.

2 References

The following documents contain provisions which, through reference in this text, constitute provisions of the present document.

- References are either specific (identified by date of publication, edition number, version number, etc.) or non-specific.
- For a specific reference, subsequent revisions do not apply.
- For a non-specific reference, the latest version applies. In the case of a reference to a 3GPP document (including a GSM document), a non-specific reference implicitly refers to the latest version of that document *in the same Release as the present document*.

3 Definitions, symbols and abbreviations

3.1 Definitions

For the purposes of the present document, the terms and definitions given in TR 21.905 [1] and the following apply. A term defined in the present document takes precedence over the definition of the same term, if any, in TR 21.905 [1].

Primary mechanical mode: the mode that is most often used during a call beside the head. Other mechanical modes are secondary. Every terminal has at least one primary mechanical mode.

Speech position: UE used close to head phantom (Specific Anthropomorphic Mannequin).

Data transfer position: UE used away from the user's head For LME and LEE devices free space configuration without head and hand phantoms is applicable.

FS: UE used in a free space configuration.

LME: Laptop mounted equipment (such as plug-in devices like USB dongles).

LEE: Laptop embedded equipment (such as embedded module card embedded in notebooks).

3.2 Symbols

None

3.3 Abbreviations

For the purposes of the present document, the abbreviations given in TR 21.905 [1] and the following apply. An abbreviation defined in the present document takes precedence over the definition of the same abbreviation, if any, in TR 21.905 [1].

OTA	Over the Air
TRP	Total Radiated Power
TRS	Total Radiated Sensitivity

4 General

4.1 Minimum Requirements for Roaming Bands

The minimum requirements for roaming bands apply only to the primary mechanical mode in the environmental conditions specified in Annex A. All bands are potential roaming bands, and a UE/MS shall fulfil the minimum requirements for roaming bands for all bands supported by the UE/MS.

4.2 Relationship between Minimum Requirements for Roaming Bands and Test Requirements

The Minimum Requirements for roaming bands given in this specification make no allowance for measurement uncertainty. The test specification 34.114 [4] Annex F defines Test Tolerances. These Test Tolerances are individually calculated for each test. The Test Tolerances are used to relax the Minimum Requirements in this specification to create Test Requirements.

The measurement results returned by the test system are compared - without any modification - against the Test Requirements as defined by the shared risk principle.

The Shared Risk principle is defined in ETR 273 [5] Part 1 sub-part 2 section 6.5.

4.3 Terminal Classes

4.3.1 Mechanical modes

The mechanical modes of a terminal are declared by the manufacturer. A terminal shall have at least one mechanical mode. If only one mode is supported, then this is defined as the primary.

5 Frequency bands

The requirements defined in this specification apply to the frequency bands defined below.

5.1 General

The information presented in this subclause is based on a chip rate of 3.84 Mcps and 1.28 Mcps (TDD).

NOTE: Other chip rates may be considered in future releases.

5.2 FDD Frequency bands

a) UTRA/FDD is designed to operate in the following paired bands:

Table 5.1: UTRA FDD frequency bands

Operating Band	UL Frequencies UE transmit, Node B receive	DL frequencies UE receive, Node B transmit
I	1920 - 1980 MHz	2110 -2170 MHz
II	1850 -1910 MHz	1930 -1990 MHz
III	1710-1785 MHz	1805-1880 MHz

IX	1749.9-1784.9 MHz	1844.9-1879.9 MHz
XIX	830 - 845MHz	875 - 890 MHz

b) Deployment in other frequency bands is not precluded

5.3 TDD Frequency bands

UTRA/TDD is designed to operate in the following bands;

a) 1900 - 1920 MHz: Uplink and downlink transmission
2010 - 2025 MHz Uplink and downlink transmission

b)* 1850 - 1910 MHz: Uplink and downlink transmission
1930 - 1990 MHz: Uplink and downlink transmission

c)* 1910 - 1930 MHz: Uplink and downlink transmission

d)** 2570 - 2620 MHz: Uplink and downlink transmission

e) 2300 - 2400 MHz: Uplink and downlink transmission

f) 1880 - 1920 MHz: Uplink and downlink transmission

* Used in ITU Region 2

**Used in ITU Region 1

6 Transmitter Performance

6.1 Total Radiated Power

The average TRP of low, mid and high channel in beside head position shall be higher than minimum performance requirements for roaming bands shown in Table 5.2. The averaging shall be done in linear scale for the TRP results of both right and left side of the phantom head.

$$TRP_{average} = 10\log\left[\frac{10^{P_{left\_low}/10} + 10^{P_{left\_mid}/10} + 10^{P_{left\_high}/10} + 10^{P_{right\_low}/10} + 10^{P_{right\_mid}/10} + 10^{P_{right\_high}/10}}{6}\right]$$

Figure 6.1: Average TRP

In addition the minimum TRP of each measured channel in beside head position shall be higher than minimum performance requirements shown in the columns "Min".

$$TRP_{\min} = 10\log\left[\min\left(10^{P_{left\_low}/10}, 10^{P_{left\_mid}/10}, 10^{P_{left\_high}/10}, 10^{P_{right\_low}/10}, 10^{P_{right\_mid}/10}, 10^{P_{right\_high}/10}\right)\right]$$

6.2 Total Radiated Power for LME/LEE

Requirements in this section are stated for free space configuration and are applicable to devices used in data transfer position such as laptop mounted equipment (LME) plug-in UEs and laptop embedded equipment (LEE) UEs.

The average TRP of low, mid and high channel shall be higher than minimum performance requirements for roaming bands shown in section 5.2. The averaging shall be done in linear scale for the TRP results.

$$TRP_{average} = 10\log\left[\frac{10^{P_{low}/10} + 10^{P_{mid}/10} + 10^{P_{high}/10}}{3}\right]$$

7 Receiver Performance

7.1 Total Radiated Sensitivity

The average TRS of low, mid and high channel in beside head position for 1% BER with 12.2kbps DL reference channel as defined in Annex C.3 of [2] shall be lower than minimum performance requirements for roaming bands shown in Table 7.1. The averaging shall be done in linear scale for the TRS results of both right and left side of the phantom head.

$$TRS_{average} = 10\log\left[6 \Big/ \left(\frac{1}{10^{P_{left\_low}/10}} + \frac{1}{10^{P_{left\_mid}/10}} + \frac{1}{10^{P_{left\_high}/10}} + \frac{1}{10^{P_{right\_low}/10}} + \frac{1}{10^{P_{right\_mid}/10}} + \frac{1}{10^{P_{right\_high}/10}}\right)\right]$$

Figure 7.1: Average TRS

In addition the maximum TRS of each measured channel in beside head position shall be better than minimum performance requirements for roaming bands shown in the columns "Max".

$$TRS_{\max} = 10\log\left[\max\left(10^{P_{left\_low}/10}, 10^{P_{left\_mid}/10}, 10^{P_{left\_high}/10}, 10^{P_{right\_low}/10}, 10^{P_{right\_mid}/10}, 10^{P_{right\_high}/10}\right)\right]$$

7.3 Total Radiated Sensitivity for LME/LEE

Requirements in this section are stated for free space configuration and are applicable to devices used in data transfer position such as laptop mounted equipment (LME) plug-in UEs and laptop embedded equipment (LEE) UEs.

The average TRS of low, mid and high shall be lower than minimum performance requirements for roaming bands shown in section 5.2. The averaging shall be done in linear scale for the TRS results.

$$TRS_{average} = 10\log\left[3\Big/\left(\frac{1}{10^{P_{low}/10}} + \frac{1}{10^{P_{mid}/10}} + \frac{1}{10^{P_{high}/10}}\right)\right]$$

Annex A (normative): Environmental conditions

A.1 General

This normative annex specifies the environmental requirements of the UE. Within these limits the requirements of the present documents shall be fulfilled.

A.2 Environmental requirements

The requirements in this clause apply to all types of UE(s) and MS(s).

A.2.2 Temperature

All the OTA requirements are applicable in room temperature [e.g. 25°C)].

A.2.3 Voltage

The UE shall be equipped with a real battery that is fully charged (in the beginning of the Test).

Annex B (informative): Recommended performance

B.1 General

This annex introduces the concept of recommended OTA performance for operating bands. This requirement is not mandatory but is recommended.

The concept of recommended performance is to ensure that UE/MS OTA performance is maximised in order to improve user experience and network performance. It is recognised that the ability to meet the recommended performance depends on the number of frequency bands supported by the UE/MS.

B.2 Total Radiated Power

The OTA performance for FDD, GSM and UTRA LCR TDD should be greater or equal than the recommended values shown in Tables B.1, B.1a, B.1b, B.2, B.2a, B.2b and B.3, B.3a, B.3b, respectively.
